"Rodney seems a bit cocksure," the former remarked, as they made their way towards the Brompton Road, "but it is no use taking things for granted. I think it quite possible that Purcell may be willing to cut his cable. At any rate, it is reasonable to give him the chance."

"Undoubtedly," agreed Thorndyke. "There is no greater folly than to take failure for granted and reject an opportunity. Now, if this plan of yours should by any chance succeed, Mrs. Purcell's emancipation is as good as accomplished."

"Is it really?" Varney exclaimed eagerly.

"Certainly," replied Thorndyke. "That is, if Purcell should send a letter the contents of which should disclose a state of affairs which would entitle his wife to a divorce. But that is too much to hope for unless Purcell also would like to have the marriage dissolved."

"I think it quite possible that he would, you know," said Varney. "He must have had strong reasons for going off in this way, and we know what those strong reasons usually amount to. But would a simple letter, without any witnesses, be sufficient to satisfy the court?"
"Undoubtedly," replied Thorndyke. "A properly attested letter is good evidence enough. It is just a question of what it contains. Let us suppose that we have a suitable letter. Then our procedure is perfectly simple. We produce it in court, and it is read and put in evidence. We say to the judge: 'Here is a letter from the respondent to the petitioner, or her solicitor, as the case may be. It is in answer to an advertisement, also read and put in evidence; the handwriting has been examined by the petitioner, by her solicitor, and by the respondent's banker, and each of them swears that the writing and the signature are those of the respondent. In that letter the respondent clearly and definitely states that, he has left his wife for good; that under no circumstances will he ever return to her; that he refuses hereafter to contribute to her support; and that he has transferred his affections to another woman, who is now living with him as his wife.' On that evidence I think we should have no difficulty in obtaining a decree."

Varney listened eagerly. He would have liked to make a few notes, but that would hardly do, though Thorndyke seemed to be a singularly simple-minded and confiding man. And he was amazingly easy to pump.

"I don't suppose Purcell would give himself away to that extent," he remarked, "unless he was really keen on a divorce."

"It is extremely unlikely in any case," Thorndyke agreed. "But we have to bear in mind that if he writes at all it will be with the object of stating his intentions as to the future and making his position clear. I shall draft the advertisement in such a way as to elicit this information, if possible. If he is not prepared to furnish the information he will not reply. If he replies it will be because, for his own purposes, he is willing to furnish the information."

"Yes, that is true. So that he may really give more information than one might expect. I wonder if he will write. What do you think?"

"It is mere speculation," replied Thorndyke. "But if I hadn't some hopes of his writing I shouldn't be at the trouble of putting in the advertisement. But perhaps Rodney is right: I may be unreasonably optimistic."

At Piccadilly Circus they parted and went their respective ways, each greatly pleased with the other and both highly amused. As soon as Thorndyke was out of sight, Varney whipped out his notebook, and by the light of a street lamp made a careful note of the necessary points of the required letter. That letter also occupied Thorndyke's mind, and he only hoped that the corresponding agent of Daniel Purcell, deceased, would not allow his enthusiasm to carry him to the extent of producing a letter the contents of which would stamp the case as one of rank collusion. For in this letter Thorndyke saw a way, and the only way, out for Margaret Purcell. He knew, or at least was fully convinced, that her husband was dead. But he had no evidence that he could take into court, nor did he expect that he ever would have. It would be years before it would be possible to apply to presume Purcell's death, and throughout those years Margaret's life would be spoiled. This letter was a fiction. The erring husband was a fiction. But it would be better that Margaret should be liberated by a fiction than that she should drag out a ruined life shackled to a husband who was himself a fiction.
FOR the second time, in connection with the death of Daniel Purcell, Mr. Varney found it necessary to give an attentive eye to the movements of the postman. He had ascertained from the post office the times at which letters were delivered in the neighbourhood of Margaret's flat; and now, in the gloom of a December evening, he lurking in the vicinity until he saw the postman approaching down the street and delivering letters at the other doors on his way. Then he entered the now familiar portals, and made his way quietly up the stairs until he reached Margaret's outer door. He paused for a few moments, standing quite still and listening intently. If he had been discovered he would have simply come to pay a call. But he was not, and the silence from within suggested that there was nobody in the hall. With a furtive look round, he drew a letter from his pocket and silently slipped it into the letter-box, catching the flap on his finger as it fell to prevent it from making any sound. Then he turned and softly stole down the stairs; and as he reached the ground floor the postman walked into the entry.

It was not without reluctance that he came away. For she was behind that door, almost certainly—she, his darling, for whose freedom from the imaginary shackles that she wore he was carrying out this particular deception. But his own guilty conscience made it seem to him that he had better not be present when the fabricated letter arrived. So he tore himself from the beloved precincts and went his way, thinking his thoughts and dreaming his dreams.

Varney's surmise was correct. Margaret was within. But it was perhaps as well that he had refrained from paying a call, for she was not alone, and his visit would not have been entirely welcome. About half an hour before his arrival Jack Roddy had ascended those stairs, and been admitted in time to join Margaret at a somewhat belated tea.

"My excuse for coming to see you," said Rodney, "is in my pocket—the front page of The Times."

"I don't know what you mean by an excuse," Margaret replied. "You know perfectly well that I am always delighted to see you. But perhaps you mean an excuse to yourself for wasting your time in gossiping with me."

"Indeed, I don't," said he. "I count no time so profitably employed as that which I spend here."

"I don't quite see what profit you get," she rejoined, "unless it is the moral benefit of doing a kindness to a lonely woman."

"I should like to take that view if I honestly could. But the fact is that I come here for the very great pleasure of seeing you and talking to you, and the profit that I get is that very great pleasure. I only wish the proprieties allowed me to come oftener."

"So do I," she said frankly. "But you know that, too. And now tell me what there is in the front page of The Times that gave you this sorely needed excuse."

Rodney laughed in a boisterous, schoolboy fashion as he drew from his pocket a folded leaf of the newspaper. "It's the great advertisement," said he. "The Thorndyke-Varney or Varney-Thorndyke advertisement. It came out yesterday morning. Compose yourself to listen, and I'll read it out to you."

He opened the paper out, refolded it into a convenient size, and with a portentous preliminary "Ahem!" read aloud in a solemn sing-song:

"PURCELL, D., is earnestly requested to communicate to M. or her solicitor his intentions with regard to the future. If his present arrangements are permanent, she would be grateful if he would notify her to that effect, in order that she may know for her part."

As he finished, he looked up at her and laughed contemptuously.

"Well, Maggie," said he, "what do you think of it?"

She laughed merrily, and looked at him with hardly disguised fondness and admiration. "What a schoolboy you are, John!" she exclaimed. "How annoyed Dr. Thorndyke would be if he could hear you! But it is rather funny. I can imagine Dan's face when he reads it—if he ever does read it."

"So can I," chuckled Rodney. "I can see him pulling down his lower lip and saying, 'Gur!' in that pleasant way that he has. But isn't it a perfectly preposterous exhibition? Just imagine a man of Thorndyke's position doing a thing like this! Why, it is beneath the dignity of a country attorney's office-boy. I can't conceive how he got his reputation. He seems to be an absolute greenhorn."

"Probably he is quite good at his own speciality," suggested Margaret.

"But this is his own speciality. The truth is that the ordinary lawyer's prejudice against experts is to a great extent justified. They are really humbugs and pretenders. You saw what his attitude was when I suggested that he should get Dan under observation. Of course, it was the obvious thing to do, and one would suppose that it would be quite in his line. Yet as soon as I made the suggestion he raised all sorts of difficulties; whereas a common private inquiry agent would have made no difficulty about it at all."

"Do you think not?" Margaret asked, a little eagerly. "Perhaps it might be worth while to employ one. It would be such a blessed thing to get rid of Dan for good."
"It would, indeed," Rodney agreed heartily. "But perhaps we had better see if, Thorndyke gets a bite. If he fails we can try the other plan."

Margaret was slightly disappointed. She wanted to see some progress made, and was a little impatient of the Law's delays. But the truth is that Rodney had been speaking rather at random. When he came to consider what information he had to give to a private detective, the affair did not look quite such plain sailing.

"Perhaps," said Margaret, "Dr. Thorndyke was right in giving Mr. Varney's plan a trial. We are no worse off if it fails; and if it were by any chance to succeed, oh, what a relief it would be! Not that there is the slightest chance that it will."

"Not a dog's chance," agreed Rodney, "and Thorndyke was an ass to have anything to do with the advertisement. He should have let Varney put it in. No one expects an artist to show any particular legal acumen."

"Poor Mr. Varney!" murmured Margaret with a faint smile; and at this moment the housemaid entered the room with a couple of letters on a salver. Margaret took the letters, and, having thanked the maid, laid them on the table by her side.

"Won't you read your letters?" said Rodney. "You are not going to make a stranger of me, I hope."

"Thank you," she replied. "If you will excuse me I will just see whom they are from."

She took up the top letter, opened it, glanced through it, and laid it down. Then she picked up the second letter, and as her glance fell on the address she uttered a little cry of amazement.

"What is it?" asked Rodney.

She held the envelope out for him to see. "It's from Dan!" she exclaimed; and forthwith she tore it open and eagerly took out the letter.

As she read it, Rodney watched her with mingled amusement, vexation, and astonishment. The utterly inconceivable thing had happened. Thorndyke had taken odds of a million to one against and it had come off. That was just a piece of pure luck. It reflected no particular credit on Thorndyke's judgment; but still, Rodney rather wished he had been less dogmatic.

When she had quickly read through the letter, Margaret handed it to him without comment. He took it from her and rapidly ran through the contents.

"DEAR MAGGIE (it ran),

"I have just seen your quaint advertisement, and send you a few lines, as requested. I don't know what you mean by 'modifying your arrangements,' but I can guess. However, that is no concern of mine, and whatever your plans may be, I don't want to stand in your way. So I will give you a plain statement, and you can do what you like.

"My present arrangements are quite permanent. You have seen the last of yours truly. I have no intention of ever coming back—and I don't suppose you particularly want me. It may interest you to know that I have made fresh domestic arrangements—necessarily a little unorthodox, but also quite permanent.

"With regard to financial questions, I am afraid I can't contribute to your 'arrangements,' what ever they may be. You have enough to live on, and I have new responsibilities; but if you can get anything out of Levy you are welcome to it. You will be the first person who ever has. You can also try Penfield, and I wish you the best of luck. And that is all I have got to say on the subject.

"With best wishes,

"Yours sincerely,

"DANIEL PURCELL."

Rodney returned the letter with an expression of disgust. "It is a brutal, hoggish letter," said he, "typical of the writer. Where does he write from?"

"The post-mark is Wivenhoe. It was posted last night at seven-thirty."

"That looks as if Varney were right and he were afloat; but it is a queer time of year for yachting on the East Coast. Well, I suppose you are not much afflicted by the tone of that letter?"

"Not at all. The more brutal the better. I shall have no qualms now. But the question is, will the letter do? What do you think?"

"It ought to do well enough—if it isn't a little too good to be true."

"I don't quite understand. You don't doubt the truth of what he says, do you?"

"Not at all. What I mean is this: Divorce judges are pretty wary customers. They have to be. The law doesn't allow married people, who are tired of one another and would like to try a fresh throw of the dice, to make nice little mutual arrangements to get their marriage dissolved. That is called collusion. And then there is a mischievous devil called the King's Proctor, whose function is to 'prevent us, O Lord, in all our doings' and to trip up poor wretches who have got a
decree and think they have escaped, and to send them back to cat-and-dog matrimony until death do them part. Now, the only pitfall about this letter of Dan's is that it is so very complete. He makes things so remarkably easy for us. He leaves us nothing to prove. He admits everything in advance, and covers the whole of our case in our favour. That letter might have been dictated by a lawyer in our interest."

Margaret looked deeply disappointed. "You don't mean to say that we shan't be able to act on it!" she exclaimed in dismay.

"I don't say that," he replied, "and I certainly think it will be worth trying. But I do wish that we could produce evidence that he is living with some woman, as he appears to state. That would be so much more convincing. However, I will get an opinion from a counsel who has had extensive experience of divorce practice—a man like Barnby, for instance. I could show him a copy of the letter and hear what he thinks."

"Why not Dr. Thorndyke?" said Margaret. "He was really right, after all, and we shall have to show him the letter."

"Yes, and he must see the original. But as to taking his opinion—well, we shall have to do that as a matter of courtesy, but I don't set much value on his judgment. You see, he chose to go double Nap on this letter, and he happened to win. Events prove that he was right to take the chance, but it was primitive strategy. It doesn't impress me."

Margaret made no immediate rejoinder. She was not a lawyer, and to her the fact that the plan had succeeded was evidence that it was a good plan. Accordingly, her waning faith in Thorndyke was strongly revived.

"I can't help hoping," she said presently, "that this letter will secure a decision in our favour. It really ought to. You see, there is no question of arrangement or collusion on my side. Our relations were perfectly normal and pleasant up to the moment of Dan's disappearance. There were no quarrels, no differences, nothing to hint at any desire for a change in our relations; and I have waited six months for him to come back, and have taken no action until he made it clear that he had gone for good. Don't you think that I have a fair chance of getting my freedom?"

"Perhaps you are right, Maggie," he replied. "I may be looking out for snags that aren't there. Of course, you could call me and Philip and Varney to prove that all was normal up to the last, and Penfield and Thorndyke to give evidence of your efforts to trace Dan. Yes, perhaps it is a better case than I thought. But all the same, I will show the letter to Barnby when Thorndyke has seen it and get his opinion without prejudice."

He paused and reflected profoundly for a while. Suddenly he looked up at Margaret, and in his eyes there was a new light.

"Supposing, Maggie," he said in a low, earnest voice, "you were to get this marriage dissolved. Then you would be free—free to marry. You know that years ago, when you were free, I loved you. You know that, because I told you; and I thought, and I still think, that you cared for me then. The fates were against us at that time, but in the years that have passed there has been no change in me. You are the only woman I have ever wanted, Of course, I have kept my feelings to myself. That had to be. But if we can win back your freedom, I shall ask you to be my wife, unless you forbid me. What shall you say to me, Maggie?"

Margaret sat with downcast eyes as Rodney was speaking. For a few moments she had appeared pale and agitated, but she was now quite composed, and nothing but a heightened colour hinted at any confusion. At the final question she raised her head and looked Rodney frankly in the face.

"At present, John," she said quietly, "I am the wife of Daniel Purcell, and as such have no right to contemplate any other marriage. But I will be honest with you. There is no reason why I should not be. You are quite right, John. I loved you in those days that you speak of, and if I never told you, you know why. You know how I came to marry Dan. It seemed to me then that I had no choice. Perhaps I was wrong, but I did what I thought was my duty to my father."

"In the years that have passed since then—the long, grey years—I have kept my covenant with Dan loyally in every respect. If I have ever looked back with regret, it has been in secret. But through those years you have been a faithful friend to me, and of all my friends the best beloved. And so you are now. That is all I can say, John."

"It is enough, Maggie," he said, "and I thank you from my heart for saying so much. Whatever your answer might have been, I would have done everything in my power to set you free. But now I shall venture to have a hope that I hold a stake in your freedom."

She made no answer to this, and for some time both sat silently engrossed with their own thoughts, and each thinking much the same thoughts as the other. The silence was at length broken by Rodney.

"It was an awful blow to me when I came home from my travels and found you married. Of course, I guessed what had happened, though I never actually knew. I assumed that Dan had put the screw on your father in some way."

"Yes. He had lent my father money, and the bills could not be met."

"What a Juggernaut the fellow is!" exclaimed Rodney. "An absolutely ruthless egoist. By the way, was he in the habit of lending money? I notice that he refers in this letter to a person named Levy. Who is Levy? And what does Dan do for a livelihood? He is out of the paper trade, isn't he?"

"I think so. The truth is, I have never known what his occupation is. I have suspected that he is principally a money-lender. As to Mr. Levy, I have always thought he was a clerk or manager, but it rather looks as if he were a partner."
"We must find out," said Rodney. "And there is another thing that we must look into—that mysterious letter that Penfield received from Dan. Did you ever learn what was in it?"

"Never. Mr. Penfield refused to divulge the slightest hint of its contents. But I feel convinced that it was in some way connected with Dan's disappearance. You remember it arrived on the very day that Dan went away. I think Dr. Thorndyke called on Mr. Penfield to see if he could glean any information, but I assume that he didn't succeed."

"We can take that for granted," said Rodney. "I don't think Thorndyke would get much out of a wary old bird like Penfield. But we must find out what was in that letter. Penfield will have to produce it if we put him in the witness-box, though he will be a mighty slippery witness. However, I will see Thorndyke and ask him about it when I have consulted Barnby. Perhaps I had better take charge of the letter."

Margaret handed him the letter, which he put securely in his wallet, and the plan of action being now settled, he stayed only for a little further gossip, and then took his leave.

On the following afternoon he called by appointment on Thorndyke, who, having admitted him, closed the "oak" and connected the bell with the laboratory upstairs, where his assistant, Polton, was at work.

"So," he said, "our fish has risen to the tin minnow, as I gather from your note."

"Yes. You have had better luck than I expected."

"Or than I deserved, you might have added if you had been less polite. Well, I don't know that I should agree. I consider it bad practice to treat an improbability as an impossibility. But what does he say?"

"All that we could wish—and perhaps a little more. That is the only difficulty. He makes things a little too easy for us—at least, that is my feeling. But you had better see the letter."

He took it from his wallet and passed it to Thorndyke, who glanced at the post-mark, and when he had taken out the letter looked quickly into the interior of the envelope.

"Wivenhoe," he remarked. "Some distance from Woodbridge, but in the same district."

He read carefully through the text, noting at the same time the peculiarities that he had observed in the former letter. In this case, too, the postmarks had been made when the envelope was empty—a curious oversight on the part of Varney in view of the care and ingenuity otherwise displayed. Indeed, as he read through the letter, Thorndyke's opinion of that cunning artificer rose considerably. It was a most skilful and tactful production. It did certainly make things almost suspiciously easy, but then that was its function. The whole case for the petition rested on it. But the brutal attitude of the imaginary truant was admirably rendered, and, so far as he could judge, the personality of the missing man convincingly represented.

"It is not a courteous epistle," he remarked tentatively.

"No," agreed Rodney, "but it is exactly the sort of letter that one would expect from Purcell. It gives you his character in a nutshell."

This was highly satisfactory and very creditable to Varney.

"You mentioned in your note that you were going to take Barnby's opinion on it. Have you seen him?"

"Yes, and he thinks the same as I do: that it would be a little risky to base a petition on this letter alone. The judge might smell a rat. He considers that if we could produce evidence that Purcell is actually living with another woman, this letter would be good evidence of desertion. He suggested putting a private inquiry agent on Purcell's tracks. What do you say to that?"

"In the abstract it is an excellent suggestion. But how are you going to carry it out? You speak of putting the agent on Purcell's tracks. But there are no tracks. There is no place in which he is known to have been staying; there is no person known to us who has seen him since he landed at Penzance. You would start your sleuth without a scent to wander about Essex and Suffolk looking for a man whom he had never seen and would probably not recognize if he met him, and who is possibly not in either of those counties at all. It really is not a practicable scheme."

Rodney emitted a discontented grunt. "Doesn't sound very encouraging certainly," he admitted. "But how do the police manage in a case of the kind?"

"By having, not one agent but a thousand, and all in communication through a central office. And even the police fail if they haven't enough data. But with regard to Barnby, of course his opinion has great weight. He knows the difficulties of these cases, and his outlook will probably be the judge's outlook. But did you make clear to him the peculiarities of this case—the character of the petitioner, her excellent relations with her husband, the sudden, unforeseen manner of the disappearance, and the total absence of any grounds for a suspicion of collusion? Did you present these points to him?"

"No, I didn't. We merely discussed the letter."

"Well, see him again and put the whole case to him. My feeling is that a petition would probably succeed."

"I hope you are right," said Rodney, more encouraged than he would have liked to admit. "I'll see Barnby again. Oh, and there is another point. That letter that Purcell sent to Penfield by mistake in June. It probably throws some light on the disappearance, and might be important as evidence on our side. I suppose Penfield did not tell you what was in it or show
it to you?"

"No, he would say nothing about it; but he allowed me, at my request, to examine the envelope."

Rodney grinned. "He might also have shown you the postman who delivered the letter. But if he won't tell us anything, we might put him in the witness-box and make him disgorge his secret."

"Yes, and you may have to if the court demands to have the letter produced. But I strongly advise you to avoid doing so if you can. I have the impression that the production of that letter would be very much the reverse of helpful—might, in fact, be fatal to the success of the case and would in addition be very disagreeable to Mrs. Purcell."

Rodney looked at him in astonishment. "Then you know what was in the letter?" said he.

"No, but I have formed certain opinions which I have no doubt are correct, but which I do not feel at liberty to communicate. I advise you to leave Mr. Penfield alone. Remember that he is a lawyer, that he is Mrs. Purcell's friend, that he does know what is in the letter, and that he thinks it best to keep his knowledge to himself. But he will have to be approached on the question as to whether he is willing to act for Mrs. Purcell against her husband. If you undertake that office you can raise the question of the letter with him, but I would urge you most strongly not to force his hand."

Rodney listened to this advice with a slightly puzzled expression. Like Mr. Penfield, he viewed Thorndyke with mixed feelings, now thinking of him as an amateur, a doctor who dabbled ineffectively in law, and now considering the possibility that he might command some means of acquiring knowledge that were not available to the orthodox legal practitioner. Here was a case in point. He had examined the envelope of that mysterious letter "at his own request" and evidently for a specific purpose, and from that inspection he had in some unaccountable way formed a very definite opinion as to what the envelope had contained. That was very curious. Of course, he might be wrong; but he seemed to be pretty confident. Then there was the present transaction. Rodney himself had rejected Varney's suggestion with scorn. But Thorndyke had adopted it quite hopefully, and the plan had succeeded in the face of all probabilities. Could it be that Thorndyke had some odd means of gauging those probabilities? It looked rather like it.

"You are only guessing at the nature of that letter," he said tentatively, "and you may have got it wrong."

"That is quite possible," Thorndyke agreed. "But Penfield isn't guessing. Put the case to him, hear what he says, and follow his advice. And if you see Barnby again it would be better to say nothing about that letter. Penfield will advise you to keep it out of the case if you can, and that is my advice, too."

When Rodney took his departure, which he did a few minutes later, he carried with him a growing suspicion that he had under-estimated Thorndyke; that the latter, perhaps, played a deeper game than at first sight appeared; and that he played with pieces unknown to traditional legal practice.

For some time after his visitor had left Thorndyke remained wrapped in profound thought. In his heart he was sensible of a deep distaste for this case that he was promoting. If it were to succeed, it could only be by misleading the court. It is true that the parties were acting in good faith, that the falsities which they would present were falsities that they believed to be true. But the whole case was based on a fiction, and Thorndyke detested fictions. Nor was he satisfied with his own position in an ethical sense. He knew that the case was fictitious, that the respondent was a dead man, and that the documents to be produced in evidence were forgeries. He was, in fact, an accessory to those forgeries. He did not like it at all. And he was not so optimistic as to the success of the petition as he had led Rodney to believe, though he was not very uneasy on that score. What troubled him was that this was, in effect, a bogus case, and that he was lending it his support.

But what was the alternative? His thoughts turned to Margaret, sweet-faced, sweet-natured, gracious-mannered, the perfect type of an English gentlewoman; and he thought of the fine, handsome, high-minded gentleman who had just gone away. These two loved one another—loved as only persons of character can love. Their marriage, if it could be achieved, would secure to them a lifelong happiness, in so far as such happiness is attainable by mortals. But between them and their happiness stood the fiction of Daniel Purcell. In order that they might marry, Purcell must either be proved to be dead or assumed to be alive.

Could he be proved to be dead? If he could, that were the better way, because it would demonstrate the truth. But was it possible? In a scientific sense it probably was. Science can accept a conclusion with reservations. But the law has to say "yes" or "no" without any reservations at all. This was not a case of death merely presumed. It was a death alleged to have occurred at a specific time and place and in a specific manner; and inseparably bound up with it was a charge of murder. If Purcell was dead, Varney had murdered him, and the murder was the issue that would be tried. But no jury would entertain for a moment the guilt of the accused on such evidence as Thorndyke could offer. And an acquittal would amount to a legal decision that Purcell was not dead. On that decision Margaret’s marriage to Rodney would be impossible.

Thus Thorndyke’s reflections led him back, as they always did, to the conclusion that Purcell’s death was incapable of legal proof, and must ever remain so, unless by some miracle new and conclusive evidence should come to light. But to wait for a miracle to happen was an unsatisfactory policy. If Purcell could not be proved to be dead, and if such failure of proof must wreck the happiness of two estimable persons, then it would appear that it might be allowable to accept what was the actual legal position and assume that he was alive.

So, once again, Thorndyke decided that he had no choice but to continue to share with Varney the secret of Purcell’s death and to hold his peace.

And if this must be, the petition must take its course, aided and abetted, if necessary, by him. After all, nobody would be
injured and nothing done which was contrary either to public policy or private morals. There were only two alternatives, as matters stood. The fiction of Purcell as a living man would either keep Margaret and Rodney apart, as it was doing now, or it would be employed (with other fictions) to enable them to be united. And it was better that they should be united.
XIII. — IN WHICH THE MEDICO-LEGAL WORM ARRIVES

ROMANCE lurks in unsuspected places. As we go our daily round, we are apt to look distastefully upon the scenes made dull by familiarity, and to seek distraction by letting our thoughts ramble far away into time and space, to ages and regions in which life seems more full of colour. In fancy, perchance, we thread the ghostly aisles of some tropical forest, or linger on the white beach of some lonely coral island, where the coconut palms, shivering in the sea breeze, patter a refrain to the song of the surf; or we wander by moonlight through the narrow streets of some Southern city and hear the thrum of the guitar serenading to the shrouded balcony; and behold! all Romance is at our very doors.

It was on a bright afternoon early in March that Thorndyke sat, with Philip Rodney by his side, on one of the lower benches of the lecture theatre of the Royal College of Surgeons. Not a likely place, this, to encounter Romance. Yet there it was—and Tragedy, too—lying unnoticed at present on the green baize cover of the lecturer’s table, its very existence unsuspected.

Meanwhile Thorndyke and Philip conversed in quiet undertones, for it still wanted some minutes to the hour at which the lecture would commence.

"I suppose," said Philip, "you have had no report from that private detective fellow—I forget his name?"

"Bagwell. No, excepting the usual weekly note stating that he is still unable to pick up any trace of Purcell."

"Ah," commented Philip, "that doesn’t sound encouraging. Must be costing a lot of money, too. I fancy my brother and Maggie Purcell are both beginning to wish they had taken your advice and relied on the letter by itself. But Jack was overborne by Barnby's insistence on corroborative evidence, and Maggie let him decide. And now they are sorry they listened to Barnby. They hadn’t bargained for all this delay."

"Barnby was quite right as to the value of the additional evidence," said Thorndyke. "What he didn’t grasp was the very great difficulty of getting it. But I think I hear the big-wigs approaching."

As he spoke, the usher threw open the lecturer’s door. The audience stood up, the president entered, preceded by the mace-bearer and followed by the officers and the lecturer, and took his seat; the audience sat down, and the lecture began without further formalities.

The theatre was nearly full. It usually was when Professor D’Arcy lectured; for that genial savant had the magnetic gift of infusing his own enthusiasm into the lecture and so into his audience, even when, as on this occasion, his subject lay on the outside edge of medical science. To-day he was lecturing on the epidermic appendages of the marine worms, and from the opening sentence he held his audience as by a spell, standing before the great blackboard with a bunch of coloured chalks in either hand, talking with easy eloquence—mostly over his shoulder—while he covered the black surface with those delightful drawings that added so much to the charm of his lectures. Philip watched his flying fingers with fascination, and struggled frantically to copy the diagrams into a large notebook with the aid of a handful of coloured pencils; while Thorndyke, not much addicted to note-taking, listened and watched with concentrated attention, mentally docketing and pigeon-holing any new or significant facts in what was to him a fairly familiar subject.

The latter part of the lecture dealt with those beautiful sea worms that build themselves tubes to live in—worms like the Serpula, that make their shelly or stony tubes by secretion from their own bodies, or, like the Sabella or Terebella, build them up with sand-grains, little stones or fragments of shell. Each, in turn, appeared in lively portraiture on the blackboard, and the trays on the table were full of specimens which were exhibited by the lecturer, and which the audience were invited to inspect more closely after the lecture.

Accordingly, when the last words of the peroration had been pronounced, the occupants of the benches trooped down into the arena to look at the exhibits and seek further details from the genial Professor. Thorndyke and Philip held back for a while on the outskirts of the crowd; but the Professor had seen them on their bench, and now approached, greeting them with a hearty hand shake and a facetious question.

"What are you doing here, Thorndyke? Is it possible that there are medico-legal possibilities even in a marine worm?"

"Oh, come, D’Arcy!” protested Thorndyke, "don’t make me such a hidebound specialist. May I have no rational interests in life? Must I live for ever in the witness-box like a marine worm in its tube?"

"I suspect you don’t get very far out of your tube," said the Professor, with a chuckle and a sly glance at Philip.

"I got far enough out last summer," retorted Thorndyke, "to come and aid and abet you in your worm-hunting. Have you forgotten Cornwall?"

"No, to be sure," was the reply. "But that was only a momentary lapse, and I expect you had ulterior motives. However, the association of Cornwall, worm-hunting, and medical jurisprudence reminds me that I have something in your line. A friend of mine, who was wintering in Cornwall, picked it up on the beach at Morte Hoe and sent it to me. Now, where is it? It is on this table somewhere. It is a ridiculous thing—a small, flat cork, evidently from a zoologist’s collecting-bottle, for it has a label stuck on it with the inscription ‘Marine Worms.’ It seems that our zoologist was a sort of Robinson Crusoe, for he had bored a couple of holes through it and evidently used it as a button. But the most ludicrous thing about it is that a Terebella has built its tube on it, as if the worm had been prowling about, looking for lodgings, and had read the label and
forthwith had engaged the apartments. Ah! here it is."

He pounced on a little cardboard box, and, opening it, took out the cork button and laid it in Thorndyke's palm.

As the Professor was describing the object, Philip looked at him with a distinctly startled expression, and uttered a smothered exclamation. He was about to speak, but suddenly checked himself and looked at Thorndyke, who flashed at him a quick glance of understanding.

"Isn't that a quaint coincidence?" chuckled the Professor—"I mean that the worm should have taken up its abode and actually built his tube on the label?"

"Very quaint," replied Thorndyke, still looking with deep interest at the object that lay in his hand.

"You realize," Philip said in a low voice, as the Professor turned away to answer a question, "that this button came from Purcell's oilskin coat?"

"Yes, I remember the incident. I realized what it was as soon as D'Arcy described the button."

He glanced curiously at Philip, wondering whether he, too, realized exactly what this queer piece of jetsam was. For to Thorndyke its message had been conveyed even before the Professor had finished speaking. In that moment it had been borne to him that the unlooked-for miracle had happened, and that Margaret Purcell's petition need never be filed.

"Well, Thorndyke," said the Professor, "my friend's treasure trove seems to interest you. I thought it would be as an instance of the possibilities of coincidence. Quite a useful lesson to a lawyer, by the way."

"Exactly," said Thorndyke. "In fact, I was going to ask you to allow me to borrow it to examine at my leisure."

The Professor was delighted. "There, now," he chuckled, with a mischievous twinkle at Philip, "what did I tell you? He hasn't come here for the comparative anatomy at all. He has just come to grub for legal data. And now, you see, the medico-legal worm has arrived, and is instantly collared by the medical jurist. Take him, by all means, Thorndyke. You needn't borrow him. I present him as a gift to your black museum. You needn't return him."

Thorndyke thanked the Professor, and, having packed the specimen with infinite tenderness in its cotton wool, bestowed the box in his waistcoat pocket. A few minutes later he and Philip took their leave of the Professor and departed, making their way through Lincoln's Inn to Chancery Lane.

"That button gave me quite a shock for a moment," said Philip, "appearing out of the sea on the Cornish coast; for, of course, it was on Purcell's coat when he went ashore—at least, I suppose it was. I understood Varney to say so."

"He did," said Thorndyke. "He mentioned the incident at dinner one evening, and he then said definitely that the cork button was on the coat when Purcell went up the ladder."

"Yes, and it seemed rather mysterious at first, as Purcell went right away from Cornwall. But there is probably quite a simple explanation. Purcell went to the East Coast by sea, and it is most likely that, when he got on board the steamer, he obtained a proper button from the steward, cut off the jury button, and chucked it overboard. But it is a queer chance that it should have come back to us in this way."

As he spoke, he looked at Philip with a somewhat puzzled expression. He was, in fact, rather surprised. Philip Rodney was a doctor, a man of science, and an unquestionably intelligent person. He knew all the circumstances that were known, and he had seen and examined the button; and yet he had failed to observe the one vitally important fact that startled him in the face.

"What made you want to borrow the button?" Philip asked presently. "Was it that you wanted to keep it as a relic of the Purcell case?"

"I want to examine the worm-tube," replied Thorndyke. "It is a rather unusual one; very uniform in composition. Mostly, Terebella tubes are very miscellaneous as to their materials—sand, shell, little pebbles, and so forth. The material of this one seems to be all alike."

"Probably the stuff that the worm was able to pick up in the neighbourhood of Morte Hoe."

"That is possible," said Thorndyke; and the conversation dropped for a moment, each man occupying himself with reflections on the other.

To Philip it seemed rather surprising that a man like Thorndyke, full of important business, should find time, or even inclination, to occupy himself with trivialities like this. For, after all, what did it matter whether this worm-tube was composed of miscellaneous gatherings or of a number of similar particles? No scientific interest attached to the question. It seemed rather a silly quest. And yet Thorndyke had thought it worth while to borrow the specimen for this very purpose.

Thorndyke, for his part, was more than ever astonished at the mental obtuseness of this usually acute and intelligent man. Not only had he failed in the first place to observe a most striking and significant fact: he could not see that fact even when his nose was rubbed hard on it.

As they passed through Old Buildings and approached the main gateway, Philip slowed down.

"I am going into my brother's chambers here to have tea with him. Do you care to join us? He will be glad to see you."
Thorndyke, however, was in no mood for tea and gossip. He had got a first-class clue—a piece of really conclusive evidence. How conclusive it was and how far its conclusiveness went he could not tell at present; and he was eager to get to work on the assay of this specimen in an evidential sense—to see exactly what was the amount and kind of evidence that the sea had cast up on the shore of Morte Hoe. He therefore excused himself, and having hidden Philip adieu, he strode out into Chancery Lane and bore south towards the Temple.

On entering his chambers, he discovered his assistant, Polton, in the act of transferring boiling water from a copper kettle to a small silver teapot; whereby he was able to infer that his approach had been observed by the said Polton from his look out in the laboratory above. The two men, master and man, exchanged friendly greetings, and Thorndyke then observed:

"I have got a job to do later on, Polton, when I have finished up the evening's work. I shall want to grind some small sections of a mineral that I wish to identify. Would you put out one or two small hones and the other things that I shall need?"

"Yes, sir," replied Polton. "I will put the mineral section outfit on a tray and bring it down after tea. But can't I grind the sections? It seems a pity for you to be wasting your time on a mechanical job like that."

"Thank you, Polton," replied Thorndyke. "Of course you could cut the sections as well as, or better than, I can. But it is possible that I may have to produce the sections in evidence, and in that case it will be better if I can say that I cut them myself and that they were never out of my own hands. The courts don't know you as I do, you see, Polton."

Polton acknowledged the compliment with a gratified smile, and departed to the laboratory. As soon as he was gone, Thorndyke brought forth the little cardboard box, and, having taken out the button, carried it over to the window, where, with the aid of his pocket lens, he made a long and careful examination of the worm-tube, the result of which was to confirm his original observation. The mineral particles of which the tube was built up were of various shapes and sizes, from mere sand-grains up to quite respectable little pebbles. But, so far as he could see, they were all of a similar material. What that material was an expert mineralogist would have been able, no doubt, to say offhand, and an expert opinion would probably have to be obtained. But in the meantime his own knowledge was enough to enable him to form a fairly reliable opinion when he had made the necessary investigations.

As he drank his tea, he reflected on this extraordinary windfall. Circumstances had conspired in the most singular manner against Varney. How much they had conspired remained to be seen. That depended on how much the worm-tube had to tell. But even if no further light were thrown on the matter by the nature of the mineral, there was evidence enough that Purcell had never landed at Penzance. The Terebella had already given that much testimony. And the cross-examination was yet to come.

Having finished tea, he fell to work on the reports and written opinions which had to be completed and sent off by the last post; and it was characteristic of the man that, though the button and its as yet half-read message lurked in the subconscious part of his mind as the engrossing object of interest, he was yet able to concentrate the whole of his conscious attention on the matters with which he was outwardly occupied. Twice during the evening Polton stole silently into the room, once to deposit on a side-table the little tray containing the mineral section appliances, and the second time to place on a small table near the fire a large tray bearing the kind of frugal, informal supper that Thorndyke usually consumed when alone and at work.

"If you wait a few moments, Polton, I shall have these letters ready for the post. Then we shall both be free. I don't want to see anybody to-night unless it is something urgent."

"Very well, sir," replied Polton. "I will switch the bell on to the laboratory, and I'll see that you are not disturbed unnecessarily."

With this he took up the letters which Thorndyke had sealed and stamped and reluctantly withdrew, not without a last wistful glance at the apparatus on the tray.

As the door closed behind him, Thorndyke rose, and, bringing forth the button from the drawer in which he had bestowed it, began operations at once. First, with a pair of fine forceps he carefully picked off the worm-tube half a dozen of the largest fragments and laid them on a glass slide. This he placed on the stage of the microscope, and, having fitted on a two inch objective, made a preliminary inspection under various conditions of light, both transmitted and reflected. When he had got clearly into his mind the general character of the unknown rock, he fetched from a store cabinet in the office a number of shallow drawers filled with labelled specimens of rocks and minerals, and he also placed on the table in readiness for reference one or two standard works on geology and petrology. But before examining either the books or the specimens in the drawers, he opened out a geological chart of the British Isles and closely scrutinized the comparatively small area with which the button was concerned—the Land's End and the north and south coast of Cornwall. A very brief scrutiny of the map showed him that the inquiry could now be narrowed down to a quite small group of rocks, the majority of which he could exclude at once by his own knowledge of the more familiar types; which was highly satisfactory. But there was evidently something more than this. Anyone who should have been observing him as he pored over the chart would have seen, by a suddenly increased attention, with a certain repressed eagerness, that some really illuminating fact had come into view; and his next proceedings would make clear to such an observer that the problem had already changed from one of search to a definite and particular identification.

From the chart he turned to the drawers of specimens, running his eye quickly over their contents, as if looking for some
specific object; and this object he presently found in a little cardboard tray—a single fragment of a grey, compact rock, which he pounced upon at once, and, picking it out of its tray, laid it on the slide with the fragment from the worm-tube. Careful comparison gave the impression that they were identical in character, but the great difference in the size of the fragments compared was a source of possible error. Accordingly, he wrapped the specimen lightly in paper, and with a hammer from the tool drawer struck a sharp blow, which broke it into a number of smaller fragments, some of them quite minute. Picking out one or two of the smallest from the paper and carefully noting the "conchoidal" character of the fracture, he placed them on a separate slide, which he at once labelled "stock specimen," labelling the other slide "worm-tube." Having taken this precaution against possible confusion, he laid the two slides on the stage of the microscope and once more made a minute comparison. And again the conclusion emerged that the fragments from the worm-tube were identical in all their characters with the fragment of the stock specimen.

It now remained to test this conclusion by more exact methods. Two more labelled slides having been prepared, Thorndyke laid them, label downwards, on the table and dropped on each a large drop of melted Canada balsam. In one drop, while it was still soft, he immersed two or three fragments from the worm-tube; in the other a like number of fragments of the stock specimen. Then he heated both slides over a spirit-lamp to liquefy the balsam and completely immerse the fragments, and laid them aside to cool while he prepared the appliances for grinding the sections.

This process was, as Polton had hinted, a rather tedious one. It consisted in rubbing the two slides backwards and forwards upon a wetted Turkey stone until the fragments of rock were ground to a flat surface. The flattened surfaces had then to be polished upon a smoother stone, and when this had been done the slides were once more heated over a spirit-lamp, the balsam liquefied, and each of the fragments neatly turned over with a needle on to its flat side. When the balsam was cool and set hard, the grinding process was repeated until each of the fragments was worn down to a thin plate or film with parallel sides. Then the slides were again heated, a fresh drop of balsam applied, and a cover-glass laid on top. The specimens were now finished and ready for examination.

On this, the final stage of the investigation, he bestowed the utmost care and attention. The two specimens were examined exhaustively and compared again and again by every possible method, including the use of the polariscope and the spectroscope, with all the results written down. Finally, Thorndyke turned to the books of reference, and, selecting a highly technical work on petrology, checked his written notes by the very detailed descriptions that it furnished of rocks of volcanic origin. And once again the results were entirely confirmatory of the opinion that he had at first formed. No doubt whatever was left in his mind as to the nature of the particles of rock of which the worm had built its tube. But if his opinion was correct, he held evidence producible in a court of law that Daniel Purcell had never landed at Penzance; that, in fact, his dead body was even now lying at the bottom of the sea.

As he consumed his frugal supper, Thorndyke turned over the situation in his mind. He had no doubts at all. But it would be necessary to get his identification of the rock confirmed by a recognized authority who could be called as a witness, and whose statement would be accepted by the court as establishing the facts. There was no difficulty about that. He had a friend who was connected with the Geological Museum, and who was recognized throughout the world as a first-class authority on everything relating to the physical and chemical properties of rocks and minerals. He would take the specimens tomorrow to this expert, and ask him to examine them; and when the authoritative opinion had been pronounced, he would consider what procedure he should adopt. Already there was growing up in his mind a doubt as to the expediency of taking action on purely scientific evidence, and in answer to that doubt a new scheme began to suggest itself.

But for the moment he put it aside. The important thing was to get the expert identification of the rock, and so put his evidence on the basis of established fact. The conversion of scientific into legal evidence was a separate matter that could be dealt with later. And having reached this conclusion, he took a sheet of notepaper from the rack and wrote a short letter to his friend at the Museum, making an appointment for the following afternoon. A few minutes later he dropped it into the box of the Fleet Street post office, and for the time being dismissed the case from his mind.
XIV. — IN WHICH MR. VARNEY IS DISILLUSIONED

THORNDYKE’S visit to the Geological Museum was not a protracted affair, for his friend, Mr. Burston, made short work of the investigation.

"You say you have examined the specimens yourself," said he. "Well, I expect you know what they are; just come to me for an official confirmation, h’m? However, don’t tell me what your conclusion was. I may as well start with an open mind. Write it down on this slip of paper and lay it on the table face downwards. And now let us have the specimens."

Thorndyke produced from his pocket a cigar-case, from which he extracted a pill-box and the labelled microscope-slide.

"There are two little water-worn fragments in the pill-box," he explained, "and three similar ones which I have ground into sections. I am sorry the specimens are so small, but they are the largest I had."

Mr. Burston took the pill-box, and, tipping the two tiny pebbles into the palm of his hand, inspected them through a Coddington lens.

"Yes," said he; "I don’t think it will be very difficult to decide what this is. I think I could tell you offhand. But I won’t. I’ll put it through the regular tests and make quite sure of it; and meanwhile you had better have a browse round the Museum."

He bustled off to some inner sanctum of the curator’s domain, and Thorndyke adopted his advice by straying out into the galleries. But he had little opportunity to study the contents of the cases, for in a few minutes Mr. Burston returned with a slip of paper in his hand.

"Now," he said facetiously, as they re-entered the room, "you see there’s no deception."

He laid his slip of paper on the table beside Thorndyke’s, and invited the latter to “turn up the cards.” Thorndyke accordingly turned over the two slips of paper. Each bore the single word “phonolite.”

"I knew you had spotted it," said Burston. "However, you have now got corroborative evidence, and I suppose you are happy. I only hope I haven’t helped to send some poor devil to chookee or worse. Good-bye. Glad you brought the things to me."

He restored the pill-box and slide, and having shaken hands heartily returned to his lair, while Thorndyke went forth into Jermyn Street and took his way thoughtfully eastward.

In a scientific sense the Purcell case was now complete. But the more he thought about it the more did he feel the necessity for bringing the scheme of evidence into closer conformity with traditional legal practice. Even to a judge a purely theoretical train of evidence might seem inconclusive; to a jury, who had been well pounded by a persuasive counsel, it would probably appear quite unconvincing. It would be necessary to obtain corroborating along different lines and in a new direction; and the direction in which it would be well to explore in the first place was the ancient precinct of Lincoln’s Inn, where, at 62, Old Buildings, Mr. John Rodney had his professional chambers.

Now, at the very moment when Thorndyke was proceeding with swift strides from the neighbourhood of Jermyn Street towards Lincoln’s Inn on business of the most critical importance to Mr. Varney, it was decreed by the irony of Fate that the latter gentleman should be engaged in bringing his affairs to a crisis of another kind. For some time past he had been watching with growing impatience the dilatory proceedings of the lawyers in regard to Margaret’s petition. Especially had he chafed at the farce of the private detective, searching, as he knew, for a man whose body was lying on the bed of the sea hundreds of miles away from the area of the search. He was deeply disappointed, too. For when his advertisement scheme had been adopted by Thorndyke, he had supposed that all was plain sailing; he had but to send the necessary letter, and the dissolution of the marriage could be proceeded with at once. That was how it had appeared to him. And as soon as the marriage was dissolved he would make his declaration, and in due course his heart’s desire would be accomplished.

Very differently had things turned out. Months had passed, and not a sign of progress had been made. The ridiculous search for the missing man—ridiculous to him only, however—dragged on interminably, and made him gnash his teeth in secret. His omniscience was now a sheer aggravation; for it condemned him to look on at the futile activities that Barnby had suggested and Rodney initiated, recognizing all their futility, but unable to utter a protest. To a man of his temperament it was maddening.

But there was another source of trouble. His confidence in Margaret’s feelings towards him had been somewhat shaken of late. It had seemed to him there had been a change in her bearing towards him—a slight change, subtle and indefinable, but a change. She seemed as friendly, as cordial as ever; she welcomed his visits and appeared always glad to see him, and yet there was something guarded, so he felt, as if she were consciously restraining any further increase of intimacy.

The thought of it troubled him profoundly. Of course, it might be nothing more than a little extra carefulness, due to her equivocal position. She had need to keep clear of anything in the slightest degree compromising; that he realized clearly. But still, the feeling lurked in his mind that she had changed, at least in manner, and sometimes he was aware of a horrible suspicion that he might have been over-confident. More than once he had been on the point of saying something indiscreet, and as time went on he felt ever growing a yearning to have his doubts set at rest.

On this present occasion he was taking tea with Margaret by invitation, with the ostensible object of showing her a set of
etchings of some of the picturesque corners of Maidstone. He always enjoyed showing her his works, because he could see
that she enjoyed looking at them; and these etchings of her native town would, he knew, have a double appeal.

"What a lovely old place it is!" she exclaimed, as she sipped her tea with her eyes fixed on the etchings that Varney had
placed before her on a music-stand. "Why is it, Mr. Varney, that an etching or a drawing of any kind is so much more like
the place than a photograph? It can't be a question of accuracy, for the photograph is at least as accurate as a drawing, and
contains a great deal more detail."

"Yes," agreed Varney, "and that is probably the explanation. An artist puts down what he sees and what anyone else
would see and recognize. A photograph puts down what is there, regardless of how the scene would look to a spectator.
Consequently, it is full of irrelevant detail, which gets in the way of the real effect as the eye would see it; and it may show
appearances that the eye never sees at all, as in the case of Muybridge's instantaneous photographs of galloping horses. A
photograph of a Dutch clock might catch the pendulum in the middle of its swing, and then the clock would appear to have
stopped. But an artist would always draw it at the end of its swing, where it pauses for an instant, and that is where the eye
sees it when the clock is going."

"Yes, of course," said Margaret; "and now I understand why your etchings of the old streets and lanes show just the
streets and lanes that I remember, whereas the photographs that I have all look more or less strange and unfamiliar. I
suppose they are full of details that I never noticed; but your etchings pick out and emphasize the things that I used to look
at with pleasure and which live in my memory. It is a long time since I have been to Maidstone. I should like to see it again;
indeed, I am not sure that, if I were free to choose, I shouldn't like to live there again. It is a dear old town."

"Yes; isn't it? But you say 'if you were free to choose.' Aren't you free to choose where you will live?"

"In a sense I am, I suppose," she replied; "but I don't feel that I can make any definite arrangements for the future until—
well, until I know what my own future is to be."

"But surely you know that now. You have got that letter of Dan's. That practically releases you. The rest is only a matter
of time and legal formalities. If Jack Rodney had only got Penfield or some other solicitor to get the case started as soon as
you had that letter, you would have had your decree by now and have been your own mistress. At least, that is my feeling
on the subject. Of course, I am not a lawyer, and I may be wrong."

"I don't think you are," said Margaret. "I have thought the same all along, and I fancy Mr. Rodney is beginning to regret
that he did not follow Dr. Thorndyke's advice and rely on the letter only. But he felt that he could hardly go against Mr.
Barnby, who has had so much experience in this kind of practice. And Mr. Barnby was very positive that the letter was not
enough."

"Yes, Barnby has crabb'd the whole business; and now after all these months you are just where you were, excepting that
you have dropped a lot of money on this ridiculous private detective. Can't you get Rodney to send the fellow packing and
get the case started in earnest?"

"I am inclined to think that he is seriously considering that line of action, and I hope he is. Of course, I have not tried to
influence him in the matter. It is silly for a lay person to embarrass a lawyer by urging him to do this or that against his
judgment. But I must say that I have grown rather despondent as the time has dragged on and nothing has been done, and
I shall be very relieved when a definite move is made. I have an impression that it will be quite soon."

"That is good hearing," exclaimed Varney, "because when a move is made it can't fail to be successful. How can it? On
that letter Dan could offer no defence, and it is pretty obvious that he has no intention of offering any. And if there is no
defence the case must go in your favour."

"Unless the judge suspects collusion, as Mr. Barnby seems to think he may."

"But," protested Varney, "judges don't give their decisions on what they suspect, do they? I thought they decided on the
evidence. Surely collusion would have to be proved like anything else; and it couldn't be, because there has been no
collusion. And I don't see why anyone should suspect that there has been."

"I agree with you entirely, Mr. Varney," said Margaret, "and I do hope you are right. You are making me feel quite
couraged."

"I am glad of that," said he, "and I am encouraging myself at the same time. This delay has been frightfully
disappointing. I had hoped that by this time the affair would have been over and you would have been free. However, we
may hope that it won't be so very long now."

"It will take some months, in any case," said Margaret.

"Yes, of course," he admitted; "but that is a mere matter of waiting. We can wait patiently when we see the end definitely
in view. And what a relief it will be when it is over! Just think of it! When the words are spoken and the shackles are struck
off! Won't that be a joyful day?"

As Varney was speaking, Margaret watched him furtively and a little uneasily. For there had come into his face an
expression that she had seen more than once of late—an expression that filled her gentle soul with forebodings of trouble
for this impulsive, warm-hearted friend. And now the note of danger was heightened by something significant in the words
that he had used—something that expressed more than mere friendly solicitude.
"It will certainly be a relief when the whole business is over," she said quietly; "and it is most kind and sympathetic of you to take such a warm interest in my future."

"It isn't kind at all," he replied, "nor particularly sympathetic. I feel that I am an interested party. In a sense, your future is my future."

He paused for a few moments, and she looked at him in something like dismay. Vainly she cast about for some means of changing the current of the conversation, of escaping to some less perilous topic. Before she had time to recover from her confusion, he looked up at her and burst out passionately:

"Maggie, I want to ask you a question. I know I oughtn't to ask it, but you must try to forgive me. I can't bear the suspense any longer. I think about it day and night, and it is eating my heart out. What I want to ask you is this: When it is all over—when that blessed day comes and you are free, will you—can I hope that you may be willing to listen to me if I ask you to let me be your devoted servant, your humble worshipper, and to try to make up to you by love and faithful service all that has been missing from your life in the past? For years—for many years, Maggie—I have been your friend—a friend far more loving and devoted than you have ever guessed, for in those days I hardly dared to dream even of intimate friendship. But now the barrier between us is no longer immoveable. Soon it will be cast down for ever. And then—can it be, Maggie, that my dream will come true? That you will grant me a lifelong joy by letting me be the guardian of your happiness and peace?"

For a moment there had risen to Margaret's face a flush of resentment, but it faded almost instantly and was gone, extinguished by a deep sense of the tragedy of this unfortunate but real and great passion. She had always liked Varney, and she had recognized and valued his quiet, unobtrusive friendship and the chivalrous deference with which he had been used to treat her. And now she was going to make him miserable, to destroy his cherished hopes of a future made happy in the realization of his great love for her. The sadness of it left no room for resentment, and her eyes filled as she answered unsteadily:

"You know, Mr. Varney, that, as a married woman, I have no right to speak or think of the making of a new marriage. But I feel that your question must be answered; and I wish, dear Mr. Varney, I wish from my heart that it could be answered differently. I have always valued your friendship—with very good reason; and I value your love, and am proud to have been thought worthy of it. But I cannot accept it. I can never accept it. It is dreadful to me, dear friend, to make you unhappy—you whom I like and admire so much. But it must be so. I have nothing but friendship to offer you, and I shall never have."

"Why do you say you will never have, Maggie?" he urged. "May it not be that you will change? That the other will come if I wait long enough? And I will wait patiently—wait until I am an old man if need be, so that only the door is not shut. I will never weary you with importunities, but just wait your pleasure. Will you not let me wait and hope, Maggie?"

She shook her head sadly. "No, Mr. Varney," she answered. "Believe me, it can never be. There is nothing to wait for. There will be no change. The future is certain so far as that. I am so sorry, dear generous friend. It grieves me to the heart to make you unhappy. But what I have said is final. I can never say anything different."

Varney looked at her in incredulous despair. He could not believe in this sudden collapse of all his hopes; for his doubts of her had been but vague misgivings, born of impatience and unrest. But suddenly a new thought flashed into his mind.

"How do you know that?" he asked. "Why are you so certain? Is there anything now that you know of that—that must keep us apart for ever? You know what I mean, Maggie. Is there anything?"

She was silent for a few moments. Naturally, she was reluctant to disclose to another the secret that she had held so long locked in her own heart, and that even now she dared but to whisper to herself. But she felt that to this man, whose love she must reject and whose happiness she must shatter, she owed a sacred duty. He must not be allowed to wreck his life if a knowledge of the truth would save him.

"I will tell you, Mr. Varney," she said. "You know how I came to marry Dan?"

"I think so," he replied. "He never told me, but I guessed."

"Well, if I had not married Dan I should have married John Rodney. There was no engagement and nothing was said; but we were deeply attached to one another, and we both understood. Then circumstances compelled me to marry Dan. Mr. Rodney knew what those circumstances were. He cherished no resentment against me. He did not even blame me. He has remained my friend ever since, and he has formed no other attachment. I know that he has never forgotten what might have been, and neither have I. Need I say any more?"

Varney shook his head. "No," he replied gruffly. "I understand."

For some moments there was a deep silence in the room. Margaret glanced timidly at her companion, shocked at the sudden change in his appearance. In a moment all the enthusiasm, the eager vivacity, had died out of his face, leaving it aged, drawn, and haggard. He had understood, and his heart was filled with black despair. At a word all his glorious dream-castles had come crashing down, leaving the world that had been so sunny a waste of dust and ashes. So he sat for a while silent, motionless, stunned by the suddenness of the calamity. At length he rose and began, in a dull, automatic way, to collect his etchings and bestow them in his portfolio. When he had secured them and tied the ribbons of the portfolio, he turned to Margaret and, standing before her, looked earnestly in her face.

"Good-bye, Maggie," he said in a strange, muffled voice; "I expect I shan't see you again for some time."
She stood up, and with a little smothered sob held out her hand. He took it in both of his and, stooping, kissed it reverently. "Good-bye again," he said, still holding her hand. "Don't be unhappy about me. It couldn't be helped. I shall often think of you and of how sweet you have been to me to-day; and I shall hope to hear soon that you have got your freedom. And I do hope to God that Rodney will make you happy. I think he will. He is a good fellow, an honest man, and a gentleman. He is worthy of you, and I wish you both long years of happiness."

He kissed her hand once more, and then, releasing it, made his way gropingly out into the hail and to the door. She followed him with the tears streaming down her face, and watched him, as she had watched him once before, descending the stairs. At the landing he turned and waved his hand, and even as she returned his greeting he was gone. She went back to the drawing-room still weeping silently, very sad at heart at this half-foreseen tragedy. For the time being, she could see, Varney was a broken man. He had come full of hope and he had gone away in despair; and something seemed to hint—it may have been the valedictory tone of his last words—that she had looked on him for the last time, that the final wave of his hand was a last farewell.

Meanwhile Varney, possessed by a wild unrest, hurried through the streets, yearning, like a wounded animal, for the solitude of his lair. He wanted to shut himself in his studio and be alone with his misery. Presently he hailed a taxicab, and from its window gazed out impatiently to measure its progress. Soon it drew up at the familiar entry, and when he had paid the driver he darted in and shut the door; but hardly had he attained the sanctuary that he had longed for than the same unrest began to engender a longing to escape. Up and down the studio he paced, letting the unbidden thoughts surge chaotically through his mind, mingling the troubled past with the future of his dreams—the sunny future that might have been—and this with the empty reality that lay before him.

On the wall he had pinned an early proof of the aquatint that Thorndyke had liked and that he himself rather liked. He had done it partly from bravado and partly as a memorial of the event that had set both him and Maggie free. Presently he halted before it and let it set the tune to his meditations. There was the lighthouse looking over the fog-bank just as it had looked on him when he was washing the bloodstain from the deck. By that time Purcell was overboard, at the bottom of the sea. His oppressor was gone. His life was now his own, and her life was her own.

He looked at the memorial picture, and in a moment it seemed to him to have become futile. The murder itself was futile, so far as he was concerned, though it had set Maggie free. To what purpose had he killed Purcell? It had been to ensure a future for himself; and behold! there was to be no future for him after all. Thus in the bitterness of his disappointment he saw everything out of proportion and in false perspective. He forgot that it was not to win Margaret but to escape from the clutches of his parasite that he had pulled the trigger on that sunny day in June. He forgot that he had achieved the very object that was in his mind when he fired the shot: freedom to live a reputable life safe from the menace of the law. His passion for Margaret had become so absorbing that it had obscured all the other purposes of his life; and now that it was gone, it seemed to him that nothing was left.

As he stood thus gloomily reflecting with his eyes fixed on the little picture, he began to be aware of a new impulse. The lighthouse, the black-sailed luggers, the open sea, seemed to take on an unwonted friendliness. They were the setting of something besides tragedy. There, in Cornwall, he had been happy in a way despite the abiding menace of Purcell's domination. There, at Sennen, he had lived under the same roof with her, had sat at her table, had been her guest and her accepted friend. It had not really been a happy period, but memory, like the sundial, numbers only the sunny hours, and Varney looked back on it with wistful eyes. At least his dream had not been shattered then. So, as he looked at the picture, he felt stirring within him a desire to go back and look upon those scenes again. Falmouth and Penzance and Sennen—especially Sennen—seemed to draw him. He wanted to look out across the sea to the Longships, and in the gathering gloom of the horizon to see the diamond and the ruby sparkle as they did that evening when he and the distant lighthouse seemed to hold secret converse.

It was, perhaps, a strange impulse. Whence it came he neither knew nor asked. It may have been the effect of memory and association. It may have been mere unrest. Or it may have been that a dead hand beckoned to him to come. Who shall say? He only knew that he was sensible of the impulse, and that it grew from moment to moment.

To a man in his condition, to feel the impulse to go back and look upon the well-remembered scenes than he began to make his simple preparations for the journey. Like most experienced travellers he travelled light. Most of his kit, including his little case of sketching materials, was in the studio. The rest could be picked up at his lodgings en route for Paddington. Within ten minutes of his having formed the resolve to go, he stood on the threshold, locking the studio door from without with the extra key that he used when he was absent for more than a day. At the outer gate he paused to pocket the key, and stood for a few moments with his portmanteau in his hand, looking back at the studio with a curiously reflective air. Then, at last, he turned and went on his way. But if he could have looked, as the clairvoyant claims to look, through the bricks and mortar of London, he might at this very time have seen Dr. John Thorndyke striding up Chancery Lane from Fleet Street; might have followed him to the great gateway of Lincoln's Inn (on the masonry whereof tradition has it that Ben Jonson worked as a bricklayer), and seen him pass through into the little square beyond, and finally plunge into the dark and narrow entry of one of the ancient red brick houses that have looked down upon the square for some three or four centuries—an entry on the jamb of which was painted the name of Mr. John Rodney.

But Varney was not a clairvoyant, and neither was Thorndyke. And so it befell that each of them went his way unconscious of the movements of the other.
V.

IN WHICH THORNDYKE OPENS THE ATTACK

As Thorndyke turned the corner at the head of the stairs, he encountered Philip Rodney with a kettle in his hand, which he had apparently been filling at some hidden source of water.

"This is a bit of luck," said Philip, holding out his disengaged hand—"for me, at least; not, perhaps, for you. I have only just arrived, and Jack hasn't come over from the courts yet. I hope this isn't a business call."

"In a sense it is," replied Thorndyke, "as I am seeking information. But I think you can probably tell me all I want to know."

"That's all right," said Philip. "I'll just plant 'Polly' on the gas-stove, and while she is boiling we can smoke a preparatory pipe and you can get on with the examination-in-chief. Go in and take the presidential chair."

Thorndyke entered the pleasant, homely room, half office, half sitting-room, and seating himself in the big armchair began to fill his pipe. In a few moments Philip entered, and sat down on a chair which commanded a view of the tiny kitchen and of "Polly," seated on a gas-ring.

"Now," said he, "fire away. What do you want to know?"

"I want," replied Thorndyke, "to ask you one or two questions about your yacht."

"The deuce you do!" exclaimed Philip. "Are you thinking of going in for a yacht yourself?"

"Not at present," was the reply. "My questions have reference to that last trip that Purcell made in her, and the first one is: When you took over the yacht after that trip, did you find her in every respect as she was before? Was there anything missing that you could not account for, or any change in her condition, or anything about her that was not quite as you expected it to be?"

Philip looked at his visitor with undissembled surprise. "Now I wonder what makes you ask that. Have you any reason to expect that I should have found any change in her condition?"

"If you don't mind," said Thorndyke, "we will leave that question unanswered for the moment. I would rather not say, just now, what my object is in seeking this information. We can go into that later. Meanwhile, do you mind just answering my questions as if you were in the witness-box?"

A shade of annoyance crossed Philip's face. He could not imagine what possible concern Thorndyke could have with his yacht, and he was inclined to resent the rather cryptic attitude of his questioner. Nevertheless, he answered readily:

"Of course I don't mind. But, in fact, there is nothing to tell. I don't remember noticing any thing unusual about the yacht, and there was nothing missing, so far as I know."

"No rope or cordage of any kind, for instance?"

"No—at least, nothing to speak of. A new ball of spun-yarn had been broached. I noticed that, and I meant to ask Varney what he used it for. But there wasn't a great deal of it gone, and I know of nothing else. Oh, wait! If I am in the witness-box I must tell the whole truth, be it never so trivial. There was a mark or stain or dirty smear of some kind on the jib. Is that any good to you?"

"Are you sure it wasn't there before that day?"

"Quite. I sailed the yacht myself the day before, and I will swear that the jib was spotlessly clean then. So the mark must have been made by Purcell or Varney, because I noticed it the very next day."

"What was the mark like?"

"It was just a faint wavy line, as if some dirty water had been spilt on the sail and allowed to dry partly before it was washed off."

"Did you form any opinion as to how the mark might have been caused?"

Philip struggled, not quite successfully, to suppress a smile. To him there seemed something extremely ludicrous in this solemn interrogation concerning these meaningless trifles. But he answered as gravely as he could:

"I could only make a vague guess. I assumed that it was caused in some way by the accident that occurred. You may remember that the jib-halyard broke, and the sail went overboard and got caught under the yacht's forefoot. That is when it must have happened. Perhaps the sail may have picked some dirt off the keel. Usually a dirty mark on the jib means mud on the fluke of the anchor, but it wasn't that. The anchor hadn't been down since it was scrubbed. The yacht rode at moorings in Sennen Cove. However, there was the mark; how it came there you are as well able to judge as I am."

"And that is all you know; this mark on the sail and the spun-yarn? There is no other cordage missing?"

"No, not so far as I know."

"And there is nothing else missing? No iron fittings or heavy objects of any kind?"

"Good Lord, no! How should there be? You don't suspect Purcell of having hooked off with one of the anchors in his
Thorndyke smiled indulgently, but persisted in his questions.

"Do you mean that you know there was nothing missing, or only that you are not aware of any thing being missing?"

The persistence of the questions impressed Philip with a sudden suspicion that Thorndyke had something definite in his mind, that he had some reason for believing that something had been removed from the yacht. He ventured to suggest this to Thorndyke, who answered frankly enough:

"You are so far right, Philip, that I am not asking these questions at random. I would rather not say more than that just now."

"Very well," said Philip; "I won't press you for an explanation. But I may say that we dismantled the yacht in rather a hurry, and hadn't time to check the inventory, so I can't really say whether there was anything missing or not. But you have come at a most opportune time, for it happens that we had arranged to go over to the place where she is laid up, at Battersea, to morrow afternoon for the very purpose of checking the inventory and generally overhauling the boat and the gear. If you care to come over with us, or meet us there, we can settle your questions quite definitely. How will that suit you?"

"It will suit me perfectly," replied Thorndyke. "If you will give me the address and fix a time, I will meet you there."

"It is a disused wharf with some empty work shops," said Philip. "I will write down the directions, and if you will be at the gate at three o'clock to-morrow, we can go through the gear and fittings together."

Thorndyke made a note of the whereabouts of the wharf, and having thus despatched the business on which he had come, he took an early opportunity to depart, not having any great desire to meet John Rodney and be subjected to the inevitable cross-examination. He could see that Philip was, naturally enough, extremely curious as to the object of his inquiries, and he preferred to leave the two brothers to discuss the matter. On the morrow his actions would be guided by the results, if any, of the survey of the yacht.

Three o'clock on the following afternoon found him waiting at a large wooden gate in a narrow thoroughfare close to the river. On the pavement by his side stood the green canvas-covered "research case," which was his constant companion whenever he went abroad on professional business. It contained a very complete outfit of such reagents and apparatus as he might require in a preliminary investigation; but on the present occasion its usual contents had been reinforced by two large bottles, to obtain which Polton had that morning made a special visit to a wholesale chemist's in the Borough. A church clock somewhere across the river struck the hour, and almost at the same moment John and Philip Rodney emerged from a tributary alley and advanced towards the gate.

"You are here first, then," said Philip, "but we are not late. I heard a clock strike a moment ago."

He produced a key from his pocket, with which he unlocked a wicket in the gate, and, having pushed it open, invited Thorndyke to enter. The latter passed through, and the two brothers followed, locking the wicket after them, and conducted Thorndyke across a large yard to a desolate looking wharf, beyond which was a stretch of unreclaimed shore. Here, drawn up well above high-water mark, a small, sharp-stermed yacht stood on chocks under a tarpaulin cover.

"This is the yacht," said Philip, "but there is nothing on board of her. All the stores and gear and loose fittings are in the workshop behind us. Which will you see first?"

"Let us look at the gear," replied Thorndyke; and they accordingly turned towards a large disused workshop at the rear of the wharf.

"Phil was telling me about your visit last night," said Rodney, with an inquisitive eye on the research case, "and we are both fairly flummoxed. He gathered that these inquiries of yours are in some way connected with Purcell."

"Yes, that is so. I want to ascertain whether, when you resumed possession of the yacht after Purcell left her, you found her in the same condition as before, and whether her stores, gear, and fittings were intact."

"Did you suppose that Purcell might have taken some of them away with him?"

"I thought it not impossible," Thorndyke replied.

"Now, I wonder why on earth you should think that," said Rodney, "and what concern it should be of yours if he had."

Thorndyke smiled evasively. "Everything is my concern," he replied. "I am an Autolycus of the Law, a collector of miscellaneous trifles of evidence and unclassifiable scraps of information."

"Well," said Rodney, with a somewhat sour smile, "I have no experience of legal curiosity shops and oddment repositories. But I don't know what you mean by 'evidence.' Evidence of what?"

"Of whatever it may chance to prove," Thorndyke replied blandly.

"What did you suppose Purcell might have taken with him?" Rodney asked, with a trace of irritability in his tone.

"I had thought it possible that there might be some cordage missing and perhaps some iron fittings or other heavy objects. But, of course, that is mere surmise. My object is, as I have said, to ascertain whether the yacht was in all respects in the same condition when Purcell left her as when he came on board."
Rodney gave a grunt of impatience; but at this moment Philip, who had been wrestling with a slightly rusty lock, threw open the door of the workshop, and they all entered. Thorndyke looked curiously about the long, narrow interior with its prosaic contents, so little suggestive of the tragedy which his thoughts associated with them. Over head the yacht's spars rested on the tie-beams, from which hung bunches of blocks; on the floor reposed a long row of neatly painted half-hundred weights, a pile of chain cable, two anchors, a stove, and other oddments such as water-breakers, buckets, mops, etc.; and on the long benches at the side folded sails, locker cushions, sidelight lanterns, the binnacle, the cabin lamp, and other more delicate fittings. After a long look round, in the course of which his eye travelled along the row of ballast-weights, Thorndyke deposited his case on a bench and asked:

"Have you still got the broken jib-halyard that Philip was telling me about last night?"

"Yes," answered Rodney; "it is here under the bench."

He drew out a coil of rope, and, flinging it on the floor, began to uncoil it, when it separated into two lengths.

"Which are the broken ends?" asked Thorndyke.

"It broke near the middle," replied Rodney, "where it chafed on the cleat when the sail was hoisted. This is the one end, you see, frayed out, like a brush in breaking, and the other—" He picked up the second half, and passing it rapidly through his hands held up the end. He did not finish the sentence, but stood, with a frown of surprise, staring at the rope in his hand.

"This is queer," he said, after a pause. "The broken end has been cut off. Did you cut it off, Phil?"

"No," replied Philip; "it is just as I took it from the locker, where I suppose, you or Varney stowed it."

"I wonder," said Thorndyke, "how much has been cut off. Do you know what the original length of the rope was?"

"Yes," replied Rodney; "forty-two feet. It is down in the inventory, but I remember working it out. Let us see how much there is here."

He laid the two lengths of rope along the floor, and with Thorndyke's spring tape care fully measured them. The combined length was exactly thirty-one feet.

"So," said Thorndyke, "there are eleven feet missing without allowing for the lengthening of the rope by stretching."

The two brothers glanced at one another, and both looked at Thorndyke with very evident surprise.

"Well," said Philip, "you seem to be right about the cordage. But what made you go for the jib-halyard in particular?"

"Because if any cordage had been cut off it would naturally be taken from a broken rope in preference to a whole one."

"Yes, of course. But I can't understand how you came to suspect that any rope was missing at all."

"We will talk about that presently," said Thorndyke. "The next question is as to the iron fittings, chain, and so forth."

"I don't think any of those can be missing," said Rodney. "You can't very well cut a length of chain off with your pocket-knife."

"No," agreed Thorndyke, "but I thought you might have some odd piece of chain among the ballast."

"We have no chain except the cable. Our only ballast is in the form of half-hundredweights. They are handier to stow than odd stuff."

"How many half-hundredweights have you?"

"Twenty-four," replied Rodney.

"There are only twenty-three in that row," said Thorndyke. "I counted them as we came in and noted the odd number."

The two brothers simultaneously checked Thorndyke's statement and confirmed it. Then they glanced about the floor of the workshop, under the benches, and by the walls; but the missing weight was nowhere to be seen, nor was there any place in which an object of this size could have got hidden.

"It is very extraordinary," said Philip. "There is certainly one weight missing. And no one has handled them but Jack and I. We hired a barrow and brought up all the gear ourselves."

"There is just the chance," said Thorndyke, "that one of them may have been overlooked and left in the yacht's hold."

"It is very unlikely," replied Philip, "seeing that we took out the floor-boards, so that you can see the whole of the bilges from end to end. But I will run down and make sure."

He ran out, literally, and crossing the wharf disappeared over the edge. In a couple of minutes he was back, breathing fast, and evidently not a little excited.

"It isn't there," he said. "Of course it couldn't be. But the question is, what has become of it? It is a most mysterious affair."

"It is," agreed Rodney. "And what is still more mysterious is that Thorndyke seemed to suspect that it was missing even before he came here. Now didn't you, Thorndyke?"

"I suspected that some heavy object was missing, as I mentioned," was the reply, "and a ballast-weight was a likely object. By the way, can you fix a date on which you know that all the ballast-weights were in place?"

"Yes, I think I can," replied Philip. "A few days before Purcell went to Penzance we beached the yacht to give her a scrape. Of course we had to take out the ballast, and when we launched her again I helped to put it back. I am certain that all the weights were there then, because I counted them after they were stowed in their places."

"Then," said Thorndyke, "it is virtually certain that they were all on board when Purcell and Varney started from Sennen."

"I should say it is absolutely certain," said Philip.

Thorndyke nodded gravely and appeared to reflect a while. But his reflections were broken in upon by John Rodney.

"Look here, Thorndyke, we have answered your questions and given you facilities for verifying certain opinions that you held, and now it is time that you were a little less reserved with us. You evidently connected the disappearance of this rope and this weight in some way with Purcell. Now, we are all interested in Purcell. You have got something up your sleeve, and we should like to know what that something is. It is perfectly obvious that you don't imagine that Purcell, when he went up the pier ladder at Penzance, had a couple of fathoms of rope and a half-hundred weight concealed about his person."

"As a matter of fact," said Thorndyke, "I don't imagine that Purcell ever went up the ladder at Penzance at all."

"But Varney saw him go up," protested Philip.

"Varney says he saw him go up," Thorndyke corrected. "I do not accept Mr. Varney's statement."

"Then what on earth do you suggest?" demanded Philip. "And why should Varney say what isn't true?"

"Let us sit down on this bench," said Thorndyke, "and thrash the matter out. I will put my case to you, and you can give me your criticisms on it. I will begin by stating that some months ago I came to the conclusion that Purcell was dead."

Both the brothers started and gazed at Thorndyke in utter astonishment. Then Rodney said:

"You say 'some months ago.' You must mean within the last three months."

"No," replied Thorndyke. "I decided that he died on the 2nd of last June, before the yacht reached Penzance."

An exclamation burst simultaneously from both of his hearers, and Rodney protested impatiently:

"But this is sheer nonsense, if you will pardon me for saying so. Have you forgotten that two persons have received letters from him less than four months ago?"

"I suggest that we waive those letters and consider the other evidence."

"But we can't waive them!" exclaimed Rodney. "They are material evidence of the most conclusive kind."

"I may say that I have ascertained that both those letters were forgeries. The evidence can be produced, if necessary, as both the letters are in existence, but I don't propose to produce it now. I ask you to accept my statement for the time being and to leave the letters out of the discussion."

"It is leaving out a good deal," said Rodney. "I find it very difficult to believe that they were forgeries or to imagine who on earth could have forged them. However, we won't contest the matter now. When did you come to this extra ordinary conclusion?"

"A little over four months ago," replied Thorndyke.

"And you never said anything to any of us on the subject," said Rodney, "and, what is more astonishing, you actually put in an advertisement, addressed to a man whom you believed to be dead."

"And got an answer from him," added Philip, with a derisive smile.

"Exactly," said Thorndyke. "It was an experiment, and it was justified by the result. But let us get back to the matter that we have been investigating. I came to the conclusion, as I have said, that Purcell met his death during that voyage from Sennen to Penzance, and that Varney, for some reason, had thought it necessary to conceal the occurrence; but I decided that the evidence in my possession would not be convincing in a court of law."

"I have no doubt that you were perfectly right in that," Rodney remarked dryly.

"I further considered it very unlikely that any fresh evidence would ever be forthcoming, and that, since the death could not be proved, it was, for many reasons, undesirable that the question should ever be raised. Accordingly, I never communicated my belief to anybody."

"Then," said Rodney, "are we to understand that some new evidence has come to light, after all?"

"Yes. It came to light the other day at the College of Surgeons. I dare say Philip told you about it."

"He told me that, by an extraordinary coincidence, that quaint button of Purcell's had turned up, and that some sort of sea-worm had built a tube on it. But if that is what you mean, I don't see the bearing of it as evidence."

"Neither do I," said Philip.
"You remember that Varney distinctly stated that when Purcell went up the ladder at Penzance he was wearing his oilskin coat, and that the button was then on it?"

"Yes. But I don't see anything in that. Purcell went ashore, it is true, and he went away from Cornwall. But he seems to have gone by sea, and, as I suggested the other day, he probably got a fresh button when he went on board the steamer and chucked this cork one overboard."

"I remember your making that suggestion," said Thorndyke, "and very much astonished I was to hear you make it. I may say that I have ascertained that Purcell was never on board that steamer."

"Well, he might have thrown it into the sea somewhere else. There is no particular mystery about its having got into the sea. But what was there about my suggestion that astonished you so much?"

"It was," replied Thorndyke, "that you completely overlooked a most impressive fact which was staring you in the face and shouting aloud for recognition."

"Indeed!" said Philip. "What fact was it that I overlooked?"

"Just consider," replied Thorndyke, "what it was that Professor D'Arcy showed us. It was a cork button with a Terebella tube on it. Now an ordinary cork, if immersed long enough, will soak up water until it is waterlogged and then sink to the bottom. But this one was impregnated with paraffin wax. It could not get waterlogged and it could not sink. It would float for ever."

"Well?" queried Philip.

"But it had sunk. It had been lying at the bottom of the sea for months—long enough for a Terebella to build a tube on it. Then at last it had broken loose, risen to the surface and drifted ashore."

"You are taking the worm-tube as evidence," said John Rodney, "that the button had sunk to bottom. Is it impossible—I am no naturalist—but is it impossible that the worm could have built its tube while the button was floating about in the sea?"

"It is quite impossible," replied Thorndyke, "in the case of this particular worm, since the tube is built up of particles of rock gathered by the worm from the sea bottom. You will bear me out in that, Philip?"

"Oh, certainly," replied Philip. "There is no doubt that the button has been at the bottom for a good many months. The question is how the deuce it can have got there, and what was holding it down."

"You are not overlooking the fact that it is a button," said Thorndyke—"I mean that it was attached to a garment?"

Both men looked at Thorndyke a little uncomfortably. Then Rodney replied:

"Your suggestion obviously is that the button was attached to a garment and that the garment contained a body. I am disposed to concede the garment, since I can think of no other means by which the button could have been held down, but I see no reason for assuming the body. I admit that I do not quite understand how Purcell's oilskin coat could have got to the bottom of the sea, but still less can I imagine how Purcell's body could have got to the bottom of the sea. What do you say, Phil?"

"I agree with you," answered Philip. "Something must have held the button down, and I can think of nothing but the coat to which it was attached. But as to the body, it seems a gratuitous assumption, to say nothing of the various reasons for believing that Purcell is still alive. There is nothing wildly improbable in the supposition that the coat might have blown overboard and been sunk by something heavy in the pocket. As a matter of fact, it would have sunk by itself as soon as it got thoroughly soaked. You must admit, Thorndyke, that that is so."

But Thorndyke shook his head. "We are not dealing with general probabilities," said he. "We are dealing with a specific case. An empty oilskin coat, even if sunk by some object in the pocket, would have been comparatively light, and, like all moderately light bodies, would have drifted about the sea bottom, impelled by currents and tide-streams. But that is not the condition in the present case. There is evidence that this button was moored immovably to some very heavy object."

"What evidence is there of that?" demanded Rodney.

"There is the conclusive fact that it has been all these months lying continuously in one place."

"Indeed!" said Rodney, with hardly concealed scepticism. "That seems a bold thing to say. But if you know that it has been lying all the time in one place, perhaps you can point out the spot where it has been lying."

"As a matter of fact I can," said Thorndyke. "That button, Rodney, has been lying all these months on the sea bottom at the base of the Wolf Rock."

The two brothers started very perceptibly. They stared at Thorndyke, then looked at one another, and then Rodney challenged the statement.

"You make this assertion very confidently," he said. "Can you produce any evidence to support it?"

"I can produce perfectly convincing and conclusive evidence," replied Thorndyke. "A very singular conjunction of circumstances enables us to fix with absolute certainty the place where that button has been lying. Do you happen to be acquainted with the peculiar resonant volcanic rock known as phonolite or clink-stone?"
Rodney shook his head a little impatiently. "No," he answered; "I have never heard of it before."

"It is not a very rare rock," said Thorndyke, "but in the neighbourhood of the British Isles it occurs in only two places. One is inland in the North, and may be disregarded. The other is the Wolf Rock."

Neither of his hearers made any comment on this statement, though it was evident that both were deeply impressed, and he continued:

"This Wolf Rock is a very remarkable structure. It is what is called a 'volcanic neck'—that is, it is a mass of altered lava that once filled the funnel of a volcano. The volcano has disappeared, but this cast of the funnel remains standing up from the bottom of the sea like a great column. It is a single mass of phonolite, and thus entirely different in composition from the sea bed around or anywhere near these islands. But, of course, immediately at its base the sea bottom must be covered with decomposed fragments which have fallen from its sides, and it is with these fragments that our Terebella has built its tube. You remember, Philip, my pointing out to you, as we walked home from the College, that the worm-tube appeared to be built of fragments that were all alike. Now, that was a very striking and significant fact. It furnished prima facie evidence that the button had been moored in one place, and that it had therefore been attached to some very heavy object. That night I made an exhaustive examination of the material of the tube, and then the further fact emerged that the material was phonolite. This, as I have said, fixed the locality with exactness and certainty. And I may add that, in view of the importance of the matter in an evidential sense, I submitted the fragments yesterday to one of the greatest living authorities on petrology, who recognized them at once as phonolite."

For some time after Thorndyke had finished speaking the two brothers sat wrapped in silent reflection. Both were deeply impressed, but each in a markedly different way. To John Rodney, the lawyer, accustomed to sworn testimony and documentary evidence, this scientific demonstration appeared amazingly ingenious but some what fantastic and unconvincing. In the case of Philip, the doctor, it was quite otherwise. Accustomed to acting on inferences from facts of his own observing, he gave full weight to each item of evidence, and his thoughts were already stretching out to the as yet unstated corollaries.

John Rodney was the first to speak. "What inference," he asked, "do you wish us to draw from this very ingenious theory of yours?"

"It is rather more than a theory," said Thorndyke, "but we will let that pass. The inference I leave to you; but perhaps it would help you if I were to recapitulate the facts."

"Perhaps it would," said Rodney.

"Then," said Thorndyke, "I will take them in their order. This is the case of a man who was seen to start on a voyage for a given destination in company with one other man. His start out to sea was witnessed by a number of persons. From that moment he was never seen again by any person excepting his one companion. He is said to have reached his destination, but his arrival there rests upon the unsupported verbal testimony of one person, the said companion. Thereafter he vanished utterly, and since then has made no sign of being alive; he has drawn no cheques, though he has a considerable balance at his bank; he has communicated with no one, and he has never been seen by anybody who could recognize him."

"Is that quite correct?" interposed Philip. "He is said to have been seen at Falmouth and Ipswich, and then there are those letters."

"His alleged appearance, embarking at Falmouth and disembarking at Ipswich," replied Thorndyke, "rest, like his arrival at Penzance, upon the unsupported testimony of one person, his sole companion on the voyage. That statement I can prove to be untrue. He was never seen either at Falmouth or at Ipswich. As to the letters, I can prove them both to be forgeries and for the present I ask you to admit them as such pending the production of proof. But if we exclude the alleged appearances and the letters, what I have said is correct: from the time when this man put out to sea from Sennen he has never been seen by anyone but Varney, and there has never been any corroboration of Varney's statement that he landed at Penzance."

"Some eight months later a portion of this man's clothing is found. It bears evidence of having been lying at the bottom of the sea for many months, so that it must have sunk to its resting-place within a very short time of the man's disappearance. The place where it has been lying is over, or near, which the man must have sailed in the yacht. It has been moored to the bottom by some very heavy object, and a very heavy object has disappeared from the yacht. That heavy object had apparently not disappeared when the yacht started, and it is not known to have been on the yacht afterwards. The evidence goes to show that the disappearance of that object coincided in time with the disappearance of the man, and a quantity of cordage disappeared certainly on that day."

"Those are the facts at present in our possession with regard to the disappearance of Daniel Purcell, to which we may add that the disappearance was totally unexpected, that it has never been explained or accounted for excepting in a letter which is a manifest forgery, and that even in the latter, apart from the fictitious nature of the letter, the explanation is utterly inconsistent with all that is known of the missing man in respect of his character, his habits, his intentions, and his circumstances."
ONCE more, as Thorndyke concluded, there was a long, uncomfortable silence, during which the two brothers cogitated profoundly and with a very disturbed expression. At length John Rodney spoke.

"There is no denying, Thorndyke, that the body of circumstantial evidence that you have produced and expounded so skillfully and lucidly is extra ordinarily complete. Of course, it is subject to your being able to prove that Varney's reports as to Purcell's appearance at Falmouth and Ipswich were false reports, and that the letters which purported to be written and sent by Purcell were in fact not written or sent by him. If you can prove those assertions, there will undoubtedly be a very formidable case against Varney, because those reports and those letters would then be evidence that someone was endeavouring to prove, falsely, that Purcell is alive. But this would amount to presumptive evidence that he is not alive, and that someone has reasons for concealing the fact of his death. But we must look to you to prove what you have asserted. You could hardly suggest that we should charge a highly respectable gentleman of our acquaintance with having murdered his friend and made away with the body—for that is obviously your meaning—on a mass of circumstantial evidence, which is, you must admit, rather highly theoretical."

"I agree with you completely," replied Thorndyke. "The evidence respecting the reports and the letters is obviously essential. But in the meantime it is of the first importance that we carry this investigation to an absolute finish. It is not merely a question of justice or our duty on grounds of public policy to uncover a crime and secure the punishment of the criminal. There are individual rights and interests to be guarded—those, I mean, of the missing man's wife. If her husband is dead, common justice to her demands that his death should be proved and placed on public record."

“Yes, indeed,” Rodney agreed heartily. “If Purcell is dead, then she is a widow, and the petition becomes unnecessary. By the way, I understand now why you were always so set against the private detective, but what I don’t understand is why you put in that advertisement."

“It is quite simple,” was the reply. “I wanted another forged letter, written in terms dictated by myself—and I got it."

“Ha!” exclaimed Rodney. And now, for the first time, he began to understand how Thorndyke had got his great reputation.

“You spoke just now,” Rodney continued, "of carrying this investigation to a finish. Haven't you done so? Is there anything more to investigate?

“We have not yet completed our examination of the yacht,” replied Thorndyke. "The facts that we have elicited enable us to make certain inferences concerning the circumstances of Purcell's death—assuming his death to have occurred. We infer, for instance, that he did not fall overboard, nor was he pushed overboard. He met his death on the yacht, and it was his dead body which was cast into the sea with the sinker attached to it. That we may fairly infer. But we have, at present, no evidence as to the way in which he came by his death. Possibly a further examination of the yacht may show some traces from which we may form an opinion. By the way, I have been looking at that revolver that is hanging from the beam. Was that on board at the time?"

“Yes,” answered Rodney. "It was hanging on the cabin bulkhead. Be careful," he added, as Thorndyke lifted it from its hook. "I don't think it has been unloaded."

Thorndyke opened the breech of the revolver, and, turning out the cartridges into his hand, peered down the barrel and into each chamber separately. Then he looked at the cartridges in his hand.

"This seems a little odd," he remarked. "The barrel is quite clean and so is one chamber, but the other five chambers are extremely foul. And I notice that the cartridges are not all alike. There are five Eleys and one Curtis and Harvey. That is quite a suggestive coincidence."

Philip looked with a distinctly startled expression at the little heap of cartridges in Thorndyke's hand, and, picking out the odd one, examined it with knitted brows.

"When did you fire the revolver last, Jack?" he asked, looking up at his brother.

"On the day when we potted at those champagne bottles," was the reply.

Philip raised his eyebrows. "Then," said he, "this is a very remarkable affair. I distinctly remember on that occasion, when we had sunk all the bottles, reloading the revolver with Eleys, and that there were then three cartridges left over in the bag. When I had loaded I opened the new box of Curtis and Harvey's, tipped them into the bag, and threw the box overboard."

"Did you clean the revolver?" asked Thorndyke.

"No, I didn't. I meant to clean it later, but forgot to."

"But," said Thorndyke, "it has undoubtedly been cleaned, and very thoroughly as to the barrel and one chamber. Shall we check the cartridges in the bag? There ought to be forty-nine Curtis and Harveys and three Eleys if what you have told us is correct."

Philip searched among the raffle on the bench, and presently unearthed a small linen bag. Untying the string, he shot out
on the bench a heap of cartridges, which he counted one by one. There were fifty-two in all, and three of them were Eleys.

"Then," said Thorndyke, "it comes to this: since you used that revolver it has been used by someone else. That someone fired only a single shot, after which he carefully cleaned the barrel and the empty chamber and reloaded. Incidentally, he seems to have known where the cartridge-bag was kept, but he did not know about the change in the make of cartridges or that the revolver had not been cleaned. You notice, Rodney," he added, "that the circumstantial evidence accumulates."

"I do, indeed," Rodney replied gloomily. "Is there anything else that you wish to examine?"

"Yes; there is the sail. Philip mentioned a stain on the jib. Shall we see if we can make any thing of that?"

"I don't think you will make much of it," said Philip. "It is very faint. However, you shall see it and judge for yourself."

He picked out one of the bundles of white duck, and while he was unfolding it Thorndyke dropped an empty bench into the middle of the floor under the skylight. Over this the sail was spread so that the mysterious mark was in the middle of the bench. It was very inconspicuous—just a faint grey-green, wavy line, like the representation of an island on a map. The three men looked at it curiously for a few moments, then Thorndyke asked:

"Would you mind if I made a further stain on the sail? I should like to apply some reagents."

"Of course you must do what is necessary," said Rodney. "The evidence is more important than the sail."

On this Thorndyke opened his research case and brought forth the two bottles that Polton had procured from the Borough, of which one was labelled "Tinct. Guaiaci Dil." and the other "Ozon." As they emerged from the case, Philip commented, "I shouldn't have thought that the guaiacum test would be of any use after all these months, especially as the sail seems to have been scrubbed."

"It will act, I think, if the pigment or its derivatives is there," said Thorndyke; and as he spoke he poured a quantity of the tincture on the middle of the stained area. The pool of liquid rapidly spread considerably beyond the limits of the stain, growing paler as it extended. Then Thorndyke cautiously dropped small quantities of the ozonic ether at various points around the stained area, and watched closely as the two liquids mingled in the fabric of the sail. Gradually the ether spread towards the stain, and, first at one point and then at another, approached and finally crossed the wavy grey line; and at each point the same change occurred: first the faint grey line turned into a strong blue line, and then the colour extended to the enclosed space until the entire area of the stain stood out a conspicuous blue patch. Philip and Thorndyke looked at one another significantly, and the latter said: "You understand the meaning of this reaction, Rodney; this is a bloodstain, and a very carefully washed bloodstain."

"So I supposed," Rodney replied; and for a while no one spoke.

There was something very dramatic and solemn, they all felt, in the sudden appearance of this staring blue patch on the sail with the sinister message that it brought. But what followed was more dramatic still. As they stood silently regarding the blue stain, the mingled liquids continued to spread; and suddenly, at the extreme edge of the wet area, they became aware of a new spot of blue. At first a mere speck, it grew slowly, as the liquid spread over the canvas, into a small oval, and then a second spot appeared by its side. At this point Thorndyke poured out a fresh charge of the tincture, and when it had soaked into the cloth cautiously applied a sprinkling of ether. Instantly the blue spots began to elongate; fresh spots and patches appeared, and as they ran together there sprang out of the blank surface the clear impression of a hand—a left hand, complete in all its details excepting the third finger, which was represented by a round spot at some two-thirds of its length.

The dreadful significance of this apparition, and the uncanny and mysterious manner of its emergence from the white surface, produced a most profound impression on all the observers, but especially on Rodney, who stared at it with an expression of the utmost horror, but spoke not a word. His brother was hardly less appalled, and when he at length spoke it was in a hushed voice that was little above a whisper.

"It is horrible," he murmured. "It seems almost supernatural, that accusing hand springing into existence out of the blank surface after all this time. I wonder," he added, after a pause, "why the third finger made no mark, seeing that the others are so distinct."

"I think," said Thorndyke, "that the impression is there. That small round spot looks like the mark of a finger-tip, and its position rather suggests a finger with a stiff joint."

As he made this statement, both brothers simultaneously uttered a smothered exclamation.

"It is Varney's hand!" gasped Philip. "You recognize it, Jack, don't you? That is just where the tip of his stiff finger would come. Have you ever noticed Varney's left hand, Thorndyke?"

"You mean the ankylosed third finger? Yes; and I agree with you that this is undoubtedly the print of Varney's hand."

"Then," said Rodney, "the case is complete. There is no need for any further investigation. On the evidence that is before us, to say nothing of the additional evidence that you can produce, there cannot be the shadow of a doubt that Purcell was murdered by Varney and his body sunk in the sea. You agree with me, I am sure, Thorndyke?"

"Certainly," was the reply. "I consider the evidence so far conclusive that I have not the slightest doubt on the subject."

"Very well," said Rodney. "Then the next question is, what is to be done? Shall I lay a sworn information or will you? Or
had we better go to the police together and make a joint statement?"

"Whatever we do," replied Thorndyke, "don't let us be premature. The evidence, as you say, is perfectly convincing. It leaves us with no doubt as to what happened on that day last June. It would probably be, in an intellectual sense, quite convincing to a judge. It might even be to a jury. But would it be sufficient to secure a conviction? I think it extremely doubtful."

"Do you really?" exclaimed Philip. "I should have thought it impossible that anyone who had heard the evidence could fail to come to the inevitable conclusion."

"You are probably right," said Thorndyke. "But a jury who are trying an accused person on a capital charge have got to arrive at something more than a belief that the accused is guilty. They have got to be convinced that there is, humanly speaking, no possible doubt as to the prisoner's guilt. No jury would give an adverse verdict on a balance of probabilities, nor would any judge encourage them to do so."

"But surely," said Philip, "this is something more than a mere balance of probabilities. The evidence all points in the same direction, and there is nothing to suggest a contrary conclusion."

Thorndyke smiled dryly. "You might think differently after you have heard a capable counsel for the defence. But the position is this: we are dealing with a charge of murder. Now, in order to prove that a particular person is guilty of murder it is necessary first to establish the corpus delicti, as the phrase goes—that is, to prove that a murder has been committed by someone. But the proof that a person has been murdered involves the antecedent proof that he is dead. If there is any doubt that the alleged deceased is dead, no murder charge can be sustained. But proof of death usually involves the production of the body or of some identifiable part of it, or at least the evidence of some person who has seen it and can swear to its identity. There are exceptional cases, of course, and this might be accepted as one. But you can take it that the inability of the prosecution to produce the body or any part of it, or any witness who can testify to having seen it, or any direct evidence that the person alleged to have been murdered is actually dead, would make it extremely difficult to secure the conviction of the accused."

"Yes, I see that," said Philip. "But, after all, that is not our concern. If we give the authorities all the information that we possess, we shall have done our duty as citizens. As to the rest, we must leave the court to convict or acquit, according to its judgment."

"Not at all," Thorndyke dissented. "You are losing sight of our position in the case. There are two different issues, which are, however, inseparably connected. One is the fact of Purcell's death, the other is Varney's part in compassing it. Now it is the first fact that concerns us, or at least concerns me. If we could prove that Purcell is dead without bringing Varney into it at all, I should be willing to do so; for I strongly suspect that there were extenuating circumstances."

"So do I," said Rodney. "Purcell was a brute, whereas Varney has always seemed to be a perfectly decent, gentlemanly fellow."

"That is the impression that I have received," said Thorndyke, "and I feel no satisfaction in proceeding against Varney. My purpose all along has been, not to convict Varney but to prove that Purcell is dead. And that is what we have to do now, for Margaret Purcell's sake. But we cannot leave Varney out of the case. For if Purcell is dead, he is dead because Varney killed him; and our only means of proving his death is to charge Varney with having murdered him. But if we charge Varney we must secure a conviction. We cannot afford to fail. If the court is convinced that Purcell is dead, it will convict Varney, for the evidence of his death is evidence of his murder; but if the court acquits Varney, it can do so only on the ground that there is no conclusive evidence that Purcell is dead. Varney's acquittal would therefore leave Margaret Purcell still bound by law to a hypothetical husband, with the insecure chance of obtaining her release at some future time either by divorce or presumption of death. That would not be fair to her. She is a widow, and she is entitled to have her status acknowledged."

Rodney nodded gloomily. A consciousness of what he stood to gain by Varney's conviction lent an uncomfortable significance to Thorndyke's words.

"Yes," he agreed, half reluctantly, "there is no denying the truth of what you say, but I wish it might have been the other way about. If Purcell had murdered Varney I could have raised the hue and cry with a good deal more enthusiasm. I knew both the men well, and I liked Varney but detested Purcell. Still, one has to accept the facts."

"Exactly," said Thorndyke, who had realized and sympathized with Rodney's qualms. "The position is not of our creating, and whatever our private sentiments may be, the fact remains that a man who elects to take the life of another must accept the consequences. That is Varney's position so far as we can see, and if he is innocent it is for him to clear himself."

"Yes, of course," Rodney agreed; "but I wish the accusation had come through different channels."

"So do I," said Philip. "It is horrible to have to denounce a man with whom one has been on terms of intimate friendship. But apparently Thorndyke considers that we should not denounce him at present. That is what I don't quite understand. You seemed to imply, Thorndyke, that the case was not complete enough to warrant our taking action, and that some further evidence ought to be obtained in order to make sure of a conviction. But what further evidence is it possible to obtain?"

"My feeling," replied Thorndyke, "is that the case is at present, as your brother expressed it just now, somewhat theoretical, or, rather, hypothetical. The evidence is circumstantial from beginning to end. There is not a single item of
direct evidence to furnish a starting-point. It would be insisted by the defence that Purcell’s death is a matter of mere inference, and that you cannot convict a man of the murder of another who may conceivably be still alive. We ought, if possible, to put Purcell’s death on the basis of demonstrable fact."

"But how is that possible?" demanded Philip.

"The conclusive method of proving the death of a person is, as I have said, to produce that person’s body or some recognizable part of it."

"But Purcell’s body is at the bottom of the sea."

"True. But we know its whereabouts. It is a small area, with the lighthouse as a landmark. If that area were systematically worked over with a trawl or dredge, or, better still, with a set of creepers attached to a good-sized spar, there should be a very fair chance of recovering the body, or at least the clothing and the weight."

Philip reflected for a few moments. "I think you are right," he said at length. "The body appears, from what you say, to be quite close to the Wolf Rock, and almost certainly on the east side. With a good compass and the lighthouse as a sailing mark, it would be possible to ply up and down and search every inch of the bottom in the neighbourhood of the Rock."

"There is only one difficulty," said Rodney. "Your worm-tube was composed entirely of fragments of the Rock. But how large an area of the sea bottom is covered with those fragments? We should have to ascertain that if we are to work over the whole of it."

"It would not be difficult to ascertain," replied Thorndyke. "If we take soundings with a hand-lead as we approach the Rock, the samples that come up on the arming of the lead will tell us when we are over a bottom covered with phonolite debris."

"Yes," Rodney agreed, "that will answer if the depth is within the range of a hand-lead. If it isn’t we shall have to rig the tackle for a deep-sea lead. It will be rather a gruesome quest. Do I gather that you are prepared to come down with us and lend a hand? I hope you are."

"So do I!" exclaimed Philip. "We shall be quite at home with the navigation, but if—er—if anything comes up on the creepers, it will be a good deal more in your line than ours."

"I should certainly wish to come," said Thorndyke, "and, in fact, I think it rather desirable that I should, as Philip suggests. But I can’t get away from town just at present, nor, I imagine, can you. We had better postpone the expedition for a week or so until the commencement of the spring vacation. That will give us time to make the necessary arrangements, to charter a suitable boat, and so forth. And, in any case, we shall have to pick our weather, having regard to the sort of sea that one may encounter in the neighbourhood of the Wolf."

"Yes," agreed Philip, "it will have to be a reasonably calm day when we make the attempt, so I suggest that we put it off until you and Jack are free; and meanwhile I will get on with the preliminary arrangements, the hiring of the boat and getting together the necessary gear."

While they had been talking the evening had closed in, and the workshop was now almost in darkness. It being too late for the brothers to carry out the business that had brought them to the wharf, even if they had been in a state of mind suitable to the checking of inventories, they postponed the survey to a later date, locked up the workshop, and in company with Thorndyke made their way homeward.
XVII. — IN WHICH THERE IS A MEETING AND A FAREWELL

It was quite early on a bright morning at the beginning of April when Thorndyke and the two Rodneys took their way from their hotel towards the harbour of Penzance. Philip had been in the town for a day or two, completing the arrangements for the voyage of exploration; the other two had come down from London only on the preceding evening.

"I hope the skipper will be punctual," said Philip. "I told him to meet us on the pier at eight o'clock sharp. We want to get off as early as possible, for it is a longish run out to the Rock, and we may have to make a long day of it."

"We probably shall," said Rodney. "The Wolf Rock is a good departure for purposes of navigation, but when it comes to finding a spot of sea bottom only a foot or two in extent, our landmark isn't very exact. It will take us a good many hours to search the whole area."

"I wonder," said Thorndyke, "what took them out there. According to Varney's description and the evidence of the button, they must have had the Rock close aboard. But it was a good deal out of their way from Sennen to Penzance."

"It was," agreed Philip. "But you can't make a bee-line in a sailing craft. That's why I chartered a motor-boat for this job. Under canvas you can only keep as near to your course as the wind will let you. But Purcell was a deuce of a fellow for sea room. He always liked to keep a good offing. I remember that on that occasion he headed straight out to sea and got well outside the Longships before he turned south. I watched the yacht from the shore, and wondered how much longer he was going to hold on. It looked as if he were heading for America. Then, you remember, the fog came down, and they may have lost their bearings a bit; and the tides are pretty strong about here."

"Yes," said Thorndyke, "and as we may take it that the trouble, whatever it was, came to a head while they were enveloped in fog, it is likely that the yacht was left to take care of herself for a time, and may have drifted a good deal off her course. At any rate, it is clear that at one time she had the Rock right under her lee, and must have drifted past within a few feet."

"It would have been a quaint position," said Philip, "if she had bumped on to it and gone to the bottom. Then they would have kept one another company in Davy Jones's locker."

"It would have saved a lot of trouble if they had gone down together," his brother remarked. "But from what you have just said, Thorndyke, it seems that you have a more definite idea as to the position of the body than I thought. Where do you suppose it to be?"

"Judging from all the facts taken together," replied Thorndyke, "I should say that it is lying close to the base of the Rock on the east side. We have it from Varney that the yacht drifted down towards the Rock during the fog, and I gathered that she drifted past close to the east side. And we also learned from him that the jib had then come down, which was, in fact, the cause of her being adrift. But the bloodstains on the sail prove that the tragedy occurred either before the halyard broke or while the sail was down—almost certainly the latter. And we may take it that it occurred during the fog; that the fog created the opportunity; for we must remember that they were close to the lighthouse, and therefore, apart from the fog, easily within sight of it. For the same reason we may assume that the body was put overboard before the fog lifted. All these circumstances point to the body being close to the Rock, and the worm-tube emphatically confirms that inference."

"Then," said Philip, "in that case there is no great point in taking soundings."

"Not in the first instance," Thorndyke agreed. "But if we get no result close to the Rock, we may have to sample the bottom to see how far from the base the conditions indicated by the worm-tube extend."

They walked on in silence for some time.

Presently Rodney remarked: "This reminds me of the last time I came down to a rendezvous on Penzance pier, when I expected to find Varney waiting for me and he wasn't there. I wonder where he was, by the way."

"He had probably gone to post a letter to Mr. Penfield at some remote pillar-box, where collections were not too frequent," said Thorndyke.

Rodney looked at him quickly, once more astonished at his intimate knowledge of the details of the case. He was about to remark on it when Thorndyke asked:

"Have you seen much of Varney lately?"

"I haven't seen him at all," replied Rodney. "Have you, Phil?"

"No," replied Philip; "not for quite a long time. Which is rather odd, for he used to look in at Maggie's flat pretty often to have tea and show her his latest work. But he hasn't been there for weeks, I know, because I was speaking to her about him only a day or two ago. She seemed to have an idea that he might have gone away on a sketching tour, though I don't think she had anything to go on."

"He can't have smelt a rat and cleared out," mused Rodney. "I don't see how he could, though I shouldn't be altogether sorry if he had. It will be a horrid business when we have to charge him and give evidence against him. But it isn't possible that he can have seen or heard anything."

This was also Thorndyke's opinion, but he was deeply interested in the report of Varney's disappearance. Nor was he
entirely without a clue to it. His observations of Margaret and Varney suggested a possible explanation, which he did not think it necessary to refer to. And, in fact, the conversation was here interrupted by their arrival at the pier, where an elderly fisherman, who had been watching their approach, came forward and saluted them.

"Here you are then, skipper," said Philip; "Punctual to the minute. We've got a fine day for our trip, haven't we?"

"Ay, sir," replied the skipper; "'tis a wonderful calm day for the time of year. And glad I am to see it, if we are to work close into the Wolf, for it's a lumpy bit of water at the best of times around the Rock."

"Is everything ready?" asked Philip.

"Ay, sir. We are all ready to cast off this moment," and in confirmation he preceded the party to the head of the ladder, and indicated the craft lying alongside the pier beneath it—a small converted Penzance lugger with a large open cock pit, in the fore part of which was the engine.

The four men descended the ladder, and while the skipper and the second fisherman, who constituted the crew, were preparing to cast off the shore ropes, Philip took a last look round to see that all was in order. Then the crew, who was named Joe Tregenna, pushed off and started the engine, the skipper took the tiller, and the boat got under way.

"You see," said Philip, as the boat headed out to sea, "we have got good strong tackle for the creeping operations."

He pointed over the boat's side to a long stout spar which was slung outside the bulwarks. It was secured by a chain bridle to a trawl-rope, and to it were attached a number of creepers—lengths of chain fitted with rows of hooks—which hung down into the water and trailed alongside. The equipment also included a spirit-compass, fitted with sight-vanes; a sextant; a hand-lead, which lay on the cockpit floor, with its line neatly coiled round it; and a deep-sea lead, stowed away forward with its long line and the block for lowering and hoisting it.

The occupants of the cockpit were strangely silent. It was a beautiful spring day, bright and sunny, with a warm blue sky overhead and a tranquil sea, heaving quietly to the long swell from the Atlantic, showing a sunlit sparkle on the surface and clear sapphire in the depths. "Nature painted all things gay," excepting the three men who sat on the side benches of the cockpit, whose countenances were expressive of the deepest gravity and even, in the case of the two Rodneys, of profound gloom.

"I shall be glad when this business is over," said Philip. "I feel as nervous as a cat."

"So do I," his brother agreed. "It is a gruesome affair. I find myself almost hoping that nothing will come of it. And yet that would only leave us worse off than ever."

"We mustn't be prepared to accept failure," said Thorndyke. "The thing is there, and we have got to find it; if not to-day, then to-morrow or some other day."

The two brothers looked at Thorndyke, a little daunted by his resolute attitude. "Yes, of course you are right," the elder admitted, "and it is only cowardice that makes me shrink from what we have to do. But when I think of what may come up, hanging from those creepers, I—bah! It is too horrible to think of! But I suppose it doesn't make that sort of impression on you? You don't find anything repulsive in the quest that we are engaged in?"

"No," Thorndyke admitted. "My attention is occupied by the scientific and legal interest of the search. But I can fully sympathize with your feelings on the matter. To you Purrcell is a real person, whom you have known and talked with; to me he is a mere abstraction connected with a very curious and interesting case. The really unpleasant part of that case—to me—will come when we have completed our evidence, if we are so fortunate—I mean when we have to set the criminal law in motion."

"Yes," said Philip, "that will be perfectly beastly."

Once more silence fell upon the boat, broken only by the throb of the engine and the murmur of the water as it was cloven by the boat's stern. And meanwhile the distant coast slipped past until they were abreast of the Land's End, and far away to the south-west the solitary lighthouse rose on the verge of the horizon. Soon afterwards they began to overtake the scattered members of a fleet of luggers, some with lowered mainsails and hand-lines down, others with their black sails set, heading for some distant fishing-ground. Through the midst of them the boat was threading her way, when her occupants suddenly became aware that one of the smaller luggers was steering so as to close in. Observing this, the skipper was putting over the helm to avoid her, when a seafaring voice from the little craft was heard to hail.

"Motor-boat ahoy! Gentleman aboard wants to speak to you!"

The two Rodneys looked at one another in surprise and then at the approaching lugger.

"Who the deuce can it be?" exclaimed Rodney. "But perhaps it is a stranger who wants a passage. If it is we shall have to refuse. We can't take anyone on board."

The boat slowed down, for at a word from the skipper Joe Tregenna had reversed the propeller. The lugger closed in rapidly, watched anxiously by the two Rodneys and Thorndyke. Suddenly a man appeared standing on the bulwark rail and holding on by the mast stay, while with his free hand he held a binocular to his eyes. Nearer and nearer the lugger approached, and still the two Rodneys gazed with growing anxiety at the figure on the bulwark. At length the man removed the glasses from his eyes and waved them above his head, and as his face became visible both brothers uttered a cry of amazement.
"God!" exclaimed Philip. "It's Varney! Sheer off, skipper! Don't let him come along side."

But it was too late. The boat had lost way and failed to answer her helm. The lugger sheered in, sweeping abreast within a foot, and as she crept past Varney sprang lightly from her gunwale and dropped on the side bench beside Jack Rodney.

"Well!" he exclaimed, "this is a queer meeting. I couldn't believe my eyes when I first spotted you through the glasses. Motor-boat, too! Rather a come down, isn't it, for seasoned yachtsmen?"

He looked curiously at his hosts, evidently a little perplexed by their silence and their unresponsive bearing. The Rodneys were, in fact, stricken dumb with dismay, and even Thorndyke was for the moment disconcerted. The lugger which had brought Varney had already gone about and was standing out to sea, leaving to them the alternative of accepting this most unwelcome passenger or of pursuing the lugger and insisting on his returning on board of her. But the Rodneys were too paralyzed to do anything but gaze at Varney in silent consternation, and Thorndyke did not feel that his position on the boat entitled him to take any action. Indeed, no action seemed to be practicable.

"This is an odd show," said Varney, looking inquisitively about the boat. "What is the lay? You can't be going out to fish in this craft. And you seem to be setting a course for the Scillies. What is it? Dredging? I see you've got a trawl-rope."

As the Rodneys were still almost stupefied by the horror of the situation, Thorndyke took upon himself to reply.

"The occasion of this little voyage was a rather remarkable marine worm that was sent to Professor D'Arcy, and which came from the locality to which we are bound. We are going to explore the bottom there."

Varney nodded. "You seem mighty keen on marine worms. I remember when I met you down here before you were in search of them, and so was Phil, though I don't fancy he got many. He had the bottles labelled ready for them, and that was about as far as he went. Do you remember that button you made, Phil, from the cork of one?"

"Yes," Philip replied huskily, "I remember."

During this conversation Thorndyke had been observing Varney with close attention, and he noted a very appreciable change in his appearance. He looked aged and worn, and there was in his expression a weariness and dejection that seemed to confirm certain opinions that Thorndyke had formed as to the reasons for his sudden disappearance from surroundings which had certainly been without their attractions to him. And, not for the first time, a feeling of compunction and of some distaste for this quest contended with the professional interest and the sense of duty that had been the impelling force behind the long, patient investigation.

Philip's curt reply was followed by a rather long, uncomfortable silence. Varney, quick and sensitive by nature, perceived that there was something amiss, that in some way his presence was a source of embarrassment. He sat on the side bench by Jack Rodney, gazing with a far-away look over the sea towards the Longships, wishing that he had stayed on board the lugger or that there were some means of escaping from this glum and silent company. And as he meditated he brought forth from his pocket his tobacco-pouch and cigarette-book, and half unconsciously, with a dexterity born of long practice, rolled a cigarette, all unaware that three pairs of eyes were riveted on his strangely efficient maimed finger, that three minds were conjuring up the vivid picture of a blue handprint on a white sail.

When he had lit the cigarette, Varney once more looked about the boat, and again his eye lighted on the big coil of trawl-rope, with its end passed out through a fair-lead. He rose, and, crossing the cockpit, looked over the side.

"Why," he exclaimed, "you've got a set of creepers! I thought you were going dredging. You won't pick up much with creepers, will you?"

"They will pick up anything with weeds attached to it," said Thorndyke.

Varney went back to his seat with a thoughtful, somewhat puzzled expression. He smoked in silence for a minute or two, and then suddenly asked: "Where is the place that you are going to explore for these worms?"

"Professor D'Arcy's specimen," replied Thorndyke, "came from the neighbourhood of the Wolf Rock. That is where we are going to work."

Varney made no comment on this answer. He looked long and steadily at Thorndyke; then he turned away his head, and once more gazed out to sea. Evidently he was thinking hard, and his companions, who watched him furtively, could have little doubt as to the trend of his thoughts. Gradually, as the nature of the exploration dawned on him, his manner changed more and more. A horrible pallor overspread his face, and a terrible restlessness took possession of him. He smoked furiously cigarette after cigarette. He brought various articles out of his pockets, fidgeted with them awhile, and put them back. He picked up the hand-lead, looking at its arming, ran the line through his fingers, and made fancy knots on the bight. And ever and anon his glance strayed to the tall lighthouse, standing out of the sea with its red and white ringed tower, and drawing inexorably nearer and nearer.

So the voyage went on until the boat was within half a mile of the Rock, when Philip, having caught a glance and a nod from Thorndyke, gave the order to stop the engine and lower the creepers. The spar was cast loose and dropped into the water with a heavy splash, the trawl-rope ran out through the fair-lead, and meanwhile Jack Rodney took a pair of cross-bearings on the lighthouse and a point of the distant land. Then the engine was restarted, the boat moved forward at half-speed, and the search began.

It was an intensely disagreeable experience for all excepting the puzzled but discreet skipper and the unconscious Joe.
Varney, pale, haggard, and wild in aspect, fidgeted about the boat, now silent and moody, now making miserable efforts to appear interested or unconcerned, picking up and handling loose objects or portions of the gear, but constantly returning to the hand-lead, counting up the "marks" on the line, or making and pulling out various knots with his restless but curiously skillful fingers. And as his mood changed, Thorndyke watched him furtively, as if to judge by his manner how near they were to the object of the search.

It was a long and wearisome quest. Slowly the boat plied up and down on the eastern side of the Rock, gradually approaching it nearer and nearer at each return. From time to time the creepers caught on the rocky bottom, and had to be eased off; from time to time the dripping trawl-rose was hauled in and the creepers brought to the surface, offering to the anxious eyes that peered over the side nothing on the hooks but, perchance, a wisp of Zostera or a clinging spider-crab.

Calm as the day was and quiet as was the ocean, stirred only by the slumberous echoes of the great Atlantic swell, the sea was breaking heavily over the Rock; and as the boat closed in nearer and nearer, the water around boiled and eddied in an unpleasant and even dangerous manner. The lighthouse keepers, who had for some time past been watching from the gallery the movements of the boat, now began to make warning signs, and one of them bellowed through a megaphone to the searchers to keep farther away.

"What do you say?" Rodney asked in a low voice. "We can't go any nearer? We shall be swamped or stove in? Shall we try another side?"

"Better try one more cast this side," said Thorndyke; and he spoke so definitely that all the others, including Varney, looked at him curiously. But no one answered, and as the skipper made no demur the creepers were dropped for a fresh cast still nearer the Rock. The boat was then to the north of the lighthouse, and the course set was to the south, so as to pass the Rock again on the east side. As they approached, the man with the megaphone bawled out fresh warnings and continued to roar at them and flourish his arm until they were abreast of the Rock in a wild tumble of confused waves. At this moment, Philip, who had his hand on the trawl-rose between the bollard and the fair-lead, reported that he had felt a pull, but that it seemed as if the creepers had broken away. As soon, therefore, as the boat was clear of the backwash and in comparatively smooth water, the order was passed to haul in the trawl-rose and examine the creepers.

The two Rodneys looked over the side eagerly but fearfully, for both had noticed something new—a definite expectancy—in Thorndyke's manner. Varney, too, who had hitherto taken but little notice of the creepers, now knelt on the side bench, gazing earnestly into the clear water whereupon the trawl-rose was rising. And still he toyed with the hand-lead, and abstractly made clove-hitches on the line and slipped them over his arm.

At length the spar came into view, and below it, on one of the creepers, a yellowish object, dimly visible through the wavering water.

"There's somethin' on this time," said the skipper, craning over the side and steadying himself by the tiller, which he still held. All eyes were riveted on the half-seen yellowish shape, moving up and down to the rise and fall of the boat. Apart from the others, Varney knelt on the bench, not fidgeting now, but still, rigid, pale as wax, staring with dreadful fascination at the slowly rising object. Suddenly the skipper uttered an exclamation.

"Why, 'tis a sou'wester! And all laced about wi' spun-y'n! Surely 'tis—Steady, sir; you'll be overboard! My God!

The others looked round quickly, and even as they looked Varney fell, with a heavy splash, into the water alongside. There was a tumultuous rush to the place whence he had fallen, and arms were thrust into the water in vain efforts to grasp the sinking figure. Rodney darted forward for the boat-hook, but by the time he was back with it the doomed man was far out of reach; yet for a long time, as it seemed, the horror-stricken onlookers could see him through the clear, blue-green water, sinking, sinking, growing paler, more shadowy, more shapeless, but always steadily following the lead sinker, until at last he faded from their sight into the darkness of the ocean.

Not until some time after he had vanished did they haul on board the creeper with its dreadful burden. Indeed, that burden, in its entirety, was never hauled on board. As it reached the surface, Tregenna stopped hauling and held the rope steady; and for a sensible time all eyes were fixed upon a skull, with a great jagged hole above the brows, that looked up at them beneath the peak of the sou'wester, through the web of spun-yarn, like the face of some phantom warrior looking out through the bars of his helmet. Then as Philip, reaching out an unsteady hand, unhooked the sou'wester from the creeper, the encircling coils of spun-yarn slipped, and the skull dropped into the water. Still the fascinated eyes watched it as it sank, turning slowly over and over, and seeming to cast back glances of horrid valediction; watched it grow green and pallid and small, until it vanished into the darkness, even as Varney had vanished.

When it was quite invisible, Philip turned, and, flinging the hat down on the floor of the cockpit, sank on the bench with a groan. Thorndyke picked up the hat and unwound the spun-yarn.

"Do you identify it?" he asked; and then, as he turned it over, he added: "But I see it identifies itself."

He held it towards Rodney, who was able to read in embroidered, lettering on the silk lining "Dan Purcell."

Rodney nodded. "Yes," he said, "but, of course, there was no doubt. Is it necessary for us to do anything more?" He indicated the creepers with a gesture of weariness and disgust.

"No," replied Thorndyke. "We have seen the body and can swear to its identity, and I can certify as to the cause of death. We can produce this hat, with a bullet-hole, as I perceive, in the back, corresponding to the injury that we observed in the skull. I can also certify as to the death of Varney, and can furnish a sworn declaration of the facts that are within my
knowledge. That may possibly be accepted by the authorities, having regard to the circumstances, as rendering any further inquiry unnecessary. But that is no concern of ours. We have established the fact that Daniel Purcell is dead, and our task is accomplished.

"Yes," said Rodney, "our quest has been successful beyond my expectations. But it has been an awful experience. I can't get the thought of poor Varney out of my mind."

"Nor I," said Philip. "And yet it was the best that could have happened. And there is a certain congruity in it, too. They are down there together. They had been companions, in a way, friends, the best part of their lives, and in death they are not divided."

THE END
I. — THE POOL IN THE WOOD

THERE are certain days in our lives which, as we recall them, seem to detach themselves from the general sequence as forming the starting-point of a new epoch. Doubtless, if we examined them critically, we should find them to be but links in a connected chain. But in a retrospective glance their continuity with the past is unperceived, and we see them in relation to the events which followed them rather than to those which went before.

Such a day is that on which I look back through a vista of some twenty years; for on that day I was, suddenly and without warning, plunged into the very heart of a drama so strange and incredible that in the recital of its events I am conscious of a certain diffidence and hesitation.

The picture that rises before me as I write is very clear and vivid. I see myself, a youngster of twenty-five, the owner of a brand-new medical diploma, wending my way gaily down Wood Lane, Highgate, at about eight o’clock on a sunny morning in early autumn. I was taking a day’s holiday, the last I was likely to enjoy for some time, for on the morrow I was to enter on the duties of my first professional appointment. I had nothing in view to-day but sheer, delightful idleness. It is true that a sketch-book in one pocket and a box of collecting-tubes in another suggested a bare hint of purpose in the
At the lower end of the Lane was the entrance to Churchyard Bottom Wood, then open and unguarded save by a few hurdles (it has since been enclosed and renamed 'Queen’s Wood'). I entered and took my way along the broad, rough path, pleasantly conscious of the deep silence and seeming remoteness of this surviving remnant of the primeval forest of Britain, and letting my thoughts stray to the great plague-pit in the haunted bottom that gave the wood its name. The foliage of the oaks was still unchanged, despite the waning of the year. The low-slaning sunlight spangled it with gold and made rosy patterns on the path, where lay a few prematurely-fallen leaves; but in the hollows among the undergrowth traces of the night-mists lingered, shrouding tree-hole, bush and fern in a mystery of gauzy blue.

A turn of the path brought me suddenly within a few paces of a girl who was stooping at the entrance to a side track and seemed to be peering into the undergrowth as if looking for something. As I appeared, she stood up and looked round at me with a startled, apprehensive manner that caused me to look away and pass as if I had not seen her. But the single glance had shown me that she was a strikingly handsome girl—indeed, I should have used the word 'beautiful'—that she seemed to be about my own age, and that she was evidently a lady.

The apparition, pleasant as it was, set me speculating as I strode forward. It was early for a girl like this to be afoot in the woods, and alone, too. Not so very safe, either, as she had seemed to realize, judging by the start that my approach seemed to have given her. And what could it be that she was looking for? Had she lost something at some previous time and come to search for it before anyone was about? It might be so. Certainly she was not a poacher, for there was nothing to poach, and she hardly had the manner or appearance of a naturalist.

A little farther on I struck into a side-path which led, as I knew, in the direction of a small pond. That pond I had had in my mind when I put the box of collecting-tubes in my pocket, and now made my way to it as directly as the winding track would let me; but still, it was not the pond or its inmates that occupied my thoughts, but the mysterious maiden whom I had left peering into the undergrowth. Perhaps if she had been less attractive I might have given her less consideration. But I was twenty-five; and if a man at twenty-five has not a keen and appreciative eye for a pretty girl, there must be something radically wrong with his mental make-up.

In the midst of my reflections I came out into a largish opening in the wood, at the centre of which, in a slight hollow, was the pond—a small oval piece of water, fed by the trickle of a tiny stream, the continuation of which carried away the overflow towards the invisible valley. Approaching the margin, I brought out my box of tubes, and uncorking one, stooped and took a trial dip. When I held the glass tube against the light and examined its contents through my pocket-lens, I found that I was in luck. The ‘catch’ included a green hydra, clinging to a rootlet of duckweed, several active water-fleas, a scarlet water-mite and a beautiful sessile rotifer. Evidently this pond was a rich hunting-ground.

Delighted with my success, I corked the tube, put it away and brought out another, with which I took a fresh dip. This was less successful; but the naturalist’s ardour and the collector’s cupidity being thoroughly aroused, I persevered, gradually enriching my collection and working my way slowly round the margin of the pond, forgetful of everything—even of the mysterious maiden—but the objects of my search: indeed, so engrossed was I with my pursuit of the minute denizens of this watery world that I failed to observe a much larger object which must have been in view most of the time. Actually, I did not see it until I was right over it. Then, as I was stooping to clear away the duckweed for a fresh dip, I found myself confronted by a human face; just below the surface and half-concealed by the pondweed.

It was a truly appalling experience. Utterly unprepared for this awful apparition, I was so overcome by astonishment and horror that I remained stooping, with motion arrested, as if petrified, staring at the thing in silence and hardly breathing. The face was that of a man of about fifty or a little more; a handsome, refined, rather intellectual face with a moustache and Vandyke beard and surmounted by a thickish growth of iron-grey hair. Of the rest of the body little was to be seen, for the duckweed and water-crowfoot had drifted over it, and I had no inclination to disturb them. Recovering somewhat from the shock of this sudden and fearful encounter, I stood up and rapidly considered what I had better do. It was clearly not for me to make any examination or meddle with the corpse in any way; indeed, when I considered the early hour and the remoteness of this solitary place, it seemed prudent to avoid the possibility of being seen there by any chance stranger. Thus reflecting, with my eyes still riveted on the pallid, impassive face, so strangely sleeping below the glassy surface and conveying to me somehow a dim sense of familiarity, I pocketed my tubes and, turning back, stole away along the woodland track, treading lightly, almost stealthily, as one escaping from the scene of a crime.

Very different was my mood, as I retraced my steps, from that in which I had come. Gone was all my gaiety and holiday spirit. The dread meeting had brought me into an atmosphere of tragedy, perchance even of something more than tragedy. With death I was familiar enough—death as it comes to men, prefaced by sickness or even by injury. But the dead man who lay in that still and silent pool in the heart of the wood had come there by none of the ordinary chances of normal life. It seemed barely possible that he could have fallen in by mere misadventure, for the pond was too shallow and its bottom shelved too gently for accidental drowning to be conceivable. Nor was the strange, sequestered spot without significance. It was just such a spot as might well be chosen by one who sought to end his life—or another’s.

I had nearly reached the main path when an abrupt turn of the narrow track brought me once more face to face with the girl whose existence I had till now forgotten. She was still peering into the dense undergrowth as if searching for something; and again, on my sudden appearance, she turned a startled face towards me. But this time I did not look away. Something in her face struck me with a nameless fear. It was not only that she was pale and haggard, that her expression...
betokened anxiety and even terror. As I looked at her I understood in a flash the dim sense of familiarity of which I had been conscious in the pallid face beneath the water. It was her face that it had recalled.

With my heart in my mouth, I halted, and, taking off my cap, addressed her.

“Pray pardon me; you seem to be searching for something. Can I help you in any way or give you any information?”

She looked at me a little shyly and, as I thought, with slight distrust, but she answered civilly enough though rather stiffly: “Thank you, but I am afraid you can’t help me. I am not in need of any assistance.”

This, under ordinary circumstances, would have brought the interview to an abrupt end. But the circumstances were not ordinary, and, as she made as if to pass me, I ventured to persist.

“Please,” I urged, “don’t think me impertinent, but would you mind telling me what you are looking for? I have a reason for asking, and it isn’t curiosity.”

She reflected for a few moments before replying and I feared that she was about to administer another snub. Then, without looking at me, she replied:

“I am looking for my father.” (and at these words my heart sank). “He did not come home last night. He left Hornsey to come home and he would ordinarily have come by the path through the wood. He always came that way from Hornsey. So I am looking through the wood in case he missed his way, or was taken ill, or—”

Here the poor girl suddenly broke off, and, letting her dignity go, burst into tears. I huskily murmured a few indistinct words of condolence, but, in truth, I was little less affected than she was. It was a terrible position, but there was no escape from it. The corpse that I had just seen was almost certainly her father’s corpse. At any rate, the question whether it was or was not had to be settled now, and settled by me—and her. That was quite clear; but yet I could not screw my courage up to the point of telling her. While I was hesitating, however, she forced the position by a direct question.

“You said just now that you had a reason for asking what I was searching for. Would it be—?” She paused and looked at me inquiringly as she wiped her eyes.

I made a last, frantic search for some means of breaking the horrid news to her. Of course there was none. Eventually I stammered:

“The reason I asked was—er—the fact is that I have just seen the body of a man lying—”

“Where?” she demanded. “Show me the place!”

Without replying, I turned and began quickly to retrace my steps along the narrow track. A few minutes brought me to the opening in which the pond was situated, and I was just beginning to skirt the margin, closely followed by my companion, when I heard her utter a low, gasping cry. The next moment she had passed me and was running along the bank towards a spot where I could now see the toe of a boot just showing through the duckweed. I stopped short and watched her with my heart in my throat. Straight to the fatal spot she ran, and for a moment stood on the brink, stooping over the weedy surface. Then, with a terrible, wailing cry she stepped into the water.

Instantly, I ran forward and waded into the pond to her side. Already she had her arms round the dead man’s neck and was raising the face above the surface. I saw that she meant to bring the body ashore, and, useless as it was, it seemed a natural thing to do. Silently I passed my arms under the corpse and lifted it; and as she supported the head, we bore it through the shallows and up the bank, where I laid it down gently in the high grass.

Not a word had been spoken, nor was there any question that need be asked. The pitiful tale told itself only too plainly. As I stood looking with swimming eyes at the tragic group, a whole history seemed to unfold itself—a history of love and companionship, of a happy, peaceful past made sunny by mutual affection, shattered in an instant by the hideous present, with its portent of a sad and lonely future. She had sat down on the grass and taken the dead head on her lap, tenderly wiping the face with her handkerchief, smoothing the grizzled hair and crooning or moaning words of endearment into the insensible ears. She had forgotten my presence; indeed, she was oblivious of everything but the still form that bore the outward semblance other father.

Some minutes passed thus. I stood a little apart, cap in hand, more moved than I had ever been in my life, and, naturally enough, unwilling to break in upon a grief so overwhelming and, as it seemed to me, so sacred. But presently it began to be borne in on me that something had to be done. The body would have to be removed from this place, and the proper authorities ought to be notified. Still, it was some time before I could gather courage to intrude on her sorrow, to profane her grief with the sordid realities of everyday life. At last I braced myself up for the effort and addressed her.

“Your father,” I said gently—I could not refer to him as ‘the body’—“will have to be taken away from here; and the proper persons will have to be informed of what has happened. Shall I go alone, or will you come with me? I don’t like to leave you here.”

She looked up at me and, to my relief, answered me with quiet composure: “I can’t leave him here all alone. I must stay with him until he is taken away. Do you mind telling whoever ought to be told,”—like me, she instinctively avoided the word ‘police’—“and making what arrangements are necessary?”

There was nothing more to be said, and loath as I was to leave her alone with the dead, my heart assented to her decision. In her place, I should have had the same feeling. Accordingly, with a promise to return as quickly as I could, I
stole away along the woodland track. When I turned to take a last glance at her before plunging into the wood, she was once more leaning over the head that lay in her lap, looking with fond grief into the impassive face and stroking the dank hair.

My intention had been to go straight to the police-station, when I had ascertained its whereabouts, and make my report to the officer in charge. But a fortunate chance rendered this proceeding unnecessary, for, at the moment when I emerged from the top of Wood Lane, I saw a police officer, mounted on a bicycle—a road patrol, as I assumed him to be—approaching along the Archway Road. I hailed him to stop, and as he dismounted and stepped on to the footway, I gave him a brief account of the finding of the body and my meeting with the daughter of the dead man. He listened with calm, businesslike interest, and, when I had finished, said: “We had better get the body removed as quickly as possible. I will run along to the station and get the wheeled stretcher. There is no need for you to come. If you will go back and wait for us at the entrance to the wood, that will save time. We shall be there within a quarter of an hour.”

I agreed gladly to this arrangement, and when I had seen him mount his machine and shoot away along the road, I turned back down the Lane and re-entered the wood. Before taking up my post, I walked quickly down the path and along the track to the opening by the pond. My new friend was sitting just as I had left her, but she looked up as I emerged from the track and advanced towards her. I told her briefly what had happened, and was about to retire when she asked: “Will they take him to our house?”

“I am afraid not,” I replied. “There will have to be an inquiry by the coroner, and until that is finished, his body will have to remain in the mortuary.”

“I was afraid it might be so,” she said with quiet resignation; and as she spoke she looked down with infinite sadness at the waxen face in her lap. A good deal relieved by her reasonable acceptance of the painful necessities, I turned back and made my way to the rendezvous at the entrance to the wood.

As I paced to and fro on the shady path, keeping a lookout up the Lane, my mind was busy with the tragedy to which I had become a party. It was a grievous affair. The passionate grief which I had witnessed spoke of no common affection. On one life at least this disaster had inflicted irreparable loss, and there were probably others on whom the blow had yet to fall. But it was not only a grievous affair; it was highly mysterious. The dead man had apparently been returning home at night in a customary manner and by a familiar way. That he could have strayed by chance from the open, well-worn path into the recesses of the wood was inconceivable, while the hour and the circumstances made it almost as incredible that he should have been wandering in the wood by choice. And again, the water in which he had been lying was quite shallow, so shallow as to rule out accidental drowning as an impossibility.

What could the explanation be? There seemed to be but three possibilities, and two of them could hardly be entertained. The idea of intoxication I rejected at once. The girl was evidently a lady, and her father was presumably a gentleman who would not be likely to be wandering abroad drunk; nor could a man who was sober enough to have reached the pond have been so helpless as to be drowned in its shallow waters. To suppose that he might have fallen into the water in a fit was to leave unexplained the circumstance of his being in that remote place at such an hour. The only possibility that remained was that of suicide, and I could not but admit that some of the appearances seemed to support that view. The solitary place —more solitary still at night—was precisely such as an intending suicide might be expected to seek; the shallow water presented no inconsistency; and when I recalled how I had found his daughter searching the wood with evident foreboding of evil, I could not escape the feeling that the dreadful possibility had not been entirely unforeseen.

My meditations had reached this point when, as I turned once more towards the entrance and looked up the Lane, I saw two constables approaching, trundling a wheeled stretcher, while a third man, apparently an inspector, walked by its side. As the little procession reached the entrance and I turned back to show the way, the latter joined me and began at once to interrogate me. I gave him my name, address and occupation, and followed this with a rapid sketch of the facts as known to me, which he jotted down in a large note-book, and he then said:

“As you are a doctor, you can probably tell me how long the man had been dead when you first saw him.”

“By the appearance and the rigidity,” I replied, “I should say about nine or ten hours; which agrees pretty well with the account his daughter gave of his movements.”

The inspector nodded. “The man and the young lady,” said he, “are strangers to you, I understand. I suppose you haven’t picked up anything that would throw any light on the affair?”

“No,” I answered; “I know nothing but what I have told you.”

“Well,” he remarked, “it’s a queer business. It is a queer place for a man to be in at night, and he must have gone there of his own accord. But there, it is no use guessing. It will all be thrashed out at the inquest.”

As he reached this discreet conclusion, we came out into the opening and I heard him murmur very feelingly, “Dear, dear! Poor thing!” The girl seemed hardly to have changed her position since I had last seen her, but she now tenderly laid the dead head on the grass and rose as we approached; and I saw with great concern that her skirts were soaked almost from the waist downwards.

The officer took off his cap and as he drew near looked down gravely but with an inquisitive eye at the dead man. Then he turned to the girl and said in a singularly gentle and deferential manner:

“This is a very terrible thing, miss. A dreadful thing. I assure you that I am more sorry for you than I can tell; and I hope
you will forgive me for having to intrude on your sorrow by asking questions. I won't trouble you more than I can help."

"Thank you," she replied quietly. "Of course I realize your position. What do you want me to tell you?"

"I understand," replied the inspector, "that this poor gentleman was your father. Would you mind telling me who he was and where he lived and giving me your own name and address?"

"My father's name," she answered, "was Julius D'Arblay. His private address was Ivy Cottage, North Grove, Highgate. His studio and workshop, where he carried on the profession of a modeller, is in Abbey Road, Hornsey. My name is Marion D'Arblay and I lived with my father. He was a widower and I was his only child."

As she concluded, with a slight break in her voice, the inspector shook his head and again murmured, "Dear, dear!" as he rapidly entered her answers in his note-book. Then, in a deeply apologetic tone, he asked:

"Would you mind telling what you know as to how this happened?"

"I know very little," she replied. "As he did not come home last night, I went to the studio quite early this morning to see if he was there. He sometimes stayed there all night when he was working very late. The woman who lives in the adjoining house and looks after the studio, told me that he had been working late last night, but that he left to come home soon after ten. He always used to come through the wood, because it was the shortest way and the most pleasant. So when I learned that he had started to come home, I came to the wood to see if I could find any traces of him. Then I met this gentleman and he told me that he had seen a dead man in the wood and—" Here she suddenly broke down and, sobbing passionately, flung out her hands towards the corpse.

The inspector shut his note—book, and murmuring some indistinct words of sympathy, nodded to the constables, who had drawn up the stretcher a few paces away and lifted off the cover. On this silent instruction, they approached the body and, with the inspector's assistance and mine, lifted it on to the stretcher without removing the latter from its carriage. As they picked up the cover, the inspector turned to Miss D'Arblay and said gently but finally: "You had better not come with us. We must take him to the mortuary, but you will see him again after the inquest, when he will be brought to your house if you wish it."

She made no objection; but as the constables approached with the cover, she stooped over the stretcher and kissed the dead man on the forehead.

Then she turned away, the cover was placed in position, the inspector and the constables saluted reverently, and the stretcher was wheeled away along the narrow track.

For some time after it had gone, we stood in silence at the margin of the pond with our eyes fixed on the place where it had disappeared. I considered in no little embarrassment what was to be done next. It was most desirable that Miss D'Arblay should be got home as soon as possible, and I did not at all like the idea of her going alone, for her appearance, with her drenched skirts and her dazed and rather wild expression, was such as to attract unpleasant attention. But I was a total stranger to her and I felt a little shy of pressing my company on her. However, it seemed a plain duty, and, as I saw her shiver slightly, I said: "You had better go home now and change your clothes. They are very wet. And you have some distance to go."

She looked down at her soaked dress and then she looked at me.

"You are rather wet, too," she said. "I am afraid I have given you a great deal of trouble."

"It is little enough that I have been able to do," I replied. "But you must really go home now; and if you will let me walk with you and see you safely to your house, I shall be much more easy in my mind."

"Thank you," she replied. "It is kind of you to offer to see me home, and I am glad not to have to go alone."

With this, we walked together to the edge of the opening and proceeded in single file along the track to the main path, and so out into Wood Lane, at the top of which we crossed the Archway Road into Southwood Lane. We walked mostly in silence, for I was unwilling to disturb her meditations with attempts at conversation, which could only have seemed banal or impertinent. For her part, she appeared to be absorbed in reflections the nature of which I could easily guess, and her grief was too fresh for any thought of distraction. But I found myself speculating with profound discomfort on what might be awaiting her at home. It is true that her own desolate state as an orphan without brothers or sisters had its compensation in that there was no wife to whom the dreadful tidings had to be imparted, nor any fellow-orphans to have their bereavement broken to them. But there must be someone who cared; or if there were not, what a terrible loneliness would reign in that house!

"I hope," I said as we approached our destination, "that there is someone at home to share your grief and comfort you a little."

"There is," she replied. "I was thinking of her and how grievous it will be to have to tell her—an old servant and a dear friend. She was my mother's nurse when the one was a child and the other but a young girl. She came to our house when my mother married and has managed our home ever since. This will be a terrible shock to her, for she loved my father dearly—everyone loved him who knew him. And she has been like a mother to me since my own mother died. I don't know how I shall break it to her."

Her voice trembled as she concluded and I was deeply troubled to think of the painful homecoming that loomed before
her; but still it was a comfort to know that her sorrow would be softened by sympathy and loving companionship, not heightened by the empty desolation that I had feared.

A few minutes more brought us to the little square—which, by the way, was triangular—and to a pleasant little old-fashioned house, on the gate of which was painted the name, ‘Ivy Cottage’. In the bay window on the ground-floor I observed a formidable-looking elderly woman, who was watching our approach with evident curiosity; which, as we drew nearer and the state of our clothing became visible, gave place to anxiety and alarm. Then she disappeared suddenly, to reappear a few moments later at the open door, where she stood viewing us both with consternation and me in particular with profound disfavour.

At the gate Miss D’Arblay halted and held out her hand. “Good-by,” she said. “I must thank you some other time for all your kindness,” and with this she turned abruptly and, opening the gate, walked up the little paved path to the door where the old woman was waiting.

II. — A CONFERENCE WITH DR. THORNDYKE

The sound of the closing door seemed, as it were, to punctuate my experiences and to mark the end of a particular phase. So long as Miss D’Arblay was present, my attention was entirely taken up by her grief and distress, but now that I was alone I found myself considering at large the events of this memorable morning. What was the meaning of this tragedy? How came this man to be lying dead in that pool? No common misadventure seemed to fit the case. A man may easily fall into deep water and be drowned; may step over a quay-side in the dark or trip on a mooring-ropes or ring-bolt. But here there was nothing to suggest any possible accident. The water was hardly two feet deep where the body was lying and much less close to the edge. If he had walked in in the dark, he would simply have walked out again. Besides, how came he there at all? The only explanation that was intelligible was that he went there with the deliberate purpose of making away with himself.

I pondered this explanation and found myself unwilling to accept it, notwithstanding that his daughter’s presence in the wood, her obvious apprehension and her terrified searching among the underwood, seemed to hint at a definite expectation on her part. But yet that possibility was discounted by what his daughter had told me of him. Little as she had said, it was clear that he was a man universally beloved. Such men, in making the world a pleasant place for others, make it pleasant for themselves. They are usually happy men; and happy men do not commit suicide. Yet, if the idea of suicide were rejected, what was left? Nothing but an insoluble mystery.

I turned the problem over again and again as I sat on the top of the tram (where I could keep my wet trousers out of sight), not as a matter of mere curiosity but as one in which I was personally concerned. Friendships spring up into sudden maturity under great emotional stress. I had known Marion D’Arblay but an hour or two, but they were hours which neither of us would ever forget; and in that brief space she had become to me a friend who was entitled, as of right, to sympathy and service. So, as I revolved in my mind the mystery of this man’s death, I found myself thinking of him not as a chance stranger but as the father of a friend; and thus it seemed to devolve upon me to elucidate the mystery, if possible.

It is true that I had no special qualifications for investigating an obscure case of this kind, but yet I was better equipped than most young medical men. For my hospital, St. Margaret’s, though its medical school was but a small one, had one great distinction; the chair of Medical Jurisprudence was occupied by one of the greatest living authorities on the subject. Dr. John Thorndyke. To him and his fascinating lectures my mind naturally turned as I ruminated on the problem; and presently, when I found myself unable to evolve any reasonable suggestion, the idea occurred to me to go and lay the facts before the great man himself.

Once started, the idea took full possession of me, and I decided to waste no time but to seek him at once. This was not his day for lecturing at the hospital, but I could find his address in our school calendar; and as my means, though modest, allowed of my retaining him in a regular way, I need have no scruples as to occupying his time. I looked at my watch. It was even now but a little past noon. I had time to change and get an early lunch and still make my visit while the day was young.

A couple of hours later found me walking slowly down the pleasant, tree-shaded footway of King’s Bench Walk in the Inner Temple, looking up at the numbers above the entries. Dr. Thorndyke’s number was 5A, which I presently discovered inscribed on the keystone of a fine, dignified brick portico of the seventeenth century, on the jamb whereof was painted his name as the occupant of the ‘1st pair.’ I accordingly ascended the first pair and was relieved to find that my teacher was apparently at home; for a massive outer door, above which his name was painted, stood wide open, revealing an inner door, furnished with a small, brilliantly-burnished brass knocker, on which I ventured to execute a modest rat-tat. Almost immediately the door was opened by a small, clerical-looking gentleman who wore a black linen apron—and ought, from his appearance, to have had black gaiters to match—and who regarded me with a look of polite inquiry.

“I wanted to see Dr. Thorndyke,” said I, adding discreetly, “on a matter of professional business.”

The little gentleman beamed on me benevolently. “The doctor,” said he, “has gone to lunch at his club, but he will be coming in quite shortly. Would you like to wait for him?”

“Thank you,” I replied, “I should, if you think I shall not be disturbing him.”
The little gentleman smiled—that is to say, the multitudinous wrinkles that covered his face arranged themselves into a sort of diagram of geniality. It was the crinkliest smile that I have ever seen, but a singularly pleasant one.

"The doctor," said he, "is never disturbed by professional business. No man is ever disturbed by having to do what he enjoys doing."

As he spoke, his eyes turned unconsciously to the table, on which stood a microscope, a tray of slides and mounting material and a small heap of what looked like dressmaker’s cuttings.

"Well," I said, "don’t let me disturb you, if you are busy."

He thanked me very graciously, and, having installed me in an easy-chair, sat down at the table and resumed his occupation, which apparently consisted in isolating fibres from the various samples of cloth and mounting them as microscopic specimens. I watched him as he worked, admiring his neat, precise, unhurried methods and speculating on the purpose of his proceedings: whether he was preparing what one might call museum specimens, to be kept for reference, or whether these preparations were related to some particular case. I was considering whether it would be admissible for me to ask a question on the subject when he paused in his work, assuming a listening attitude, with one hand—holding a mounting-needle—raised and motionless.

"Here comes the doctor," said he.

I listened intently and became aware of footsteps, very faint and far away, and only barely perceptible. But my clerical friend—who must have had the auditory powers of a watch-dog—had no doubts as to their identity, for he began quietly to pack all his material on the tray. Meanwhile the footsteps drew nearer, they turned in at the entry and ascended the ‘first pair,’ by which time my crinkly-faced acquaintance had the door open. The next moment Dr. Thorndyke entered and was duly informed that ‘a gentleman was waiting to see’ him.

"You under-estimate my powers of observation, Polton," he informed his subordinate, with a smile. "I can see the gentleman distinctly with my naked eye. How do you do, Gray?" and he shook my hand cordially.

"I hope I haven’t come at the wrong time, sir," said I. "If I have, you must adjourn me. But I want to consult you about a rather queer case."

"Good," said Thorndyke. "There is no wrong time for a queer case. Let me hang up my hat and fill my pipe and then you can proceed to make my flesh creep."

He disposed of his hat, and when Mr. Polton had departed with his tray of material, he filled his pipe, laid a note-block on the table and invited me to begin; whereupon I gave him a detailed account of what had befallen me in the course of the morning, to which he listened with close attention, jotting down an occasional note, but not interrupting my narrative. When I had finished, he read through his notes and then said:

"It is, of course, evident to you that all the appearances point to suicide. Have you any reasons, other than those you have mentioned, for rejecting that view?"

"I am afraid not," I replied gloomily. "But you have always taught us to beware of too ready acceptance of the theory of suicide in doubtful cases."

He nodded approvingly. "Yes," he said, "that is a cardinal principle in medico-legal practice. All other possibilities should be explored before suicide is accepted. But our difficulty in this case is that we have hardly any of the relevant facts. The evidence at the inquest may make everything clear. On the other hand, it may leave things obscure. But what is your concern with the case? You are merely a witness to the finding of the body. The parties are all strangers to you, are they not?"

"They were," I replied. "But I feel that someone ought to keep an eye on things for Miss D’Arblay’s sake, and circumstances seem to have put the duty on me. So, as I can afford to pay any costs that are likely to be incurred, I proposed to ask you to undertake the case—on a strict business footing, you know, sir."

"When you speak of my undertaking the case," said he, "what is it that is in your mind? What do you want me to do in the matter?"

"I want you to take an measures that you may think necessary," I replied, "to ascertain definitely, if possible, how this man came by his death."

He reflected a while before answering. At length he said: "The examination of the body will be conducted by the person whom the coroner appoints, probably the police surgeon. I will write to the coroner for permission to be present at the post-mortem examination. He will certainly make no difficulties. I will also write to the police surgeon, who is sure to be quite helpful. If the post-mortem throws no light on the case—in fact, in any event—I will instruct a first-class shorthand writer to attend at the inquest and make a verbatim report of the evidence, and you, of course, will be present as a witness. That, I think, is about all that we can do at present. When we have heard all the evidence, including that furnished by the body itself, we shall be able to judge whether the case calls for further investigation. How will that do?"

"It is all that I could wish," I answered, "and I am most grateful to you, sir, for giving your time to the case. I hope you don’t think I have been unduly meddlesome."

"Not in the least," he replied warmly. "I think you have shown a very proper spirit in the way you have interpreted your
neighbourly duties to this poor, bereaved girl, who, apparently, has no one else to watch over her interests. And I take it as a compliment from an old pupil that you should seek my help.”

I thanked him again, very sincerely, and had risen to take my leave, when he held up his hand.

“Sit down, Gray, if you are not in a hurry,” said he. “I hear the pleasant clink of crockery. Let us follow the example of the eminent Mr. Pepys—though it isn’t always a safe thing to do—and taste of the ‘China drinke called Tee’ while you tell me what you have been doing since you went forth from the fold.”

It struck me that the sense of hearing was uncommonly well developed in this establishment, for I had heard nothing; but a few moments later the door opened very quietly and Mr. Polton entered with a tray on which was a very trim, and even dainty, tea-service, which he set out, noiselessly and with a curious neatness of hand, on a small table placed conveniently between our chairs.

“Thank you, Polton,” said Thorndyke. “I see you diagnosed my visitor as a professional brother.”

Polton crinkled benevolently and admitted that he ‘thought the gentleman looked like one of us’, and with this he melted away, closing the door behind him without a sound.

“Well,” said Thorndyke, as he handed me my tea-cup, “what have you been doing with yourself since you left the hospital?”

“Principally looking for a job,” I replied; “and now I’ve found one—a temporary job, though I don’t know how temporary. To-morrow I take over the practice of a man named Cornish in Mecklenburgh Square. Cornish is a good deal run down and wants to take a quiet holiday on the East Coast. He doesn’t know how long he will be away. It depends on his health; but I have told him that I am prepared to stay as long as he wants me to. I hope I shan’t make a mess of the job, but I know nothing of general practice.”

“You will soon pick it up,” said Thorndyke; “but you had better get your principal to show you the ropes before he goes, particularly the dispensing and book-keeping. The essentials of practice you know, but the little practical details have to be learnt, and you are doing well to make your first plunge into professional life in a practice that is a going concern. The experience will be valuable when you make a start on your own account.”

On this plane of advice and comment our talk proceeded until I thought that I had stayed long enough, when I once more rose to depart. Then, as we were shaking hands, Thorndyke reverted to the object of my visit.

“I shall not appear in this case unless the coroner wishes me to,” said he. “I shall consult with the official medical witness and he will probably give our joint conclusions in his evidence—unless we should fail to agree, which is very unlikely. But you will be present, and you had better attend closely to the evidence of all the witnesses and let me have your account of the inquest as well as the shorthand writer’s report. Good-bye, Gray. You won’t be far away if you should want my help or advice.”

I left the precincts of the temple in a much more satisfied frame of mind. The mystery which seemed to me to surround the death of Julius D’Arblay would be investigated by a supremely competent observer, and I need not further concern myself with it. Perhaps there was no mystery at all. Possibly the evidence at the inquest would supply a simple explanation. At any rate, it was out of my hands and into those of one immeasurably more capable, and I could now give my undivided attention to the new chapter of my life that was to open on the morrow.

III. — THE DOCTOR’S REVELATIONS

It was in the evening of the very day on which I took up my duties at number 61 Mecklenburgh Square that the little blue paper was delivered summoning me to attend at the inquest on the following day. Fortunately, Dr. Cornish’s practice was not of a highly strenuous type, and the time of year tended to a small visiting-list, so that I had no difficulty in making the necessary arrangements. In fact, I made them so well that I was the first to arrive at the little building in which the inquiry was to be held and was admitted by the caretaker to the empty room. A few minutes later, however, the inspector made his appearance, and while I was exchanging a few words with him, the jury began to straggle in, followed by the reporters, a few spectators and witnesses, and finally the coroner, who immediately took his place at the head of the table and prepared to open the proceedings.

At this moment I observed Miss D’Arblay standing hesitatingly in the doorway and looking into the room as if reluctant to enter. I at once rose and went to her, and as I approached, she greeted me with a friendly smile and held out her hand; and then I perceived, lurking just outside, a tall, black-apparelled woman, whose face I recognized as that which I had seen at the window.

“This,” said Miss D’Arblay, presenting me, “is my friend Miss Boler, of whom I spoke to you. This, Arabella, dear, is the gentleman who was so kind to me on that dreadful day.”

I bowed deferentially and Miss Boler recognized my existence by a majestic inclination, remarking that she remembered me. As the coroner now began his preliminary address to the jury, I hastened to find three chairs near the table, and having inducted the ladies into two of them, took the third myself, next to Miss D’Arblay. The coroner and the jury now rose and went out to the adjacent mortuary to view the body, and during their absence I stole an occasional critical glance at my fair
friend.

Marion D’Arblay was, as I have said, a strikingly handsome girl. The fact seemed now to dawn on me afresh, as a new discovery; for the harrowing circumstances of our former meeting had so preoccupied me that I had given little attention to her personality. But now, as I looked her over anxiously to see how the grievous days had dealt with her, it was with a sort of surprised admiration that I noted the beautiful, thoughtful face, the fine features and the wealth of dark, gracefully disposed hair. I was relieved, too, to see the change that a couple of days had wrought. The wild, dazed look was gone. Though she was pale and heavy-eyed and looked tired and infinitely sad, her manner was calm, quiet and perfectly self-possessed.

“I am afraid,” said I, “that this is going to be rather a painful ordeal for you.”

“Yes,” she agreed, “it is all very dreadful. But it is a dreadful thing in any case to be bereft in a moment of the one whom one loves best in all the world. The circumstances of the loss cannot make very much difference. It is the loss itself that matters. The worst moment was when the blow fell—when we found him. This inquiry and the funeral are just the drab accompaniments that bring home the reality of what has happened.”

“Has the inspector called on you?” I asked.

“Yes,” she replied. “He had to, to get the particulars, and he was so kind and delicate that I am not in the least afraid of the examination by the coroner. Everyone has been kind to me, but none so kind as you were on that terrible morning.”

I could not see that I had done anything to call for so much gratitude, and I was about to enter a modest disclaimer when the coroner and the jury returned and the inspector approached somewhat hurriedly.

“It will be necessary,” said he, “for Miss D’Arblay to see the body—just to identify deceased, a glance will be enough. And, as you are a witness, Doctor, you had better go with her to the mortuary. I will show you the way.”

Miss D’Arblay rose without any comment or apparent reluctance and we followed the inspector to the adjoining mortuary, where, having admitted us, he stood outside awaiting us. The body lay on the slate-topped table, covered with a sheet excepting the face, which was exposed and was undisfigured by any traces of the examination. I watched my friend a little nervously as we entered the grim chamber, fearful that this additional trial might be too much for her self-control. But she kept command of herself, though she wept quietly as she stood beside the table looking down on the still, waxen-faced figure. After standing thus for a few moments, she turned away with a smothered sob, wiped her eyes and walked out of the mortuary.

When we re-entered the court-room, we found our chairs moved up to the table and the coroner waiting to call the witnesses. As I had expected, my name was the first on the list, and on being called, I took my place by the table near to the coroner and was duly sworn.

“Will you give us your name, occupation and address?” the coroner asked.

“My name is Stephen Gray,” I replied. “I am a medical practitioner and my temporary address is 61 Mecklenburgh Square, London.”

“When you say your ‘temporary address’ you mean—?”

“I am taking charge of a medical practice at that address. I shall be there six weeks or more.”

“Then that will be your address for our purposes. Have you viewed the body that is now lying in the mortuary, and, if so, do you recognize it?”

“Yes. It is the body which I saw lying in a pond in Churchyard Bottom Wood on the morning of the 16th instant—last Tuesday.”

“Can you tell us how long deceased had been dead when you first saw the body?”

“I should say he had been dead nine or ten hours.”

“Will you relate the circumstances under which you discovered the body?”

I gave a circumstantial account of the manner in which I made the tragic discovery, to which not only the jury but also the spectators listened with eager interest. When I had finished my narrative, the coroner asked: “Did you observe anything which led you, as a medical man, to form any opinion as to the cause of death?”

“No,” I replied. “I saw no injuries or marks of violence or anything which was not consistent with death by drowning.”

This concluded my evidence, and when I had resumed my seat, the name of Marion D’Arblay was called by the coroner, who directed that a chair should be placed for the witness. When she had taken her seat, he conveyed to her, briefly but feelingly, his own and the jury’s sympathy.

“It has been a terrible experience for you,” he said, “and we are most sorry to have to trouble you in your great affliction, but you will understand that it is unavoidable.”

“I quite understand that,” she replied, “and I wish to thank you and the jury for your kind sympathy.”

She was then sworn, and having given her name and address, proceeded to answer the questions addressed to her, which elicited a narrative of the events substantially identical with that which she had given to the inspector and which I have
already recorded.

“You have told us,” said the coroner, “that when Dr. Gray spoke to you, you were searching among the bushes. Will you tell us what was in your mind—what you were searching for and what induced you to make that search?”

“I was very uneasy about my father,” she replied. “He had not been home that night and he had not told me that he intended to stay at the studio—as he sometimes did when he was working very late. So, in the morning I went to the studio in Abbey Road to see if he was there; but the caretaker told me that he had started for home about ten o’clock. Then I began to fear that something had happened to him, and as he always came home by the path through the wood, I went there to see if—if anything had happened to him.”

“Had you in your mind any definite idea as to what might have happened to him?”

“I thought he might have been taken ill or have fallen down dead. He once told me that he would probably die quite suddenly. I believe that he suffered from some affection of the heart, but he did not like speaking about his health.”

“Are you sure that there was nothing more than this in your mind?”

“There was nothing more. I thought that his heart might have failed and that he might have wandered, in a half-conscious state, away from the main path and fallen dead in one of the thickets.”

The coroner pondered this reply for some time. I could not see why, for it was plain and straightforward enough. At length he said, very gravely and with what seemed to me unnecessary emphasis: “I want you to be quite frank and open with us. Miss D’Arblay. Can you swear that there was no other possibility in your mind than that of sudden illness?”

She looked at him in surprise, apparently not understanding the drift of the question. As to me, I assumed that he was endeavouring delicately to ascertain whether deceased was addicted to drink. “I have told you exactly what was in my mind,” she replied.

“Have you ever had any reason to suppose, or to entertain the possibility, that your father might take his own life?”

“Never,” she answered emphatically. “He was a happy, even-tempered man, always interested in his work and always in good spirits. I am sure he would never have taken his own life.”

The coroner nodded with a rather curious air of satisfaction, as if he were concurring with the witness’s statement. Then he asked in the same grave, emphatic manner:

“So far as you know, had your father any enemies?”

“No,” she replied confidently. “He was a kindly, amiable man who disliked nobody, and everyone who knew him loved him.”

As she uttered this panegyric (and what prouder testimony could a daughter have given?), her eyes filled, and the coroner looked at her with deep sympathy but yet with a somewhat puzzled expression.

“You are sure,” he said gently, “that there was no one whom he might have injured—even inadvertently—or who bore him any grudge or ill-will?”

“I am sure,” she answered, “that he never injured or gave offence to anyone, and I do not believe that there was any person in the whole world who bore him anything but goodwill.”

The coroner noted this reply, and as he entered it in the depositions, his face bore the same curious puzzled or doubtful expression. When he had written the answer down, he asked: “By the way, what was the deceased’s occupation?”

“He was a sculptor by profession, but in later years he worked principally as a modeller for various trades—pottery manufacturers, picture-frame makers, carvers and the makers of high-class wax figures for shop windows.”

“Had he any assistants or subordinates?”

“No. He worked alone. Occasionally I helped him with his moulds when he was very busy or had a very large work on hand; but usually he did everything himself. Of course, he occasionally employed models.”

“Do you know who those models were?”

“They were professional models. The men, I think, were all Italians and some of the women were, too. I believe my father kept a list of them in his address book.”

“Was he working from a model on the night of his death?”

“No. He was making the moulds for a porcelain statuette.”

“Did you ever hear that he had any kind of trouble with his models?”

“Never. He seemed always on the best of terms with them and he used to speak of them most appreciatively.”

“What sort of persons are professional models? Should you say they are a decent, well-conducted class?”

“Yes. They are usually most respectable, hard-working people; and, of course, they are sober and decent in their habits or they would be of no use for their professional duties.”

The coroner meditated on these replies with a speculative eye on the witness. After a short pause, he began along
“Might it not have been administered for medicinal purposes?”

“I have no doubt that it was administered for the purpose of causing the death of deceased.”

“Might it not have been administered for medicinal purposes?”

“Did deceased ever carry about with him property of any considerable value?”

“Never, to my knowledge.”

“No jewellery, plate or valuable material?”

“No. His work was practically all in plaster or wax. He did no goldsmith’s work and he used no precious material.”

“Did he ever have any considerable sums of money about him?”

“No. He received all his payments by cheque and he made his payments in the same way. His habit was to carry very little money on his person—usually not more than one or two pounds.”

Once more the coroner reflected profoundly. It seemed to me that he was trying to elicit some fact—I could not imagine what—and was failing utterly. At length, after another puzzled look at the witness, he turned to the jury and inquired if any of them wished to put any questions; and when they had severally shaken their heads, he thanked Miss D’Arblay for the clear and straightforward way in which she had given her evidence and released her.

While the examination had been proceeding, I had allowed my eyes to wander round the room with some curiosity, for this was the first time that I had ever been present at an inquest. From the jury, the witnesses in waiting and the reporters among whom I tried to identify Dr. Thorndyke’s stenographer—my attention was presently transferred to the spectators. There were only a few of them, but I found myself wondering why there should be any. What kind of person attends as a spectator at an ordinary inquest such as this appeared to be? The newspaper reports of the finding of the body were quite unsensational and promised no startling developments. Finally, I decided that they were probably local residents who had some knowledge of the deceased and were just indulging their neighbourly curiosity.

Among them my attention was particularly attracted by a middle-aged woman who sat near me—at least I judged her to be middle-aged, though the rather dense black veil that she wore obscured her face to a great extent. Apparently she was a widow, and advertised the fact by the orthodox, old-fashioned ‘weeds’. But I could see that she had white hair and wore spectacles. She held a folded newspaper on her knee, apparently dividing her attention between the printed matter and the proceedings of the court. She gave me the impression of having come in to spend an idle hour, combining a somewhat perfunctory reading of the paper with a still more perfunctory attention to the rather gruesome entertainment that the inquest afforded.

The next witness called was the doctor who had made the official examination of the body; on whom the—presumed—widow bestowed a listless, incurious glance and then returned to her newspaper. He was a youngish man, though his hair was turning grey, with a quiet but firm and confident manner and a very clear, pleasant voice. The preliminaries having been disposed of, the coroner led off with the question:

“You have made an examination of the body of the deceased?”

“Yes. It is that of a well-proportioned, fairly muscular man of about sixty, quite healthy with the exception of the heart one of the valves of which—the mitral valve—was incompetent and allowed some leakage of blood to take place.”

“Was the heart affection sufficient to account for the death of deceased?”

“No. It was quite a serviceable heart. There was good compensation—that is to say, there was extra growth of muscle to make up for the leaky valve. So far as his heart was concerned, deceased might have lived for another twenty years.”

“Were you able to ascertain what actually was the cause of death?”

“Yes. The cause of death was aconitine poisoning.”

At this reply a murmur of astonishment arose from the jury, and I heard Miss D’Arblay suddenly draw in her breath. The spectators sat up on their benches, and even the veiled lady was so far interested as to look up from her paper.

“How had the poison been administered?” the coroner asked.

“It had been injected under the skin by means of a hypodermic syringe.”

“Can you give an opinion as to whether the poison was administered to deceased by himself or by some other person?”

“It could not have been injected by deceased himself,” the witness replied. “The needle-puncture was in the back, just below the left shoulder-blade. It is, in my opinion, physically impossible for anyone to inject with a hypodermic syringe into his own body in that spot. And, of course, a person who was administering an injection to himself would select the most convenient spot—such as the front of the thigh. But apart from the question of convenience, the place in which the needle-puncture was found was actually out of reach.” Here the witness produced a hypodermic syringe, the action of which he demonstrated with the aid of a glass of water; and having shown the impossibility of applying it to the spot that he had described, passed the syringe round for the jury’s inspection.

“Have you formed any opinion as to the purpose for which this drug was administered in this manner?”

“I have no doubt that it was administered for the purpose of causing the death of deceased.”

“Might it not have been administered for medicinal purposes?”

Another line.

“Did deceased ever carry about with him property of any considerable value?”

“Never, to my knowledge.”

“No jewellery, plate or valuable material?”

“No. His work was practically all in plaster or wax. He did no goldsmith’s work and he used no precious material.”

“Did he ever have any considerable sums of money about him?”

“No. He received all his payments by cheque and he made his payments in the same way. His habit was to carry very little money on his person—usually not more than one or two pounds.”

Once more the coroner reflected profoundly. It seemed to me that he was trying to elicit some fact—I could not imagine what—and was failing utterly. At length, after another puzzled look at the witness, he turned to the jury and inquired if any of them wished to put any questions; and when they had severally shaken their heads, he thanked Miss D’Arblay for the clear and straightforward way in which she had given her evidence and released her.

While the examination had been proceeding, I had allowed my eyes to wander round the room with some curiosity, for this was the first time that I had ever been present at an inquest. From the jury, the witnesses in waiting and the reporters among whom I tried to identify Dr. Thorndyke’s stenographer—my attention was presently transferred to the spectators. There were only a few of them, but I found myself wondering why there should be any. What kind of person attends as a spectator at an ordinary inquest such as this appeared to be? The newspaper reports of the finding of the body were quite unsensational and promised no startling developments. Finally, I decided that they were probably local residents who had some knowledge of the deceased and were just indulging their neighbourly curiosity.

Among them my attention was particularly attracted by a middle-aged woman who sat near me—at least I judged her to be middle-aged, though the rather dense black veil that she wore obscured her face to a great extent. Apparently she was a widow, and advertised the fact by the orthodox, old-fashioned ‘weeds’. But I could see that she had white hair and wore spectacles. She held a folded newspaper on her knee, apparently dividing her attention between the printed matter and the proceedings of the court. She gave me the impression of having come in to spend an idle hour, combining a somewhat perfunctory reading of the paper with a still more perfunctory attention to the rather gruesome entertainment that the inquest afforded.

The next witness called was the doctor who had made the official examination of the body; on whom the—presumed—widow bestowed a listless, incurious glance and then returned to her newspaper. He was a youngish man, though his hair was turning grey, with a quiet but firm and confident manner and a very clear, pleasant voice. The preliminaries having been disposed of, the coroner led off with the question:

“You have made an examination of the body of the deceased?”

“Yes. It is that of a well-proportioned, fairly muscular man of about sixty, quite healthy with the exception of the heart one of the valves of which—the mitral valve—was incompetent and allowed some leakage of blood to take place.”

“Was the heart affection sufficient to account for the death of deceased?”

“No. It was quite a serviceable heart. There was good compensation—that is to say, there was extra growth of muscle to make up for the leaky valve. So far as his heart was concerned, deceased might have lived for another twenty years.”

“Were you able to ascertain what actually was the cause of death?”

“Yes. The cause of death was aconitine poisoning.”

At this reply a murmur of astonishment arose from the jury, and I heard Miss D’Arblay suddenly draw in her breath. The spectators sat up on their benches, and even the veiled lady was so far interested as to look up from her paper.

“How had the poison been administered?” the coroner asked.

“It had been injected under the skin by means of a hypodermic syringe.”

“Can you give an opinion as to whether the poison was administered to deceased by himself or by some other person?”

“It could not have been injected by deceased himself,” the witness replied. “The needle-puncture was in the back, just below the left shoulder-blade. It is, in my opinion, physically impossible for anyone to inject with a hypodermic syringe into his own body in that spot. And, of course, a person who was administering an injection to himself would select the most convenient spot—such as the front of the thigh. But apart from the question of convenience, the place in which the needle-puncture was found was actually out of reach.” Here the witness produced a hypodermic syringe, the action of which he demonstrated with the aid of a glass of water; and having shown the impossibility of applying it to the spot that he had described, passed the syringe round for the jury’s inspection.

“Have you formed any opinion as to the purpose for which this drug was administered in this manner?”

“I have no doubt that it was administered for the purpose of causing the death of deceased.”

“Might it not have been administered for medicinal purposes?”
“That is quite inconceivable. Leaving out of consideration the circumstances—the time and place where the administration occurred—the dose excludes the possibility of medicinal purposes. It was a lethal dose. From the tissues round the needle—puncture we recovered the twelfth of a grain of aconitine. That alone was more than enough to cause death. But a quantity of the poison had been absorbed, as was shown by the fact that we recovered a recognizable trace from the liver.”

“What is the medicinal dose of aconitine?”

“The maximum medicinal dose is about the four-hundredth of a grain, and even that is not very safe. As a matter of fact, aconitine is very seldom used in medical practice. It is a dangerous drug and of no particular value.”

“How much aconitine do you suppose was injected?”

“Not less than the tenth of a grain—that is, about forty times the maximum medicinal dose. Probably more.”

“There can, I suppose, be no doubt as to the accuracy of the facts that you have stated as to the nature and quantity of the poison?”

“There can be no doubt whatever. The analysis was made in my presence by Professor Woodford of St. Margaret’s Hospital after I had removed the tissues from the body in his presence. He has not been called because, in accordance with the procedure under Coroners Law, I am responsible for the analysis and the conclusions drawn from it.”

“Taking the medical facts as known to you, are you able to form an opinion as to what took place when the poison was administered?”

“That,” the witness replied, “is a matter of inference or conjecture. I infer that the person who administered the poison thrust the needle violently into the back of the deceased, intending to inject the poison into the chest. Actually, the needle struck a rib and bent up sharply, so that the contents of the syringe were delivered just under the skin. Then I take it that the assailant ran away—probably towards the pond—and deceased pursued him. Very soon the poison would take effect, and then deceased would have fallen. He may have fallen into the pond, or more probably was thrown in. He was alive when he fell into the pond, as is proved by the presence of water in the lungs; but he must then have been insensible and in a dying condition, for there was no water in the stomach, which proves that the swallowing reflex had already ceased.”

“Your considered opinion, then, based on the medical facts ascertained by you, is, I understand, that deceased died from the effects of a poison injected into his body by some other person with homicidal intent?”

“Yes; that is my considered opinion, and I affirm that the facts do not admit of any other interpretation.”

The coroner looked towards the jury. “Do any of you gentlemen wish to ask the witness any questions?” he inquired; and when the foreman had replied that the jury were entirely satisfied with the doctor’s explanations, he thanked the witness, who thereupon retired. The medical witness was succeeded by the inspector, who made a short statement respecting the effects found on the person of deceased. They comprised a small sum of money—under two pounds—a watch, keys and other articles, none of them of any appreciable value, but such as they were, furnishing evidence that at least petty robbery had not been the object of the attack.

When the last witness had been heard, the coroner glanced at his notes and then proceeded to address the jury.

“There is little, gentlemen,” he began, “that I need say to you. The facts are before you and they seem to admit of only one interpretation. I remind you that, by the terms of your oath, your finding must be ‘according to the evidence.’ Now, the medical evidence is quite dear and definite. It is to the effect that deceased met his death by poison administered violently by some other person; that is, by homicide. Homicide is the killing of a human being, and it may or may not be criminal. But if the homicidal act is done with the intent to kill, if that intention has been deliberately formed—that is to say, if the homicidal act has been premeditated—then that homicide is wilful murder.

“Now, the person who killed the deceased came to the place where the act was done provided with a solution of a very powerful and uncommon vegetable poison. He was also provided with a very special appliance—to wit, a hypodermic syringe—for injecting it into the body. The fact that he was furnished with the poison and the appliance creates a strong presumption that he came to this place with the deliberate intention of killing the deceased. That is to say, this fact constitutes strong evidence of premeditation.

“As to the motive for this act, we are completely in the dark; nor have we any evidence pointing to the identity of the person who committed that act. But a coroner’s inquest is not necessarily concerned with motives, nor is it our business to fix the act on any particular person. We have to find how and by what means the deceased met his death; and for that purpose we have clear and sufficient evidence. I need say no more, but will leave you to agree upon your finding.”

There was a brief interval of silence when the coroner had finished speaking. The jury whispered together for a few seconds; then the foreman announced that they had agreed upon their verdict.

“And what is your decision, gentlemen?” the coroner asked.

“We find,” was the reply, “that deceased met his death by wilful murder, committed by some person unknown.”

The coroner bowed. “I am in entire agreement with you, gentlemen,” said he. “No other verdict was possible; and I am sure you will join with me in the hope that the wretch who committed this dastardly crime may be identified and in due course brought to justice.”
This brought the proceedings to an end. As the court rose, the spectators filed out of the building and the coroner approached Miss D’Arblay to express once more his deep sympathy with her in her tragic bereavement. I stood apart with Miss Boler, whose rugged face was wet with tears, but set in a grim and wrathful scowl.

“Things have taken a terrible turn,” I ventured to observe.

She shook her head and uttered a sort of low growl. “It won’t bear thinking of,” she said gruffly. “There is no possible retribution that would meet the case. One has thought that some of the old punishments were cruel and barbarous; but if I could lay my hands on the villain that did this—” She broke off, leaving the conclusion to my imagination, and in an extraordinarily different voice, said: “Come, Miss Marion; let us get out of this awful place.”

As we walked away slowly and in silence, I looked at Miss D’Arblay, not without anxiety. She was very pale, and the dazed expression that her face had borne on the fatal day of the discovery had, to some extent, reappeared. But now the signs of bewilderment and grief were mingled with something new. The rigid face, the compressed lips and lowered brows spoke of a deep and abiding wrath.

Suddenly she turned to me and said, abruptly, almost harshly: “I was wrong in what I said to you before the inquiry. You remember that I said the circumstances of the loss could make no difference; but they make a whole world of difference. I had supposed that my dear father had died as he had thought he would die; that it was the course of Nature, which we cannot rebel against. Now I know, from what the doctor said, that he might have lived on happily for the full span of human life but for the malice of this unknown wretch. His life was not lost; it was stolen—from him and from me.”

“Yes,” I said somewhat lamely. “It is a horrible affair.”

“It is beyond bearing!” she exclaimed. “If his death had been natural, I would have tried to resign myself to it. I would have tried to put my grief away. But to think that his happy, useful life has been snatched from him, that he has been torn from us who loved him, by the deliberate act of this murderer—it is unendurable. It will be with me every hour of my life until I die. And every hour I shall call on God for justice against this wretch.”

I looked at her with a sort of admiring surprise. A quiet, gentle girl as I believed her to be at ordinary times, now, with her flushed cheeks, her flashing eyes and ominous brows, she reminded me of one of the heroines of the French Revolution. Her grief seemed to be merged in a longing for vengeance.

While she had been speaking, Miss Boler had kept up a running accompaniment in a deep, humming bass. I could not catch the words—if there were any—but was aware only of a low, continuous bourdon. She now said with grim decision: “God will not let him escape. He shall pay the debt to the uttermost farthing.” Then, with sudden fierceness, she added: “If I should ever meet with him, I could kill him with my own hand.”

After this, both women relapsed into silence, which I was loath to interrupt. The circumstances were too tragic for conversation. When we reached their gate. Miss D’Arblay held out her hand and once again thanked me for my help and sympathy.

“I have done nothing,” said I, “that any stranger would not have done, and I deserve no thanks. But I should like to think that you will look on me as a friend, and if you should need any help will let me have the privilege of being of use to you.”

“I look on you as a friend already,” she replied; “and I hope you will come and see us sometimes—when we have settled down to our new conditions of life.”

As Miss Boler seemed to confirm this invitation, I thanked them both and took my leave, glad to think that I had now a recognized status as a friend and might pursue a project which had formed in my mind even before we had left the courthouse.

The evidence of the murder, which had fallen like a thunderbolt on us all, had a special significance for me; for I knew that Dr. Thorndyke was behind this discovery, though to what extent I could not judge. The medical witness was an obviously capable man, and it might be that he would have made the discovery without assistance. But a needle-puncture in the back is a very inconspicuous thing. Ninety-nine doctors in a hundred would almost certainly have overlooked it, especially in the case of a body apparently ‘found drowned’ and seeming to call for no special examination beyond the search for gross injuries. The revelation was very characteristic of Thorndyke’s methods and principles. It illustrated in a most striking manner the truth which he was never tired of insisting on: that it is never safe to accept obvious appearances, and that every case, no matter how apparently simple and commonplace, should be approached with suspicion and scepticism and subjected to the most rigorous scrutiny. That was precisely what had been done in this case; and thereby an obvious suicide had been resolved into a cunningly-planned and skilfully-executed murder. It was quite possible that, but for my visit to Thorndyke, those cunning plans would have succeeded and the murderer have secured the cover of a verdict of ‘death by misadventure’ or ‘suicide while temporarily insane.’ At any rate, the results had justified me in invoking Dr. Thorndyke’s aid; and the question now arose whether it would be possible to retain him for the further investigation of the case.

This was the project that had occurred to me as I listened to the evidence and realized how completely the unknown murderer had covered up his tracks. But there were difficulties. Thorndyke might consider such an investigation outside his province. Again, the costs involved might be on a scale entirely beyond my means. The only thing to be done was to call on Thorndyke and hear what he had to say on the subject, and this I determined to do on the first opportunity. And having formed this resolution, I made my way back by the shortest route to Mecklenburgh Square, where the evening
IV. — MR. BENDLOW

THERE are certain districts in London the appearance of which conveys to the observer the impression that the houses, and indeed the entire streets, have been picked up second-hand. There is in their aspect a grey, colourless, mouldy quality, reminiscent, not of the antique shop, but rather of the marine-store dealers; a quality which even communicates itself to the inhabitants, so that one gathers the impression that the whole neighbourhood was taken as a going concern.

It was on such a district that I found myself looking down from the top of an omnibus a few days after the inquest (Dr. Cornish’s brougham being at the moment under repairs and his horse ‘out to grass’ during the slack season), being bound for a street in the neighbourhood of Hoxton—Market Street by name—which abutted, as I had noticed when making out my route, on the Regent’s Canal. The said route I had written out, and now, in the intervals of my surveys of the unlovely prospect, I divided my attention between it and the note which had summoned me to these remote regions.

Concerning the latter I was somewhat curious, for the envelope was addressed, not to Dr. Cornish but to ‘Dr. Stephen Gray’. This was really quite an odd circumstance. Either the writer knew me personally or was aware that I was acting as locum tenens for Cornish. But the name—James Morris—was unknown to me, and a careful inspection of the index of the ledger had failed to bring to light anyone answering to the description. So Mr. Morris was presumably a stranger to my principal also. The note, which had been left by hand in the morning, requested me to call ‘as early in the forenoon as possible,’ which seemed to hint at some degree of urgency. Naturally, as a young practitioner, I speculated with interest, not entirely unmixed with anxiety, on the possible nature of the case, and also on the patient’s reason for selecting a medical attendant whose residence was so inconsequently far away.

In accordance with my written route, I got off the omnibus at the corner of Shepherdess Walk, and pursuing that pastoral thoroughfare for some distance, presently plunged into a labyrinth of streets adjoining it and succeeded most effectually in losing myself. However, inquiries addressed to an intelligent fish-vendor elicited a most lucid direction and I soon found myself in a little, drab street which justified its name by giving accommodation to a row of stationary barrows loaded with what looked like the ‘throw-outs’ from a colossal spring-clean. Passing along this kerb-side market and reflecting (like Diogenes, in similar circumstances) how many things there were in the world that I did not want, I walked slowly up the street looking for number 23—my patient’s number—and the canal which I had seen on the map. I located them both at the same instant, for number 23 turned out to be the last house on the opposite side, and a few yards beyond it the street was barred by a low wall, over which, as I looked, the mast of a sailing-barge came into view and slowly crept past. I stepped up to the wall and looked over. Immediately beneath me was the towing-path, alongside which the barge was now bringing up and beginning to lower her mast, apparently to pass under a bridge that spanned the canal a couple of hundred yards farther along.

From these nautical manoeuvres I transferred my attention to my patient’s house—or at least, so much of it as I could see, for number 23 appeared to consist of a shop with nothing over it. There was, however, in a wall which extended to the canal wall, a side door with a bell and knocker, so I inferred that the house was behind the shop and that the latter had been built on a formerly existing front garden. The shop itself was somewhat reminiscent of the stalls down the street, for though the fascia was newly painted (with the inscription J. Morris, Dealer in Antiques), the stock-in-trade exhibited in the window was in the last stage of senile decay. It included, I remember, a cracked Toby jug, a mariner’s sextant of an obsolete type a Dutch clock without hands, a snuff-box, one or two planter statuettes, an invalid punchbowl, a shiny, dark and inscrutable oil-painting and a plaster mask, presumably the death-mask of some celebrity whose face was unknown to me.

My examination of this collection was brought to a sudden end by the apparition of a face above the half-blind of the glazed shop-door, the face of a middle-aged woman who seemed to be inspecting me with malevolent interest. Assuming—rather too late—a brisk, professional manner, I opened the shop-door, thereby setting a bell jangling within, and confronted the owner of the face.

“I am Dr. Gray,” I began to explain.

“Side-door,” she interrupted brusquely. “Ring the bell and knock.”

I backed out hastily and proceeded to follow the directions, giving a tug at the bell and delivering a flourish on the knocker. The hollow reverberations of the latter almost suggested an empty house, but my vigorous pull at the bell-handle produced no audible result, from which I inferred—wrongly, as afterwards appeared—that it was out of repair.

After waiting quite a considerable time, I was about to repeat the performance when I heard sounds within; and then the door was opened, to my surprise, by the identical sour-faced woman whom I had seen in the shop. As her appearance and manner did not invite conversation, and as she uttered no word, I followed her in silence through a long passage, or covered way, which ran parallel to the side of the shop and presumably crossed the site of the garden. It ended at a door which opened into the hall proper; a largish square space into which the doors of the ground-floor rooms opened. It contained the main staircase and was closed in at the farther end by a heavy curtain which extended from wall to wall.

We proceeded in this funereal manner up the stairs to the first floor on the landing of which my conductress halted and for the first time broke the silence.
“You will probably find Mr. Bendelow asleep or dozing,” she said in a rather gruff voice. “If he is, there is no need for you to disturb him.”

“Mr. Bendelow!” I exclaimed. “I understood that his name was Morris.”

“Well, it isn’t,” she retorted. “It is Bendelow. My name is Morris and so is my husband’s. It was he who wrote to you.”

“By the way,” said I, “how did he know my name? I am acting for Dr. Cornish, you know.”

“I didn’t know,” said she, “and I don’t suppose he did. Probably the servant told him. But it doesn’t matter. Here you are, and you will do as well as another. I was telling you about Mr. Bendelow. He is in a pretty bad way. The specialist whom Mr. Morris took him to—Dr. Artemus Cropper—said he had cancer of the bilorus, whatever that is—”

“Pylorus,” I corrected.

“Well, pylorus, then, if you prefer it,” she corrected impatiently. “At any rate, whatever it is, he’s got cancer of it; and as I said before, he is in a pretty bad way. Dr. Cropper told us what to do, and we are doing it. He wrote out full directions as to diet—I will show them to you presently—and he said that Mr. Bendelow was to have a dose of morphia if he complained of pain—which he does, of course; and that, as there was no chance of his getting better, it didn’t matter how much morphia he had. The great thing was to keep him out of pain. So we give it to him twice a day—at least, my husband does—and that keeps him fairly comfortable. In fact he sleeps most of the time and is probably dozing now; so you are not likely to get much out of him, especially as he is rather hard of hearing even when he is awake. And now you had better come in and have a look at him.”

She advanced to the door of a room and opened it softly, and I followed in a somewhat uncomfortable frame of mind. It seemed to me that I had no function but that of a mere figure-head. Dr. Cropper, whom I knew by name as a physician of some reputation, had made the diagnosis and prescribed the treatment, neither of which I, as a mere beginner, would think of contesting. It was an unsatisfactory, even an ignominious position, from which my professional pride revolted, but apparently it had to be accepted.

Mr. Bendelow was a most remarkable-looking man. Probably he had always been, but now the frightful emaciation (which strongly confirmed Cropper’s diagnosis) had so accentuated his original peculiarities that he had the appearance of some dreadful, mirthless caricature. Under the influence of the remorseless disease, every shriveling structure had shrunk to the vanishing-point, leaving the unshrinkable skeleton jutting out with a most horrible and grotesque effect. His great hooked nose, which must always have been strikingly prominent, stuck out now, thin and sharp, like the beak of prey. His heavy beetling brows, which must always have given to his face a frowning sullenness, now overhung sockets which had shrunk away into mere caverns. His naturally-high cheek-bones were now not only prominent but exhibited the details of their structure as one sees them in a dry skull. Altogether, his aspect was at once pitiable and forbidding. Of his age I could form no estimate. He might have been a hundred. The wonder was that he was still alive; that there was yet left in that shrivelled body enough material to enable its mechanism to continue its functions.

He was not asleep, but was in that somnolent, lethargic state that is characteristic of the effects of morphia. He took no notice of me when I approached the bed, nor even when I spoke his name somewhat loudly.

“I told you you wouldn’t get much out of him,” said Mrs. Morris, looking at me with a sort of grim satisfaction. “He doesn’t have a great deal to say to any of us nowadays.”

“Well,” said I, “there is no need to rouse him, but I had better just examine him, if only as a matter of form. I can’t take the case entirely on hearsay.”

“I suppose not,” she agreed. “You know best. Do what you think necessary, but don’t disturb him more than you can help.”

It was not a prolonged examination. The first touch of my fingers on the shrunken abdomen made me aware of the unmistakable hard mass and rendered further exploration needless. There could be no doubt as to the nature of the case or of what the future held in store. It was only a question of time, and a short time at that.

The patient submitted to the examination quite passively, but he seemed to be fully aware of what was going on, for he looked at me in a sort of drunken, dreamy fashion but without any sign of interest in my proceedings. When I had finished, I looked him over again, trying to reconstitute him as he might have been before this deadly disease fastened on him. I observed that he seemed to have a fair crop of hair of a darkish iron-grey. I say seemed because the greater part of his head was covered by a skull-cap of black silk; but a fringe of hair straying from under it on to the forehead suggested that he was not bald. His teeth, too, which were rather conspicuous, were natural teeth and in good preservation. In order to confirm this fact, I stooped and raised his lip the better to examine them. But at this point Mrs. Morris intervened.

“There, that will do,” she said impatiently. “You are not a dentist, and his teeth will last as long as he will want them. If you have finished, you had better come with me and I will show you Dr. Cropper’s prescriptions. Then you can tell me if you have any further directions to give.”

She led the way out of the room, and when I had made a farewell gesture to the patient (of which he took no notice) I followed her down the stairs to the ground-floor, where she ushered me into a small, rather elegantly furnished room. Here she opened the top of a bureau and from one of the little drawers took an open envelope, which she handed to me. It contained one or two prescriptions for occasional medicines and a sheet of directions relative to the diet and general
management of the patient, including the administration of morphia. The latter read, under the general heading, ‘Simon Bendelow, Esq.’:

‘As the case progresses, it will probably be necessary to administer morphine regularly, but the amount given should, if possible, be restricted to 14 gr. Morph. Sulph. not more than twice a day, but, of course, the hopeless prognosis and probable early termination of the case make some latitude admissible.’

Although I was in complete agreement with the writer, I was a little puzzled by these documents. They were signed ‘Artemus Cropper, MD,’ but they were not addressed to any person by name. They appeared to have been given to Mr. Morris, in whose possession they now were; but the use of the word ‘morphine’ instead of the more familiar ‘morphia’ and the general technical phraseology seemed inappropriate to directions addressed to lay persons. As I returned them I remarked:

“These directions read as if they had been intended for the information of a medical man.”

“They were,” she replied. “They were meant for the doctor who was attending Mr. Bendelow at the time. When we moved to this place, I got them from him to show to the new doctor. You are the new doctor.”

“They haven’t been here very long?”

“No,” she replied. “We have only just moved in. And that reminds me that our stock of morphia is running out. Could you bring a fresh tube of the tabloids next time you call? My husband left an empty tube for me to give you to remind you what size the tabloids are. He gives Mr. Bendelow the injections.”

“Thank you,” said I, “but I don’t want the empty tube. I read the prescription and shan’t forget the dose. I will bring a new tube to-morrow—that is, if you want me to call every day. It seems hardly necessary.”

“No, it doesn’t,” she agreed. “I should think twice a week would be quite enough. Monday and Thursday would suit me best; if you could manage to come about this time I should be sure to be in. My time is rather taken up, as I haven’t a servant at present.”

It was a bad arrangement. Fixed appointments are things to avoid in medical practice. Nevertheless I agreed to it—subject to unforeseen obstacles—and was forthwith conducted back along the covered way and launched into the outer world with a farewell which it would be inadequate to describe as unemotional.

As I turned away from the door I cast a passing glance at the shop-window; and once again I perceived a face above the half-blind. It was a man’s face this time; presumably the face of Mr. Morris. And like his wife, he seemed to be ‘taking stock of me.’ I returned the attention and carried away with me the instantaneous mental photograph of a man in that unprepossessing transitional state between being clean-shaved and wearing a beard which is characterized by a sort of grubby prickliness that disfigures the features without obscuring them. His stubble was barely a week old, but as his complexion and hair were dark the effect was very untidy and disreputable. And yet, as I have said, it did not obscure the features. I was even able, in that momentary glance, to note a detail which would probably have escaped a non-medical eye: the scar of a hare-lip which had been very neatly and skilfully mended and which a moustache would probably have concealed altogether.

I did not, however, give much thought to Mr. Morris. It was his dour-faced wife with her gruff, overbearing manner who principally occupied my reflections. She seemed to have divined in some way that I was but a beginner—perhaps my youthful appearance gave her the hint—and to have treated me with almost open contempt. In truth, my position was not a very dignified one. The diagnosis of the case had been made for me, the treatment had been prescribed for me and was being carried out by other hands than mine. My function was to support a kind of legal fiction that I was conducting the case, but principally to supply the morphia (which a chemist might have refused to do) and, when the time came, to sign the death-certificate. It was an ignominious role for a young and ambitious practitioner and my pride was disposed to boggle at it. But yet there was nothing to which I could object. The diagnosis was undoubtedly correct and the treatment and management of the case exactly as I should have prescribed. Finally, I decided that my dissatisfaction was principally due to the unattractive personality of Mrs. Morris; and with this conclusion I dismissed the case from my mind and let my thoughts wander into more agreeable channels.

V.—INSPECTOR FOLLETT’S DISCOVERY

TO a man whose mind is working actively, walking is a more acceptable mode of progression than riding in a vehicle. There is a sort of reciprocity between the muscles and the brain—possibly due to the close association of the motor and psychical centres—whereby the activity of the one appears to act as a stimulus to the other. A sharp walk sets the mind working; and, conversely, a state of lively reflection begets an impulse to bodily movement.

Hence, when I had emerged from Market Street and set my face homewards, I let the omnibuses rumble past unheeded. I knew my way now. I had but to retrace the route by which I had come and, preserving my isolation amidst the changing crowd, let my thoughts keep pace with my feet. And I had, in fact, a good deal to think about—a general subject for reflection which arranged itself around two personalities, Miss D’Arblay and Dr. Thorndyke.

To the former I had written suggesting a call on her, ‘subject to the exigencies of the service,’ on Sunday afternoon, and had received a short but cordial note definitely inviting me to tea. So that matter was settled and really required no further
consideration, though it did actually occupy my thoughts for an appreciable part of my walk. But that was mere self-indulgence, the preliminary savouring of an anticipated pleasure. My cogitations respecting Dr. Thorndyke were, on the other hand, somewhat troubled. I was eager to invoke his aid in solving the hideous mystery which his acuteness had (I felt convinced) brought into view. But it would probably be a costly business and my pecuniary resources were not great. To apply to him for services of which I could not meet the cost was not to be thought of. The too-common meanness of sponging on a professional man was totally abhorrent to me.

But what was the alternative? The murder of Julius D’Arblay was one of those crimes which offer the police no opportunity; at least, so it seemed to me. Out of the darkness this fiend had stolen to commit this unspeakable atrocity, and into the darkness he had straightway vanished, leaving no trace of his identity nor any hint of his diabolical motive. It might well be that he had vanished for ever; that the mystery of the crime was beyond solution. But if any solution was possible, the one man who seemed capable of discovering it was John Thorndyke.

This conclusion, to which my reflections led again and again, committed me to the dilemma that either this villain must be allowed to go his way unmolested, if the police could find no clue to his identity—a position that I utterly refused to accept—or that the one supremely skilful investigator should be induced, if possible, to take up the inquiry. In the end I decided to call on Thorndyke and frankly lay the facts before him, but to postpone the interview until I had seen Miss D’Arblay and ascertained what view the police took of the case and whether any new facts had transpired.

The train of reflection which brought me to this conclusion had brought me also, by way of Pentonville, to the more familiar neighbourhood of Clerkenwell; and I had just turned into a somewhat squalid by-street which seemed to bear in the right direction, when my attention was arrested by a brass plate affixed to the door of one of those hybrid establishments, intermediate between a shop and a private house, known by the generic name of open surgery. The name upon the plate—Dr. Solomon Usher—awakened certain reminiscences. In my freshman days there had been a student of that name at our hospital; a middle-aged man (elderly, we considered him, seeing that he was near upon forty) who, after years of servitude as an unqualified assistant, had scraped together the means of completing his curriculum. I remembered him very well: a facetious, seedy, slightly bibulous but entirely good-natured man, invincibly amiable (as he had need to be), and always in the best of spirits. I recalled the quaint figure that furnished such rich material for our school-boy wit: the solemn spectacles, the ridiculous side-whiskers, the chimney-pot hat, the formal frock-coat (too often decorated with a label secretly pinned to the coat-tail and bearing some such inscription as ‘This style 10s. 6d.’ or other scintillations of freshman humour), and, looking over the establishment, decided that it seemed to present a complete congruity with that well-remembered personality. But the identification was not left to mere surmise, for even as my eye roamed along a range of stoppered bottles that peeped over the wire blind, the door opened and there he was, spectacles, side-whiskers, top-hat and frock-coat, all complete, plus an oedematous-looking umbrella.

He did not recognise me at first—naturally, for I had changed a good deal more than he had in the five or six years that had slipped away—but inquired gravely if I wished to see him. I replied that it had been the dearest wish of my heart, now at length gratified. Then, as I grinned in his face, my identity suddenly dawned on him.

“Why, it’s Gray!” he exclaimed, seizing my hand. “God bless me, what a surprise! I didn’t know you. Getting quite a man. Well, I am delighted to see you. Come in and have a drink.”

He held the door open invitingly, but I shook my head.

“No, thanks,” I replied. “Not at this time in the day.”

“Nonsense,” he urged. “Do you good. I’ve just had one myself. Can’t say more than that, excepting that I am ready to have another. Won’t you really? Pity. Should never waste an opportunity. Which way are you going?”

It seemed that we were going the same way for some distance and we accordingly set off together.

“So you’ve flopped out of the nest,” he remarked, looking me over—“at least, so I judge by the adult clothes that you are wearing. Are you in practice in these parts?”

“No,” I replied; “I am doing a locum. Only just qualified, you know.”

“Good,” said he. “A locum’s the way to begin. Try your prentice hand on somebody else’s patients and pick up the art of general practice, which they don’t teach you at the hospital.”

“You mean book-keeping and dispensing and the general routine of the day’s work?” I suggested.

“No, I don’t,” he replied. “I mean practice; the art of pleasing your patients and keeping your end up. You’ve got a lot to learn, my boy. Experientia does it. Scientific stuff is all very well at the hospital, but in practice it is experience, gumption, tact, knowledge of human nature, that counts.”

“I suppose a little knowledge of diagnosis and treatment is useful?” I suggested.

“For your own satisfaction, yes,” he admitted; “but for practical purposes, a little knowledge of men and women is a good deal better. It isn’t your scientific learning that brings you kudos, nor is it out-of-the-way cases. It is just common sense brought to bear on common ailments. Take the case of an aurist. You think that he lives by dealing with obscure and difficult middle and internal ear cases. Nothing of the kind. He lives on wax. Wax is the foundation of his practice. Patient comes to him as deaf as a post. He does all the proper jugglery—tuning-fork, otoscope, speculum and so on, for the moral effect. Then he hikes out a good old plug of cerumen and the patient hears perfectly. Of course, he is delighted. Thinks a
miracle has been performed. Goes away convinced that the aurist is a genius; and so he is if he has managed the case properly. I made my reputation here on a fish-bone."

"Well, a fish-bone isn't always so very easy to extract," said I.

"It isn't," he agreed. "Especially if it isn't there."

"What do you mean?" I asked.

"I'll tell you about it," he replied. "A chappie here got a fish-bone stuck in his throat. Of course it didn't stay there. They never do. But the prick in his soft palate did, and he was convinced that the bone was still there. So he sent for a doctor. Doctor came, looked in his throat. Couldn't see any fish-bone and, like a fool, said so. Tried to persuade the patient that there was no bone there. But the chappie said it was his throat and he knew better. He could feel it there. So he sent for another doctor and the same thing happened. No go. He had four different doctors and they hadn't the sense of an infant among them. Then he sent for me.

"Now, as soon as I heard how the land lay, I nipped into the surgery and got a fish-bone that I keep there in a pillow for emergencies, stuck it into the jaws of a pair of throat-forceps, and off I went. 'Show me whereabouts it is,' says I, handing him a probe to point with. He showed me the spot and nearly swallowed the probe. 'All right,' said I. 'I can see it. Just shut your eyes and open your mouth wide and I will have it out in a jiffy.' I popped the forceps into his mouth, gave a gentle prod with the point on the soft palate, patient hollered out, 'Hoo!' I whisked out the forceps and held them up before his eyes with the fish-bone grasped in their jaws.

"'Ha!' says he. 'Thank Gawd! What a relief! I can swallow quite well now.' And so he could. It was a case of suggestion and counter-suggestion. Imaginary fish-bone cured by imaginary extraction. And it made my local reputation. Well, goodbye, old chap. I've got a visit to make here. Come in one evening and smoke a pipe with me. You know where to find me. And take my advice to heart. Never go to extract a fish-bone without one in your pocket; and it isn't a bad thing to keep a dried earwig by you. I do. People will persist in thinking they've got one in their ears. So long. Look me up soon," and with a farewell flourish of the umbrella, he turned to a shabby street-door and began to work the top bell-pull as if it were the handle of an air-pump.

I went on my way, not a little amused by my friend's genial cynicism, nor entirely uninstructed. For 'there is a soul of truth in things erroneous,' as the philosopher reminds us; and if the precepts of Solomon Usher did not sound the highest note of professional ethics, they were based on a very solid foundation of worldly wisdom.

When, having finished my short round of visits, I arrived at my temporary home, I was informed by the housemaid in a mysterious whisper that a police officer was waiting to see me. "Name of Follett," she added. "He's waiting in the consulting-room."

Proceeding thither, I found my friend, the Highgate inspector, standing with one eye closed before a card of test-types that hung on the wall. We greeted one another cordially and then, as I looked at him inquiringly, he produced from his pocket without remark an official envelope, from which he extracted a coin, a silver pencil-case and a button. These objects he laid on the writing-table and silently directed my attention to them. A little puzzled by his manner, I picked up the coin and examined it attentively. It was a Charles the Second guinea, dated 1663, very clean and bright and in remarkably perfect preservation. But I could not see that it was any concern of mine.

"It is a beautiful coin," I remarked; "but what about it?"

"It doesn't belong to you, then?" he asked.

"No. I wish it did."

"Have you ever seen it before?"

"Never, to my knowledge."

"What about the pencil-case?"

I picked it up and turned it over in my fingers. "No," I said, "it is not mine and I have no recollection of ever having seen it before."

"And the button?"

"It is apparently a waistcoat button," I said after having inspected it, "which seems to belong to a tweed waistcoat; and judging by the appearance of the thread and the wisp of cloth that it still holds, it must have been pulled off with some violence. But it isn't off my waistcoat, that is what I want to know."

"I didn't much think it was," he replied, "but I thought it best to make sure. And it didn't come from poor Mr. D'Arblay's waistcoat, because I have examined that and there is no button missing. I showed these things to Miss D'Arblay and she is sure that none of them belonged to her father. He never used a pencil-case—artists don't, as a rule—and as to the guinea, she knew nothing about it. If it was her father's, he must have come by it immediately before his death; otherwise she felt sure he would have shown it to her, seeing that they were both interested in anything in the nature of sculpture."

"Where did you get these things?" I asked.

"From the pond in the wood," he replied. "I will tell you how I came to find them—that is, if I am not taking up too much
of your time."

"Not at all," I assured him; and even as I spoke, I thought of Solomon Usher. He wouldn't have said that. He would have anxiously consulted his engagement-book to see how many minutes he could spare. However, Inspector Follett was not a patient, and I wanted to hear his story. So having established him in the easy-chair, I sat down to listen.

"The morning after the inquest," he began, "an officer of the CID came up to get particulars of the case and see what was to be done. Well, as soon as I had told him all I knew and shown him our copy of the depositions, it was pretty clear to me that he didn't think there was anything to be done but wait for some fresh evidence. Mind you, Doctor, this is in strict confidence."

"I understand that. But if the Criminal Investigation Department doesn't investigate crime, what does the duchess mean by the good of it?"

"That is hardly a fair way of putting it," he protested. "The people at Scotland Yard have got their hands pretty full and they can't spend their time in speculating about cases in which there is no evidence. They can't create evidence; and you can see for yourself that there isn't the ghost of a clue to the identity of the man who committed this murder. But they are keeping the case in mind, and meanwhile we have got to report any new facts that may turn up. Those were our instructions, and when I heard them I decided to do a bit of investigating on my own, with the superintendent's permission, of course.

"Well, I began by searching the wood thoroughly, but I got nothing out of that excepting Mr. D'Arblay's hat, which I found in the undergrowth not far from the main path.

"Then I thought of dragging the pond; but I decided that, as it was only a small pond and shallow, it would be best to empty it and expose the bottom completely. So I dammed up the little stream that feeds it and deepened the outflow, and very soon I had it quite empty excepting a few small puddles. And I think it was well worth the trouble. These things don't tell us much, but they may be useful one day for identification. And they do tell us something. They suggest that this man was a collector of coins; and they make it fairly clear that there was a struggle in the pond before Mr. D'Arblay fell down."

"That is, assuming that the things belonged to the murderer," I interposed. "There is no evidence that they did."

"No, there isn't," he admitted; "but if you consider the three things together, they suggest a very strong probability. Here is a waistcoat button violently pulled off, and here are two things such as would be carried in a waistcoat pocket and might fall out if the waistcoat were dragged at violently when the wearer was stooping over a fallen man and struggling to avoid being pulled down with him. And then there is this coin. Its face-value is a guinea, but it must be worth a good deal more than that. Do you suppose anybody would leave a thing of that kind in a shallow pond from which it could be easily recovered with a common landing-net? Why, it would have paid to have had the pond dragged or even emptied. But, as I say, that wouldn't have been necessary."

"I am inclined to think you are right, Inspector," said I, "rather impressed by the way in which he had reasoned the matter out; but even so, it doesn't seem to me that we are much more forward. The things don't point to any particular person."

"Not at present," he rejoined. "But a fact is a fact and you can never tell in advance what you may get out of it. If we should get a hint of any other kind pointing to some particular person, these things might furnish invaluable evidence connecting that person with the crime. They may even give a clue now to the people at the CID, though that isn't very likely."

"Then you are going to hand them over to the Scotland Yard people?"

"Certainly. The CID are the lions, you know. I'm only a jackal."

I was rather sorry to hear this, for the idea had floated into my mind that I should have liked Thorndyke to see these waifs, which, could they have spoken, would have had much to tell. To me they conveyed nothing that threw any light on the ghastly events of that night of horror. But to my teacher, with his vast experience and his wonderful power of analysing evidence, they might convey some quite important significance.

I reflected rapidly on the matter. It would not be wise to say anything to the inspector about Thorndyke, and it was quite certain that a loan of the articles would not be entertained. Probably a description of them would be enough for the purpose; but still I had a feeling that an inspection of them would be better. Suddenly I had a bright idea and proceeded cautiously to broach it.

"I should rather like to have a record of these things," said I, "particularly of the coin. Would you object to my taking an impression of it in sealing-wax?"

Inspector Follett looked doubtful. "It would be a bit irregular," he said. "It is a bit irregular for me to have shown it to you, but you are interested in the case, and you are a responsible person. What did you want the impression for?"

"Well," I said, "we don't know much about that coin. I thought I might be able to pick up some further information. Of course, I understand that what you have told me is strictly confidential. I shouldn't go showing the thing about, or talking. But I should like to have the impression to refer to, if necessary."

"Very well," said he. "On that understanding, I have no objection. But see that you don't leave any wax on the coin, or the CID people will be asking questions."
With this permission, I set about the business gleefully, determined to get as good an impression as possible. From the surgery I fetched an ointment slab, a spirit-lamp, a stick of sealing-wax, a tea-spoon, some powder-papers, a bowl of water and a jar of vaseline. Laying a paper on the slab, I put the coin on it and traced its outline with a pencil. Then I broke off a piece of sealing-wax, melted it in the tea-spoon and poured it out carefully into the marked circle so that it formed a round, convex button of the right size. While the wax was cooling to the proper consistency, I smeared the coin with vaseline and wiped the excess off with my handkerchief. Then I carefully laid it on the stiffening wax and made steady pressure. After a few moments, I cautiously lifted the paper and dropped it into the water, leaving it to cool completely. When, finally, I turned it over under water, the coin dropped away by its own weight.

"It is a beautiful impression," the inspector remarked, as he examined it with the aid of my pocket-lens, while I prepared to operate on the reverse of the coin. "As good as the original. You seem rather a dab at this sort of thing, Doctor. I wonder if you would mind doing another pair for me?"

Of course, I complied gladly; and when the inspector departed a few minutes later he took with him a couple of excellent wax impressions to console him for the necessity of parting with the original.

As soon as he was gone, I proceeded to execute a plan that had already formed in my mind. First, I packed the two wax impressions very carefully in lint and bestowed them in a tin tobacco-box, which I made up into a neat parcel and addressed it to Dr. Thorndyke. Then I wrote him a short letter giving him the substance of my talk with Inspector Follett and asking for an appointment early in the following week to discuss the situation with him. I did not suppose that the wax impressions would convey, even to him, anything that would throw fresh light on this extraordinarily obscure crime. But one never knew. And the mere finding of the coin might suggest to him some significance that I had overlooked. In any case, the new incident gave me an excuse for reopening the matter with him.

I did not trust the precious missive to the maid, but as soon as the letter was written I took it and the parcel in my own hands to the post, dropping the letter into the box but giving the parcel the added security of registration. This business being thus dispatched, my mind was free to occupy itself with pleasurable anticipations of the projected visit to Highgate on the morrow and to deal with whatever exigencies might arise in the course of the Saturday-evening consultations.

VI. — MARION D’ARBLAY AT HOME

MOST of us have, I imagine, been conscious at times of certain misgivings as to whether the Progress of which we hear so much has done for us all that it is assumed to have done, whether the undoubted gain of advancing knowledge has not a somewhat heavy counterpoise of loss. We moderns are accustomed to look upon a world filled with objects that would have made our forefathers gasp with admiring astonishment, and we are accordingly a little puffed up by our superiority. But the museums and galleries and ancient buildings sometimes tell a different tale. By them we are made aware that the same ‘rude forefathers’ were endowed with certain powers and aptitudes that seem to be denied to the present generation.

Some such reflections as these passed through my mind as I sauntered about the ancient village of Highgate, having arrived in the neighbourhood nearly an hour too early. Very delightful the old village was to look upon, and so it had been even when the mellow red brick was new and the plaster on the timber houses was but freshly laid; when the great elms were saplings and the stage-wagon with its procession of horses rumbled along the road which now resounds to the thunder of the electric tram. It was not Time that had made beautiful its charming old houses and pleasant streets and closes, but fine workmanship guided by unerring taste.

At four o’clock precisely, by the chime of the church dock, I pushed open the gate of Ivy Cottage, and as I walked up the flagged path, read the date, 1709, on a stone tablet set into the brickwork. I had no occasion to knock, for my approach had been observed, and as I mounted the threshold the door opened and Miss D’Arblay stood in the opening.

"Miss Boler saw you coming up the Grove," she explained, as we shook hands. "It is surprising how much of the outer world you can see from a bay window. It is as good as a watch-tower." She disposed of my hat and stick and then preceded me into the room to which the window appertained, where, beside a bright fire. Miss Boler was at the moment occupied with a brilliantly-burnished copper kettle and a silver teapot. She greeted me with an amiable smile and as much of a bow as was possible under the circumstances, and then proceeded to make the tea with an expression of deep concentration.

"I do like punctual people," she remarked, placing the teapot on a carved wooden stand. "You know where you are with them. At the very moment when you turned the corner, sir, Miss Marion finished buttering the last muffin and the kettle boiled over. So you won’t have to wait a moment."

Miss D’Arblay laughed softly. "You speak as if Dr. Gray had staggered into the house in a famished condition, roaring for food," said she.

"Well," retorted Miss Boler, "you said ‘tea at four o’clock,’ and at four o’clock the tea was ready and Dr. Gray was here. If he hadn’t been, he would have had to eat leathery muffins, that’s all."

"Horrible!" exclaimed Miss D’Arblay. "One doesn’t like to think of it; and there is no need to as it hasn’t happened. Remember that this is a gate-legged table, Dr. Gray, when you sit down. They are delightfully picturesque, but exceedingly bad for the knees of the unwary."

I thanked her for the warning and took my seat with due caution. Then Miss Boler poured out the tea and uncovered the
muffins with the grave and attentive air of one performing some ceremonial rite.

As the homely, simple meal proceeded, to an accompaniment of desultory conversation on everyday topics, I found myself looking at the two women with a certain ill-defined surprise. Both were garbed in unobtrusive black, and both, in moments of repose, looked somewhat tired and worn. But in their manner and the subjects of their conversation they were astonishingly ordinary and normal. No stranger, looking at them and listening to their talk, would have dreamed of the tragedy that overshadowed their lives. But so it constantly happens. We go into a house of mourning and are almost scandalized by its cheerfulness, forgetting that whereas to us the bereavement is the one salient fact, to the bereaved there is the necessity of taking up afresh the threads of their lives. Food must be prepared even while the corpse lies under the roof, and the common daily round of duty stands still for no human affliction.

But, as I have said, in the pauses of the conversation when their faces were in repose, both women looked strained and tired. Especially was this so in the case of Miss D’Arblay. She was not only pale, but she had a nervous, shaken manner which I did not like. And as I looked anxiously at the delicate, pallid face, I noticed, not for the first time, several linear scratches on the cheek and a small cut on the temple.

“What have you been doing to yourself?” I asked. “You look as if you have had a fall.”

“She has,” said Miss Boler in an indignant tone. “It is a marvel that she is here to tell the tale. The wretches!”

“Ah! indeed!” growled Miss Boler. “I wish I knew. Tell him about it. Miss Marion.”

“It was really rather a terrifying experience,” said Miss D’Arblay, “and most mysterious. You know Southwood Lane and the long, steep hill at the bottom of it?” I nodded, and she continued: “I have been going down to the studio every day on my bicycle, just to tidy up, and of course I went by Southwood Lane. It is really the only way. But I always put on the brake at the top of the hill and go down quite slowly because of the cross—roads at the bottom. Well, three days ago I started as usual and ran down the Lane pretty fast until I got on the hill. Then I put on the brake; and I could feel at once that it wasn’t working.”

“Has your bicycle only one brake?” I asked.

“It had. I am having a second one fixed now. Well, when I found that the brake wasn’t acting, I was terrified. I was already going too fast to jump off, and the speed increased every moment. I simply flew down the hill, faster and faster, with the wind whistling about my ears and the trees and houses whirling past like express trains. Of course, I could do nothing but steer straight down the hill; but at the bottom there was the Archway Road with the tram cars and buses and wagons. I knew that if a tram crossed the bottom of the Lane as I reached the road, it was practically certain death. I was horribly frightened.

“However, mercifully the Archway Road was clear when I flew across it, and I steered to run on down Muswell Hill Road, which is nearly in a line with the Lane. But suddenly I saw a steam roller and a heavy cart, side by side and taking up the whole of the road. There was no room to pass. The only possible thing was to swerve round, if I could, into Wood Lane. And I just managed it. But Wood Lane is pretty steep, and I flew down it faster than ever. That nearly broke down my nerve; for at the bottom of the Lane is the wood—the horrible wood that I can never even think of without a shudder. And there I seemed to be rushing towards it at once.”

She paused and drew a deep breath, and her hand shook so that the cup which it held rattled on the saucer.

“Well,” she continued, “down the Lane I flew with my heart in my mouth and the entrance to the wood rushing to meet me. I could see that the opening in the hurdles was just wide enough for me to pass through, and I steered for it. I whizzed through into the wood and the bicycle went bounding down the steep, rough path at a fearful pace until it came to a sharp turn; and then I don’t quite know what happened. There was a crash of snapping branches and a violent shock, but I must have been partly stunned, for the next thing that I remember is opening my eyes and looking stupidly at a lady who was stooping over me. She had seen me fly down the Lane and had followed me into the wood to see what happened to me. She lived in the Lane and she very kindly took me to her house and cared for me until I was quite recovered; and then she saw me home and wheeled the bicycle.”

“It is a wonder you were not killed outright!” I exclaimed.

“Yes,” she agreed, “it was a narrow escape. But the odd thing is that, with the exception of these scratches and a few slight bruises, I was not hurt at all; only very much shaken. And the bicycle was not damaged a bit.”

“By the way,” said I, “what had happened to the brake?”

“Ahh!” exclaimed Miss Boler. “There you are. The villains!”

Miss D’Arblay laughed softly. “Ferocious Arabella!” said she. “But it is really a most mysterious affair: Naturally, I thought that the wire of the brake had snapped. But it hadn’t. It had been cut.”

“Are you quite sure of that?” I asked.

“Oh, there is no doubt at all,” she replied. “The man at the repair shop showed it to me. It wasn’t merely cut in one place. A length of it had been cut right out. And I can tell within a few minutes when it was done; for I had been riding the machine in the morning and I know the brake was all right then. But I left it for a few minutes outside the gate while I went
into the house to change my shoes, and when I came out, I started on my adventurous journey. In those few minutes someone must have come along and just snipped the wire through in two places and taken away the piece."

"Scoundrel!" muttered Miss Boler; and I agreed with her most cordially.

"It was an infamous thing to do," I exclaimed, "and the act of an abject fool. I suppose you have no idea or suspicion as to who the idiot might be?"

"Not the slightest," Miss D'Arblay replied. "I can't even guess at the kind of person who would do such a thing. Boys are sometimes very mischievous, but this is hardly like a boy's mischief."

"No," I agreed; "it is more like the mischief of a mentally defective adult; the sort of half-baked larrikin who sets fire to a rick if he gets the chance."

Miss Boler sniffed. "Looks to me more like deliberate malice," said she.

"Mischievous acts usually do," I rejoined; "but yet they are mostly the outcome of stupidity that is indifferent to consequences."

"And it is of no use arguing about it," said Miss D'Arblay, "because we don't know who did it or why he did it, and we have no means of finding out. But I shall have two brakes in future and I shall test them both every time I take the machine out."

"I hope you will," said Miss Boler; and this closed the topic so far as conversation went, though I suspect that, in the interval of silence that followed, we all continued to pursue it in our thoughts. And to all of us, doubtless, the mention of Churchyard Bottom Wood had awakened memories of that fatal morning when the pool gave up its dead. No reference to the tragedy had yet been made, but it was inevitable that the thoughts which were at the back of all our minds should sooner or later come to the surface. They were in fact brought there by me, though unintentionally; for, as I sat at the table, my eyes had strayed more than once to a bust—or rather a head, for there were no shoulders—which occupied the centre of the mantelpiece. It was apparently of lead and was a portrait, and a very good one, of Miss D'Arblay's father. At the first glance I had recognized the face which I had first seen through the water of the pool. Miss D'Arblay, who was sitting facing it, caught my glance and said: "You are looking at that head of my dear father. I suppose you recognized it?"

"Yes, instantly. I should take it to be an excellent likeness."

"It is," she replied; "and that is something of an achievement in a self-portrait in the round."

"Then he modelled it himself?"

"Yes, with the aid of one or two photographs and a couple of mirrors. I helped him by taking the dimensions with callipers and drawing out a scale. Then he made a wax cast and a fireproof mould and we cast it together in type-metal, as we had no means of melting bronze. Poor Daddy! How proud he was when we broke away the mould and found the casting quite perfect!"

She sighed as she gazed fondly on the beloved features, and her eyes filled. Then, after a brief silence, she turned to me and asked:

"Did Inspector Follett call on you? He said he was going to."

"Yes; he called yesterday to show me the things that he had found in the pond. Of course they were not mine, and he seemed to have no doubt—and I think he is right—that they belonged to the—to the—"

"Murderer," said Miss Boler.

"Yes. He seemed to think that they might furnish some kind of clue, but I am afraid he had nothing very clear in his mind. I suppose that coin suggested nothing to you?"

Miss D'Arblay shook her head. "Nothing," she replied. "As it is an ancient coin, the man may be a collector or a dealer—"

"Or a forger," interposed Miss Boler.

"Or a forger. But no such person is known to us. And even that is mere guess-work."

"Your father was not interested in coins, then?"

"As a sculptor, yes, and more especially in medals and plaquettes. But not as a collector. He had no desire to possess; only to create. And so far as I know, he was not acquainted with any collectors. So this discovery of the inspector's, so far from solving the mystery, only adds a fresh problem."

She reflected for a few moments with knitted brows; then, turning to me quickly, she asked: "Did the inspector take you into his confidence at all? He was very reticent with me, though most kind and sympathetic. But do you think that he, or the others, are taking any active measures?"

"My impression," I answered reluctantly, "is that the police are not in a position to do anything. The truth is that this villain seems to have got away without leaving a trace."

"That is what I feared," she sighed. Then with sudden passion, though in a quiet, suppressed voice, she exclaimed: "But he must not escape! It would be too hideous an injustice. Nothing can bring back my dear father from the grave; but if
there is a God of Justice, this murderous wretch must be called to account and made to pay the penalty of his crime.”

“He must,” Miss Boler assented in deep, ominous tones, “and he shall; though God knows how it is to be done.”

“For the present,” said I, “there is nothing to be done but to wait and see if the police are able to obtain any fresh information; and meanwhile to turn over every circumstance that you can think of; to recall the way your father spent his time, the people he knew and the possibility in each case that some cause of enmity may have arisen.”

“That is what I have done,” said Miss D'Arblay. “Every night I lie awake, thinking, thinking; but nothing comes of it. The thing is incomprehensible. This man must have been a deadly enemy of my father's. He must have hated him with the most intense hatred; or he must have had some strong reason, other than mere hatred, for making away with him. But I cannot imagine any person hating my father and I certainly have no knowledge of any such person; nor can I conceive of any reason that any human creature could have had for wishing for my father's death. I cannot begin to understand the meaning of what has happened.”

“But yet,” said I, “there must be a meaning. This man—unless he was a lunatic, which he apparently was not—must have had a motive for committing the murder. That motive must have had some background, some connexion with circumstances of which somebody has knowledge. Sooner or later those circumstances will almost certainly come to light and then the motive for the murder will come into view. But, once the motive is known, it should not be difficult to discover who could be influenced by such a motive. Let us, for the present, be patient and see how events shape; but let us also keep a constant watch for any glimmer of light, for any fact that may bear on either the motive or the person.”

The two women looked at me earnestly and with an expression of respectful confidence of which I knew myself to be wholly undeserving.

“It gives me new courage,” said Miss D'Arblay, “to hear you speak in that reasonable, confident tone. I was in despair, but I feel that you are right. There must be some explanation of this awful thing; and if there is, it must be possible to discover it. But we ought not to put the burden of our troubles on you, though you have been so kind.”

“You have done me the honour,” said I, “to allow me to consider myself your friend. Surely friends should help to bear one another's burdens.”

“Yes,” she replied, “in reason; and you have given me most generous help already. But we must not put too much on you. When my father was alive, he was my great interest and chief concern. Now that he is gone, the great purpose of my life is to find the wretch who murdered him and to see that justice is done. That is all that seems to matter to me. But it is my own affair. I ought not to involve my friends in it.”

“I can’t admit that,” said I. “The foundation of friendship is sympathy and service. If I am your friend, then what matters to you matters to me; and I may say that in the very moment when I first knew that your father had been murdered, I made the resolve to devote myself to the discovery and punishment of his murderer by any means that lay in my power. So you must count me as your ally as well as your friend.”

As I made this declaration—to an accompaniment of approving growls from Miss Boler—Marion D'Arblay gave me one quick glance and then looked down, and once more her eyes filled. For a few moments she made no reply, and when, at length, she spoke, her voice trembled.

“You leave me nothing to say,” she murmured, “but to thank you from my heart. But you little know what it means to us, who felt so helpless, to know that we have a friend so much wiser and stronger than ourselves.”

I was a little abashed, knowing my own weakness and helplessness, to find her putting so much reliance on me. However, there was Thorndyke in the background, and now I was resolved that, if the thing was in any way to be compassed, his help must be secured without delay.

A longish pause followed; and as it seemed to me that there was nothing more to say on this subject until I had seen Thorndyke, I ventured to open a fresh topic.

“What will happen to your father's practice?” I asked. “Will you be able to get anyone to carry it on for you?”

“I am glad you asked that,” said Miss D'Arblay, “because, now that you are our counsellor, we can take your opinion. I have already talked the matter over with Arabella—with Miss Boler.”

“There's no need to stand on ceremony,” the latter lady interposed. “Arabella is good enough for me.”

“Arabella is good enough for anyone,” said Miss D'Arblay. “Well, the position is this. The part of my father's practice that was concerned with original work—pottery figures and reliefs and models for goldsmith's work—will have to go. No one but a sculptor of his own class could carry that on. But the wax figures for the shop-windows are different. When he first started, he used to model the heads and limbs in clay and make plaster casts from which to make the gelatine moulds for the waxwork. But as time went on, these casts accumulated and he very seldom had need to model fresh beads or limbs. The old casts could be used over and over again. Now there is a large collection of plaster models in the studio—heads, arms, legs and faces, especially faces—and as I have a fair knowledge of the waxwork, from watching my father and sometimes helping him, it seemed that I might be able to carry on that part of the practice.”

“You think you could make the wax figures yourself?” I asked.

“Of course she could,” exclaimed Miss Boler. “She's her father's daughter. Julius D'Arblay was a man who could do
anything he turned his hand to and do it well. And Miss Marion is just like him. She is quite a good modeller—so her father said; and she wouldn’t have to make the figures. Only the wax parts.”

“Then they are not wax all over?” said I.

“No,” answered Miss D’Arblay. “They are just dummies; wooden frameworks covered with stuffed canvas, with wax heads, busts and arms and shaped legs. That was just what poor Daddy used to hate about them. He would have liked to model complete figures.”

“And as to the business side. Could you dispose of them?”

“Yes, if I could do them satisfactorily. The agent who dealt with my father’s work has already written to me asking if I could carry on. I know he will help me so far as he can. He was quite fond of my father.”

“And you have nothing else in view?”

“Nothing by which I could earn a real living. For the last year or two I have worked at writing and illuminating—addresses, testimonials and church services when I could get them—and filled in the time writing special window-tickets. But that isn’t very remunerative, whereas the wax figures would yield quite a good living. And then,” she added, after a pause, “I have the feeling that Daddy would have liked me to carry on his work, and I should like it myself. He taught me quite a lot and I think he meant me to join him when he got old.”

As she had evidently made up her mind, and as her decision seemed quite a wise one, I concurred with as much enthusiasm as I could muster.

“I am glad you agree,” said she, “and I know Arabella does. So that is settled, subject to my being able to carry out the plan. And now, if we have finished, I should like to show you some of my father’s works. The house is full of them and so, even, is the garden. Perhaps we had better go there first before the light fails.”

As the treasures of this singularly interesting home were presented, one after another, for my inspection, I began to realize the truth of Miss Boler’s statement. Julius D’Arblay had been a remarkably versatile man. He had worked in all sorts of mediums and in all equally well. From the carved stone sundial and the leaden garden figures to the clock-case decorated with gilded gesso and enriched with delicate bronze plaquettes, all his works were eloquent of masterly skill and a fresh, graceful fancy. It seems to me little short of a tragedy that an artist of his ability should have spent the greater part of his time in fabricating those absurd, posturing effigies that simper and smirk so grotesquely in the enormous windows of Vanity Fair.

I had intended, in compliance with the polite conventions, to make this, my first visit, a rather short one; but a tentative movement to depart only elicited protests and I was easily persuaded to stay until the exigencies of Dr. Cornish’s practice seemed to call me. When at last I shut the gate of Ivy Cottage behind me and glanced back at the two figures standing in the lighted doorway, I had the feeling of turning away from a house with which, and its inmates, I had been familiar for years.

On my arrival at Mecklenburgh Square I found a note which had been left by hand earlier in the evening. It was from Dr. Thorndyke, asking me, if possible, to lunch with him at his chambers on the morrow. I looked over my visiting-list, and finding that Monday would be a light day—most of my days here were light days—I wrote a short letter accepting the invitation and posted it forthwith.

VII. — THORNDYKE ENLARGES HIS KNOWLEDGE

“I AM glad you were able to come,” said Thorndyke, as we took our places at the table. “Your letter was a shade ambiguous. You spoke of discussing the D’Arblay case. I believe you had something more than discussion in your mind.”

“You are quite right,” I replied. “I had it in my mind to ask if it would be possible for me to retain you—I believe that is the correct expression—to investigate the case, as the police seem to think there is nothing to go on; and if the costs would be likely to be within my means.”

“As to the costs,” said he, “we can dismiss them. I see no reason to suppose that there would be any costs.”

“But your time, sir—” I began.

He laughed derisively. “Do you propose to pay me for indulging in my pet hobby? No, my dear fellow, it is I who should pay you for bringing a most interesting and intriguing case to my notice. So your questions are answered. I shall be delighted to look into this case, and there will be no costs unless we have to pay for some special services. If we do, I will let you know.”

I was about to utter a protest, but he continued:

“And now, having disposed of the preliminaries, let us consider the case itself, Your very shrewd and capable inspector believes that the Scotland Yard people will take no active measures unless some new facts turn up. I have no doubt he is right, and I think they are right, too. They can’t spend a lot of time—which means public money—on a case in which hardly any data are available and which holds out no promise of any result. But we mustn’t forget that we are in the same boat. Our chances of success are infinitesimal. This investigation is a forlorn hope. That, I may say, is what commends it to me;
but I want you to understand clearly that failure is what we have to expect."

"I understand that," I answered gloomily, but nevertheless rather disappointed at this pessimistic view. "There seems to be nothing whatever to go upon."

"Oh, it isn't so bad as that," he rejoined. "Let us just run over the data that we have. Our object is to fix the identity of the man who killed Julius D'Arblay. Let us see what we know about him. We will begin with the evidence at the inquest. From that we learned: One. That he is a man of some education, ingenious, subtle, resourceful. This murder was planned with extraordinary ingenuity and foresight. The body was found in the pond with no tell-tale mark on it but an almost invisible pin-prick in the back. The chances were a thousand to one, or more, against that tiny puncture ever being observed; and if it had not been observed, the verdict would have been 'found drowned' or 'found dead' and the fact of the murder would never have been discovered.

"Two. We also learned that he has some knowledge of poisons. The common, vulgar poisoner is reduced to flypapers, weed-killer or rat-poison—arsenic or strychnine. But this man selects the most suitable of all poisons for his purpose and administers it in the most effective manner—with a hypodermic syringe.

"Three. We learned further that he must have had some extraordinarily strong reason for making away with D'Arblay. He made most elaborate plans, he took endless trouble—for instance, it must have been no easy matter to get possession of that quantity of aconitine (unless he were a doctor, which God forbid!). That strong reason—the motive, in fact—is the key of the problem. It is the murderer's one vulnerable point, for it can hardly be beyond discovery; and its discovery must be our principal objective."

I nodded, not without some self-congratulation as I recalled how I had made this very point in my talk with Miss D'Arblay.

"Those," Thorndyke continued, "are the data that the inquest furnished. Now we come to those added by Inspector Follett."

"I don't see that they help us at all," said I. "The ancient coin was a curious find, but it doesn't appear to tell us anything new excepting that this man may have been a collector or a dealer. On the other hand, he may not. It doesn't seem to me that the coin has any significance."

"Doesn't it really?" said Thorndyke, as he refilled my glass. "You are surely overlooking the very curious coincidence that it presents?"

"What coincidence is that?" I asked, in some surprise.

"The coincidence," he replied, "that both the murderer and the victim should be, to a certain extent, connected with a particular form of activity. Here is a man who commits a murder and who at the time of committing it appears to have been in possession of a coin, which is not a current coin but a collector's piece; and behold! the murdered man is a sculptor—a man who, presumably, was capable of making a coin, or at least the working model."

"There is no evidence," I objected, "that D'Arblay was capable of cutting a die. He was not a die-sinker."

"There was no need for him to be," Thorndyke rejoined. "Formerly, the medallist who designed the coin cut the die himself. But that is not the modern practice. Nowadays, the designer makes the model, first in wax and then in plaster, on a comparatively large scale. The model of a shilling may be three inches or more in diameter. The actual die-sinking is done by a copying machine which produces a die of the required size by mechanical reduction. I think there can be no doubt that D'Arblay could have modelled the design for a coin on the usual scale, say three or four inches in diameter."

"Yes," I agreed, "he certainly could, for I have seen some of his small relief work, some little plaquettes, not more than two inches long and most delicately and beautifully modelled. But still I don't see the connexion, otherwise than as a rather odd coincidence."

"There may be nothing more," said he. "There may be nothing in it at all. But odd coincidences should always be noted with very special attention."

"Yes, I realize that. But I can't imagine what significance there could be in the coincidence."

"Well," said Thorndyke, "let us take an imaginary case, just as an illustration. Suppose this man to have been a fraudulent dealer in antiquities, and suppose him to have obtained enlarged photographs of a medal or coin of extreme rarity and of great value, which was in some museum or private collection. Suppose him to have taken the photographs to D'Arblay and commissioned him to model from them a pair of exact replicas in hardened plaster. From those plaster models he could, with a copying machine, produce a pair of dies with which he could strike replicas in the proper metal and of the exact size; and these could be sold for large sums to judiciously-chosen collectors."

"I don't believe D'Arblay would have accepted such a commission," I exclaimed indignantly.

"We may assume that he would not, if the fraudulent intent had been known to him. But it would not have been, and there is no reason why he should have refused a commission merely to make a copy. Still, I am not suggesting that anything of the kind really happened. I am simply giving you an illustration of one of the innumerable ways in which a perfectly honest sculptor might be made use of by a fraudulent dealer. In that case, his honesty would be a source of danger to him, for if a really great fraud were perpetrated by means of his work, it would clearly be to the interest of the
perpetrator to get rid of him. An honest and unconscious collaborator in a crime is apt to be a dangerous witness if questions arise."

I was a good deal impressed by this demonstration. Here, it seemed to me, was something very like a tangible clue. But at this point Thorndyke again applied a cold douche.

"Still," he said, "we are only dealing with generalities, and rather speculative ones. Our assumptions are subject to all sorts of qualifications. It is possible, for instance, though very improbable, that D'Arblay may have been murdered in error by a perfect stranger; that he may have walked into an ambush prepared for someone else. Again, the coin may not have belonged to the murderer at all, though that is also most improbable. But there are numerous possibilities of error; and we can eliminate them only by following up each suggested clue and seeking verification or disproof. Every new fact that we learn is a multiple gain. For as money makes money, so knowledge begets knowledge."

"That is very true," I answered dejectedly—for it sounded rather like a platitude; "but I don't see any means of following up any of these clues."

"We are going to follow up one of them after lunch, if you have time," said he. As he spoke, he took from the table-drawer a paper packet and a jeweller's leather case. "This," he said, handing me the packet, "contains your sealing-wax moulds. You had better take care of them and keep the box with the marked side up to prevent the wax from warping. Here are a pair of casts in hardened plaster—fictile ivory as it is called—which my assistant, Polton, has made."

He opened the case and passed it to me, when I saw that it was lined with purple velvet and contained what looked like two old ivory replicas of the mysterious coin.

"Mr. Polton is quite an artist," I said, regarding them admiringly. "But what are you going to do with these?"

"I had intended to take them round to the British Museum and show them to the Keeper of the Coins and Medals, or one of his colleagues. But I think I will just ask a few questions and hear what he says before I produce the casts. Have you time to come round with me?"

"I shall make time. But what do you want to know about the coin?"

"It is just a matter of verification," he replied. "My books on the British coinage describe the Charles the Second guinea as having a tiny elephant under the bust on the obverse, to show that the gold from which it was minted came from the Guinea Coast."

"Yes," said I. "Well, there is a little elephant under the bust in this coin."

"True," he replied. "But this elephant has a castle on its back and would ordinarily be described as an elephant and castle, to distinguish him from the plain elephant which appeared on some coins. What I want to ascertain is whether there were two different types of guinea. The books make no mention of a second variety."

"Surely they would have referred to it if there had been," said I.

"So I thought," he replied; "but it is better to make sure than to think."

"I suppose it is," I agreed without much conviction, "though I don't see that, even if there were two varieties, that fact would have any bearing on what we want to know."

"Neither do I," he admitted. "But then you can never tell what a fact will prove until you are in possession of the fact. And now, as we seem to have finished, perhaps we had better make our way to the Museum."

The Department of Coins and Medals is associated in my mind with an impassive-looking Chinese person in bronze who presides over the upper landing of the main staircase. In fact, we halted for a moment before him to exchange a final word.

"It will probably be best," said Thorndyke, "to say nothing about this coin, or, indeed, about anything else. We don't want to enter into any explanations."

"No," I agreed. "It is best to keep one's own counsel," and with this we entered the hall, where Thorndyke led the way to a small door and pressed the electric bell-push. An attendant admitted us, and when we had signed our names in the visitors' book, he ushered us into the keeper's room. As we entered, a keen-faced, middle-aged man who was seated at a table inspected us over his spectacles, and apparently recognizing Thorndyke, rose and held out his hand.

"Quite a long time since I have seen you," he remarked after the preliminary greetings. "I wonder what your quest is this time."

"It is a very simple one," said Thorndyke. "I am going to ask you if you can let me look at a Charles the Second guinea dated 1663."

"Certainly I can," was the reply, accompanied by an inquisitive glance at my friend. "It is not a rarity, you know."

He crossed the room to a large cabinet, and having run his eye over the multitudinous labels, drew out a small, very shallow drawer. With this in his hand, he returned, and picking a coin out of its circular pit, held it out to Thorndyke, who took it from him, holding it delicately by the edges. He looked at it attentively for a few moments, and then silently presented the obverse for my inspection. Naturally my eye at once sought the little elephant under the bust, and there it was, but there was no castle on its back.
“Is this the only type of guinea issued at that date?” Thorndyke asked.

“The only type—with or without the elephant, according to the source of the gold.”

“There was no variation or alternative form?”

“No.”

“I notice that this coin has a plain elephant under the bust; but I seem to have heard of a guinea, bearing this date, which had an elephant and castle under the bust. You are sure there was no such guinea?”

Our official friend shook his head as he took the coin from Thorndyke and replaced it in its cell. “As sure,” he replied, “as one can be of a universal negative.” He picked up the drawer and was just moving away towards the cabinet when there came a sudden change in his manner.

“Wait!” he exclaimed, stopping and putting down the drawer. “You are quite right. Only it was not an issue; it was a trial piece, and only a single coin was struck. I will tell you about it. There is a rather curious story hanging to that piece.

“This guinea, as you probably know, was struck from dies cut by John Roettier and was one of the first coined by the mill-and-screw process in place of the old hammer-and-pile method. Now, when Roettier had finished the dies, a trial piece was struck; and in striking that piece, the obverse die cracked right across, but apparently only at the last turn of the screw, for the trial piece was quite perfect. Of course Roettier had to cut a new die; and for some reason he made a slight alteration. The first die had an elephant and castle under the bust. In the second one he changed this to a plain elephant. So your impression was, so far, correct; but the coin, if it still exists, is absolutely unique.”

“Is it not known, then, what became of that trial piece?”

“Oh, yes—up to a point. That is the queerest part of the story. For a time it remained in the possession of the Slingsby family—Slingsby was the Master of the Mint when it was struck. Then it passed through the hands of various collectors and finally was bought by an American collector named Van Zellen. Now, Van Zellen was a millionaire and his collection was a typical millionaire’s collection. It consisted entirely of things of enormous value which no ordinary man could afford or of unique things of which nobody could possibly have a duplicate. It seems that he was a rather solitary man and that he spent most of his evenings alone in his museum, gloating over his possessions.

“One morning Van Zellen was found dead in the little study attached to the museum. That was about eighteen months ago. There was an empty champagne bottle on the table and a half-emptied glass, which smelt of bitter almonds, and in his pocket was an empty phial labelled Hydrocyanic Acid. At first it was assumed that he had committed suicide; but when, later, the collection was examined, it was found that a considerable part of it was missing. A clean sweep had been made of the gems, jewels and other portable objects of value, and, among other things, this unique trial guinea had vanished. Surely you remember the case?”

“Yes,” replied Thorndyke. “I do, now you mention it; but I never heard what was stolen. Do you happen to know what the later developments were?”

“There were none. The identity of the murderer was never discovered, and not a single item of the stolen property has ever been traced. To this day the crime remains an impenetrable mystery—unless you know something about it?”; and again our friend cast an inquisitive glance at Thorndyke.

“My practice,” the latter, plied, “does not extend to the United States. Their own very efficient investigators seem to be able to do all that is necessary. But I am very much obliged to you for having given us so much of your time, to say nothing of this extremely interesting information. I shall make a note of it; for American crime occasionally has its repercussions on this side.”

I secretly admired the adroit way in which Thorndyke had evaded the rather pointed question without making any actual misstatement. But the motive for the evasion was not very obvious to me. I was about to put a question on the subject, but he anticipated it, for, as soon as we were outside, he remarked with a chuckle: “It is just as well that we didn’t begin by exhibiting the casts. We could hardly have sworn our friend to secrecy, seeing that the original is undoubtedly stolen property.”

“But aren’t you going to draw the attention of the police to the fact?”

“I think not,” he replied. “They have got the original, and no doubt they have a list of the stolen property. We must assume that they will make use of their knowledge; but if they don’t, it may be all the better for us. The police are very discreet; but they do sometimes give the Press more information than I should. And what is told to the Press is told to the criminal.”

“And why not?” I asked. “What is the harm of his knowing?”

“My dear Gray!” exclaimed Thorndyke. “You surprise me. Just consider the position. This man aimed at being entirely unsuspected. That failed. But still his identity is unknown, and he is probably confident that it will never be ascertained. Then he is, so far, off his guard. There is no need for him to disappear or go into hiding. But let him know that he is being tracked and he will almost certainly take fresh precautions against discovery. Probably he will slip away beyond our reach. Our aim must be to encourage him in a feeling of perfect security; and that aim commits us to the strictest secrecy. No one must know what cards we hold or that we hold any; or even that we are taking a hand.”
“What about Miss D’Arblay?” I asked anxiously. “May I not tell her that you are working on her behalf?”

He looked at me somewhat dubiously. “It would obviously be better not to,” he said, “but that might seem a little unfriendly and unsympathetic.”

“It would be an immense relief to her to know that you are trying to help her, and I think you could trust her to keep your secrets.”

“Very well,” he conceded. “But warn her very thoroughly. Remember that our antagonist is hidden from us. Let us remain hidden from him, so far as our activities are concerned.”

“I will make her promise absolute secrecy,” I agreed; and then, with a slight sense of anti-climax, I added: “But we don’t seem to have so very much to conceal. This curious story of the stolen coin is interesting, but it doesn’t appear to get us any more forward.”

“Doesn’t it?” he asked. “Now, I was just congratulating myself on the progress that we had made; on the way in which we are narrowing down the field of inquiry. Let us trace our progress. When you found the body, there was no evidence as to the cause of death, no suspicion of any agent whatever. Then came the inquest demonstrating the cause of death and bringing into view a person of unknown identity but having certain distinguishing characteristics. Then Follett’s discovery added some further characteristics and suggested certain possible motives for the crime. But still there was no hint as to the person’s identity or position in life. Now we have good evidence that he is a professional criminal of a dangerous type, that he is connected with another crime and with a quantity of easily-identified stolen property. We also know that he was in America about eighteen months ago, and we can easily get exact information as to dates and locality. This man is no longer a mere formless shadow. He is in a definite category of possible persons.”

“But,” I objected, “the fact that he had the coin in his possession does not prove that he is the man who stole it.”

“Not by itself,” Thorndyke agreed. “But taken in conjunction with the crime, it is almost conclusive. You appear to be overlooking the striking similarity of the two crimes. Each was a violent murder committed by means of poison; and in each case the poison selected was the most suitable one for the purpose. The one, aconitine, was calculated to escape detection; the other, hydrocyanic acid—the most rapidly-acting of all poisons—was calculated to produce almost instant death in a man who was probably struggling and might have raised an alarm. I think we are fairly justified in assuming that the murderer of Van Zellen was the murderer of D’Arblay. If that is so, we have two groups of circumstances to investigate, two tracks by which to follow him; and sooner or later, I feel confident, we shall be able to give him a name. Then, if we have kept our own counsel, and he is unconscious of the pursuit, we shall be able to lay our hands on him. But here we are at the Foundling Hospital. It is time for each of us to get back to the routine of duty.”
VIII. — SIMON BENDELOW, DECEASED

It was near the close of my incumbency of Dr. Cornish’s practice—indeed, Cornish had returned on the previous evening—that my unsatisfactory attendance on Mr. Simon Bendelow came to an end. It had been a wearisome affair. In medical practice, perhaps even more than in most human activities, continuous effort calls for the sustenance of achievement. A patient who cannot be cured or even substantially relieved is of all patients the most depressing. Week after week I had made my fruitless visits, had watched the silent, torpid sufferer grow yet more shrivelled and wasted, speculating even a little impatiently on the possible duration of his long-drawn-out passage to the grave. But at last the end came.

“Good morning, Mrs. Morris,” I said as that grim female opened the door and surveyed me impassively, “and how is our patient to-day?”

“He isn’t our patient any longer,” she replied. “He’s dead.”

“Ha!” I exclaimed. “Well, it had to be, sooner or later. Poor Mr. Bendelow! When did he die?”

“Yesterday afternoon, about five,” she answered.

“I’m! If you had sent me a note, I could have brought the certificate. However, I can post it to you. Shall I go up and have a look at him?”

“You can if you like,” she replied. “But the ordinary certificate won’t be enough in his case. He is going to be cremated.”

“Oh, indeed,” said I, once more unpleasantly conscious of my inexperience. “What sort of certificate is required for cremation?”

“Oh, all sorts of formalities have to be gone through,” she answered. “Just come into the drawing-room and I will tell you what has to be done.”

She preceded me along the passage and I followed meekly, anathematizing myself for my ignorance, and my instructors for having sent me forth crammed with academic knowledge but with the practical business of my profession all to learn.

“Why are you having him cremated?” I asked, as we entered the room and shut the door.

“Because it is one of the provisions of his will,” she answered. “I may as well let you see it.”

She opened a bureau and took from it a foolscap envelope from which she drew out a folded document. This she first unfolded and then re-folded so that its concluding clauses were visible, and laid it on the flap of the bureau. Placing her finger on it, she said: “That is the cremation clause. You had better read it.”

I ran my eye over the clause, which read: “I desire that my body shall be cremated and I appoint Sarah Elizabeth Morris the wife of the aforesaid James Morris to be the residuary legatee and sole executrix of this my will.” Then followed the attestation clause, underneath which was the shaky but characteristic signature of Simon Bendelow, and opposite this the signatures of the witnesses, Anne Dewsnap and Martha Bonnington, both described as spinsters and both of a joint address which was hidden by the folding of the document.

“So much for that,” said Mrs. Morris, returning the will to its envelope; “and now as to the certificate. There is a special form for cremation which has to be signed by two doctors, and one of them must be a hospital doctor or a consultant. So I wrote off at once to Dr. Cropper, as he knew the patient, and I have had a telegram from him this morning saying that he will be here this evening at eight o’clock to examine the body and sign the certificate. Can you manage to meet him at that time?”

“Yes,” I replied, “fortunately I can, as Dr. Cornish is back.”

“Very well,” said she; “then in that case you needn’t go up now. You will be able to make the examination together. Eight o’clock, sharp, remember.”

With this she re-conducted me along the passage and—I had almost said ejected me; but she sped the parting guest with a business-like directness that was perhaps accounted for by the presence opposite the door of one of those grim parcels—delivery vans in which undertakers distribute their wares, and from which a rough—looking coffin was at the moment being hoisted out by two men.

The extraordinary promptitude of this proceeding so impressed me that I remarked: “They haven’t been long making the coffin.”

“They didn’t have to make it,” she replied. “I ordered it a month ago. It’s no use leaving things to the last moment.”

I turned away with somewhat mixed feelings. There was certainly a horrible efficiency about this woman. Executrix indeed! Her promptness in carrying out the provisions of the will was positively appalling. She must have written to Cropper before the breath was fairly out of poor Bendelow’s body, but her forethought in the matter of the coffin fairly made my flesh creep.

Dr. Cornish made no difficulty about taking over the evening consultations, in fact he had intended to do so in any case. Accordingly, after a rather early dinner, I made my way in leisurely fashion back to Hoxton, where, after all, I arrived fully ten minutes too soon. I realized my prematurity when I halted at the corner of Market Street to look at my watch; and as
ten additional minutes of Mrs. Morris's society offered no allurement, I was about to turn back and fill up the time with short walk when my attention was arrested by a mast which had just appeared above the wall at the end of the street. With its black—painted truck and halymaid blocks and its long tricolour pennant, it looked like the mast of a Dutch schuyt or galliot, but I could hardly believe it possible that such a craft could make its appearance in the heart of London. All agog with curiosity, I hurried up the street and looked over the wall at the canal below, and there, sure enough, she was—a big Dutch sloop, broad-boomed, massive and mediaeval, just such a craft as one may see in the pictures of old Vandervelde, painted when Charles the Second was king.

I leaned on the low wall and watched her with delight interest as she crawled forward slowly to her berth, bringing with her, as it seemed, a breath of the distant sea and the echo of the surf murmuring on sandy beaches. I noted appreciatively her old-world air, her antique build, her gay and spotless paint and the muslin curtains in the little windows of her deck-house, and was, in fact, so absorbed in watching her that the late Simon Bendelow had passed completely out of my mind. Suddenly, however, the chiming of a clock recalled me to my present business. With a hasty glance at my watch, I tore myself away reluctantly, darted across the street and gave a vigorous pull at the bell.

Dr. Cropper had not yet arrived, but the deceased had not been entirely neglected, for when I had spent some five minutes staring inquisitively about the drawing-room into which Mrs. Morris had shown me, that lady returned, accompanied by two other ladies whom she introduced to me somewhat informally by the names of Miss Dewsnep and Miss Bonnington respectively. I recognized the names as those of the two witnesses to the will and inspected them with furtive curiosity, though, indeed, they were quite unremarkable excepting as typical specimens of the genus elderly spinster.

"Poor Mr. Bendelow!" murmured Miss Dewsnep, shaking her head and causing an artificial cherry on her bonnet to waggle idiotically. "How beautiful he looks in his coffin!

She looked at me as if for confirmation, so that I was fain to admit that his beauty in this new setting had not yet been revealed to me.

"So peaceful," she added, with another shake of her head, and Miss Bonnington chimed in with the comment, "Peaceful and restful." Then they both looked at me and I mumbled indistinctly that I had no doubt he did; the fact being that the inmates of coffins are not in general much addicted to boisterous activity.

"Ah!" Miss Dewsnep resumed, "how little did I think when I first saw him, sitting up in bed so cheerful in that nice, sunny room in the house at—"

"Why not?" interrupted Mrs. Morris. "Did you think he was going to live for ever?"

"No, Mrs. Morris, ma'am," was the dignified reply, "I did not. No such idea ever entered my head. I know too well that we mortals are all born to be gathered in at last as the—er—as the—"

"Sparks fly upwards," murmured Miss Bonnington. "As the corn is gathered in at harvest-time," Miss Dewsnep continued with slight emphasis. "But not to be cast into a burning fiery furnace. When I first saw him in the other house at—"

"I don't see what objection you need have to cremation," interrupted Mrs. Morris. "It was his own choice, and a good one, too. Look at those great cemeteries. What sense is there in letting the dead occupy the space that is wanted for the living?"

"Well," said Miss Dewsnep, "I may be old-fashioned, but it does seem to me that a nice quiet funeral with plenty of flowers and a proper, decent grave in a churchyard is the natural end to a human life. That is what I look forward to, myself."

"Then you are not likely to be disappointed," said Mrs. Morris; "though I don't quite see what satisfaction you expect to get out of your own funeral."

Miss Dewsnep made no reply, and an interval of dismal silence followed. Mrs. Morris was evidently impatient of Dr. Cropper's unpunctuality. I could see that she was listening intently for the sound of the bell, as she had been even while the conversation was in progress; indeed I had been dimly conscious all the while of a sense of tension and anxiety on her part. She had seemed to me to watch her two friends with a sort of uneasiness and to give a quite uncalled-for attention to their rather trivial utterances.

At length her suspense was relieved by a loud ringing of the bell. She started up and opened the door, but she had barely crossed the threshold when she suddenly turned back and addressed me.

"That will be Dr. Cropper. Perhaps you had better come out with me and meet him."

It struck me as an odd suggestion, but I rose without comment and followed her along the passage to the street door, which we reached just as another loud peal of the bell sounded in the house behind us. She flung the door wide open and a small, spectacled man charged in and seized my hand, which he shook with violent cordiality.

"How do you do, Mr. Morris?" he exclaimed. "So sorry to keep you waiting, but I was unfortunately detained at a consultation."

Here Mrs. Morris sourly intervened to explain who I was; upon which he shook my hand again and expressed his joy at
making my acquaintance. He also made polite inquiries as to our hostess's health, which she acknowledged gruffly over her shoulder as she preceded us along the passage; which was now pitch-dark and where Cropper dropped his hat and trod on it, finally bumping his head against the unseen wall in a frantic effort to recover it.

When we emerged into the dimly-lighted hall, I observed the two ladies peering inquisitively out of the drawing-room door. But Mrs. Morris took no notice of them, leading the way directly up the stairs to the room with which I was already familiar. It was poorly illuminated by a single gas bracket over the fireplace, but the light was enough to show us a coffin resting on three chairs and beyond it the shadowy figure of a man whom I recognized as Mr. Morris.

We crossed the room to the coffin, which was plainly finished with zinc fastenings, in accordance with the regulations of the crematorium authorities, and had let into the top what I first took to be a pane of glass, but which turned out to be a plate of clear celluloid. When we had made our salutations to Mr. Morris, Cropper and I looked in through the celluloid window. The yellow, shrunken face of the dead man, surmounted by the skull-cap which he had always worn, looked so little changed that he might still have been in the drowsy, torpid state in which I had been accustomed to see him. He had always looked so like a dead man that the final transition was hardly noticeable.

"I suppose," said Morris, "you would like to have the coffin-lid taken off?"

"God bless my soul, yes!" exclaimed Cropper. "What are we here for? We shall want him out of the coffin, too."

"Are you proposing to make a post-mortem?" I asked, observing that Dr. Cropper had brought a good-sized handbag. "It seems hardly necessary, as we both know what he died of."

Cropper shook his head. "That won't do," said he. "You mustn't treat a cremation certificate as a mere formality. We have got to certify that we have verified the cause of death. Looking at a body through a window is not verifying the cause of death. We should cut a pretty figure in a court of law if any question arose and we had to admit that we had certified without any examination at all. But we needn't do much, you know. Just get the body out on the bed and a single small incision will settle the nature of the growth. Then everything will be regular and in order. I hope you don't mind, Mrs. Morris," he added suavely, turning to that lady.

"You must do what you think necessary," she replied indifferently. "It is no affair of mine;" and with this she went out of the room and shut the door.

While we had been speaking, Mr. Morris, who apparently had kept a screw-driver in readiness for the possible contingency, had been neatly extracting the screws and now lifted off the coffin-lid. Then the three of us raised the shrivelled body—it was as light as a child’s—and laid it on the bed. I left Cropper to do what he thought necessary, and while he was unpacking his instruments I took the opportunity to have a good look at Mr. Morris, for it is a singular fact that in all the weeks of my attendance at this house I had never come into contact with him since that first morning when I had caught a momentary glimpse of him as he looked out over the blind through the glazed shop-door. In the interval his appearance had changed considerably for the better. He was no longer a merely unshaved man; his beard had grown to respectable length, and, so far as I could judge in the uncertain light, the hare-lip scar was completely concealed by his moustache.

"Let me see," said Cropper, as he polished a scalpel on the palm of his hand, "when did you say Mr. Bendelow died?"

"Yesterday afternoon at about five o'clock," replied Mr. Morris.

"Did he really?" said Cropper, lifting one of the limp arms and letting it drop on the bed. "Yesterday afternoon! Now, Gray, doesn't that show how careful one should be in giving opinions as to the time that has elapsed since death? If I had been shown this body and asked how long the man had been dead, I should have said three or four days. There isn't the least trace of rigor mortis left; and the other appearances—but there it is. You are never safe in giving dogmatic opinions."

"No," I agreed. "I should have said he had been dead more than twenty-four hours. But I suppose there is a good deal of variation."

"There is," he replied. "You can't apply 'averages to particular cases.'"

I did not consider it necessary to take any active part in the proceedings. It was his diagnosis and it was for him to verify it. At his request Mr. Morris fetched a candle and held it as he was directed; and while these preparations were in progress I looked out of the window, which commanded a partial view of the canal. The moon had now risen and its light fell on the white-painted hull of the Dutch sloop, which had come to rest and made fast alongside a small wharf. It was quite a pleasant picture, strangely at variance with the squalid neighbourhood around. As I looked down on the little vessel, with the ruddy light glowing from the deck-house windows and casting shimmering reflections in the quiet water, the sight seemed to carry me far away from the sordid streets around into the fellowship of the breezy ocean and the far-away shores whence the little craft had sailed, and I determined, as soon as our business was finished, to seek some access to the canal and indulge myself with a quiet stroll in the moonlight along the deserted towing-path.

"Well, Gray," said Cropper, standing up with the scalpel and forceps in his hands, "there it is, if you want to see it. Typical carcinoma. Now we can sign the certificates with a clear conscience. I'll just put in a stitch or two and then we can put him back in his coffin. I suppose you have got the forms?"

"They are downstairs," said Mr. Morris. "When we have got him back, I will show you the way down."

This, however, was unnecessary, as there was only one staircase and I was not a stranger. Accordingly, when we had
replaced the body, we took our leave of Mr. Morris and departed, and glancing back as I passed out of the door, I saw him driving in the screws with the ready skill of a cabinet-maker.

The filling up of the forms was a portentous business which was carried out in the drawing-room under the superintendence of Mrs. Morris and was watched with respectful interest by the two spinsters. When it was finished and I had handed the registration certificate to Mrs. Morris, Cropper gathered up the forms B and C and slipped them into a long envelope on which the Medical Referee’s address was printed.

“I will post this off to-night,” said he; “and you will send in Form A, Mrs. Morris, when you have filled it in.”

“I have sent it off already,” she replied.

“Good,” said Dr. Cropper. “Then that is all; and now I must run away. Can I put you down anywhere. Gray?”

“Thank you, no,” I replied. “I thought of taking a walk along the tow-path, if you can tell me how to get down to it, Mrs. Morris.”

“I can’t,” she replied. “But when Dr. Cropper has gone, I will run up and ask my husband. I daresay he knows.”

We escorted Cropper along the passage to the door, which he reached without mishap, and having seen him into his brougham, turned back to the hall, where Mrs. Morris ascended the stairs and I went into the drawing-room; where the two spinsters appeared to be preparing for departure. In a couple of minutes Mrs. Morris returned, and seeing both the ladies standing, said: “You are not going yet. Miss Dewsnap. You must have some refreshment before you go. Besides, I thought you wanted to see Mr. Bendelow again.”

“So we should,” said Miss Dewsnap. “Just a little peep, to see how he looks after—”

“I will take you up in a minute,” interrupted Mrs. Morris. “When Dr. Gray has gone.” Then addressing me, she said: “My husband says that you can get down to the tow-path through that alley nearly opposite. There is a flight of steps at the end which come right out on the path.”

I thanked her for the direction, and, having hidden farewell to the spinsters, was once more escorted along the passage and finally launched into the outer world.

IX. — A STRANGE MISADVENTURE

ALTHOUGH I had been in harness but a few weeks, it was with a pleasant sense of freedom that I turned from the door and crossed the road towards the alley. My time was practically my own, for, though I was remaining with Dr. Cornish until the end of the week, he was now in charge and my responsibilities were at an end.

The alley was entered by an arched opening so narrow that I had never suspected it of being a public thoroughfare, and I now threaded it with my shoulders almost touching the walls. Whither it finally led I have no idea, for when I reached another arched opening in the left—hand wall and saw that this gave on a flight of stone steps, I descended the latter and found myself on the tow-path. At the foot of the steps I stood awhile and looked about me. The moon was nearly full and shone brightly on the opposite side of the canal, but the tow-path was in deep shadow, being flanked by a high wall, behind which were the houses of the adjoining streets. Looking back—that is, to my left—I could just make out the bridge and the adjoining buildings, all their unlovely details blotted out by the thin night-haze, which reduced them to mere flat shapes of grey. A little nearer, one or two spots of ruddy light with wavering reflections beneath them marked the cabin windows of the sloop, and her mast, rising above the grey obscurity, was clearly visible against the sky.

Naturally, I turned in that direction, sauntering luxuriously and filling my pipe as I went. Doubtless, by day the place was sordid enough in aspect—though it is hard to vulgarize a navigable waterway—but now, in the moonlit haze, the scene was almost romantic. And it was astonishingly quiet and peaceful. From above, beyond the high wall, the noises of the streets came subdued and distant like sounds from another world; but here there was neither sound nor movement. The tow-path was utterly deserted, and the only sign of human life was the glimmer of light from the sloop.

It was delightfully restful. I found myself treading the gravel lightly, not to disturb the grateful silence; and as I strolled along, enjoying my pipe, I let my thoughts ramble idly from one topic to another. Somewhere above me, in that rather mysterious house, Simon Bendelow was lying in his narrow bed, the wasted, yellow face looking out into the darkness through that queer little celluloid window, or perhaps Miss Dewsnap and her friend were even now taking their farewell peep at him. I looked up, but, of course, the house was not visible from the tow-path, nor was I now able to guess at its position.

A little farther and the hull of the sloop came clearly into view, and nearly opposite to it, on the tow-path, I could see some kind of shed or hut against the wall, with a derrick in front of it overhanging a little quay. When I had nearly reached the shed, I passed a door in the wall, which apparently communicated with some house in one of the streets above. Then I came to the shed, a small wooden building which probably served as a lighterman’s office, and I noticed that the derrick swung from one of the corner-posts. But at this moment my attention was attracted by sounds of mild revelry from across the canal. Someone in the sloop’s deck-house had burst into song.

I stepped out on to the little quay and stood at the edge, looking across at the homely curtained windows and wondering what the interior of the deck-house looked like at this moment. Suddenly my ear caught an audible creak from behind me.
I was in the act of turning to see whence it came when something struck me a heavy, glancing blow on the arm, crashed to the ground and sent me flying over the edge of the quay.

Fortunately the water here as not more than four feet deep, and as I had plunged in feet first and am a good swimmer, I never lost control of myself. In a moment I was standing up with my head and shoulders out of water, not particularly alarmed, though a good deal annoyed and much puzzled as to what had happened. My first care was to recover my hat, which was floating forlornly close by, and the next was to consider how I should get ashoore. My left arm was numb from the blow and was evidently useless for climbing. Moreover, the face of the quay was of smooth concrete, as was also the wall below the tow-path. But I remembered having passed a pair of boat-steps some fifty yards back and decided to make for them. I had thought of hauling the sloop, but as the droning song still came from the deck-house, it was clear that the Dutchmen had heard nothing, and I did not think it worth while to disturb them. Accordingly I set forth for the steps, walking with little difficulty over the soft, muddy bottom, keeping close to the side and steadying myself with my right hand, with which I could just reach the edge of the coping.

It seemed a long journey, for one cannot progress very fast over soft mud with the water up to one’s armpits; but at last I reached the steps and managed to scramble up on to the tow-path. There I stood for a moment or two irresolute. My first impulse was to hurry back as fast as I could and seek the Morris’s hospitality, for I was already chilled to the bone and felt as physically wretched as the proverbial cat in similar circumstances. But I was devoured by curiosity as to what had happened, and, moreover, I believed that I had dropped my stick on the quay. The latter consideration decided me, for it was a favourite stick, and I set out for the quay at a very different pace from that at which I had approached it the first time.

The mystery was solved long before I arrived at the quay; at least it was solved in part. For the derrick, which had overhung the quay, now lay on the ground. Obviously it had fallen—and missed my head only by a matter of inches. But how had it come to fall? Again, obviously, the guy-rope had given way. As it could not have broken, seeing that the derrick was unloaded and the rope must have been strong enough to bear the last load, I was a good deal puzzled as to how the accident could have befallen. Nor was I much less puzzled when I had made my inspection. The rope was, of course, unbroken and its ‘fall’—the part below the pulley-blocks—passed into the shed through a window-like hole. This I could see as I approached, and also that a door in the end of the shed nearest to me was ajar. Opening it, I plunged into the dark interior, and partly by touch and partly by the faint glimmer that came in at the window, I was able to make out the state of affairs. Just below the hole through which the rope entered was a large cleat, on which the fall must have been belayed. But the cleat was vacant, the rope hung down from the hole and its end lay in an untidy raffle on the floor. It looked as if it had been cast off the cleat; but as there had apparently been no one in the shed, the only possible supposition was that the rope had been badly secured, that it had gradually worked loose and had at last slipped off the cleat. But it was difficult to understand how it had slipped right off.

I found my stick lying at the edge of the quay and close by it my pipe. Having recovered these treasures, I set off to retrace my steps along the tow-path, sped on my way by a jovial chorus from the sloop. A very few minutes brought me to the steps, which I ascended two at a time, and then, having traversed the alley, I came out sheepishly into Market Street. To my relief, I saw a light in Mr. Morris’s shop and could even make out a moving figure in the background. I hurried across, and, opening the glazed door, entered the shop, at the back of which Mr. Morris was seated at a bench filing some small object which was fixed in a vice. He looked round at me with no great cordiality, but suddenly observing my condition, he dropped his file on the bench and exclaimed:

“Good Lord, Doctor! What on earth have you been doing?”

“Nothing on earth,” I replied with a feeble grin, “but something in the water. I’ve been into the canal.”

“But what for?” he demanded.

“Oh, I didn’t go in intentionally,” I replied; and then I gave him a sketch of the incident, as short as I could make it, for my teeth were chattering and explanations were chilly work. However, he rose nobly to the occasion. “You’ll catch your death of cold!” he exclaimed, starting up. “Come in here and slip off your things at once while I go for some blankets.”

He led me into a little den behind the shop, and, having lighted a gas fire, went out by a back door. I lost no time in peeling off my dripping clothes, and by the time that he returned I was in the state in which I ought to have been when I took my plunge.

“Here you are,” said he. “Put on this dressing-gown and wrap yourself in the blankets. We’ll draw this chair up to the fire and then you will be all right for the present.”

I followed his directions, pouring out my thanks as well as my chattering teeth would let me.

“Oh, that’s all right,” said he. “If you will empty your pockets, the missus can put some of the things through the wringer and then they’ll soon dry. There happens to be a good fire in the kitchen, some advance cooking on account of the funeral. You can dry your hat and boots here. If anyone comes to the shop, you might just press that electric bell-push.”

When he had gone, I drew the Windsor arm-chair close to the fire and made myself as comfortable as I could, dividing my attention between my hat and my boots, which called for careful roasting, and the contents of the room. The latter appeared to be a sort of store for the reserve stock-in-trade and certainly this was a most amazing collection. I could not see a single article for which I would have given sixpence. The array on the shelves suggested that the shop had been
It was really rather mysterious. Mr. Morris was a somewhat superior man and he did not appear to be poor. Yet this shop did not seem capable of yielding an income that would have been acceptable to a rag-picker. And during the whole of the time in which I sat warming myself, there was not a single visitor to the shop. However, it was no concern of mine; and I had just reached this sage conclusion when Mr. Morris returned with my clothes.

“There,” he said, “they are very creased and disreputable but they are quite dry. They would have had to be cleaned and pressed in any case.”

With this he went out into the shop and resumed his filing while I put on the stiff and crumpled garments. When I was dressed, I followed him and thanked him effusively for his kind offices, leaving also a grateful message for his wife. He took my thanks rather stolidly, and having wished me ‘good night,’ picked up his file and fell to work again.

I decided to walk home; principally, I think, to avoid exhibiting myself in a public vehicle. But my self-consciousness soon wore off, and when, in the neighbourhood of Clerkenwell, I perceived Dr. Usher on the opposite side of the street, I crossed the road and touched his arm. He looked round quickly, and recognizing me, shook hands cordially. “What are you doing on my beat at this time of night?” he asked. “You are not still at Cornish’s, are you?”

“Yes,” I answered, “but not for long. I have just made my last visit and signed the death certificate.”

“Good man,” said he. “Very methodical. Nothing like finishing a case up neatly. They didn’t invite you to the funeral, I suppose?”

“No,” I replied, “and I shouldn’t have gone if they had.”

“Quite right,” he agreed. “Funerals are rather outside medical practice. But you have to go sometimes. Policy, you know. I had to go to one a couple of days ago. Beastly nuisance it was. Chappie would insist on putting me down at my own door in the mourning coach. Meant well, of course, but it was very awkward. All the neighbours came to their shop-doors and grinned as I got out. Felt an awful fool, couldn’t grin back, you see. Had to keep up the farce to the end.”

“I don’t see that it was exactly a farce,” I objected.

“That is because you weren’t there,” he retorted. “It was the silliest exhibition you ever saw. Just think of it! The parson who ran the show actually got a lot of school-children to stand round the grave and sing a blooming hymn: something about gathering at the river—I expect you know the confounded doggerel.”

“Well, why not?” I protested. “I daresay the friends of the deceased liked it.”

“No doubt,” said he. “I expect they put the parson up to it. But it was sickening to hear those kids bleating that stuff. How did they know where he was?—an old rip with malignant disease of the pancreas, too!”

“Really, Usher,” I exclaimed, laughing at his quaint cynicism, “you are unreasonable. There are no pathological disqualifications for the better land, I hope.”

“I suppose not,” he agreed with a grin. “Don’t have to show a clean bill of health before they let you in. But it was a trying business, you must admit. I hate cant of that sort; and yet one had to pull a long face and join in the beastly chorus.”

The picture that his last words suggested was too much for my gravity. I laughed long and joyously. However, Usher was not offended; indeed I suspect that he appreciated the humour of the situation as much as I did. But he had trained himself to an outward solemnity of manner that was doubtless a valuable asset in his particular class of practice and he walked at my side with unmoved gravity, taking an occasional quick, critical look at me. When we came to the parting of our ways, he once more shook my hand warmly and delivered a little farewell speech.

“You’ve never been to see me. Gray. Haven’t had time, I suppose. But when you are free you might look me up one evening to have a smoke and a glass and talk over old times. There’s always a bit of grub going, you know.”

I promised to drop in before long, and he then added:

“I gave you one or two tips when I saw you last. Now I’m going to give you another. Never neglect your appearance. It’s a great mistake. Treat yourself with respect and the world will respect you. No need to be a dandy. But just keep an eye on your tailor and your laundress, especially your laundress. Clean collars don’t cost much, and they pay; and so does a trousers-press. People expect a doctor to be well turned out. Now, you mustn’t think me impertinent. We are old pals and I want you to get on. So long, old chap. Look me up as soon as you can,” and without giving me the opportunity to reply, he turned about and bustled off, swinging his umbrella and offering, perhaps, a not very impressive illustration of his own excellent precepts. But his words served as a reminder which caused me to pursue the remainder of my journey by way of side-streets neither too well lighted nor too much frequented.

As I let myself in with my key and closed the street-door, Cornish stepped out of the dining-room.

“I thought you were lost. Gray,” said he. “Where the deuce have you been all this time?” Then, as I came into the light of
the hall-lamp, he exclaimed: “And what in the name of Fortune have you been up to?”

“I have had a wetting,” I explained. “I’ll tell you all about it presently.”

“Dr. Thorndyke is in the dining-room,” said he; “came in a few minutes ago to see you.” He seized me by the arm and ran me into the room, where I found Thorndyke methodically filling his pipe. He looked up as I entered and regarded me with raised eyebrows.

“Why, my dear fellow, you’ve been in the water!” he exclaimed. “But yet your clothes are not wet. What has been happening to you?”

“If you can wait a few minutes,” I replied, “while I wash and change, I will relate my adventures. But perhaps you haven’t time.”

“I want to hear all about it,” he replied, “so run along and be as quick as you can.”

I bustled up to my room, and having washed and executed a lightning change, came down to the dining-room, where I found Cornish in the act of setting out decanters and glasses.

“I’ve told Dr. Thorndyke what took you to Hoxton,” said he, “and he wants a full account of everything that happened. He is always suspicious of cremation cases, as you know from his lectures.”

“Yes, I remember his warnings,” said I. “But this was a perfectly commonplace, straightforward affair.”

“Did you go for your swim before or after the examination?” Thorndyke asked.

“Oh, after,” I replied.

“Then let us hear about the examination first,” said he.

On this I plunged into a detailed account of all that had befallen since my arrival at Market Street, to which Thorndyke listened, not only patiently but with the closest attention and even cross-examined me to elicit further details. Everything seemed to interest him, from the construction of the coffin to the contents of Mr. Morris’s shop. When I had finished, Cornish remarked:

“Well, it is a queer affair. I don’t understand that rope at all. Ropes don’t unceat themselves. They may slip, but they don’t come right off the cleat. It looks more as if some mischievous fool had cast it off for a joke.”

“But there was no one there,” said I. “The shed was empty when I examined it and there was not a soul in sight on the tow-path.”

“Could you see the shed when you were in the water?” Thorndyke asked.

“No. My head was below the level of the tow-path. But if anyone had run out and made off, I must have seen him on the path when I came out. He couldn’t have got out of sight in the time. Besides, it is incredible that even a fool should play such a trick as that.”

“It is,” he agreed. “But every explanation seems incredible. The only plain fact is that it happened. It is a queer business altogether; and not the least queer feature in the case is your friend Morris. Hoxton is an unlikely place for a dealer in antiques, unless he should happen to deal in other things as well—things, I mean, of ambiguous ownership.”

“Just what I was thinking,” said Cornish. “Sounds uncommonly like a fence. However, that is no business of ours.”

“No,” agreed Thorndyke, rising and knocking out his pipe. “And now I must be going. Do you care to walk with me to the bottom of Doughty Street, Gray?”

I assented at once, suspecting that he had something to say to me that he did not wish to say before Cornish. And so it turned out; for as soon as we were outside he said:

“What I really called about was this: it seems that we have done the police an injustice. They were more on the spot than we gave them credit for. I have learned—and this is in the strictest confidence—that they took that coin round to the British Museum for the expert’s report. Then a very curious fact came to light. That coin is not the original which was stolen. It is an electrotype in gold, made in two halves very neatly soldered together and carefully worked on the milled edge to hide the join. That is extremely important in several respects. In the first place it suggests an explanation of the otherwise incredible circumstance that it was being carried loose in the waistcoat pocket. It had probably been recently obtained from the electrotyper. That suggests the question, is it possible that D’Arblay might have been that electrotyper? Did he ever work the electrotype process? We must ascertain whether he did.”

“There is no need,” said I. “It is known to me as a fact that he did. The little plaquettes that I took for castings are electrotypes, made by himself. He worked the process quite a lot and was very skilful in finishing. For instance, he did a small bust of his daughter in two parts and brazed them together.”

“Then, you see,” Gray,” said Thorndyke, “that advances us considerably. We now have a plausible suggestion as to the motive and a new field of investigation. Let us suppose that this man employed D’Arblay to make electrotype copies of certain unique objects with the intention of disposing of them to collectors. The originals, being stolen property, would be almost impossible to dispose of with safety, but a copy would not necessarily incriminate the owner. But when D’Arblay had made the copies, he would be a dangerous person, for he would know who had the originals. Here, to a man whom we
know to be a callous murderer, would be a sufficient reason for making away with D'Arblay.”

“But do you think that D'Arblay would have undertaken such a decidedly fishy job? It seems hardly like him.”

“Why not?” demanded Thorndyke. “There was nothing suspicious about the transaction. The man who wanted the copies was the owner of the originals, and D'Arblay would not know or suspect that they were stolen.”

“That is true,” I admitted. “But you were speaking of a new field of investigation.”

“Yes. If a number of copies of different objects have been made, there is a fair chance that some of them have been disposed of. If they have and can be traced, they will give us a start along a new line which may bring us in sight of the man himself. Do you ever see Miss D’Arblay now?”

“Oh, yes,” I replied. “I am quite one of the family at Highgate. I have been there every Sunday lately.”

“Have you!” he exclaimed with a smile. “You are a pretty locum tenens. However, if you are quite at home there you can make a few discreet inquiries. Find out, if you can, whether any electros had been made recently and, if so, what they were and who was the client. Will you do that?”

I agreed readily, only too glad to take an active part in the investigation; and having by this time reached the end of Doughty Street, I took leave of Thorndyke and made my way back to Cornish’s house.

X. — MARION’S PERIL

THE mist, which had been gathering since the early afternoon, began to thicken ominously as I approached Abbey Road, Hornsey, from Crouch End station, causing me to quicken my pace so that I might make my destination before the fog closed in; for this was my first visit to Marion D’Arblay’s studio and the neighbourhood was strange to me. And in fact I was none too soon; for hardly had I set my hand on the quaint bronze knocker above the plate inscribed Mr. J. D’Arblay,— when the adjoining houses grew pale and shadowy and then vanished altogether.

My elaborate knock—in keeping with the distinguished knocker—was followed by soft, quick footsteps, the sound whereof set my heart ticking in double-quick time; the door opened and there stood Miss D’Arblay, garbed in a most alluring blue smock or pinafore, with sleeves rolled up to the elbow, with a smile of friendly welcome on her comely face and looking so sweet and charming that I yearned then and there to take her in my arms and kiss her. This, however, being inadmissible, I shook her hand warmly and was forthwith conducted through the outer lobby into the main studio, where I stood looking about me with amused surprise. She looked at me inquiringly as I emitted an audible chuckle.

“It is a queer-looking place,” said I; “something between a miracle-shrine hung with votive offerings from sufferers who have been cured of sore heads and arms and legs and a meat emporium in a cannibal district.”

“It is nothing of the kind!” she exclaimed indignantly. “I don’t mind the votive offerings, but I reject the cannibal meat-market as a gross and libellous fiction. But I suppose it does look rather queer to a stranger.”

“To a what?” I demanded fiercely.

“Oh, I only meant a stranger to the place, of course, and you know I did. So you needn’t be cantankerous.”

She glanced smilingly round the studio and for the first time, apparently, the oddity of its appearance dawned on her, for she laughed softly and then turned a mischievous eye on me as I gaped about me like a bumpkin at a fair. The studio was a very large and lofty room or hall with a partially-glazed roof and a single large window just below the skylight. The walls were fitted partly with rows of large shelves and the remainder with ranks of pegs. From the latter hung row after row of casts of arms, hands, legs and faces—especially faces—while the shelves supported a weird succession of heads, busts and a few half-length but armless figures. The general effect was very strange and uncanny, and what made it more so was the fact that all the heads presented perfectly smooth, bare craniums.

“Are artists’ models usually bald?” I inquired, as I noted this latter phenomenon.

“Now you are being foolish,” she replied—“wilfully and deliberately foolish. You know very well that all these heads have got to be fitted with wigs, and you couldn’t fit a wig to a head that already had a fine covering of plaster curls. But I must admit that it rather detracts from the beauty of a girl’s head if you represent it without hair. The models used to hate it when they were shown with heads like old gentleman’s, and so did poor Dad—in fact he usually rendered the hair in the clay, just sketchily, for the sake of the model’s feelings and his own and took it off afterwards with a wire tool. But there is the kettle boiling over. I must make the tea.”

While this ceremony was being performed, I strolled round the studio and inspected the casts, more particularly the heads and faces. Of these latter the majority were obviously modelled, but I noticed quite a number with closed eyes, having very much the appearance of death-masks. When we had taken our places at the little table near the great gas-ring, I inquired what they were.

“They do look rather cadaverous, don’t they?” she said as she poured out the tea, “but they are not death-masks. They are casts from living faces, mostly from the faces of models, but my father always used to take a cast from anyone who would let him. They are quite useful to work from, though, of course, the eyes have to be put in from another cast or from life.”

“It must be rather an unpleasant operation:” I said “having the plaster poured all over the face. How does the victim
manage to breathe?"

"The usual plan is to put little quills or tubes into the nostrils. But my father could keep the nostrils free without any tubes. He was a very skilful moulder; and then he always used the best plaster, which sets very quickly, so that it only took a few minutes."

"And how are you getting on; and what were you doing when I came in?"

"I am getting on quite well," she replied. "My work has been passed as satisfactory and I have three new commissions. When you came in I was just getting ready to make a mould for a head and shoulders. After tea I shall go on with it and you shall help me. But tell me about yourself. You have finished with Dr. Cornish, haven't you?"

"Yes, I am a gentleman at large for the time being; but that won't do. I shall have to look out for another job."

"I hope it will be a London job," she said. "Arabella and I would feel quite lonely if you went away, even for a week or two. We both look forward so much to our little family gathering on Sunday afternoon."

"You don't look forward to it as much as I do," I said warmly. "It is difficult for me to realize that there was ever a time when you were not a part of my life. And yet we are quite new friends."

"Yes," she said; "only a few weeks old. But I have the same feeling. I seem to have known you for years; and as for Arabella, she speaks of you as if she had nursed you from infancy. You have a very insinuating way with you."

"Oh, don't spoil it by calling me insinuating!" I protested.

"No, I won't," she replied. "It was the wrong word. I meant sympathetic. You have the gift of entering into other people's troubles and feeling them as if they were your own; which is a very precious gift—to the other people."

"Your troubles are my own," said I, "since I have the privilege to be your friend. But I have been a happier man since I shared them."

"It is very nice of you to say that," she murmured with a quick glance at me, "and just a faint heightening of colour; and then for a while neither of us spoke."

"Have you seen Dr. Thorndyke lately?" she asked, when she had refilled our cups, and thereby, as it were, punctuated our silence.

"Yes," I answered. "I saw him only a night or two ago. And that reminds me that I was commissioned to make some inquiries. Can you tell me if your father ever did any electrotype work for outsiders?"

"I don't know," she answered. "He used latterly to electrotype most of his own work instead of sending it to the bronze-founders, but it is hardly likely that he would do electrots for outsiders. There are firms who do nothing else, and I know that, when he was busy, he used to send his own work to them. But why do you ask?"

I related to her what Thorndyke had told me and pointed out the importance of ascertaining the facts, which she saw at once.

"As soon as we have finished tea," she said, "we will go and look over the cupboard where the electro moulds were kept—that is, the permanent ones. The gelatine moulds for works in the round couldn't be kept. They were melted down again. But the water-proofed-plaster moulds were stored away in this cupboard, and the gutta-percha ones too until they were wanted to soften down to make new moulds. And even if the moulds were destroyed. Father usually kept a cast."

"Would you be able to tell by looking through the cupboard?" I asked.

"Yes, I should know a strange mould, of course, as I saw all the original work that he did. Have we finished? Then let us go and settle the question now."

She produced a bunch of keys from her pocket and crossed the studio to a large, tall cupboard in a corner. Selecting a key, she inserted it and was trying vainly to turn it when the door came open. She looked at it in surprise and then turned to me with a somewhat puzzled expression.

"This is really very curious," she said. "When I came here this morning I found the outer door unlocked. Naturally I thought I must have forgotten to lock it, though that would have been an extraordinary oversight. And now I find this door unlocked. But I distinctly remember locking it before going away last night, when I had put back the box of modelling wax. What do you make of that?"

"It looks as if someone had entered the studio last night with false keys or by picking the lock. But why should they? Perhaps the cupboard will tell. You will know if it has been disturbed."

She ran her eyes along the shelves and said at once: "It has been. The things are all in disorder and one of the moulds is broken. We had better take them all out and see if anything is missing—so far as I can judge, that is, for the moulds were just as my father left them."

We dragged a small work-table to the cupboard and emptied the shelves one by one. She examined each mould as we took it out, and I jotted down a rough list at her dictation. When we had been through the whole collection and rearranged the moulds on the shelves—they were mostly plaques and medallions—she slowly read through the list and reflected for a few moments. At length she said:
few moments she gazed at me with eyes full of horror; then, conscious. Suddenly her eye
she stayed for the night. On this I laid her, and fetching some water and a towel, dabbed her face and neck. Presently she opened her eyes and heaved a deep sigh, looking at me with a troubled, bewildered expression and evidently only half-conscious. Suddenly her eye caught the great blood-stain on her smock and her expression grew wild and terrified. For a few moments she gazed at me with eyes full of horror; then, as the memory other dreadful experience rushed back on her,
she uttered a little cry and burst into tears, moaning and sobbing almost hysterically.

I rested her head on my shoulder, and tried to comfort her; and she, poor girl, weak and shaken by the awful shock, clung to me, trembling, and wept passionately with her face buried in my breast. As for me, I was almost ready to weep, too, if only from sheer relief and revulsion from my late terrors.

"Marion darling!" I murmured into her ear as I stroked her damp hair. "Poor dear little woman! It was horrible. But you mustn't cry any more now. Try to forget it, dearest."

She shook her head passionately. "I can never do that," she sobbed. "It will haunt me as long as I live. Oh! and I am so frightened, even now. What a coward I am!"

"Indeed you are not!" I exclaimed. "You are just weak from loss of blood. Why did you let me leave you, Marion?"

"I didn't think I was hurt, and I wasn't particularly frightened then, and I hoped that if you followed him, he might be caught. Did you see him?"

"No. There is a thick fog outside. I didn't dare to leave the threshold. Were you able to see what he was like?"

She shuddered and choked down a sob. "He is a dreadful-looking man," she said; "I loathed him at the first glance—a beetle-browed, hook-nosed wretch with a face like that of some horrible bird of prey. But I couldn't see him very distinctly, for it is rather dark in the lobby and he wore a wide-brimmed hat, pulled down over his brows."

"Would you know him again? And can you give a description of him that would be of use to the police?"

"I am sure I should know him again," she said with a shudder. "It was a face that one could never forget. A hideous face! The face of a demon! I can see it now and it will haunt me, sleeping and waking, until I die."

Her words ended with a catch of the breath and she looked piteously into my face with wide, terrified eyes. I took her trembling hand and once more drew her head to my shoulder.

"You mustn't think that, dear," said I. "You are all unstrung now, but these terrors will pass. Try to tell me quietly just what this man was like. What was his height for instance?"

"He was not very tall. Not much taller than me. And he was rather slightly built."

"Could you see whether he was dark or fair?"

"He was rather dark. I could see a shock of hair sticking out from under his hat and he had a moustache with turned-up ends and a beard—a rather short beard."

"And now as to his face. You say he had a hooked nose?"

"Yes, a great, high-bridged nose like the beak of some horrible bird. And his eyes seemed to be deep-set under heavy brows with bushy eyebrows. The face was rather thin with high cheek-bones—a fierce, scowling, repulsive face."

"And the voice? Should you know that again?"

"I don't know," she answered. "He spoke in quite a low tone, rather indistinctly. And he said only a few words—something about having come to make some inquiries about the cost of a wax model. Then he stepped into the lobby and shut the outer door, and immediately, without another word, he seized my right arm and struck at me. But I saw the knife in his hand and, as I called out, I snatched at it with my left hand, so that it missed my body and I felt it cut my right arm. Then I got hold of his wrist. But he had heard you coming and wrenched himself free. The next moment he had opened the door and rushed out, shutting it behind him."

She paused and then added in a shaking voice: "If you had not been here—if I had been alone—"

"We won't think of that, Marion. You were not alone; and you will never be again in this place. I shall see to that."

At this she gave a little sigh of satisfaction, and looked into my face with the pallid ghost of a smile. "Then I shan't be frightened any more," she murmured; and closing her eyes she lay for a while, breathing quietly as if asleep. She looked very delicate and frail with her waxen checks and the dark shadows under her eyes, but still I noted a faint tinge of colour stealing back into her lips. I gazed down at her with fond anxiety, as a mother might look at a sleeping child that had just passed the crisis of a dangerous illness. Of the bare chance that had snatched her from imminent death I would not allow myself to think. The horror of that moment is too fresh for the thought to be endurable. Instead I began to occupy myself with the practical question as to how she was to be got home. It was a long way to North Grove—some two miles, I reckoned—too far for her to walk in her present weak state; and then there was the fog. Unless it lifted it would be impossible for her to find her way; and I could give her no help, as I was a stranger to this locality. Nor was it by any means safe; for our enemy might still be lurking near, waiting for the opportunity that the fog would offer.

I was still turning over these difficulties when she opened her eyes and looked up at me a little shyly.

"I'm afraid I've been rather a baby," she said, "but I am much better now. Hadn't I better get up?"

"No," I answered. "Lie quiet and rest. I am trying to think how you are to be got home. Didn't you say something about a caretaker?"

"Yes; a woman in the little house next door, which really belongs to the studio. Daddy used to leave the key with her at
night so that she could clean up. But I just fetch her in when I want her help. Why do you ask?"

"Do you think she could get a cab us?"

"I am afraid not. There is no cab-stand anywhere near here. But I think I could walk, unless the fog is too thick. Shall we go and see what it is like?"

"I will go," said I, rising. But she clung to my arm.

"You are not to go alone," she said, in sudden alarm. "He may be there still."

I thought it best to humour her and accordingly helped her to rise. For a few moments she seemed rather unsteady on her feet, but soon she was able to walk, supported by my arm, to the studio door, which I opened, and through which wreaths of vapour drifted in. But the fog was perceptibly thinner; and even as I was looking across the road at the now faintly visible houses, two spots of dull yellow light appeared up the road and my ear caught the muffled sound of wheels. Gradually the lights grew brighter and at length there stole out of the fog the shadowy form of a cab with a man leading the horse at a slow walk. Here seemed a chance to escape from our dilemma.

"Go in and shut the door while I speak to the cabman," said I. "He may be able to take us. I shall give four knocks when I come back."

She was unwilling to let me go, but I gently pushed her in and shut the door and then advanced to meet the cab. A few words set my anxieties at rest; for it appeared that the cabman had to set down a fare a little way along the street and was very willing to take a return fare, on suitable terms. As any terms would have been suitable to me under the circumstances, the cabman was able to make a good bargain and we parted with mutual satisfaction and a cordial au revoir. Then I steered back along the fence to the studio door, on which I struck four distinct knocks and announced myself vocally by name. Immediately the door opened and a hand drew me in by the sleeve.

"I am so glad you have come back," she whispered. "It was horrid to be alone in the lobby even for a few minutes. What did the cabman say?"

I told her the joyful tidings and we at once made ready for our departure. In a minute or two the welcome glare of the cab-lamps reappeared, and when I had locked up the studio and pocketed the key I helped her into the rather ramshackle vehicle.

I don't mind admitting that the cabman's charges were extortionate; but I grudged him never a penny. It was probably the slowest journey that I had ever made, but yet the funereal pace was all too swift. Half-ashamed as I was to admit it to myself, this horrible adventure was bearing sweet fruit to me in the unquestioned intimacy that had been born in the troubled hour. Little enough was said; but I sat happily by her side, holding her uninjured hand in mine (on the pretence of keeping it warm), blissfully conscious that our sympathy and friendship had grown to something sweeter and more precious.

"What are we to say to Arabella?" I asked. "I suppose she will have to be told?"

"Of course she will," replied Marion; "you shall tell her. But," she added in a lower tone, "you needn't tell her everything—I mean what a baby I was and how you had to comfort and soothe me. She is as brave as a lion and she thinks I am, too. So you needn't undeceive her too much."

"I needn't undeceive her at all," said I, "because you are;" and we were still arguing this weighty question when the cab drew up at Ivy Cottage. I sent the cabman off rejoicing, and then escorted Marion up the path to the door, where Miss Boler was waiting, having apparently heard the cab arrive.

"Thank goodness!" she exclaimed. "I was wondering how on earth you would manage to get home." Then she suddenly observed Marion's bandaged hand and uttered an exclamation of alarm.

"Miss Marion has cut her hand rather badly," I explained. "We won't talk about it just now. I will tell you everything presently when you have put her to bed. Now I want some stuff to make dressings and bandages."

Miss Boler looked at me suspiciously, but made no comment. With extraordinary promptitude she produced a supply of linen, warm water and other necessaries, and then stood by to watch the operation and give assistance.

"It is a nasty wound," I said, as I removed the extemporized dressing, "but not so bad as I feared. There will be no lasting injury."

I put on the permanent dressing and then exposed the wound on the arm, at the sight of which Miss Boler's eyebrows went up. But she made no remark, and when a dressing had been put on this, too, she took charge of the patient to conduct her up to the bedroom.

"I shall come up and see that she is all right before I go," said I; "and meanwhile, no questions, Arabella."

She cast a significant look at me over her shoulder and departed with her arm about the patient's waist.

The rites and ceremonies above-stairs were briefer than I had expected—perhaps the promised explanations had accelerated matters. At any rate, in a very few minutes Miss Boler bustled into the room and said: "You can go up now, but don't stop to gossip. I am bursting with curiosity."

Thereupon, I ascended to my lady's chamber, which I entered as diffidently and reverently as though such visits were not
the commonplace of my professional life. As I approached the bed, she heaved a little sigh of content and murmured:

“What a fortunate girl I am! To be petted and cared for and pampered in this way! Arabella is a perfect angel; and you, Dr. Gray—”

“Oh, Marion!” I protested. “Not Dr. Gray.”

“Well, then, Stephen,” she corrected with a faint blush.

“That is better. And what am I?”

“Never mind,” she replied, very pink and smiling. “I expect you know. If you don’t, ask Arabella when you go down.”

“I expect she will do most of the asking,” said I. “And I have strict orders not to stop to gossip, so let me see the bandages and then I must go.”

I made my inspection, without undue hurry, and having seen that all was well, I took her hand.

“You are to stay there until I have seen you to-morrow morning, and you are to be a good girl and try not to think of unpleasant things.”

“Yes; I will do everything that you tell me.”

“Then I can go away happy. Good night, Marion.”

“Good night, Stephen.”

I pressed her hand and felt her fingers close on mine. Then I turned away and, with only a moment’s pause at the door for a last look at the sweet, smiling face, descended the stairs to confront the formidable Arabella.

Of my cautious statement and her keen cross-examination I will say nothing. I made the proceedings as short as was decent, for I wanted, if possible, to take counsel with Thorndyke. On my explaining this, the brevity of my account was condoned, and even my refusal of food.

“But remember, Arabella,” I said as she escorted me to the gate, “she has had a very severe shock. The less you say to her about the affair for the present, the quicker will be her recovery.”

With this warning I set forth through the rapidly-thinning fog to catch the first conveyance that I could find to bear me southward.

XI. — ARMS AND THE MAN

THE fog had thinned to a mere haze when the porter admitted me at the Inner Temple Gate, so that, as I passed the Cloisters and looked through into Pump Court, I could see the lighted windows of the residents’ chambers at tile far end. The sight of them encouraged me to hope that the chambers in King’s Bench Walk might throw out a similar hopeful gleam. Nor was I disappointed; and the warm glow from the windows of number 5A sent me tripping up the stairs profoundly relieved though a trifle abashed at the untimely hour of my visit.

The door was opened by Thorndyke, himself, who instantly cut short my apologies.

“Nonsense, Gray!” he exclaimed, shaking my hand. “It is no interruption at all. On the contrary: how beautiful upon the staircase are the feet of him that bringeth—well, what sort of tidings?”

“Not good, I am afraid, sir.”

“Well, let us have them. Come and sit by the fire.” He drew up an easy-chair, and having installed me in it and taken a critical look at me, invited me to proceed. I accordingly proceeded bluntly to inform him that an attempt had been made to murder Miss D’Arblay.

“Ha!” he exclaimed. “These are bad tidings indeed! I hope she is not injured in any way.”

I reassured him on this point and gave him the details as to the patient’s condition, and he then asked:

“When did the attempt occur and how did you hear of it?”

“It happened this evening and I was present.”

“You were present!” he repeated, gazing at me in the utmost astonishment. “And what became of the assailant?”

“He vanished into the fog,” I replied.

“Ah, yes. The fog. I had forgotten that. But now let us drop this question and answer method. Give me a narrative from the beginning with the events in their proper sequence. And omit nothing, no matter how trivial.”

I took him at his word—up to a certain point. I described my arrival at the studio, the search in the cupboard, the sinister interruption, the attack and the unavailing attempt at pursuit. As to what befell thereafter I gave him a substantially complete account—with certain reservations—up to my departure from Ivy Cottage.

“Then you never saw the man at all?”
“No; but Miss D'Arblay did;” and here I gave him such details of the man’s appearance as I had been able to gather from Marion.

“It is quite a vivid description,” he said as he wrote down the details; “and now shall we have a look at that piece of the mould?”

I disinterred it from my tobacco-pouch and handed it to him. He glanced at it and then went to a cabinet, from a drawer in which he produced the little case containing Polton’s casts of the guinea and a box which he placed on the table and opened. From it he took a lump of moulding-wax and a bottle of powdered French chalk. Pinching off a piece of the wax, he rolled it into a ball, dusted it lightly with the chalk powder and pressed it with his thumb into the mould. It came away on his thumb bearing a perfect impression of the inside of the mould.

“That settles it,” said he, taking the obverse cast from the case and laying it on the table beside the wax ‘squeeze.’ “The squeeze and the cast are identical. There is now no possible doubt that the electrotype guinea that was found in the pond was made by Julius D'Arblay. Probably it had been delivered by him to the murderer on the very evening of his death. So we are undoubtedly dealing with that same man. It is a most alarming situation.”

“It would be alarming if it were any other man,” I remarked.

“No doubt,” he agreed. “But there is something very special about this man. He is a criminal of a type that is almost unknown here, but is not uncommon in South European and Slav countries. You find him, too, in the United States, principally among the foreign-born or alien population. He is not a normal human being. He is an inveterate murderer, to whom a human life does not count at all. And this type of man continually grows more and more dangerous, for two reasons: first, the murder habit becomes more confirmed with each crime; second, there is virtually no penalty for the succeeding murders, for the first one entails the death-sentence and fifty murders can involve no more. This man killed Van Zellen as a mere incident of a robbery. Then he appears to have killed D'Arblay to secure his own safety, and he is now attempting to kill Miss D'Arblay, apparently for the same reason. And he will kill you and he will kill me if our existence is inconvenient or dangerous to him. We must bear that in mind and take the necessary measures.”

“I can’t imagine,” said I, “what motive he can have for wanting to kill Miss D'Arblay.”

“Probably he believes that she knows something that would be dangerous to him—something connected with those moulds, or perhaps something else. We are rather in the dark. We don’t know for certain what it was he came to look for when he entered the studio, or whether or not he found what he wanted. But to return to the danger. It is obvious that he knows the Abbey Road district well, for he found his way to the studio in the fog. He may be living close by. There is no reason why he should not be. His identity is quite unknown.”

“That is a horrid thought!” I exclaimed.

“It is,” he agreed; “but it is the assumption that we have to act upon. We must not leave a loophole unwatched. He mustn’t get another chance.”

“No,” I concurred warmly; “he certainly must not—if we can help it. But it is an awful position. We carry that poor girl’s life in our hands, and there is always the possibility that we may be caught off our guard, just for a moment.”

He nodded gravely. “You are quite right. Gray. An awful responsibility rests on us. I am very unhappy about this poor young lady. Of course, there is the other side—but at present we are concerned with Miss D'Arblay’s safety.”

“What other side is there?” I demanded.

“I mean,” he replied, “that if we can hold out, this man is going to deliver himself into our hands.”

“What makes you think that?” I asked eagerly.

“I recognize a familiar phenomenon,” he replied. “My large experience and extensive study of crimes against the person have shown me that in the overwhelming majority of cases of obscure crime the discovery has been brought about by the criminal’s own efforts to make himself safe. He is constantly trying to hide his tracks—and making fresh ones. Now, this man is one of those criminals who won’t let well alone. He kills Van Zellen and disappears, leaving no trace. He seems to be quite safe. But he is not satisfied. He can’t keep quiet. He kills D’Arblay; he enters the studio, he tries to kill Miss D’Arblay: all to make himself more safe. And every time he moves, he tells us something fresh about himself. If we can only wait and watch, we shall have him.”

“What has he told us about himself this time?” I asked. “We won’t go into that now, Gray. We have other business on hand. But you know all that I know as to the facts. If you will turn over those facts at your leisure, you will find that they yield some very curious and striking inferences.”

I was about to press the question when the door opened and Mr. Polton appeared on the threshold. Observing me, he crinkled benevolently and then, in answer to Thorndyke’s inquiring glance, said: “I thought I had better remind you, sir, that you have not had any supper.”

“Dear me, Polton,” Thorndyke exclaimed, “now you mention it, I believe you are right. And I suspect that Dr. Gray is in the same case. So we place ourselves in your hands. Supper and pistols are what we want.”

“Pistols, sir!” exclaimed Polton, opening his eyes to an unusual extent and looking at us suspiciously.
“Don’t be alarmed, Polton,” Thorndyke chuckled. “It isn’t a duel. I just want you to go over our stock of pistols and ammunition.”

At this I thought I detected a belligerent gleam in Polton’s eye, but even as I looked, he was gone. Not for long, however. In a couple of minutes he was back with a large hand-bag, which he placed on the table and again retired. Thorndyke opened the bag and took out quite a considerable assortment of weapons—single pistols, revolvers and automatics—which he laid out on the table, each with its box of appropriate cartridges.

“I hate fire-arms!” he exclaimed as he viewed the collection distastefully. “They are dangerous things, and when it comes to business they are scurrilous weapons. Any poltroon can pull a trigger. But we must put ourselves on equal terms with our opponent, who is certain to be provided. Which will you have? I recommend this Baby Browning for portability. Have you had any practice?”

“Only target practice. But I am a fair shot with a revolver. I have never used an automatic.”

“We will go over the mechanism after supper,” said he. “Meanwhile, I hear the approach of Polton and am conscious of a voracious interest in what he is bringing. When did you feed last?”

“I had tea at the studio about half past four.”

“My poor Gray!” he exclaimed, “you must be starving. I ought to have asked you sooner. However, here comes relief.” He opened a folding table by the fire just as Polton entered with the tray, on which I was gratified to observe a good-sized dish-cover and a claret-jug. Polton rapidly laid the little table and then, whisking off the cover, retired with a triumphant crinkle.

“You have a regular kitchen upstairs, I presume,” said I as we took our seats at the table, “as well as a laboratory? And a pretty good cook, too, to judge by the results.”

Thorndyke chuckled. “The kitchen and the laboratory are one,” he replied, “and Polton is the cook. An uncommonly good cook, as you suggest, but his methods are weird. These cutlets were probably grilled in the cupel furnace, but I have known him to do a steak with the brazing-jet. There is nothing conventional about Polton. But whatever he does, he does to a finish, which is fortunate, because I thought of calling in his aid in our present difficulty.”

I looked at him inquiringly and he continued: “If Miss D’Arblay is to go on with her work, which she ought to, as it is her livelihood, she must be guarded constantly. I had considered applying to Inspector Follett, and we may have to later; but for the present it will be better for us to keep our own counsel and play our own hand. We have two objects in view. First—and paramount—is the necessity of securing Miss D’Arblay’s safety. But, second, we want to lay our hands on this man, not to frighten him away, as we might do if we put the police on his track. When once we have him, her safety is secured for ever; whereas if he were merely scared away he would be an abiding menace. We have got to catch him, and at present he is catchable. Secure in his unknown identity, he is lurking within reach, ready to strike, but also ready to be pounced upon when we are ready to pounce. Let us keep him confidant of his safety while we are gathering up the clues.”

“Hm! yes,” I assented, without much enthusiasm. “What is it that you propose to do?”

“Somebody,” he replied, “must keep watch over Miss D’Arblay from the moment when she leaves her house until she returns to it. How much time—if any—can you give up to this duty?”

“My whole time,” I answered promptly. “I shall let everything else go.”

“Then,” said he, “I propose that you and Polton relieve one another on duty. It will be better than for you to be there all the time.”

I saw what he meant and agreed at once. The conventions must be respected as far as possible.

“But,” I suggested, “isn’t Polton rather a light-weight—if it should come to a scrap, I mean?”

“Don’t undervalue small men, even physically,” he replied. “They are commonly better built than big men and more enduring and energetic. Polton is remarkably strong and he has the pluck of a bulldog. But we must see how he is placed as regards work.”

The question was put to him and the position of affairs explained when he came down to clear the table; whereupon it appeared (from his own account) that he was absolutely without occupation of any kind and pining for something to do. Thorndyke laughed incredulously but did not contest this outrageous and barefaced untruth, merely remarking:

“I am afraid it will be rather an idle time for you.”

“Oh, no, it won’t, sir,” Polton assured him emphatically. “I’ve always wanted to learn something about sculptor’s moulding and wax-casting, but I’ve never had a chance. Now I shall have. And that opportunity isn’t going to be wasted.”

Thorndyke regarded his assistant with a twinkling eye. “So it was mere self-seeking that made you so enthusiastic,” said he. “But you are quite a good moulder already.”

“Not a sculptor’s moulder, sir,” replied Polton; “and I know nothing about waxwork. But I shall, before I have been there many days.”

“I am sure you will,” said Thorndyke. “Miss D’Arblay will have an apprentice and journeyman in one. You will be able to give her quite a lot of help; which will be valuable just now while her hand is disabled. When do you think she will be able
to go back to work, Gray?"

"I can't say. Not to-morrow certainly. Shall I send you a report when I have seen her?"

"Do," he replied; "or better still, come in to-morrow evening and give me the news. So, Polton, we shall want you for another day or so."

"Ah!" said Polton, "then I shall be able to finish that recording-clock before I go;" upon which Thorndyke and I laughed aloud and Polton, his mendacity thus unmasked, retired with the tray, crinking but unabashed.

The short remainder of the evening—or rather, of the night—was spent in the study of the mechanism and mode of use of automatic pistol. When I finally bestowed the 'Baby,' fully loaded, in my hip-pocket and rose to go, Thorndyke sped me on my way with a few words of warning and advice.

"Be constantly on your guard. Gray. You are going to make a bitter enemy of a man who knows no scruples; indeed, you have done so already, and something tells me that he is aware of it. Avoid all solitary or unfrequented places. Keep to main thoroughfares and well-lighted streets and maintain a vigilant look-out for any suspicious appearances. You have said truly that we carry Miss D'Arblay's life in our hands. But to preserve her life we must preserve our own; which we should probably prefer to do in any case. Don't get jumpy—I don't much think you will; but keep your attention alert and your weather eyelid lifting."

With these encouraging words and a hearty handshake, he let me out and stood watching me as I descended the stairs.

— A DRAMATIC DISCOVERY

ABOUT eleven o'clock in the forenoon of the third day after the terrible events of that unforgettable night of the great fog, Marion and I drew up on our bicycles opposite the studio door. She was now outwardly quite recovered, excepting as to her left hand, but I noticed that, as I inserted the key into the door, she cast a quick, nervous glance up and down the road; and as we passed through the lobby, she looked down for one moment at the great bloodstain on the floor and then hastily averted her face.

"Now," I said, assuming a brisk, cheerful tone, "we must get to work. Mr. Polton will be here in half an hour and we must be ready to put his nose on the grindstone at once."

"Then your nose will have to go on first," she replied with a smile, "and so will mine, with two raw apprentices to teach and an important job waiting to be done. But, dear me! what a lot of trouble I am giving!"

"Nothing of the kind, Marion," I exclaimed; "you are a public benefactor. Polton is delighted at the chance to come here and enlarge his experience, and as for me—"

"Well? As for you?" She looked at me half-shyly, half-mischievously. "Go on. You've stopped at the most interesting point."

"I think I had better not," said I. "We don't want the forewoman to get too uppish."

She laughed softly, and when I had helped her out of her overcoat and rolled up the sleeve of her one serviceable arm, I went out to the lobby to stow away the bicycles and lock the outer door. When I returned, she had got out from the cupboard a large box of flaked gelatine and a massive spouted bucket which she was filling at the sink.

"Hadn't you better explain to me what we are going to do?" I asked.

"Oh, explanations are of no use," she replied. "You just do as I tell you and then you will know all about it. This isn't a school; it's a workshop. When we have got the gelatine in to soak, I will show you how to make a plaster case."

"It seems to me," I retorted, "that my instructress has graduated in the academy of Squeers. "W-i-n-d-e-r, winder; now go and clean one. Isn't that the method?"

"Apprentices are not allowed to waste time in wrangling," she rejoined severely. "Go and put on one of Daddy's blouses and I will set you to work."

This practical method of instruction justified itself abundantly. The reasons for each process emerged at once as soon as the process was completed. And it was withal a pleasant method, for there is no comradeship so sympathetic as the comradeship of work, nor any which begets so wholesome and friendly an intimacy. But though there were playful and frivolous interludes—as when the forewoman's working hand became encrusted with clay and had to be cleansed with a sponge by the apprentice—we worked to such purpose that by the time Mr. Polton was due, the plaster bust (of which a wax replica had to be made) was firmly fixed on the work-table on a clay foundation and surrounded by a carefully-levelled platform of clay, in which it was embedded to half its thickness. I had just finished smoothing the surface when there came a knock at the outer door; on which Marion started violently and clutched my arm. But she recovered in a moment and exclaimed in a tone of vexation:

"How silly I am! Of course it is Mr. Polton."

It was. I found him on the threshold in rapt contemplation of the knocker and looking rather like an archdeacon on tour. He greeted me with a friendly crinkle, and I then conducted him into the studio and presented him to Marion, who shook
his hand warmly and thanked him so profusely for coming to her aid that he was quite abashed. However, he did not waste time in compliments, but, producing an apron from his hand-bag, took off his coat, donned the apron, rolled up his sleeves and beamed inquiringly at the bust.

“We are going to make a plaster case for the gelatine mould, Mr. Polton,” Marion explained, and proceeded to a few preliminary directions, to which the new apprentice listened with respectful attention. But she had hardly finished when he fell to work with a quiet, unhurried facility that filled me with envy. He seemed to know where to find everything. He discovered the waste paper with which to cover the model to prevent the clay from sticking to it, he pounced on the clay-bin at the first shot, and when he had built up the shape for the case, found the plaster-bin, mixing-bowl and spoon as if he had been born and bred in the workshop, stopping only for a moment to test the condition of the gelatine in the bucket.

“Mr. Polton,” Marion said after watching him for a while, “you are an impostor—a dreadful impostor. You pretend to come here as an improver, but you really know all about gelatine moulding; now, don’t you?”

Polton admitted apologetically that he “had done a little in that way. But,” he added, in extenuation, “I have never done any work in wax. And talking of wax, the doctor will be here presently.”

“Dr. Thorndyke?” Marion asked.

“Yes, miss. He had some business in Holloway, so he thought he would come on here to make your acquaintance and take a look at the premises.”

“All the same,” Mr. Polton’ said I, “I don’t quite see the connexion between Dr. Thorndyke and wax.”

He crinkled with a slightly embarrassed air and explained that he must have been thinking of something that the doctor had said to him; but his explanations were cut short by a knock at the door.

“That is his knock,” said Polton; and he and I together proceeded to open the door, when I inducted the distinguished visitor into the studio and presented him to the presiding goddess. I noticed that each of them inspected the other with some curiosity and that the first impressions appeared to be mutually satisfactory, though Marion was at first a little overawed by Thorndyke's impressive personality.

“You mustn’t let me interrupt your work,” the latter said, when the preliminary politenesses had been exchanged. “I have just come to fill in Dr. Gray's outline sketches with details of my own observing. I wanted to see you—to convert a name into an actual person, to see the studio for the same reason, and to get as precise a description as possible of the man whom we are trying to identify. Will it distress you to recall his appearance?”

She had turned a little pale at the mention of her late assailant, but she answered stoutly enough: “Not at all; besides, it is necessary.”

“Thank you,” said he; “then I will read out the description that I had from Dr. Gray and we will see if you can add anything to it.”

He produced a note-book from which he read out the particulars that I had given him, at the conclusion of which he looked at her inquiringly.

“I think that is all that I remember,” she said. “There was very little light and I really only glanced at him.”

Thorndyke looked at her reflectively. “It is a fairly full description,” said he. “Perhaps the nose is a little sketchy. You speak of a hooked nose with a high bridge. Was it a curved nose of the Jewish type, or a squarer Roman nose?”

“It was rather square in profile; a Wellington nose, but with a rather broad base. Like a vulture's beak, and very large.”

“Was it actually a hook-nose—I mean, had it a drooping tip?”

“Yes; the tip projected downwards and it was rather sharp—not bulbous.”

“And the chin? Should you call it a pronounced or a retreating chin?”

“Oh, it was quite a projecting chin, rather of the Wellington type.”

Thorndyke reflected once more, then, having jotted down the answers to his questions, he closed the book and returned it to his pocket.

“It is a great thing to have a trained eye,” he remarked. “In your one glance you saw more than an ordinary person would have noted in a leisurely inspection in a good light. You have no doubt that you would know this man again if you should meet him?”

“Not the slightest,” she replied with a shudder. “I can see him now, if I shut my eyes.”

“Well,” he rejoined, with a smile, “I wouldn’t recall that unpleasant vision too often, if I were you. And now, may I, without disturbing you further, just take a look round the premises?”

“But, of course. Dr. Thorndyke,” she replied. “Do exactly what you please.”

With this permission he drew away and stood for some moments letting a very reflective eye travel round the interior; and meanwhile I watched him curiously and wondered what he had really come for. His first proceeding was to walk slowly round the studio and examine closely, one by one, all the casts which hung on pegs. Next, in the same systematic manner,
he inspected all the shelves, mounting a chair to examine the upper ones. It was after scrutinizing one of the latter that he turned towards Marion and asked:

“Have you moved these casts lately, Miss D’Arblay?”

“No,” she replied, “so far as I know, they have not been touched for months.”

“Someone has moved them within the last day or two,” said he. “Apparently the nocturnal explorer went over the shelves as well as the cupboard.”

“I wonder why?” said Marion. “There were no moulds on the shelves.”

Thorndyke made no rejoinder, but as he stood on the chair he once more ran his eye round the studio. Suddenly he stepped down from the chair, picked it up, carried it over to the tall cupboard and once more mounted it. His stature enabled him easily to look over the cornice onto the top of the cupboard and it was evident that something there had attracted his attention.

“Here is a derelict of some sort,” he announced, “which certainly has not been moved for some months.” As he spoke, he reached over the cornice into the enclosed space and lilted out an excessively grimy plaster mask, from which he blew the thick coating of dust, and then stood for a while looking at it thoughtfully.

“A striking face, this,” he remarked, “but not attractive. It rather suggests a Russian or Polish Jew. Do you recognize the person, Miss D’Arblay?”

He stepped down from the chair and handed the mask to Marion, who had advanced to look at it and who now held it in her hand, regarding it with a frown of perplexity.

“This is very curious,” she said. “I thought I knew all the casts that have been made here. But I have never seen this one before, and I don’t know the face. I wonder who he was. It doesn’t look like an English face, but I should hardly have taken it for the face of a Jew, with that rather small and nearly straight nose.”

“The East-European Jews are not a very pure breed,” said Thorndyke. “You will see many a face of that type in Whitechapel High Street and the Jewish quarters hard by.”

At this point, deserting the work-table, I came and looked over Marion’s shoulder at the mask which she was holding at arm’s length. And then I got a surprise of the most singular kind, for I recognized the face at a glance.

“What is it, Gray?” asked Thorndyke, who had apparently observed my astonishment.

“This is a most extraordinary coincidence!” I exclaimed. “Do you remember my speaking to you about a certain Mr. Morris?”

“The dealer in antiques?” he queried.

“Yes. Well, this is his face.”

He regarded me for some moments with a strangely intent expression. Then he asked: “When you say that this is Morris’s face, do you mean that it resembles his face or that you identify it positively?”

“I identify it positively. I can swear to the identity. It isn’t a face that one would forget. And if any doubt were possible, there is this hare-lip scar, which you can see quite plainly on the cast.”

“Yes, I noticed that. And Morris has a hare-lip scar, has he?”

“Yes; and in the same position and of the same character. I think you can take it as a fact that this cast was undoubtedly taken from Morris’s face.”

“Which,” said Thorndyke, “is a really important fact and one that is worth looking into.”

“In what way is it important?” I asked.

“In this respect,” he answered. “This man, Morris, is unknown to Miss D’Arblay; but he was not unknown to her father. Here we have evidence that Mr. D’Arblay had dealings with people of whom his daughter had no knowledge. The circumstances of the murder made it clear that there must be such people; but here we have proof of their existence and we can give to one of them a local habitation and a name. And you will notice that this particular person is a dealer in curios and possibly in more questionable things. There is just a hint that he may have had some rather queer acquaintances.”

“He seemed to have had rather a fancy for plaster masks,” I remarked. “I remember that he had one in his shop window.”

“Did your father make many life or death-masks as commissions, Miss D’Arblay?” Thorndyke asked.

“Only one or two, so far as I know,” she replied. “There is very little demand for portrait masks nowadays. Photography has superseded them.”

“That is what I should have supposed,” said he. “This would be just a chance commission. However, as it establishes the fact that this man Morris was in some way connected with your father, I think I should like to have a record of his appearance. May I take this mask away with me to get a photograph of it made? I will take great care of it and let you have it back safely.”
“Certainly,” replied Marion; “but why not keep it, if it is of any interest to you? I have no use for it.”

“That is very good of you,” said he, “and if you will give me some rag and paper to wrap it in, I will take myself off and leave you to finish your work in peace.”

Marion took the cast from him and, having procured some rag and paper, began very carefully to wrap it up. While she was thus engaged, Thorndyke stood letting his eye travel once more round the studio.

“I see,” he remarked, “that you have quite a number of masks moulded from life or death. Do I understand that they were not commissions?”

“Very few of them were,” Marion replied. “Most of them were taken from professional models, but some from acquaintances whom my father bribed with the gift of a duplicate mask.”

“But why did he make them? They could not have been used for producing wax faces for the show figures, for you could hardly turn a shop-window into a waxwork exhibition with lifelike portraits of real persons.”

“No,” Marion agreed; “that wouldn’t do at all. These masks were principally used for reference as to details of features when my father was modelling a head in clay. But he did sometimes make moulds for the wax from these masks, only he obliterated the likeness, so that the wax face was not a portrait.”

“By working on the wax, I suppose?”

“Yes; or more usually by altering the mask before making the mould. It is quite easy to alter a face. Let me show you.” She lifted one of the masks from its peg and laid it on the table.

“You see,” she said, “that this is the face of a young girl—one of my father’s models. It is a round, smooth, smiling face with a very short, weak chin and a projecting upper lip. We can change all that in a moment.”

She took up a lump of clay, and pinching off a pellet, laid it on the right cheek-bone and spread it out. Having treated the other side in the same manner, she rolled an elongated pellet with which she built up the lower lip. Then, with a larger pellet, she enlarged the chin downwards and forwards, and having added a small touch to each of the eyebrows, she dipped a sponge in thick clay-water, or ‘slip’, and dabbed the mask all over to bring it to a uniform colour.

“There,” she said, “it is very rough, but you see what I mean.”

The result was truly astonishing. The weak, chubby, girlish face had been changed by these few touches into the strong, coarse face of a middle-aged woman.

“It really is amazing!” I exclaimed. “It is a perfectly different face. I wouldn’t have believed that such a thing was possible.”

“It is a most striking and interesting demonstration,” said Thorndyke. “But yet I don’t know that we need be so surprised. If we consider that of all the millions of persons in this island alone, each one has a face which is different from any other and yet that all those faces are made up of the same anatomical parts, we realize that the differences which distinguish one face from another must be excessively subtle and minute.”

“We do,” agreed Marion, “especially when we are modelling a portrait bust and the likeness won’t come, although every part appears to be correct and all the measurements seem to agree. A true likeness is an extraordinarily subtle and exact piece of work.”

“So I have always thought,” said Thorndyke. “But I mustn’t delay you any longer. May I have my precious parcel?”

Marion hastily put the finishing touches to the not very presentable bundle and handed it to him with a smile and a bow. He then took his leave of her and I escorted him to the door, where he paused for a moment as we shook hands.

“You are bearing my advice in mind, I hope. Gray,” he said.

“As to keeping clear of unfrequented places? Yes, I have been very careful in that respect, and I never go abroad without the pistol. It is in my hip-pocket now. But I have seen no sign of anything to justify so much caution. I doubt if our friend is even aware of my existence, and in any case, I don’t see that he has anything against me, excepting as Miss D’Arblay’s watch-dog.”

“Don’t be too sure, Gray,” he rejoined earnestly. “There may be certain little matters that you have overlooked. At any rate, don’t relax your caution. Give all unfrequented places a wide berth and keep a bright look-out.”

With this final warning, he turned away and strode off down the road, while I re-entered the studio just in time to see Polton mix the first bowl of plaster, as Marion, having washed the clay from the transformed mask, dried it and rehung it on its peg.

XIII. — A NARROW ESCAPE

THE statement that I had made to Thorndyke was perfectly true in substance; but it was hardly as significant in fact as the words implied. I had, it is true, in my journeys abroad, restricted myself to well-beaten thoroughfares. But then I had had no occasion to do otherwise. Until Polton’s arrival on the scene my time had been wholly taken up in keeping a watch
on Marion; and so it would have continued if I had followed my own inclination. But at the end of the first day's work she intervened resolutely.

"I am perfectly ashamed," she said, "to occupy the time of two men, both of whom have their own affairs to attend to, though I can't tell you how grateful I am to you for sacrificing yourselves."

"We are acting under the doctor's orders, miss," said Polton, thereby, in his opinion, closing the subject.

"You mean Dr. Thorndyke's?" said Marion, not realizing—or not choosing to realize—that, to Polton, there was no other doctor in the world who counted.

"Yes, miss. The doctor's orders must be carried out."

"Of course they must," she agreed warmly, "since he has been so very good as to take all this trouble about my safety. But there is no need for both of you to be here together. Couldn't you arrange to take turns on duty—alternate days or a half-day each? I hate the thought that I am wasting the whole of both your times."

I did not look on the suggestion with favour, for I was reluctant to yield up to any man—even to Polton—the privilege of watching over the safety of one who was so infinitely dear to me. Nor was Polton much less unwilling to agree, for he loathed to leave a piece of work uncompleted. However, Marion refused to accept our denial (as is the way of women), and the end of it was that Polton and I had to arrange our duties in half-day shifts, changing over at the end of each week, the first spell allotting the mornings to me and the latter half of the day—with the duty of seeing Marion home—to him.

Thus, during each of the following six working days, I found myself with the entire afternoon and evening free. The former I usually spent at the hospital, but in the evenings, feeling too unsettled for study, I occupied myself very pleasantly with long walks through the inexhaustible streets, extending my knowledge of the town and making systematic explorations of such distant regions as Mile End, Kingsland, Dalston, Wapping and the Borough.

One evening I bethought me of my promise to look in on Usher. I did not find myself yearning for his society, but a promise is a promise. Accordingly, when I had finished my solitary dinner, I set forth from my lodgings in Camden Square and made a bee-line for Clerkenwell; so far, that is to say, as was possible, while keeping to the wider streets. For in this respect, I followed Thorndyke's instructions to the letter, though, as to the other matter—that of keeping a bright look-out—I was less attentive, my mind being much more occupied with thoughts of Marion (who would, just now, be on her way home under Polton's escort) than with any considerations of my own personal safety. Indeed, to tell the truth, I was inclined to be more than a little sceptical as to the need for these extraordinary precautions.

I found Usher in the act of bowing out the last of the 'evening consultations' and was welcomed by him with enthusiasm.

"Delighted to see you, old chap!" he exclaimed, shaking my hand warmly. "It is good of you to drop in on an old fossil like me. Didn't much think you would. I suppose you don't often come this way?"

"No," I replied. "It is rather off my beat. I've finished with Hoxton—for the present, at any rate."

"So have I," said Usher, "since poor old Crile went off to the better land."

"Crile?" I repeated. "Who was he?"

"Don't you remember me telling you about this funeral, when they had those Sunday-school kids yowling hymns round the grave? That was Mr. Crile—Christian name, Jonathan."

"I remember, but I didn't realize that he was a Hoxton aristocrat."

"Well, he was. Fifty-two Field Street was his earthly abode. I used to remember it by the number of weeks in the year. And glad enough I was when he hopped off his perch, for his confounded landlady, a Mrs. Pepper, would insist on fixing the times for my visits, and deuced inconvenient times, too. Between four and six on Tuesdays and Fridays. I hate patients who turn your visits into appointments. Upsets your whole visiting-list."

"It seems to be the fashion in Hoxton," I remarked. "I had to make my visits at appointed times, too. It would have been frightfully inconvenient if I had been busy. Is it often done?"

"They will always do it if you let 'em. Of course it is a convenience to a woman who doesn't keep a servant, to know what time the doctor is going to call; but it doesn't do to give way to 'em."

I assented to this excellent principle, noting, however, that he seemed to have "given way to 'em" all the same.

As we had been talking, we had gradually drifted from the surgery up a flight of stairs to a shabby, cosy little room on the first floor, where a cheerful fire was burning and a copper kettle on a trivet purred contentedly and breathed forth little clouds of steam. Usher inducted me into a large easy-chair, the depressed seat of which suggested its customary use by an elephant of sedentary habits, and produced from a cupboard a spirit-decanter, a high-shouldered Dutch gin-bottle, a sugar-basin and a couple of tumblers and sugar-crushers.

"Whisky or Hollands?" he demanded, and as curiosity led me to select the latter, he commented: "That's right, Gray. Good stuff, Hollands. Touches up the cubical epithelium—what! I am rather partial to a drop of Hollands."

It was no empty profession. The initial dose made me open my eyes; and that was only a beginning. In a twinkling, as it seemed, his tumbler was empty and the collaboration of the bottle and the copper kettle was repeated. And so it went on for nearly an hour, until I began to grow quite uneasy, though without any visible cause, so far as Usher was concerned. He
did not turn a hair (he hadn’t very many to turn for that matter, but I speak figuratively). The only effect that I could observe was an increasing fluency of speech with a tendency to discursiveness; and I must admit that his conversation was highly entertaining. But his evident intention to ‘make a night of it’ set me planning to make my escape without appearing to slight his hospitality. How I should have managed it, unaided by the direct interposition of Providence, I cannot guess; for his conversation had now taken the form of an interminable sentence punctuated by indistinguishable commas; but in the midst of this steadily-flowing stream of eloquence the outer silence was rent by the sudden jangling of a bell.

Usher stopped short, stared at me solemnly, deliberately emptied his tumbler and stood up.

“Night bell, ol’ chappie,” he explained. “Got to go out. But don’t you disturb yourself. Be back in a few minutes. Soon polish ‘em off.”

“I’ll walk round with you as far as your patient’s house,” said I, “and then I shall have to get home. It is past ten and I have a longish walk to Camden Square.”

He was disposed to argue the point, but another violent jangling cut his protests short and lent him hurrying down the stairs with me close at his heels. A couple of minutes later we were out in the street, following in the wake of a hurrying figure; and, looking at Usher as he walked sedately at my side, with his top-hat, his whiskers and his inevitable umbrella, I had the feeling that all those juries of Hollands had been consumed in vain. In appearance, in manner, in speech and in gait he was just his normal self, with never a hint of any change from the status quo ante bellum.

Our course led us into the purloins of St. John Street Road, where we presently turned into a narrow, winding and curiously desolate little street, along which we proceeded for a few hundred yards, when our ‘fore-runner’ halted at a door into which he inserted a latch-key. When we arrived at the open door, inside which a shadowy figure was lurking, Usher stopped and held out his hand.

“Good night, old chap,” he said. “Sorry you can’t come back with me. If you keep straight on and turn to the left at the cross-roads, you will come out presently into the King’s Cross Road. Then you’ll know your way. So long.”

He turned into the dark passage, the door was closed and I went on my way.

The little meandering street was singularly silent and deserted; and its windings cut off the light from the scanty street-lamps, so that stretches of it were in almost total darkness. As I strode forward the echoes of my foot-falls resounded with hollow reverberations which smote my ear—and ought have smitten my conscience—causing me to wonder, with grim amusement, what Thorndyke would have said if he could have seen me thus setting his instructions at defiance. Indeed, I was so far sensible of the impropriety of my being in such a place at such an hour that I was about to turn to take a look back along the street; but at the very moment that I halted within a few feet of a street-lamp, something struck the brim of my hat with a sharp, weighty blow like the stroke of a hammer, and I heard a dull thud from the lamp-post.

In an instant I spun round, mighty fierce, whipping out my pistol, cocking it and pointing it down the street as I raced back towards the spot from whence the missile had appeared to come. There was not a soul in sight nor any sound of movement, and the shallow doorways seemed to offer no possible hiding-place. But some thirty yards back I came suddenly on a narrow opening like an empty doorway but actually the entrance to a covered alley not more than three feet wide and as dark as a pocket. This was evidently the ambush (which I had passed, like a fool, without observing it), and I halted beside it, with my pistol still pointed, listening intently and considering what I had better do. My first impulse had been to charge into the alley, but a moment’s reflection showed the futility of such a proceeding. Probably my assailant had made off by some well-known outlet; but in any case it would be sheer insanity for me to plunge into that pitch-dark passage. For if he were still lurking there, he would be invisible to me, whereas I should be a clear silhouette against the dim light of the street. Moreover, I had seen no one and I could not shoot at any chance stranger whom I might find there. Reluctantly, I recognized that there was nothing for it but to retreat cautiously and be more careful in future.

My retirement would have looked an odd proceeding to an observer, if there had been one, for I had to retreat crab-wise in order that I might keep the entrance of the alley covered with my pistol and yet see where I was going. When I reached the lamp-post, I scanned the area of lighted ground beneath it, and, almost at the first glance, perceived an object like a largish marble lying in the road. It proved, when I picked it up, to be a leaden ball, like an old-fashioned musket-ball, with one flattened side, which had prevented it from rolling away from the spot where it had fallen. I dropped it into my pocket and resumed my masterly retreat until, at length, the cross-roads came into view. Then I quickened my pace, and as I reached the corner, put away my pistol after slipping in the safety-catch.

Once more out in the lighted and frequented main streets, my thoughts were free to turn over this extraordinary experience. But I did not allow them to divert me from a very careful look-out. All my scepticism was gone now. I realized that Thorndyke had not been making mere vague guesses, but that he had clearly foreseen that something of this kind would probably happen. That was, to me, the most perplexing feature of this incomprehensible affair.

I turned it over in my mind again and again and could make nothing of it. I could see no adequate reason why this man should want to make away with me. True, I was Marion’s protector, but that—even if he were aware of it—did not seem an adequate reason. Indeed, I could not see why he was seeking to make away with her—nor, even, was it clear to me that there had been a reasonable motive for murdering her father. But as to myself, I seemed to be out of the picture altogether. The man had nothing to fear from me or to gain by my death.

That was how it appeared to me; and yet I saw plainly that I must be mistaken. There must be something behind all this
—something that was unknown to me but was known to Thorndyke. What could it be? I found myself unable to make any sort of guess. In the end, I decided to call on Thorndyke the following evening, report the incident and see if I could get any enlightenment from him.

The first part of this programme I carried out successfully enough, but the second presented more difficulties.

Thorndyke was not a very communicative man, and a perfectly impossible one to pump. What be chose to tell, he told freely; and beyond that, no amount of ingenuity could extract the faintest shadow of a hint.

“I am afraid I am disturbing you, sir,” I said in some alarm, as I noted a portentous heap of documents on the table.

“No,” he replied. “I have nearly finished, and I shall treat you as a friend and keep you waiting while I do the little that is left.” He turned to his papers and took up his pen, but paused to cast one of his quick, penetrating glances at me.

“Has anything fresh happened?” he asked.

“Our unknown friend has had a pot at me,” I answered. “That is all.”

He laid down his pen and, leaning back in his chair, demanded particulars. I gave him an account of what had happened on the preceding night, and taking the leaden ball from my pocket, laid it on the table. He picked it up, examined it curiously and then placed it on the letter-balance.

“Just over half an ounce,” he said. “It is a mercy it missed your head. With that weight and the velocity indicated by the flattening, it would have dropped you insensible with a fractured skull.”

“And then he would have come along and put the finishing touches, I suppose. But I wonder how he shot the thing. Could he have used an air-gun?”

Thorndyke shook his head. “An air-gun that would discharge a ball of that weight would make quite a loud report, and you say you heard nothing. You are quite sure of that, by the way?”

“Perfectly. The place was as silent as the grave.”

“Then he must have used a catapult; and an uncommonly efficient weapon it is in skilful hands, and as portable as a pistol. You mustn’t give him another chance, Gray.”

“I am not going to if I can help it. But what the deuce does the fellow want to pot at me for? It is a most mysterious thing. Do you understand what it is all about, sir?”

“I do not,” he replied. “My knowledge of the facts of this case is nearly all second-hand knowledge, derived from you. You know all that I know and probably more.”

“That is all very well, sir,” said I; “but you foresaw that this was likely to happen. I didn’t. Therefore you must know more about the case than I do.”

He chuckled softly. “You are confusing knowledge and inference,” said he. “We had the same facts, but our inferences were not the same. It is just a matter of experience. You haven’t squeezed out of the facts as much as they are capable of yielding. Come, now, Gray; while I am finishing my work, you shall look over my notes of this case, and then you should take a sort of bird’s-eye view of the whole case and see if anything new occurs to you. And you must add to those notes that this man has been at the enormous trouble of stalking you continuously, that he shadowed you to Usher’s, that he waited patiently for you to come out, that he followed you most skilfully and took instant advantage of the first opportunity that you gave him. You might also note that he did not elect to overtake you and make a direct attack on you as he did on Miss D’Arblay. Note those facts and consider what their significance may be. And now just go through this little dossier. It won’t take you many minutes.”

He took out of a drawer a small portfolio, on the cover of which was written ‘J. D’Arblay, decd.’ and, passing it to me, returned to his documents. I opened it and found it to contain a number of separate abstracts, each duly headed with its descriptive title, and an envelope marked “Photographs.” Glancing over the abstracts, I saw that they dealt respectively with J. D’Arblay, the Inquest, the Van Zellen Case, Miss D’Arblay, Dr. Gray and Mr. Morris; the last containing, somewhat to my surprise, all the details that I had given Thorndyke respecting that rather mysterious person together with an account of my dealings with him and cross-references to the abstract bearing my name. It was all very complete and methodical, but none of the abstracts contained any information that was new to me. If this represented all the facts at were known to Thorndyke, then he was no better informed than I was. But he had evidently got a great deal more out of the information than I had.

Returning the abstracts with some disappointment to the portfolio, I turned to the photographs, and then I got a very thorough surprise. There were only three, and the first two were of no great interest, one representing the two casts of the guinea and the other the plaster mask of Morris. But the third fairly took away my breath. It was a very bad photograph, apparently an enlargement from a rather poor snap-shot portrait; but, bad as it was, it gave a very vivid presentation of one of the most evil-looking faces that I have ever looked on: a lean, bearded face with high cheekbones, with heavy, frowning brows that overhung deep-shadowed, hollow eye-sockets and an almost grotesquely large nose, thin, curved and sharp, that jutted out like a great predatory beak.

I stared at the photograph in speechless amazement. At the first glance I had been struck by the perfect way in which this crude portrait realized Marion’s description of the man who had tried to murder her. But that was not all. There was
another resemblance which I now perceived with even more astonishment; indeed it was so incredible that the perception of it reduced me to something like stupefaction. I sat for fully a minute with the portrait in my hand and my thoughts surging confusedly in a vain effort to grasp the meaning of this extraordinary likeness; then, happening to glance up at Thorndyke, I found him quietly regarding me with undisguised interest.

"Well?" he said, as he caught my eye.

"Who is he?" I demanded, holding up the photograph.

"That is what I want to know," he replied. "The photograph came to me without any description. The identity of the subject is unknown. Who do you think he is?"

"To begin with," I answered, "he exactly corresponds in appearance with Miss D'Arblay's description of her would-be murderer. Don't you think so?"

"I do," he replied. "The correspondence seems complete in every detail, so far as I can judge. That was why I secured the photograph. But the actual resemblance will have to be settled by her. I suggest that you take the portrait and let her see it; but you had better not show it to her pointedly for identification. It would be better to put it in some place where she will see it without previous suggestion or preparation. But you said just now 'to begin with'. Was there anything else that struck you about this photograph?"

"Yes," I answered, "there was—a most amazing thing. You remember my telling you about the patient I attended in Morris's house?"

"The man who died of gastric cancer and was eventually cremated?"

"Yes. His name was Bendelow. Well, this photograph might have been a portrait of Bendelow, taken with a beard and moustache before the disease got hold of him. Excepting for the emaciation and the beard—Bendelow was clean-shaven—I should think it would be quite an excellent likeness of him."

Thorndyke made no immediate reply or comment, but sat quite still, looking at me with a very singular expression. I could see that he was thinking rapidly and intensely, but I suspected that his thoughts were in a good deal less confusion than mine had been.

"It is," he remarked at length, "as you say, a most amazing affair. The face is no ordinary face. It would be difficult to mistake it, and one would have to go far to find another with which it could be confused. Still, one must not forget the possibility of a chance resemblance. Nature doesn't take out letters-patent even for a human face. But I will ask you, Gray, to write down and send to me all that you know about the late Mr. Bendelow, including all the details of your attendance on him, dead and alive."

"I will," said I, "though it is difficult to imagine what connexion he could have had with the D'Arblay case."

"It seems incredible that he could have had any," Thorndyke agreed. "But at present we are collecting facts, and we must note everything impartially. It is a fatal mistake to select your facts in accordance with the apparent probabilities. By the way, if Bendelow was like this photograph, he must have corresponded pretty exactly with Miss D'Arblay's very complete and lucid description. I wonder why you did not realize that at the time."

"That is what I have been wondering. But I suppose it was the beard and the absence of any kind of association between Bendelow and the D'Arblays."

"Probably," he agreed. "A beard and moustache alter very greatly even a striking face like this. Incidentally, it illustrates the superiority of a picture over a verbal description for purposes of identification. No mere description will enable you to visualize correctly a face which you have never seen. I shall be curious to hear what Miss D'Arblay has to say about this photograph."

"I will let you know without delay," said I; and then, as he seemed to have completed his work and put the documents aside, I made a final effort to extract some definite information from him.

"It is evident," I said, "that the body of facts in your notes has conveyed a good deal more to you than it has to me."

"Probably," he agreed. "If it had not, I should seem to have profited little by years of professional practice."

"Then," I said persuasively, "may I ask, if you have formed a really satisfactory theory as to who this man is and why he murdered D'Arblay?"

Thorndyke reflected for a few moments and then replied:

"My position, Gray, is this: I have arrived at a very definite theory as to the motive of the murder, and a most extraordinary motive it is. But there are one or two points that I do not understand. There are some links missing from the chain of evidence. So with the identity of the man. We know pretty certainly that he is the murderer of Van Zellen and we know what he is like to look at; but we can't give him a name and a definite personality. There are links missing there, too. But I have great hopes of finding those missing links. If I find them, I shall have a complete case against this man and I shall forthwith set the law in motion. I can't tell you more than that at present; but I repeat that you are in possession of all the facts and that if you think over all that has happened and ask yourself what it can mean, though you will not arrive at a complete solution any more than I have, you will at least begin to see the light."
This was all that I could get out of him, and as it was growing late I presently rose to take my departure. He walked with me as far as the Middle Temple Gate and stood outside the wicket watching me as I strode away westward.

XIV. — THE HAUNTED MAN

WHEN I arrived at the studio on the following afternoon I found the door open and Polton waiting just inside with his hat and overcoat on and his bag in his hand.

"I am glad you are punctual, sir," he said, with his benevolent smile. "I wanted to get back to the chambers in good time to-day. It won’t matter to-morrow, which is fortunate, as you may be late."

"Why may I be late to-morrow?" I asked.

"I have a message for you from the doctor," he replied. "It is about what you were discussing last night. He told me to tell you that he is expecting a visit from an officer of the Criminal Investigation Department and he would like you to be present, if it would be convenient. About half past ten, sir."

"I will certainly be there," said I.

"Thank you, sir," said he. "And the doctor told me to warn you, in case you should arrive after the officer, not to make any comment on anything that may be said, or to seem to know anything about the subject of the interview."

"This is very mysterious, Polton," I remarked.

"Why, not particularly, sir," he replied. "You see, the officer is coming to give certain information, but he will try to get some for himself if he can. But he won’t get anything out of the doctor, and the only way for you to prevent his pumping you is to say nothing and appear to know nothing."

I laughed at his ingenuous wiliness. "Why," I exclaimed, "you are as bad as the doctor, Polton. A regular Machiavelli."

"I never heard of him," said Polton, "but most Scotchmen are pretty close. Oh, and there is another little matter that I wanted to speak to you about—on my own account this time. I gathered from the doctor, in confidence, that someone has been following you about. Now, sir, don’t you think it would be very useful to be able to see behind you without turning your head?"

"By jove!" I exclaimed. "It would indeed! Capital! I never thought of it. I will have a supplementary eye fixed in the back of my head without delay."

Polton crinkled deprecatingly. "No need for that, sir," said he. "I have invented quite a lot of different appliances for enabling you to see behind you—reflecting spectacles and walking-sticks with prisms in the handle and so on. But for use at night I think this will answer your purpose best."

He produced from his pocket an object somewhat like a watchmaker’s eye-glass, and having fixed it in his eye to show me how it worked, handed it to me with the request that I would try it. I did so and was considerably surprised at the efficiency of the appliance; for it gave me a perfectly clear view of the street almost directly behind me.

"I am very much obliged to you, Polton," I said enthusiastically. "This is a most valuable gift, especially under the present circumstances."

He was profoundly gratified. "I think you will find it useful, sir," he said. "The doctor uses these things sometimes, and so do I if the occasion arises. You see, sir, if you are being shadowed, it is a fatal thing to turn round and look behind you. You never get a chance of seeing what the stalker is like, and you put him on his guard."

I saw this clearly enough and once more thanked him for his timely gift. Then, having shaken his hand and sped him on his way, I entered the lobby and shut the outer door, at the same time transferring Thorndyke’s photograph from my letter-case to my jacket-pocket. When I passed through into the studio, I found Marion putting the finishing touches to a plaster case. She greeted me with a smile as I entered and then plunged her hand once more into the bowl of rapidly-thickening plaster, whereupon I took the opportunity to lay the photograph on a side-bench as I walked towards the table on which she was working.

"Good afternoon, Marion," said I.

"Good afternoon, Stephen," she responded, adding, "I can’t shake hands until I have washed," and held out her emplastered hands in evidence.

"That will be too late," said I, and as she looked up at me inquiringly, I stooped and kissed her.

"You are very resourceful," she remarked with a smile and a warm blush, as she scooped up another handful of plaster; and then, as if to cover her slight confusion, she asked: "What was all that solemn pow-wow about with Mr. Polton? And why did he wait for you at the door in that suspicious manner? Had he some secret message for you?"

"I don’t know whether it was intended to be secret," I answered, "but it isn’t going to be so far as you are concerned;" and I repeated to her the substance of Thorndyke’s message, to which she listened with an eagerness that rather surprised me, until her further inquiries explained it.
“This sounds rather encouraging,” she said; “as if Dr. Thorndyke had been making some progress in his investigations. I wonder if he has. Do you think he really knows much more than we do?”

“I am sure he does,” I replied, “but how much more, I cannot guess. He is extraordinarily close. But I have a feeling that the end is not so very far off. He seems to be quite hopeful of laying his hand on this villain.”

“Oh! I hope you are right, Stephen,” she exclaimed. “I have been getting so anxious. There has seemed to be no end to this deadlock. And yet it can’t go on indefinitely.”

“What do you mean, Marion?” I asked.

“I mean,” she answered, “that you can’t go on wasting your time here and letting your career go. Of course, it is delightful to have you here. I don’t dare to think what the place will be like without you. But it makes me wretched to think how much you are sacrificing for me.”

“I am not really sacrificing anything,” said I. “On the contrary, I am spending my time most profitably in the pursuit of knowledge and most happily in a sweet companionship which I wouldn’t exchange for anything in the world.”

“It is very nice of you to say that,” she said, “but still, I shall be very relieved when the danger is over and you are free.”

“Free!” I exclaimed. “I don’t want to be free. When my apprenticeship has run out I am coming on as journeyman. And now I had better get my blouse on and start work.”

I went to the further end of the studio, and taking the blous down from its peg; proceeded to exchange it for my coat. Suddenly I was startled by a sharp cry, and turning round, beheld Marion stooping over the photograph with an expression of the utmost horror.

“Where did this come from?” she demanded, turning a white, terror-stricken face on me.

“I put it there, Marion,” I answered somewhat sheepishly, hurrying to her side. “But what is the matter? Do you know the man?”

“Do I know him?” she repeated. “Of course I do. It is he—the man who came here that night.”

“Are you quite sure?” I asked. “Are you certain that it is not just a chance resemblance?”

She shook her head emphatically. “It is he, Stephen. I can swear to him. It is not mere resemblance. It is a likeness, and a perfect one, though it is such a bad photograph. But where did you get it? And why didn’t you show it to me when you came in?”

I told her how I came by it and explained Thorndyke’s instructions. “Then,” she said, “Dr. Thorndyke knows who the man is.”

“He says he doesn’t, and he was very close and rather obscure as to how the photograph came into his possession.”

“It is very mysterious,” said she, with another terrified glance at the photograph. Then suddenly she snatched it up and, with averted face, held it out to me. “Put it away, Stephen,” she entreated. “I can’t bear the sight of that horrible face. It brings back a fresh all the terrors of that awful night.”

I hastily returned the photograph to my letter-case, and taking her arm, led her back to the work-table. “Now,” I said, “let us forget it and get on with our work;” and I proceeded to turn the case over and fix it in the new position with lumps of clay. For a little while she watched me in silence, and I could see by her pallor that she was still suffering from the shock of that unexpected encounter. But presently she picked up a scraper and joined me in trimming up the edges of the case, cutting out the ‘key-ways’ and making ready for the second half; and by degrees her colour came back and the interest of the work banished her terrors.

We were, in fact, extremely industrious. We not only finished the case—it was an arm from the shoulder which was to be made—cut the pouring-holes and varnished the inside with knotting, but we filled one half with the melted gelatine which was to form the actual mould in which the wax would be cast. This brought the day’s work to an end, for nothing more could be done until the gelatine had set—a matter of at least twelve hours.

“It is too late to begin anything fresh,” said Marion. “You had better come and have supper with me and Arabella.”

I agreed readily enough to this proposal, and when we had tidied up in readiness for the morning’s work, we set forth at a brisk pace—for it was a cold evening—towards Highgate, gossiping cheerfully as we went. By the time we reached Ivy Cottage eight o’clock was striking and ‘the village’ was beginning to settle down for the night. The premature quiet reminded me that the adjacent town would presently be settling down, too, and that I should do well to start for home before the streets had become too deserted.

Nevertheless, so pleasantly did the time slip away in the sorry sitting-room with my two companions that it was close upon half past ten when I rose to take my departure. Marion escorted me to the door, and as I stood in the hall buttoning up my overcoat she said:

“You needn’t worry if you are detained to-morrow. We shall be making the wax cast of the bust and I am certain Mr. Polton won’t leave the studio until it is finished, whether you are there or not. He is perfectly mad on waxwork. He wormed all the secrets of the trade out of me the very first time we were alone and he is extraordinarily quick at learning. But I can’t imagine what use the knowledge will be to him.”
“Perhaps he thinks of starting an opposition establishment,” I suggested, “or he may have an eye to a partnership. But if he has, he will have a competitor, and one with a prior claim. Good night, dear child. Save some of the waxwork for me tomorrow.”

She promised to restrain Polton’s enthusiasm as far as possible and, wishing me ‘good night,’ held out her hand, but submitted without demur to being kissed; and I took my departure in high spirits, more engrossed with the pleasant leave-taking than with the necessity of keeping a bright look-out.

I was nearing the bottom of the High Street when the prevailing quiet recalled me to the grim realities of my position, and I was on the point of stopping to take a look round when I bethought of Polton’s appliance and also of that cunning artificer’s advice not to put a possible Stalker on his guard. I accordingly felt in my pocket, and having found the appliance carefully fixed it in my eye without altering my pace. The first result was a collision with a lamp—post, which served to remind me of the necessity of keeping both eyes open. The instrument was, in fact, not very easy to use while walking and it took me a minute or two to learn how to manage it. Presently, however, I found myself able to divide my attention between the pathway in front and the view behind, and then it was that I became aware of a man following me at a distance of about a hundred yards. Of course, there was nothing remarkable or suspicious in this, for it was a main thoroughfare and by no means deserted at this comparatively early tour. Nevertheless, I kept the man in view, noting that he wore a cloth cap and a monkey-jacket, that he carried no stick or umbrella and that when I slightly slackened my pace he did not seem to overtake me. As this suggested that he was accommodating his pace to mine, I decided to put the matter to the test by giving him an opportunity to pass me at the next side-turning.

At this moment the Roman Catholic church came into view and I recalled that at its side a narrow lane—Dartmouth Park Hill—ran down steeply between high fences towards Kentish Town. Instantly I decided to turn into the lane—which bent sharply to the left behind the church—walk a few yards down it and then return slowly. If my follower were a harmless stranger, he would then have passed on down Highgate Hill, whereas if he were stalking me I should meet him at the entrance to the lane and could then see what he was like.

But I was not very well satisfied with this plan, for the obvious manoeuvre would show him that he was suspected, and as I approached the church, a better plan suggested itself.

On one side by the entrance to the lane were some low railings and a gate with large brick piers. In a moment I had vaulted over the railings and taken up a position behind one of the piers, where I stood motionless, listening intently. Very soon I caught the sound of distinctly rapid footsteps, which suddenly grew louder as my follower came opposite the entrance to the lane, and louder still as, without a moment’s hesitation, he turned into it.

From my hiding-place in the deep shadow of the pier I could safely peep out into the wide space at the entrance of the lane, and as this space was well lighted by a lamp I was able to get an excellent view of my follower. And very much puzzled I was therewith. Naturally I had expected to recognize the man whose photograph I had in my pocket. But this was quite a different type of man. It is true that he was shortish and rather slightly built and that he had a beard: but there the resemblance ended. His face, which I could see plainly by the lamp-light, so far from being of an aquiline or vulturine cast, was rather of the blunt and bibulous type. The short, though rather bulbous nose made up in colour what it lacked in size, and its florid tint extended into the cheek on either side in the form of what dermatologists call acne rosacea.

I say that his appearance puzzled me; but it was not his appearance alone. For the latter showed that he was a stranger to me and suggested that he was going down the lane on his lawful occasions; but his movements did not support that suggestion. He had turned into the lane and passed my hiding-place at a very quick walk. But just as he reached the sharp turn he slackened his pace, stepping lightly, and then stopped for a moment, listening intently and peering forward into the darkness of the lane. At length he started again and disappeared round the corner, and by the sound of his retreating footsteps I could tell that he was once more putting on the pace.

I listened until these sounds had nearly died away and was just about to emerge from my shelter when I became aware of footsteps approaching from the opposite direction, and as I did not choose to be seen in the act of climbing the railings, I decided to remain perdu until this person had passed. These footsteps, too, had a distinctly hurried sound, a fact which I noted with some surprise; but I was a good deal more surprised when the new-comer turned sharply into the entrance, walked swiftly past my ambush, and then, as he approached the corner, suddenly slowed down, advancing cautiously on tip-toe, and finally halted to listen and stare into the obscurity of the lane.

I peered out at this new arrival with an amazement that I cannot describe. Like the first man, he was a complete stranger to me: a tallish, athletic-looking man of about thirty-five, not ill-looking and having something of a military air; fair-complexioned with a sandy moustache but otherwise clean-shaved, and dressed in a suit of thick tweed with no overcoat. I could see these details clearly by the light of the lamp; and even as I was noting them, he disappeared round the corner and I could hear him walking quickly but lightly down the lane.

As soon as he was gone I looked out from my hiding-place and listened attentively. There was no one in sight nor could I hear anyone approaching. I accordingly came forth and, quickly climbing over the railings, stood for a few moments irresolute. The obviously reasonable thing to do was to make off down Highgate Hill as fast as I could and take the first conveyance that I could get homeward. But the appearance of that second man had inflamed me with curiosity. What was he here for? Was he shadowing me or was he in pursuit of the other man? Either supposition was incredible, but one of them must be true. The end of it was that curiosity got the better of discretion and I, too, started down the lane, walking as fast as I could and treading as lightly as circumstances permitted.
The second man was some considerable distance ahead, for his footsteps came to me but faintly, and I did not seem to be gaining on him; and I took it that his speed was a fair measure of that of the man in front. Keeping thus within hearing of my quarry, I sped on, turning over the amazing situation in my bewildered mind. The first man was a mystery to me, though apparently not to Thorndyke. Who could he be, and why on earth was he taking this prodigious amount of trouble to get rid of a harmless person like myself? For there could be no mistake as to the magnitude of the efforts that he was making. He must have waited outside the studio, followed Marion and me to her home and there kept a patient vigil of over two hours, waiting for me to come out. It was a stupendous labour. And what was it all about? I could not form the most shadowy guess; while as to the other man, the very thought of him reduced me to a state of hopeless bewilderment.

As my reflections petered out to this rather nebulous conclusion, I halted for a moment to listen for the footsteps ahead. They were still audible, though they sounded somewhat farther away. But now I caught the sound of other footsteps, approaching from behind. Someone else was coming down the lane. Of course, there was nothing surprising in that circumstance, for, after all, this was a public thoroughfare, little frequented as it was, especially after dark. Nevertheless, something in the character of those footsteps put me on the qui vive. For this man, too, was walking quickly—very quickly—and with a certain stealthiness, as if he had rubber-soled boots and, like the rest of us, were making as little noise as possible.

I walked on at my previous rapid pace, keeping my ears cocked now both fore and aft; and as I went, my mind surged with wild speculations. Could it be that I had yet another follower? The thing was becoming grotesque. My bewilderment began to mingle with a spice of grim amusement; but still I listened, not without anxiety, to those foot-steps from behind, which seemed to be growing rapidly more distinct. Whoever this newcomer might be, he was no mean walker, for he was overtaking me apace; and this fact gave a pretty broad hint as to his size and strength.

I looked back from time to time, but without stopping or slackening my pace, trying to pierce the deep obscurity of the narrow, closed-in lane. But it was a dark winter's night, and the high fences shut out even the glimmer from the murky sky. It was not until the approaching footfalls sounded quite near that I was able, at length, to make out a smear of deeper darkness on the general obscurity. Then I drew out my pistol and, withdrawing the safety-catch, put my hand, grasping it, into my overcoat pocket. Having thus made ready for possible contingencies, I watched the black shape emerge from the darkness until it developed into a tall, portly man, bearing down on me with long, swinging strides, when I halted and drew back against the fence to let him pass.

But he had no intention of passing. As he came up to me, he, too, halted, and, looking into my face with undissembled curiosity, he addressed me in a brusque though not uncivil tone.

"Now, sir, I must ask you to explain what is going on."

"What do you mean?" I demanded.

"I'll tell you," he replied. "I saw you, a little time ago, climb over the railings and hide behind a gate-post. Then I saw a man come up in a deuce of a hurry, and turn into the lane. I saw him stop and listen for a moment and then bustle off down the hill. Close on this fellow's heels comes another man, also in a devil of a hurry. He turns into the lane, too, and suddenly he pulls up and creeps forward on tip-toe like a cat on hot bricks. He stops and listens, too; and then off he goes down the lane like a lamplighter. Then you come from behind the gate-post, over the railings you climb, and then you creep up to the corner and listen, and then off you go down the lane like another lamplighter. Now, sir, what's it all about?"

"I assume," said I, repressing a strong tendency to giggle, "that you have some authority for making these inquiries?"

"I have, sir," he replied. "I am a police officer on plain-clothes duty. I happened to be at the corner of Hornsey Lane when I saw you coming down the High Street walking in a queer sort of way as if you couldn’t see where you were going. So I drew back into the shadow and had a look at you. Then I saw you nip into the lane and climb over the railings, so I waited to see what was going to happen next. And then those other two came along. Well, now, I ask you again, sir, what's going on? What is it all about?"

"The fact is," I said a little sheepishly, "I thought the first man was following me, so I hid just to see what he was up to."

"What about the second man?"

"I don't know anything about him."

"What do you know about the first man?"

"Nothing, except that he certainly was following me."

"Why should he be following you?"

"I can't imagine. He is a stranger to me and so is the other man."

"Hm!" said the officer, regarding me with a distrustful eye. "Damn funny affair. I think you had better walk up to the station with me and give us a few particulars about yourself."

"I will with pleasure," said I. "But I am not altogether a stranger there. Inspector Follett knows me quite well. My name is Gray—Dr. Gray."

The officer did not reply for a few moments. He seemed to be listening to something. And now my ear caught the sound of footsteps approaching hurriedly from down the lane. As they drew near, my friend peered into the darkness and
muttered in an undertone:

"Will that be one of 'em coming back?" He listened again for a moment or two and then, resuming his inquiries, said aloud: "You say Inspector Follett knows you. Well, perhaps you had better come and see Inspector Follett."

As he finished speaking, he again listened intently, and his mouth opened slightly. I suspect my own did, too. For the footsteps had ceased. There was now a dead silence in the lane.

"That chap has stopped to listen," my new friend remarked in a low voice. "We had better see what his game is. Come along, sir;" and with this he strode off at a pace that taxed my powers to keep up with him.

But at the very moment that he started, the footsteps became audible again, only now they were obviously retreating; and straining my ears I caught the faint sound of other and more distant foot-falls, also retreating, so far as I could judge, and in the same hurried fashion.

For a couple of minutes the officer swung along like a professional pedestrian and I struggled on just behind him, perspiring freely and wishing that I could shed my overcoat. Still, despite our efforts, there was no sign of our gaining on the men ahead. My friend evidently realized this, for he presently growled over his shoulder: "This won't do," and forthwith broke into a run.

Instantly this acceleration communicated itself to the men in front. The rhythm of both sets of foot-falls showed that our fore-runners were literally justifying that description of them; and as both had necessarily given up any attempt to move silently, the sounds of their retreat were borne to us quite distinctly. And from those sounds, the unsatisfactory conclusion emerged that they were drawing ahead pretty rapidly. My friend the officer was, as I have said, an uncommonly fine walker. But he was no runner. His figure was against him. He was fully six feet in height and he had a presence. He could have walked me off my legs; but when it came to running I found myself ambling behind him with such ease that I was able to get out my pistol and, after replacing the safety-catch, stow the weapon in my hip-pocket out of harm's way.

However, if my friend was no sprinter he was certainly a stayer, for he lumbered on doggedly until the lane entered the new neighbourhood of Dartmouth Park; and here it was that the next act opened. We had just passed the end of the first of the streets when I saw a surprisingly agile policeman dart out from a shady corner and follow on in our wake in proper Lilliebridge style. I immediately put on a spurt and shot past my companion, and a few moments later, sounds of obfuscation arose from behind. I stopped at once and turned back just in time to hear an apologetic voice exclam:

"I'm sure I beg your pardon, Mr. Plonk. I didn't recognize you in the dark."

"No, of course you wouldn't," replied the plain-clothes officer. "Did you see two men run past here just now?"

"I did," answered the constable; "one after the other, and both running as if the devil was after them. I was halfway up the street, but I popped down to have a look at them, and when I got to the corner I heard you coming. So I just kept out of sight and waited for you."

"Quite right too," said Mr. Plonk. "Well, I don't see or hear anything of those chaps now."

"No," agreed the constable, "and you are not likely to. There's a regular maze of new streets about here. You can take it that they've got clear away."

"Yes, I'm afraid they have," said Plonk. "Well, it can't be helped and there's nothing much in it. Good night, constable."

He moved off briskly, not wishing, apparently, to discuss the affair, and in a few minutes we came to the wide crossroads. Here he halted and looked me over by the light of a street-lamp. Apparently the result was satisfactory, for he said: "It's hardly worth while to take you all the way back to the station at this time of night. Where do you live?"

I told him Camden Square and offered a card in corroboration.

"Then you are pretty close home," said he, inspecting my card. "Very well, doctor. I'll speak to Inspector Follett about this affair, and if you have any further trouble of this sort you had better let us know. And you had better let us have a description of the men in any case."

I promised to send him the particulars on the following day, and we then parted with mutual good wishes, he making his way towards Holloway Road and I setting my face homeward by way of the Brecknock Road and keeping an uncommonly sharp look-out as I went.

---

XV. — THORNDYKE PROPOSES A NEW MOVE

ON the following morning, in order to make sure of arriving before the detective officer, I presented myself at King's Bench Walk a good half-hour before I was due. The door was opened by Thorndyke himself, and as we shook hands, he said: "I am glad you have come early. Gray. No doubt Polton explained the programme to you, but I should like to make our position quite clear. The officer who is coming here presently is Detective-Superintendent Miller of the Criminal Investigation Department. He is quite an old friend and he is coming at my request to give me certain information. But, of course, he is a detective officer, with his own duties to his department, and an exceedingly shrewd, capable man. Naturally, if he can pick up any crumbs of information from us, he will, and I don't want him to learn more, at present, than I choose to tell him."
“Why do you want to keep him in the dark?” I asked.

“Because,” he replied, “we are doing quite well, and I want to get the case complete before I call in the police. If I were to tell him all I know and all I think, he might get too busy and scare our man away before we have enough evidence to justify an arrest. As soon as the investigation is finished and we have such evidence as will secure a conviction, I shall turn the case over to him; meanwhile, we keep our own counsel. Your role this morning will be that of listener. Whatever happens, make no comment. Act as if you knew nothing that is not of public knowledge.”

I promised to follow his directions to the letter, though I could not get rid of the feeling that all this secrecy was somewhat futile. Then I began to tell him of my experiences of the previous night, to which he listened at first with grave interest, but with growing amusement as the story developed. When I came to the final chase and the pursuing policeman, he leaned back in his chair and laughed heartily.

“Why,” he exclaimed, wiping his eyes, “it was a regular procession! It only wanted a string of sausages and a harlequin to bring it up to pantomime form.”

“Yes,” I admitted with a grin, “It was a ludicrous affair. But it was a mighty mysterious affair too. You see, neither of the men was the man I had expected. There must be more people in this business than we had supposed. Have you any idea who these men can be?”

“It isn’t much use making vague guesses,” he replied. “The important point to note is that this incident, far-facial as it turned out, might easily have taken a tragical turn; and the moral is that, for the present, you can’t be too careful in keeping out of harm’s way.”

It was obvious to me that he was evading my question; that those two sinister strangers were not the mystery to him that they were to me, and I was about to return to the charge with a more definitely pointed question when an elaborate flourish on the little brass knocker of the inner door announced a visitor.

The tall, military-looking man whom Thorndyke admitted was evidently the superintendent, as I gathered from the mutual greetings. He looked rather hard at me until Thorndyke introduced me, which he did with characteristic reticence.

“This is Dr. Gray, Miller, you may remember his name. It was he who discovered the body of Mr. D’Arblay.”

“Yes, I remember,” said the superintendent, shaking my hand unemotionally and still looking at me with a slightly dubious air.

“He is a good deal interested in the case,” Thorndyke continued, “not only professionally, but as a friend of the family—since the catastrophe.”

“I see,” said the superintendent, taking a final inquisitive look at me and obviously wondering why the deuce I was there. “Well, there is nothing of a very secret nature in what I have to tell you, and I suppose you can rely on Dr. Gray to keep his own counsel and ours.”

“Certainly,” replied Thorndyke. “He quite understands that our talk is confidential, even if it is not secret.”

The officer nodded, and having been inducted into an easy-chair, by the side of which a decanter, a siphon and a box of cigars had been placed, settled himself comfortably, lit a cigar, mixed himself a modest refresher and drew from his pocket a bundle of papers secured with red tape.

“You asked me, Doctor,” he began, “to give you all particulars up to date of the Van Zellen case. Well, I can do that without difficulty, as the case—or at least what is left of it—is in my hands. The circumstances of the actual crime I think you know already, so I will take up the story from that point.

“Van Zellen, as you know, was found dead in his room, poisoned with prussic acid, and a quantity of very valuable portable property was missing. It was not dear whether the murderer had let himself in with false keys or whether Van Zellen had let him in; but the place hadn’t been broken into. The job had been done with remarkable skill, so that not a trace of the murderer was left. Consequently, all that was left for the police to do was to consider whether they knew of anyone whose methods agreed with those of this murderer.

“Well, they did know of such a person, but they had nothing against him but suspicion. He had never been convicted of any serious crime, though he had been in chokee once or twice for receiving. But there had been a number of cases of robbery with murder—or rather murder with robbery; for this man seemed to have committed the murder as a preliminary precaution—and they were all of this kind: a solitary crime, very skillfully carried out by means of poison. There was never any trace of the criminal; but gradually the suspicions of the police settled down on a rather mysterious individual of the name of Bendelow—Simon Bendelow. Consequently, when the Van Zellen crime came to light, they were inclined to put it on this man Bendelow, and they began making fresh inquiries about him. But presently it transpired that someone had seen a man, on the morning of the crime, coming away from the neighbourhood of Van Zellen’s house just about the time when the murder must have been committed.”

“Was there anything to connect him with the crime?” Thorndyke asked.

“Well, there was the time—the small hours of the morning—and the man was carrying a good-sized handbag which seemed to be pretty heavy and which would have held the stuff that was missing. But the most important point was the man’s appearance. He was described as a smallish man, clean-shaven, with a big hooked nose and very heavy eyebrows set
close down over his eyes.

"Now, this put Bendelow out of it as the principal suspect, because the description didn’t fit him at all," (here I caught Thorndyke’s eye for an instant and was warned afresh, and not unnecessarily, to make no comment); “but,” continued the superintendent, “it didn’t put him out altogether. For the man whom the description did fit—and it fitted him to a T—was a fellow named Crile—Jonathan Crile—who was a pal of Bendelow’s and was known to have worked with him as a confederate in the receiving business and had been in prison once or twice. So the police started to make inquiries about Crile, and before long they were able to run him to earth. But that didn’t do them much good, for it turned out that Crile wasn’t in New York at all. He was in Philadelphia; and it was clearly proved that he had been there on the day of the murder, on the day before and the day after. So they seemed to have drawn a blank; but they were still a bit suspicious of Mr. Crile, who seems to have been as downy a bird as his friend Bendelow, and of the other chappie, too. But they hadn’t a crumb of evidence against either.

"So there the matter stands. A complete deadlock. There was nothing to be done; for you can’t arrest a man on mere suspicion with not a single fact to support it. But the police kept their eye on both gent, so far as they could, and presently they got a chance. Bendelow made a slip—or at any rate they said he did. It was a little trumpery affair, something in the receiving line, and of no importance at all. Probably a faked charge, too. But they thought that if they could get him arrested they might be able to squeeze something out of him—the police in America can do things that we aren’t allowed to. So they tried to pounce on him. But Mr. Bendelow was a slippery customer and he got wind of their intentions just in time. When they got into his rooms they found that he had left— in a deuce of a hurry, too, and only a few minutes before they arrived. They searched the place, but found nothing incriminating, and they tried to get on Bendelow’s track, but they didn’t succeed. He had managed to get dear away, and Crile seemed to have disappeared, too.

"Well, that seemed to be the end of the affair. Both of these crooks had made off without leaving a trace, and the police—having no evidence—didn’t worry any more about them. And so things went on for about a year, until the Van Zellen case had been given up and nearly forgotten. Then something happened quite recently that gave the police a fresh start.

"It appears that there was a fire in the house in which Bendelow’s rooms were and a good deal of damage was done, so that they had to do some rebuilding; and in the course of the repairs the builder’s men found, hidden under the floor-boards, a small parcel containing part of the Van Zellen swag. There was nothing of real value; just coins and medals and seal-rings and truck of that kind. But the things were all identified by means of Van Zellen’s catalogue, and, of course, the finding of them in what had been Bendelow’s rooms put the murder pretty clearly on to him.

"On this, as you can guess, the police and the detective agencies got busy. They searched high and low for the missing man, but for a long time they could pick up no traces of him. At last they discovered that he and Crile had taken a passage, nearly a year ago, on a tramp-steamer bound for England. Thereupon they sent a very smart, experienced detective over to work at the case in conjunction with our own detective department.

"But we didn’t have much to do with it. The American—Wilson was his name—had all the particulars, with the prison photographs and finger-prints of both the men, and he made most of the inquiries himself. However, there were two things that we did for him. We handed over to him the Van Zellen guinea and the particulars of the D’Arblay murder; and we were able to inform him that his friend Bendelow was dead."

"How did you find that out?” Thorndyke asked.

"Oh, quite by chance. One of our men happened to be at Somerset House looking up some details of a will when in the list of wills he came across the name of Simon Bendelow, which he had heard from Wilson himself. He at once got out the will, copied out the address of the executrix and the names and addresses of the witnesses and handed them over to Wilson, who was mightily taken aback, as you may suppose. However, he wasn’t taking anything for granted. He set off instantly to look up the executrix—a Mrs. Morris. But there he got another disappointment; for the Morrises had gone away and no one knew where they had gone.”

"I take it,” said Thorndyke, “that probate of the will had been granted.”

"Yes; everything in that way had been finished up. Well, on this, Wilson set off in search of the witnesses, and he had better luck this time. They were two elderly spinster who lived together in a house in Turnpike Lane, Hornsey. They didn’t know much about Bendelow, for they had only made his acquaintance after he had taken to his bed. They were introduced to him by his friend and landlady, Mrs. Morris, who used to take them up to his room to talk to him and cheer him up a bit. However, they knew all about his death, for they had seen him in his coffin and they followed him to the Ilford Crematorium."

"Ha!" said Thorndyke. “So he was cremated.”

"Yes,” chuckled the superintendent with a sly look at Thorndyke. “I thought that would make you prick up your ears, Doctor. Yes, there were no half-measures for Mr. Bendelow. He had gone literally to ashes. But it was all right, you know. There couldn’t have been any hanky-panky. These two ladies had not only seen him in his coffin; they actually had a last look at him through a little celluloid window in the coffin-lid, just before the coffin was passed through into the cremation furnace.”

"And there was no doubt as to his identity?"

"None whatever. Wilson showed the old ladies his photograph and they recognized him instantly; picked his photograph
out of a dozen others."

"Where was Bendelow living when they made his acquaintance?"

"Not far from their house: in Abbey Road, Hornsey. But the Morrices moved afterwards to Market Street, Hoxton, and that is where he died and where the will was signed."

"I suppose Wilson ascertained the cause of death?"

"Oh, yes. The old ladies told him that. But he went to Somerset House and got a copy of the death-certificate. I haven’t got that, as he took it back with him; but the cause of death was cancer of the pylorus—that’s some part of the gizzard, I believe, but you’ll know all about it. At any rate, there was no doubt on the subject, as the two doctors made a post-mortem before they signed the death-certificate. It was all perfectly plain and straightforward.

"Well, so much for Mr. Bendelow. When Wilson had done with him, he turned his attention to Crile. And then he really did get a proper shake-up. When he was at Somerset House, looking up Bendelow’s death-certificate, it occurred to him just to run his eye down the list and make sure that Crile was still in the land of the living. And there, to his astonishment, he found Crile’s name. He was dead, too! And not only was he dead: he, also, had died of cancer—it was the pancreas this time, another part of the gizzard—and he had died at Hoxton, too, and he had died just four days before Bendelow. The thing was ridiculous. It looked like a conspiracy. But here again everything was plain and above-board. Wilson got a copy of the certificate and called on the doctor who had signed it, a man named Usher. Of course, Dr. Usher remembered all about the case as it had occurred quite recently. There was not a shadow of doubt that Crile was dead. Usher had helped to put him in his coffin and had attended at his funeral; and he, too, had no difficulty in picking out Crile’s photograph, and he had no doubt at all as to what Crile died of. So there it was. Queer as it was, there was no denying the plain facts. Those two crooks had slipped through the fingers of the law, so far as it was possible to see.

"But I must admit that I was not quite satisfied; the circumstances were so remarkably odd. I told Wilson so, and I advised him to look further into the matter. I reminded him of D’Arblay murder and the finding of that guinea, but he said that the murder was our affair; that the men had come to look for were dead and that was all that concerned him. So back he went to New York, taking with him the death-certificate and the two photographs with the certificates of recognition on the backs of them. But he left the notes of the case with me, on the chance that they might be useful to me, and the two sets of finger-prints, which certainly don’t seem likely to be of much use under the circumstances."

"You never know," said Thorndyke, with an enigmatical smile.

The superintendent gave him a quick, inquisitive look and agreed. "No, you don’t; especially when you are dealing with Dr. John Thorndyke." He pulled out his watch and, staring at it anxiously, exclaimed: "What a confounded nuisance! I’ve got an appointment at the Law Courts in five minutes. It is quite a small matter. Won’t take me more than half an hour. May I come back when I have finished? I should like to hear what you think of this extraordinary story."

"Come back, by all means," said Thorndyke, "and I will turn over the facts in my mind while you are gone. Probably some suggestion may present itself in the interval."

He let the officer out, and when the hurried footsteps had died away on the stairs, he dosed the door and turned to me with a smile.

"Well, Gray," he said, "what do you think of that? Isn’t it a very pretty puzzle for a medical jurist?"

"It is a hopeless tangle to me," I replied. "My brain is in a whirl. You can’t dispute the facts and yet you can’t believe them. I don’t know what to make of the affair."

"You note the fact that, whoever may be dead, there is somebody alive—very much alive; and that that somebody is the murderer of Julius D’Arblay."

"Yes, I realize that. But obviously he can’t be either Crile or Bendelow. The question is, who is he?"

"You note the link between him and the Van Zellen murder—I mean the electrotype guinea?"

"Yes; there is evidently some connexion, but I can’t imagine what it can be. By the way, you noticed that the American police had got muddled about the personal appearance of these two men. The description of that man who was seen coming away from Van Zellen’s house, and who was said to be quite unlike Bendelow, actually fitted him perfectly. They had evidently made a mistake of some kind."

"Yes, I noticed that. But the description may have fitted Crile better. We must get into touch with this man Usher. I wonder if he will be the Usher who used to attend at St. Margaret’s."

"He is; and I am in touch with him already. In fact, he was telling me about this very patient, Jonathan Crile."

"Indeed! Can you remember the substance of what he told you?"

"I think so. It wasn’t very thrilling; and here I gave him, as well as I could remember them, the details with which Usher had entertained me of his attendance on the late Jonathan Crile, his dealings with the landlady, Mrs. Pepper, and the incidents of the funeral, including Usher’s triumphant return in the mourning-coach. It seemed a dull and trivial story, but Thorndyke listened to it with the keenest interest, and when I had finished, he asked:

"He didn’t happen to mention where Crile lived, I suppose?"
“Yes, curiously enough, he did. The address, I remember, was 52 Field Street, Hoxton.”

“Ha!” said Thorndyke. “You are a mine of information, Gray.”

He rose, and taking down from the bookshelves Philip’s Atlas of London, opened it and pored over one of the maps. Then, replacing the atlas, he go out his notes of the D’Arblay case and searched for a particular entry. It was evidently quite a short one, for when he had found it he gave it but a single glance and closed the portfolio. Then, returning to the bookshelves, he took out the Post Office Directory and opened it at the ‘Streets’ section. Here, also, his search was but a short one, though it appeared to be concerned with two separate items; for having examined one, he turned to a different part of the section to find the other. Finally he closed the unwieldy volume, and having replaced it on the shelf, turned and once more looked at me inquiringly.

“Reflecting on what Miller has told us,” he said, “does anything suggest itself to you? Any sort of hypothesis as to what the real facts may be?”

“Nothing whatever,” I replied. “The confusion that was already in my mind is only the worse confounded. But that is not your case, I take it?”

“Not entirely,” he admitted. “The fact is that I had already formed a hypothesis as to the motives and circumstances which lay behind the murder of Julius D’Arblay and I find this new matter not inconsistent with it. But that hypothesis may, nevertheless, turn out to be quite wrong when we put it to the test of further investigation.”

“You have some further investigation in view, then?”

“Yes. I am going to make a proposal to Superintendent Miller—and here he comes, before his time; by which I judge that he, also, is keen on the solution of this puzzle.”

Thorndyke’s opinion seemed to be justified, for the superintendent entered all agog and opened the subject at once.

“Well, Doctor, I suppose you have been thinking over Wilson’s story? How does it strike you? Have you come to any conclusion?”

“Yes,” replied Thorndyke. “I have come to the conclusion that I can’t accept that story at its face-value as representing the actual facts.”

Miller laughed with an air of mingled amusement and vexation. “That is just my position,” said he. “The story seems incredible, but yet you can’t raise any objection. The evidence in support of it is absolutely conclusive at every point. There isn’t a single weak spot in it—at least I haven’t found one. Perhaps you have?” And here he looked at Thorndyke with eager inquiry in his eyes.

“I won’t say that,” Thorndyke replied. “But I put it to you, Miller, that the alleged facts that are offered are too abnormal to be entertained. We cannot accept that string of coincidences. It must be obvious to you that there is a fallacy somewhere and that the actual facts are not what they seem.”

“Yes, I feel that myself,” rejoined Miller. “But what are we to do? How are we to find the flaw in the evidence, if there is one? Can you see where to look for it? I believe you can.”

“I think there is one point which ought to be verified,” said Thorndyke. “The identification of Crile doesn’t strike me as perfectly convincing.”

“How does his case differ from Bendelow’s?” Miller demanded.

“In two respects,” was the reply. “First, Bendelow was identified by two persons who had known him well for some time and who gave a circumstantial account of his illness, his death and the disposal of his body; and second, Bendelow’s remains have been cremated and are therefore, presumably, beyond our reach for purposes of identification.”

“Well,” Miller objected, “Crile isn’t so very accessible, being some few feet under ground.”

“Still, he is there; and he has been buried only a few weeks. It would be possible to exhume the body and settle the question of his identity once for all.”

“Then you are not satisfied with Dr. Usher’s identification?”

“No. Usher saw him only after a long, wasting illness, which must have altered his appearance very greatly; whereas the photograph was taken when Crile was in his normal health. It couldn’t have been so very like Usher’s patient.”

“That’s true,” said Miller; “and I remember that Usher wasn’t so very positive, according to Wilson. But he agreed that it seemed to be the same man, and all the other facts seemed to point to the certainty that it was really Crile. Still, you are not satisfied? It’s a pity Wilson took the photograph back with him.”

“The photograph is of no consequence,” said Thorndyke. “You have the finger-prints—properly authenticated finger-prints, actually taken from the man in the presence of witnesses. After this short time it will be possible to get perfectly recognizable finger-prints from the body, and those finger-prints will settle the identity of Usher’s patient beyond any possible doubt.”

The superintendent scratched his chin thoughtfully. “It’s a bit of a job to get an exhumation order,” said he. “Before I raise the question with the Commissioner, I should like to have a rather more definite opinion from you. Do you seriously
doubt that the man in that coffin is Jonathan Crile?"

"It is my opinion," replied Thorndyke—"of course, I may be wrong, but it is my considered opinion that the Crile who is
in that coffin is not the Crile whose fingerprints are in your possession."

"Very well. Doctor," said Miller, rising and picking up his hat, "that is good enough for me. I won’t ask you for your
reasons, because I know you won’t give them. But I have known you long enough to fed sure that you wouldn’t give a
definite opinion like that unless you had got something pretty solid to go on. And I don’t think we shall have any difficulty
about the exhumation order after what you have said."

With this the superintendent took his leave, and very shortly afterwards Thorndyke carried me off to lunch at his club
before dismissing me to take up my duties at the studio.

XVI. — A SURPRISE FOR THE SUPERINTENDENT

It appeared that Thorndyke was correct in his estimate of the superintendent’s state of mind, for that officer managed to
dispose in a very short time of the formalities necessary for the obtaining of an exhumation licence from the Home Office.
It was less than a week after the interview that I have recorded when I received a note from Thorndyke asking me to join
him and Miller at King’s Bench Walk on the following morning at the unholy hour of half past six. He offered to put me up
for the night at his chambers, but I declined this hospitality, not wishing to trouble him unnecessarily; and after a
perfunctory breakfast by gaslight, a ride on an early tram and a walk through the dim, lamplit streets, I entered the Temple
just as the subdued notes of an invisible clock-bell announced a quarter past six. On my arrival at Thorndyke’s chambers, I
observed a roomy hired carriage drawn up at the entry, and ascending the stairs, found the Doctor and Miller ready to
start, each provided with a good-sized handbag.

"This is a queer sort of function," I remarked, as we took our way down the stairs—"a sort of funeral the wrong way
about."

"Yes," Thorndyke agreed; "it is what Lewis Carroll would have called an unfuneral—and very appropriately too. I didn’t
give you any particulars in my note, but you understand the object of this expedition?"

"I assume that we are going to resurrect the late Jonathan Crile," I replied. "It isn’t very dear to me what I have to do
with the business, as I never knew Mr. Crile, though I am delighted to have this rather uncommon experience. But I should
have thought that Usher would be the proper person to accompany you."

"So the superintendent thought," said Thorndyke, "and quite rightly; so I have arranged to pick up Usher and take him
with us. He will be able to identify the body as that of his late patient, and you and I will help the superintendent to take
the finger-prints."

"I am taking your word for it, Doctor," said Miller, "that the finger-prints will be recognizable; and that they will be the
wrong ones."

"I don’t guarantee that," Thorndyke replied; "but still, I shall be surprised if you get the right ones."

Miller nodded with an air of satisfaction, and nothing more was said on the subject until we drew up before Dr. Usher’s
surgery. That discreet practitioner was already waiting at the open door and at once took his place in the carriage, watched
curiously by observers from adjacent windows.

"This is a rum go," he remarked, diffusing a vinous aroma into the atmosphere of the carriage. "I really did think I had
paid my last visit to Mr. Crile. But there’s no such thing as certainty in this world." He chuckled softly and continued: "A bit
different this journey from the last. No hat-bands this time and no Sunday-school children. Lord! when I think of those
kids piping round the open grave, and that our dear departed brother was wanted by the police so badly that they are
actually going to dig him up, it makes me smile—it does indeed."

In effect, it made him cackle; and as Miller had not heard the account of the funeral, it was repeated for his benefit in
great detail. Then the anecdotal ball was set rolling in a fresh direction by one or two questions from Thorndyke, with the
result that the entire history of Usher’s attendance on the deceased, including the misdeeds of Mrs. Pepper, was retailed
with such a wealth of circumstance that the narration lasted until we stopped at the cemetery gate.

Our arrival was not unexpected, for, as we got out of the carriage, two gentlemen approached the entrance and one of
them unlocked a gate to admit us. He appeared to be the official in charge of the cemetery, while the other, to whom he
introduced us, was no less a person than Dr. Garroll, the Medical Officer of Health.

"The Home Office licence," the latter explained, "directs that the removal shall be carried out under my supervision and
to my satisfaction—very necessary in a populous neighbourhood like this."

"Very necessary," Thorndyke agreed gravely.

"I have provided a supply of fresh ground-lime, according to the directions," Dr. Garroll continued, "and as a further
precaution, I have brought with me a large formalin spray. That, I think, would satisfy all sanitary requirements."

"It certainly should be sufficient," Thorndyke agreed, "to meet the requirements of the present case. Has the excavation
been commenced yet?"
“Oh, yes,” replied the cemetery official. “It was started quite early and has been carried down nearly to the full depth; but I thought that the coffin had better not be uncovered until you arrived. I have had a canvas screen put up round the grave so that the proceedings may be quite private. We can send the labourers outside before we unscrew the coffin-lid. You said, Superintendent, that you were anxious to avoid any kind of publicity; and I have warned the men to say nothing to anyone about the affair.”

“Quite right,” said Miller. “We don’t want this to get into the papers, in case—well, in any case.”

“Exactly, sir,” agreed the official, who was evidently bursting with curiosity himself. “Exactly. Here is the screen. If you will step inside, the excavation can be proceeded with.”

We passed inside the screen, where we found four men reposefully contemplating a coil of stout rope, a basket, attached to another rope, and a couple of spades. The grave yawned in the middle of the enclosure, flanked on one side by the mound of newly-dug earth and on the other by a tub of lime and a Winchester quart bottle fitted with a spray nozzle and large rubber bellows.

“You can get on with the digging now,” said the official; whereupon one of the men was let down into the grave, together with a spade and the basket, and set to work briskly. Then Dr. Garroll directed one of the other men to sprinkle in a little lime; which he did, with a pleased smile and so little discretion that the man below was seen to stop digging, and after looking up indignantly, take off his cap, shake it violently and ostentatiously dust his shoulders with it.

When about a dozen basketfuls of earth had been hoisted up, a hollow, woody sound accompanying the thursts of the spade announced that the coffin had been reached. Thereupon more lime was sprinkled in, and Dr. Garroll, picking up the formalin bottle, sprayed vigorously into the cavity until a plaintive voice from below—accompanied by an unnaturally loud sneeze—was heard to declare that “he’d ‘ave brought his umbrella if he’d known he was goin’ to be squirted at.” A few minutes’ more work exposed the coffin and enabled us to read the confirmatory inscription on the plate. Then the rope slings were let down and with some difficulty worked into position by the excavator below; who, when he had completed his task, climbed to the surface and grasped one end of a sling in readiness to haul on it.

“It’s a good deal easier letting ‘em down than hoisting ‘em up,” Usher remarked, as a final shower of lime descended and the men began to haul; “but poor old Crile oughtn’t to take much lifting. There was nothing of him but skin and bone.”

However this might be, it took the united efforts of the four men to draw the coffin up to the surface and slew it round clear of the yawning grave. But at last this was accomplished and it was lifted, for convenience of inspection, on to one of the mounds of newly-dug earth.

“Now,” said the presiding official, “you men had better go outside and wait down at the end of the path until you are wanted again.”—an order that was received with evident disfavour and complied with rather sulkily. As soon as they were gone, our friend produced a couple of screw-drivers, with which he and Miller proceeded in a very workmanlike manner to extract the screws, while Dr. Garroll enveloped them in a cloud of spray and Thorndyke, Usher and I stood apart to keep out of range. It was not a long process; indeed, it came to an end sooner than I had expected, for the first intimation that I received of its completion was a loud exclamation (consisting of the single word “Snakes!”) in the voice of Superintendent Miller. I turned quickly and saw that officer standing with the raised coffin-lid in his hand, staring into the interior with a look of perfectly indescribable amazement. Instantly I rushed forward and looked into the coffin; and then I was no less amazed. For in place of the mortal remains of the late Jonathan Crile was a portly sack oozing sawdust from a hole in its side, through which coyly peeped a length of thick lead pipe.

For a sensible time we all stood in breathless silence gazing down at that incredible sack. Suddenly Miller looked up eagerly at Thorndyke, whose sphinx-like countenance showed the faintest shadow of a smile. “You knew this coffin was empty. Doctor,” said he.

Thorndyke shook his head. “If I had known,” he replied, “I should have told you.”

“Well, you suspected that it was empty.”

“Yes,” Thorndyke admitted; “I don’t deny that.”

“I wonder why you did and why it never occurred to me.”

“It did not occur to you, perhaps, because you were not in possession of certain suggestive facts which are known to me. Still, if you consider that the circumstances surrounding the alleged deaths of these two men were so incredible as to make us both feel certain that there was some fallacy or deception in regard to the apparent facts, you will see that this was a very obvious possibility. Two men were alleged to have died, and one of them was certainly cremated. It followed that either the other man had died, as alleged, or that his funeral was a mock funeral. There was no other alternative. You must admit that, Miller.”

“I do, I do,” the superintendent replied ruefully. “It is always like this. Your explanations are so obvious when you have given them, and yet no one thinks of them but yourself. All the same, this isn’t so very obvious, even now. There are some extraordinary discrepancies that have yet to be explained. But we can discuss them on the way back. The question now is, what is to be done with this coffin?”

“The first thing to be done,” replied Thorndyke, “is to screw on the lid. Then we can leave the cemetery authorities to deal with it. But those men must be sworn to absolute secrecy. That is vitally important, for if this exhumation should get
reported in the press, we should probably lose the whole advantage of this discovery.”

“Yes, by Jove!” the superintendent agreed emphatically. “It would be a disaster. At present the late Mr. Crile is at large, perfectly happy and secure and entirely off his guard. We can just follow him up at our leisure and take him unawares. But if he got wind of this, he would be out of reach in a twinkling—that is, if he is alive, which I suppose—” And here the superintendent suddenly paused, with knitted brows.

“Exactly,” said Thorndyke. “The advantage of surprise is with us and we must keep it at all costs. You realize the position,” he added, addressing the cemetery official and the Medical Officer.

“Perfectly,” the latter replied—a little grimly, I thought, “and you may rely on us both to do everything that we can to keep the affair secret.”

With this we all emerged from the screen and walked back slowly towards the gate, and as we went, I strove vainly to get my ideas into some kind of order. But the more I considered the astonishing event which had just happened, the more incomprehensible did it appear. And yet I saw plainly that it could not really be incomprehensible since Thorndyke had actually arrived at its probability in advance. The glaring discrepancies and inconsistencies which chased one another through my mind could not be real. They must be susceptible of reconciliation with the observed facts. But by no effort was I able to reconcile them.

Nor, evidently, was I alone the subject of these difficulties and bewilderments. The superintendent walked with corrogated brows and an air of profound cogitation, and even Usher—when he could detach his thoughts from the juvenile choir at the funeral—was obviously puzzled. In fact it was he who opened the discussion as the carriage moved off.

“This job,” he observed with conviction, “is what the sporting men would call a fair knock-out. I can’t make head nor tail of it. You talk of the late Mr. Crile being at large and perfectly happy. But the late Mr. Crile died of cancer of the pancreas. I attended him in his illness. There was no doubt about the cancer, though I wouldn’t swear to the pancreas. But he died of cancer all right. I saw him dead; and what is more, I helped to put him into that coffin. What do you say to that, Dr. Thorndyke?”

“What is there to say?” was the elusive reply, “You are a competent observer and your facts are beyond dispute. But inasmuch as Mr. Crile was not in that coffin when we opened it, the unavoidable inference is that after you had put him in, somebody else must have taken him out.”

“Yes, that is clear enough,” rejoined Usher. “But what has become of him? The man was dead, that I am ready to swear to. But where is he?”

“Yes,” said Miller. “That is what is bothering me. There has evidently been some hanky-panky. But I can’t follow it. It isn’t as though we were dealing with a supposititious body. There was a real dead man. That isn’t disputed—at least, I take it that it isn’t.”

“It certainly is not disputed by me,” said Thorndyke.

“Then what the deuce became of him? And why, in the name of blazes, was he taken out of the coffin? That’s what I want to know. Can you tell me. Doctor? But there! What is the good of asking you? Of course you know all about it! You always do. But it is the old story. You have got the ace of trumps up your sleeve, but you won’t bring it out until it is time to take the trick. Now, isn’t that the position, Doctor?”

Thorndyke’s impassive face softened with a faint, inscrutable smile.

“We hold a promising hand. Miller,” he replied quietly; “but if the ace is there, it is you who will have the satisfaction of playing it. And I hope to see you put it down quite soon.”

Miller grunted. “Very well,” said he. “I can see that I am not going to get any more out of you than that; so I must wait for you to develop your plans. Meanwhile I am going to ask Dr. Usher for a signed statement.”

“Yes, that is very necessary,” said Thorndyke. “You two had better go on together and set down Gray and me in the Kingsland Road, where he and I have some other business to transact.”

I glanced at him quickly as he made this astonishing statement, for we had no business there, or anywhere else that I knew of. But I said nothing. My recent training had not been in vain.

A few minutes later, near to Dalston Junction, he stopped the carriage, and having made our adieux, we got out. Then Thorndyke strode off down the Kingsland Road, but presently struck off westward through a bewildering maze of seedy suburban streets and shabby squares in which I was as completely lost as if I had been dropped into the midst of the Sahara.

“What is the nature of the business that we are going to transact?” I ventured to ask as we turned yet another corner.

“In the first place,” he replied, “I wanted to hear what conclusions you had reached in view of this discovery at the cemetery.”

“Well, that won’t take long,” I said, with a grin. “They can be summed up in half a dozen words: I have come to the conclusion that I am a fool.”

He laughed good-humouredly. “There is no harm in thinking that,” he said, “provided you are not right—which you are
not. But did that empty coffin suggest no new ideas to you?”

"On the contrary," I replied, "it scattered the few ideas that I had. I am in the same condition as Superintendent Miller—an inextricable muddle."

"But," he objected, "you are not in the same position as the superintendent. If he knew all that you and I know, he wouldn't be in a muddle at all. What is your difficulty?"

"Primarily the discrepancies about this man Crile. There seems to be no possible doubt that he died. But apparently he was never buried; and you and Miller seem to believe that he is still alive. Further, I don't see what business Crile is of ours at all."

"You will see that presently," said he, "and meanwhile you must not confuse Miller's beliefs with mine. However," he added as we crossed a bridge over a canal—presumably the Regent's Canal—"we will adjourn the discussion for the moment. Do you know what street that is ahead of us?"

"No," I answered; "I have never been here before, so far as I know."

"That is Field Street," said he.

"The street that the late Mr. Crile lived in?"

"Yes," he answered; and as we passed on into the street from the foot of the bridge, he added, pointing to a house on our left hand, "And that is the residence of the late Mr. Crile—empty, and to let, as you observe."

As we walked past I looked curiously at the house, with its shabby front and its blank, sightless windows, its desolate condition emphasized by the bills which announced it; but I made no remark until we came to the bottom of the street, when I recognized the cross-roads as the one along which I used to pass on my way to the Morrises' house. I mentioned the fact to Thorndyke, and he replied: "Yes. That is where we are going now. We are going to take a look over the premises. That house also is empty, and I have got a permit from the agent to view it and have been entrusted with the keys."

In a few minutes we turned into the familiar little thoroughfare, and as we took our way past its multitudinous stalls and barrows I speculated on the object of this exploration. But it was futile to ask questions, seeing that I had but to wait a matter of minutes or the answer to declare itself. Soon we reached the house and halted for a moment to look through the glazed door into the empty shop. Then Thorndyke inserted the key into the side-door and pushed it open.

"Primarily the discrepancies about this man Crile. There seems to be no possible doubt that he died. But apparently he was never buried; and you and Miller seem to believe that he is still alive. Further, I don't see what business Crile is of ours at all."

"You will see that presently," said he, "and meanwhile you must not confuse Miller's beliefs with mine. However," he added as we crossed a bridge over a canal—presumably the Regent's Canal—"we will adjourn the discussion for the moment. Do you know what street that is ahead of us?"

"No," I answered; "I have never been here before, so far as I know."

"That is Field Street," said he.

"The street that the late Mr. Crile lived in?"

"Yes," he answered; and as we passed on into the street from the foot of the bridge, he added, pointing to a house on our left hand, "And that is the residence of the late Mr. Crile—empty, and to let, as you observe."

As we walked past I looked curiously at the house, with its shabby front and its blank, sightless windows, its desolate condition emphasized by the bills which announced it; but I made no remark until we came to the bottom of the street, when I recognized the cross-roads as the one along which I used to pass on my way to the Morrises' house. I mentioned the fact to Thorndyke, and he replied: "Yes. That is where we are going now. We are going to take a look over the premises. That house also is empty, and I have got a permit from the agent to view it and have been entrusted with the keys."

In a few minutes we turned into the familiar little thoroughfare, and as we took our way past its multitudinous stalls and barrows I speculated on the object of this exploration. But it was futile to ask questions, seeing that I had but to wait a matter of minutes or the answer to declare itself. Soon we reached the house and halted for a moment to look through the glazed door into the empty shop. Then Thorndyke inserted the key into the side-door and pushed it open.

There is always something a little melancholy in the sight of an empty house which one has known in its occupied state. Nothing, indeed, could be more cheerless than the Morris household; yet it was with a certain feeling of depression that I looked down the long passage (where Cropper had bumped his head in the dark) and heard the clang of the closing door. This was a dead house—a mere empty shell. The feeble life that I had known in it was no more. So I reflected as I walked slowly down the passage at Thorndyke's side, recalling the ungracious personalities of Mrs. Morris and her husband and the pathetic figure of poor Mr. Bendelow.

When from the passage we came out into the hall, the sense of desolation was intensified; for here not only the bare floor and vacant walls proclaimed the untenanted state of the house. The big curtain that had closed in the end of the hall and to a great extent furnished it was gone, leaving the place very naked and chill. Incidentally, its disappearance revealed a feature of whose existence I had been unaware.

"Why," I exclaimed, "they had a second street-door. I never saw that. It was hidden by a curtain. But it can't open into Market Street."

"It doesn't," replied Thorndyke. "It opens on Field Street."

"On Field Street!" I repeated in surprise. "I wonder why they didn't let me in that way. It is really the front of the house."

"I think," answered Thorndyke, "that if you open the door and look out, you will understand why you were admitted at the back."

I unbolted the door and, opening it, stepped out on the wide threshold and looked up and down the street. Thorndyke was right. The thoroughfare was undoubtedly Field Street, down which we had passed only a few minutes ago, and close by, on the right hand, was the canal bridge. Strongly impressed with the oddity of the affair, I turned to re-enter, and as I turned I glanced up at the number on the door. As my eye lighted on it, I uttered a cry of astonishment. For the number was fifty-two!

"But this is amazing!" I exclaimed, re-entering the hall—where Thorndyke stood watching me with quiet amusement—and shutting the door. "It seems that Usher and I were actually visiting at the same house!"

"Evidently," said he.

"But it almost looks as if we were visiting the same patient!"

"There can be practically no doubt that you were," he agreed. "It was on that assumption that I induced Miller to apply for the exhumation order; and the empty coffin seems to confirm it completely."

I was thunderstruck; not only by the incredible thing that had happened, but by Thorndyke's uncanny knowledge of all the circumstances.
“Then,” I said, after a pause, “if Usher and I were attending the same man, we were both attending Bendelow.”

“That is certainly what the appearances suggest,” he agreed.

“It was undoubtedly Bendelow who was cremated,” said I.

“All the circumstances seem to point to that conclusion,” he admitted, “unless you can think of any that point in the opposite direction.”

“I cannot,” I replied. “Everything points in the same direction. The dead man was seen and identified as Bendelow by those two ladies. Miss Dewsnap and Miss Bonnington; and they not only saw him here, but they actually saw him in his coffin just before it was passed through into the crematorium. And there is no doubt that they knew Bendelow by sight, for you remember that they recognized the photograph of him that the American detective showed them.”

“Yes,” he admitted, “that is so. But their identification is a point that requires further investigation. And it is a vitally important point. I have my own hypothesis as to what took place, but that hypothesis will have to be tested; and that test will be what the logicians would call the Experimentum Crucis. It will settle one way or the other whether my theory of this case is correct. If my hypothesis as to their identification is true, there will be nothing left to investigate. The case will be complete and ready to turn over to Miller.”

I listened to this statement in complete bewilderment. Thorndyke’s reference to the case conveyed nothing definite to me. It was all so involved that I had almost lost count of the subjects of our investigation.

“When you speak of ‘the case’,” said I, “what case are you referring to?”

“My dear Gray!” he protested. “Do you not realize that we are trying to discover who murdered Julius D’Arblay?”

“I thought you were,” I answered; “but I can’t connect this new mystery with his death in any way.”

“Never mind,” said he. “When the case is completed, we will have a general elucidation. Meanwhile there is something else that I have to show you before we go. It is through this side-door.”

He led me out into a large neglected garden and along a wide path that was all overgrown with weeds. As we went I tried to collect and arrange my confused ideas, and suddenly a new discrepancy occurred to me. I proceeded to propound it.

“By the way, you are not forgetting that the two alleged deaths were some days apart? I saw Bendelow dead on a Monday. He had died on the preceding afternoon. But Crile’s funeral had already taken place a day or two previously.”

“I see no difficulty in that,” Thorndyke replied. “Crile’s funeral occurred, as I have ascertained, on a Saturday. You saw Bendelow alive for the last time on Thursday morning. Usher was sent for and saw Crile dead on Thursday evening, he having evidently died—with or without assistance—soon after you left. Of course, the date of death given to you was false, and you mention in your notes of the case that both you and Cropper were surprised at the condition of the body. The previous funeral offers no difficulty, seeing that we know that the coffin was empty. This is what I thought you might be interested to see.”

He pointed to a flight of stone steps, at the bottom of which was a wooden gate set in the wall that enclosed the garden. I looked at the steps—a little vacantly, I am afraid—and inquired what there was about them that I was expected to find of interest.

“Perhaps,” he replied, “you will see better if we open the gate.”

We descended the steps and he inserted a key into the gate, drawing my attention to the fact that the lock had been oiled at no very distant date and was in quite good condition. Then he threw the gate open and we both stepped out on to the tow-path of the canal. I looked about me in considerable surprise, for we were within a few yards of the hut with the derrick and the little wharf from which I had been flung into the canal.

“I remember this gate,” said I—“in fact, I think I mentioned it to you in my account of my adventure here. But I little imagined that it belonged to the Morrices’ house. It would have been a short way in, if I had known. But I expect it was locked at the time.”

“I expect it was,” Thorndyke agreed, and thereupon turned and re-entered. We passed once more down the long passage, and came out into Market Street, when Thorndyke locked the door and pocketed the key.

“That is an extraordinary arrangement,” I remarked; “one house having two frontages on separate streets.”

“It is not a very uncommon one,” Thorndyke replied. “You see how it comes about. A house fronting on one street has a long back garden extending to another street which is not yet fully built on. As the new street fills up, a shop is built at the end of the garden. A small house may be built in connexion with it and cut off from the garden or the shop may be connected with the original house, as in this instance. But in either case, the shop belongs to the new street and has its own number. What are you going to do now?”

“I am going straight on to the studio,” I replied.

“You had better come and have an early lunch with me first,” said he. “There is no occasion to hurry. Polton is there and you won’t easily get rid of him, for I understand that Miss D’Arblay is doing the finishing work on a wax bust.”

“I ought to see that, too,” said I.
He looked at me with a mischievous smile. “I expect you will have plenty of opportunities in the future,” said he, “whereas Polton must make hay while the sun shines. And, by the way, he may have something to tell you. I have instructed him to make arrangements with those two ladies, Miss Dewsnep and her friend, to go into the question of their identification of Bendelow. I want you to be present at the interview, but I have left him to fix the date. Possibly he has made the arrangement by now. You had better ask him.”

At this moment an eligible omnibus making its appearance, we both climbed on board and were duly conveyed to King’s Cross, where we alighted and lunched at a modest restaurant, thereafter separating to go our respective ways north and south.
IN answer to my knock, the studio door was opened by Polton; and as I met his eyes for a moment I was conscious of something unusual in his appearance. I had scanty opportunity to examine him, for he seemed to be in a hurry, bustling away after a few hasty words of apology and returning whence he had come. Following close on his heels, I saw what was the occasion of his hurry. He was engaged with a brush and a pot of melted wax in painting a layer of the latter on the insides of the moulds of a pair of arms, while Marion, seated on a high stool, was working at a wax bust, which was placed on a revolving modelling-stand, obliterating the seams and other irregularities with a steel tool which she heated from time to time at a small spirit-lamp.

When I had made my salutations, I offered my help to Polton, which he declined—without looking up from his work—saying that he wanted to carry the job through by himself. I sympathized with this natural desire, but it left me without occupation, for the work which Marion was doing was essentially a one-person job, and in any case was far beyond the capabilities of either of the apprentices. For a minute or two I stood idly looking on at Polton’s proceedings, but noticing that my presence seemed to worry him, I presently moved away—again with a vague impression that there was something unusual in his appearance—and drawing up another high stool beside Marion’s, settled myself to take a lesson in the delicate and difficult technique of surface finishing.

We were all very silent. My two companions were engrossed by their respective occupations and I must needs refrain from distracting them by untimely conversation; so I sat, well content to watch the magical tool stealing caressingly over the wax surface, causing the disfiguring seams to vanish miraculously into an unbroken contour. But my own attention was somewhat divided; for even as I watched the growing perfection of the bust there would float into my mind now and again an idle speculation as to the change in Polton’s appearance. What could it be? It was something that seemed to have altered, to some extent, his facial expression. It couldn’t be that he had shaved off his moustache or whiskers, for he had none to shave. Could he have parted his hair in a new way? It seemed hardly sufficient to account for the change; and looking round at him cautiously, I could detect nothing unfamiliar about his hair.

At this point he picked up his wax-pot and carried it away to the farther end of the studio, to exchange it for another which was heating in a water-bath. I took the opportunity to lean towards Marion and ask in a whisper:

“Have you noticed anything unusual about Polton?”

She nodded emphatically and cast a furtive glance over her shoulder in his direction.

“What is it?” I asked in the same low tone.

She took another precautionary glance and then, leaning towards me with an expression of exaggerated mystery, whispered:

“He has cut his eyelashes off.”

I gazed at her in amazement, and was about to put a further question, but she held up a warning fore-finger and turned again to her work. However, my curiosity was now at boiling-point. As soon as Polton returned to his bench, I slipped off my stool and sauntered over to it on the pretence of seeing how his wax cast was progressing.

Marion’s report was perfectly correct. His eyelids were as bare of lashes as those of a marble bust. And this was not all. Now that I came to look at him critically, his eyebrows had a distinctly moth—eaten appearance. He had been doing something to them, too.

It was an amazing affair. For one moment I was on the point of demanding an explanation, but good sense and good manners conquered the inquisitive impulse in time. Returning to my stool I cast an inquiring glance at Marion, from whom, however, I got no enlightenment but such as I could gather from a most alluring dimple that hovered about the corner of her mouth and that speedily diverted my thoughts into other channels.

My two companions continued for some time to work silently, leaving me to my meditations—which concerned themselves alternately with Polton’s eyelashes and the dimple aforesaid. Suddenly Marion turned to me and asked:

“Has Mr. Polton told you that we are all to have a holiday to-morrow?”

“No,” I answered; “but Dr. Thorndyke mentioned that Mr. Polton might have something to tell us. Why are we all to have a holiday?”

“Why, you see, sir,” said Polton, standing up and forgetting all about his eyelashes, “the Doctor instructed me to make an appointment with those two ladies. Miss Dewsnep and Miss Bonnington, to come to our chambers on a matter of identification. I have made the appointment for ten o’clock to-morrow morning; and as the Doctor wants you to be present at the interview and wants me to be in attendance, and we can’t leave Miss D’Arblay here alone, we have arranged to shut up the studio for to-morrow.”

“Yes,” said Marion; “and Arabella and I are going to spend the morning looking at the shops in Regent Street, and then we are coming to lunch with you and Dr. Thorndyke. It will be quite a red-letter day.”

“I don’t quite see what these ladies are coming to the chambers for,” said I.
“You will see, all in good time, sir,” replied Polton; and as if to head me off from any further questions, he added: “I forgot to ask how your little party went off this morning.”

“It went off with a bang,” I answered. “We got the coffin up all right, but Mr. Fox wasn’t at home. The coffin was empty.”

“I rather think that was what the Doctor expected,” said Polton.

Marion looked at me with eager curiosity. “This sounds rather thrilling,” she said. “May one ask who it was that you expected to find in that coffin?”

“My impression is,” I replied, “that the missing tenant was a person who bore a strong resemblance to that photograph that I showed you.”

“Oh, dear!” she exclaimed. “What a pity! I wish that coffin hadn’t been empty. But, of course, it could hardly have been occupied, under the circumstances. I suppose I mustn’t ask for fuller details?”

“I don’t imagine that there is any secrecy about the affair, so far as you are concerned,” I answered; “but I would rather that you had the details from Dr. Thorndyke, or at least with his express authority. He is conducting the investigations, and what I know has been imparted to me in confidence.”

This view was warmly endorsed by Polton (who had by now either forgotten his eyelashes or abandoned concealment as hopeless). The subject was accordingly dropped and the two workers resumed their occupations. When Polton had painted a complete skin of wax over the interior of both pairs of moulds, I helped him to put the latter together and fasten them with cords. Then into each completed mould we poured enough melted wax to fill it, and after a few seconds poured it out again, leaving a solid layer to thicken the skin and unite the two halves of the wax cast. This finished Polton’s job, and shortly afterwards he took his departure. Nor did we remain very much longer, for the final stages of the surface finishing were too subtle to be carried out by artificial light and had to be postponed until daylight was available.

As we walked homewards we discussed the situation so far as was possible without infringing Thorndyke’s confidences.

“I am very confused and puzzled about it all,” she said. “It seems that Dr. Thorndyke is trying to get on the track of the man who murdered my father. But whenever I hear any details of his investigations, they always seem to be concerned with somebody else or with something that has no apparent connexion with the crime.”

“That is exactly my condition,” said I. “He seems to be busily working at problems that are totally irrelevant. As far as I can make out, the murderer has never once come into sight, excepting when he appeared at the studio that terrible night. The people in whom Thorndyke has interested himself are mere outsiders—suspicious characters, no doubt, but not suspected of the murder. This man, Crile, for instance, whose empty coffin was dug up, was certainly a shady character. But he was not the murderer, though he seems to have been associated with the murderer at one time. Then there is that Morris, whose mask was found at the studio. He is another queer customer. But he is certainly not the murderer, though he was also probably an associate. Thorndyke has taken an immense interest in him. But I can’t see why. He doesn’t seem to me to be in the picture, or at any rate, not in the foreground of it. Of the actual murderer we seem to know nothing at all—at least that is my position.”

“Do you think Dr. Thorndyke has really got anything to go on?” she asked.

“My dear Marion!” I exclaimed, “I am confident that he has the whole case cut and dried and perfectly clear in his mind. What I was saying referred only to myself. My ideas are all in confusion, but his are not. He can see quite clearly who is in the picture and what of it. The blindness is mine. But let us wait and see what to-morrow brings forth. I have a sort of feeling—in fact he hinted—that this interview is the final move. He may have something to tell you when you arrive.”

“I do hope he may,” she said earnestly, and with this we dismissed the subject. A few minutes later we parted at the gate of Icy Cottage and I took my way (by the main thoroughfares) home to my lodgings.

On the following morning I made a point of presenting myself at Thorndyke’s chambers well in advance of the appointed time in order that I might have a few words with him before the two ladies arrived. With the same purpose, no doubt, Superintendent Miller took a similar course, the result being that we converged simultaneously on the entry and ascended the stairs together. The ‘oak’ was already open and the inner door was opened by Thorndyke, who smilingly remarked that he seemed thereby to have killed two early birds with one stone.

“So you have, Doctor,” assented the superintendent; “two early birds who have come betimes to catch the elusive worm—and I suspect they won’t catch him.”

“Don’t be pessimistic, Miller,” said Thorndyke with a quiet chuckle. “He isn’t such a slippery worm as that. I suppose you want to know something of the programme?”

“Naturally, I do; and so, I suppose, does Dr. Gray.”

“Well,” said Thorndyke, “I am not going to tell you much—”

“I knew it,” groaned Miller.

“Because it will be better for everyone to have an open mind—”

“Well,” interposed Miller, “mine is open enough, wide open; and nothing inside.”

“And then,” pursued Thorndyke, “there is the possibility that we shall not get the result we hope for; and in that case, the
less you expect the less you will be disappointed.”

“But,” persisted Miller, “in general terms, what are we here for? I understand that those two ladies, the witnesses to Bendelow’s will, are coming presently. What are they coming for? Do you expect to get any information out of them?”

“I have some hopes,” he replied, “of learning something from them. In particular I want to test them in respect of their identification of Bendelow.”

“Ha! Then you have got a photograph of him?”

Thorndyke shook his head. “No,” he replied. “I have not been able to get a photograph of him.”

“Then you have an exact description of him?”

“No,” was the reply. “I have no description of him at all.”

The superintendent banged his hat on the table. “Then what the deuce have you got, sir?” he demanded distractedly. “You must have something, you know, if you are going to test these witnesses on the question of identification. You haven’t got a photograph, you haven’t got a description, and you can’t have the man himself because he is at present reposing in a little terra-cotta pot in the form of bone-ash. Now, what have you got?”

Thorndyke regarded the exasperated superintendent with an inscrutable smile and then glanced at Polton, who had just stolen into the room and was now listening with an expression of such excessive crinkliness that I wrote him down an accomplice on the spot.

“You had better ask Polton,” said Thorndyke. “He is the stage manager on this occasion.”

The superintendent turned sharply to confront my fellow-apprentice, whose eyes thereupon disappeared into a labyrinth of crow’s feet.

“It’s no use asking me, sir,” said he. “I’m only an accessory before the fact, so to speak. But you’ll know all about it when the ladies arrive—and I rather think I hear ‘em coming now.”

In corroboration, light footsteps and feminine voices became audible, apparently ascending the stairs. We hastily seated ourselves while Polton took his station by the door and Thorndyke said to me in a low voice: “Remember, Gray, no comments of any kind. These witnesses must act without ourselves while Polton..."

I gave a quick assent, and at that moment Polton threw open the door with a flourish and announced majestically:

“Miss Dewsnep, Miss Bonnington.”

We all rose, and Thorndyke advanced to receive his visitors while Polton placed chairs for them.

“It is exceedingly good of you to take all this trouble to help us,” said Thorndyke. “I hope it was not in any way inconvenient for you to come here this morning.”

“Oh, not at all,” replied Miss Dewsnep: “only we are not quite clear as to what it is that you want us to do.”

“We will go into that question presently,” said Thorndyke. “Meanwhile, may I introduce to you these two gentlemen, who are interested in our little business: Mr. Miller and Dr. Gray.”

The two ladies bowed, and Miss Dewsnep remarked:

“We are already acquainted with Dr. Gray. We had the melancholy pleasure of meeting him at Mrs. Morris’s house on the sad occasion when he came to examine the mortal remains of poor Mr. Bendelow, who is now with the angels.”

“And no doubt,” added Miss Bonnington, “in extremely congenial society.”

At this statement of Miss Dewsnep’s the superintendent turned and looked at me sharply with an expression of enlightenment; but he made no remark, and the latter lady returned to her original inquiry. “You were going to tell us what it is that you want us to do.”

“Yes,” replied Thorndyke. “It is quite a simple matter. We want you to look at the face of a certain person who will be shown to you and to tell us if you recognize and can give a name to that person.”

“Not an insane person, I hope!” exclaimed Miss Dewsnep.

“No,” Thorndyke assured her, “not an insane person.”

“Nor a criminal person in custody, I trust,” added Miss Bonnington.

“Certainly not,” replied Thorndyke. “In short, let me assure you that the inspection of this person need not cause you the slightest embarrassment. It will be a perfectly simple affair, as you will see. But perhaps we had better proceed at once. If you two gentlemen will follow Polton, I will conduct the ladies upstairs myself.”

On this we rose, and Miller and I followed Polton out on to the landing, where he turned and began to ascend the stairs at a slow and solemn pace, as if he were conducting a funeral. The superintendent walked at my side and muttered as he went, being evidently in a state of bewilderment fully equal to my own.

“Now, what the blazes,” he growled, “can the doctor be up to now? I never saw such a man for springing surprises on one. But who the deuce can he have up there?”
At the top of the second flight we came on to a landing and, proceeding along it, reached a door which Polton unlocked and opened.

“You understand, gentlemen,” he said, halting in the doorway, “that no remarks or comments are to be made until the witnesses have gone. Those were my instructions.”

With this he entered the room, closely followed by Miller, who, as he crossed the threshold, set at naught Polton’s instructions by exclaiming in a startled voice:

“Snakes!” I followed quickly, all agog with curiosity; but whatever I had expected to see—if I had expected anything—I was totally unprepared for what I did see.

The room was a smallish room, completely bare and empty of furniture save for four chairs—one of which Polton firmly seated us; and in the middle of the floor, raised on a pair of trestles, was a coffin covered with a black linen cloth. At this gruesome object Miller and I gazed in speechless astonishment, but, apart from Polton’s injunction, there was no opportunity for an exchange of sentiments; for we had hardly taken our seats when we heard the sound of ascending footsteps mingled with Thorndyke’s bland and persuasive accents. A few moments later the party reached the door, and as the two ladies came in sight of the coffin, both started back with a cry of alarm.

“Oh, dear!” exclaimed Miss Dewsnep, “it’s a dead person! Who is it, sir? Is it anyone we know?”

“That is what we want you to tell us,” Thorndyke replied.

“How mysterious!” exclaimed Miss Bonnington, in a hushed voice. “How dreadful! Some poor creature who has been found dead, I suppose? I hope it won’t be very—er—you know what I mean, sir—when the coffin is opened.”

“There will be no need to open the coffin,” Thorndyke reassured her. “There is an inspection window in the coffin-lid through which you can see the face. All you have to do is to look through the window and tell us if the face that you see is the face of anyone who is known to you. Are you ready, Polton?”

Polton replied that he was, having taken up his position at the head of the coffin with an air of profound gravity, approaching to gloom. The two ladies shuddered audibly, but their nervousness being now overcome by a devouring curiosity, they advanced, one on either side of the coffin, and taking up a position close to Polton, gazed eagerly at the covered coffin. There was a solemn pause as Polton carefully gathered up the two comers of the linen pall. Then, with a quick movement, he threw it back. The two witnesses simultaneously stooped and peered in at the window. Simultaneously their mouths opened and they sprang back with a shriek.

“Why, it’s Mr. Bendelow!”

“You are quite sure it is Mr. Bendelow?” Thorndyke asked.

“Perfectly,” replied Miss Dewsnep. “And yet,” she continued with a mystified look, “it can’t be; for I saw him pass through the bronze doors into the cremation furnace. I saw him with my own eyes,” she added, somewhat unnecessarily.

“And what’s more, I saw his ashes in the casket.”

She gazed with wide-open eyes at Thorndyke and then at her friend, and the two women tip-toed forward and once more stared in at the window with starting eyes and dropped chins.

“It is Mr. Bendelow,” said Miss Bonnington, in an awe-stricken voice.

“But it can’t be,” Miss Dewsnep protested in tremulous tones. “You saw him put through those doors yourself, Susan, and you saw his ashes afterwards.”

“I can’t help that, Sarah,” the other lady retorted. “This is Mr. Bendelow. You can’t deny that it is.”

“Our eyes must be deceived,” said Miss Dewsnep, the said eyes being still riveted on the face behind the window. “It can’t be—and yet it is—but yet it is impossible—”

She paused suddenly and raised a distinctly alarmed face to her friend.

“Susan,” she said, in a low, rather shaky voice, “there is something here with which we, as Christian women, are better not concerned. Something against nature. The dead has been recalled from a burning fiery furnace by some means which we may not inquire into. It were better, Susan, that we should now depart from this place.”

This was evidently Susan’s opinion, too, for she assented with uncommon alacrity and with a distinctly uncomfortable air; and the pair moved with one accord towards the door. But Thorndyke gently detained them.

“Do we understand,” he asked, “that, apart from the apparently impossible circumstances, the body in that coffin is, in your opinion, the body of the late Simon Bendelow?”

“You do,” Miss Dewsnep replied in a resentfully nervous tone and regarding Thorndyke with very evident alarm. “If it were possible that it could be, I would swear that those unnatural remains were those of my poor friend Mr. Bendelow. As it is not possible, it cannot be.”

“Thank you,” said Thorndyke, with the most extreme suavity of manner. “You have done us a great service by coming here to-day, and a great service to humanity—how great a service you will learn later. I am afraid it has been a disagreeable experience to both of you, for which I am sincerely sorry; but you must let me assure you that there is nothing unlawful or
supernatural in what you have seen. Later, I hope you will be able to realize that. And now I trust you will allow Mr. Polton to accompany you to the dining-room and offer you a little refreshment."

As neither of the ladies raised any objection to this programme, we all took our leave of them and they departed down the stairs, escorted by Polton. When they had gone, Miller stepped across to the coffin and cast a curious glance in at the window.

"So that is Mr. Bendelow," said he. "I don’t think much of him, and I don’t see how he is going to help us. But you have given those two old girls a rare shake-up, and I don’t wonder. Of course, this can’t be a dead body that you have got in this coffin, but it is a most life-like representation of one, and it took in those poor old Judies properly. What have you got to tell us about this affair, Doctor? I can see that your scheme, whatever it was, has come off. They always do. But what about it? What has this experiment proved?"

"It has turned a mere name into an actual person," was the reply.

"Yes, I know," rejoined Miller, "Very interesting, too. Now we know exactly what he looked like. But what about it? And what is the next move?"

"The next move on my part is to lay a sworn information against him as the murderer of Julius D’Arblay; which I will do now, if you will administer the oath and witness my signature." As he spoke, Thorndyke produced a paper from his pocket and laid it on the coffin.

The superintendent looked at the paper with a surprised grin.

"A little late, isn’t it," he said, "to be swearing an information? Of course you can if you like, but when you’ve done it, what then?"

"Then," replied Thorndyke, "it will be for you to arrest him and bring him to trial."

At this reply the superintendent’s eyes opened until his face might have been a symbolic mask of astonishment. Grasping his hair with both hands, he rose slowly from his chair, staring at Thorndyke as if at some alarming apparition.

"You’ll be the death of me. Doctor!" he exclaimed. "You really will. I am not fit for these shocks at my time of life. What is it you ask me to do? I am to arrest this man! What man? Here is a waxwork gentleman in a coffin—at least, I suppose that is what he is—that might have come straight from Madame Tussaud’s. Am I to arrest him? And there is a casket full of ashes somewhere. Am I to arrest those? Or am I off my head or dreaming?"

Thorndyke smiled at him indulgently. "Now, Miller," said he, "don’t pretend to be foolish, because you are not. The man whom you are to arrest is a live man, and what is more, he is easily accessible whenever you choose to lay your hands on him."

"Do you know where to find him?"

"Yes," Thorndyke replied. "I, myself, will conduct you to his house, which is in Abbey Road, Hornsey, nearly opposite Miss D’Arblay’s studio."

I gave a gasp of amazement on hearing this, which directed the superintendent’s attention to me.

"Very well. Doctor," he said, "I will take your information, but you needn’t swear to it; just sign your name. I must be off now, but I will look in to-night about nine, if that will do, to get the necessary particulars and settle the arrangements with you. Probably to-morrow afternoon will be a good time to make the arrest. What do you think?"

"I should think it would be an excellent time," Thorndyke replied, "but we can settle definitely to-night."

With this, the superintendent, having taken the signed paper from Thorndyke, shook both our hands and bustled away with the traces of his late surprise still visible on his countenance.

The recognition of the tenant of the coffin as Simon Bendelow had come on me with almost as great a shock as it had on the two witnesses, but for a different reason. My late experiences enabled me to guess at once that the mysterious tenant was a waxwork figure, presumably of Polton’s creation. But what I found utterly inexplicable was that such a waxwork should have been produced in the likeness of a man whom neither Polton nor Thorndyke had ever seen. The astonishing conversation between the latter and Miller had, for the moment, driven this mystery out of my mind; but as soon as the superintendent had gone, I stepped over to the coffin and looked in at the window. And then I was more amazed than ever. For the face that I saw was not the face that I had expected to see. There, it is true, was the old familiar skull-cap, which Bendelow had worn, pulled down over the temples above the jaw-bandage. But it was the wrong face. (Incidentally I now understood what had become of Polton’s eyelashes. That conscientious realist had evidently taken no risks.)

"But," I protested, "this is not Bendelow. This is Morris."

Thorndyke nodded. "You have just heard two competent witnesses declare with complete conviction and certainty that this is Simon Bendelow; and, as you yourself pointed out, there can be no doubt as to their knowledge of Bendelow, since they recognized the photograph of him that was shown to them by the American detective."

"That is perfectly true," I admitted. "But it is a most incomprehensible affair. This is not the man who was cremated."

"Evidently not, since he is still alive."
“But these two women saw Bendelow cremated—at least they saw him pass through into the crematorium, which is near enough. And they had seen him in the coffin a few minutes before I saw him in the coffin, and they saw him again a few minutes after Cropper and Morris and I had put him back in the coffin. And the man whom we put into the coffin was certainly not this man.”

“Obviously not, since he helped you to put the corpse in.”

“And again,” I urged, “if the body that we put into the coffin was not the body that was cremated, what has become of it? It wasn’t buried, for the other coffin was empty. Those women must have made some mistake.”

He shook his head. “The solution of the mystery is staring you in the face,” said he. “It is perfectly obvious, and I am not going to give you any further hints now. When we have made the arrest, you shall have a full exposition of the case. But tell me, now; did those two women ever meet Morris?”

I considered for a few moments and then replied: “I have no evidence that they ever met him. They certainly never did in my presence. But even if they had, they would hardly have recognized him as the person they have identified to-day. He had grown a beard and moustache, you will remember, and his appearance was very much altered from what it was when I first saw him.”

Thorndyke nodded. “It would be,” he agreed. Then, turning to another subject, he said: “I am afraid it will be necessary for you to be present at the arrest. I would much rather that you were not, for he is a dangerous brute and will probably fight like a wild cat; but you are the only one of us who really knows him by sight in his present state.”

“I should like to be in at the death,” I said eagerly.

“That is well enough,” said he, “so long as it is his death. You must bring your pistol and don’t be afraid to use it.”

“And how shall I know when I am wanted?” I asked.

“You had better go to the studio to-morrow morning,” he replied. “I will send a note by Polton giving you particulars of the time when we shall call for you. And now we may as well help Polton to prepare for our other visitors, and I think. Gray, that we will say as little as possible about this morning’s proceedings or those of to-morrow. Explanations will come better after the event.”

With this, we went down to the dining-room, where we found Polton sedately laying the table, having just got rid of the two ladies. We made a show of assisting him and I ventured to inquire:

“Who is doing the cooking to-day, Polton? Or is it to be a cold lunch?”

He looked at me almost reproachfully as he replied: “It is to be a hot lunch, and I am doing the cooking, of course.”

“But,” I protested, “you have been up to your eyes in other affairs all the morning.”

He regarded me with a patronizing crinkle. “You can do a good deal,” said he, “with one or two casseroles, a hay-box and a four-storey cooker on a gas stove. Things don’t cook any better for your standing and staring at them.”

Events went to prove the soundness of Polton’s culinary principles; and the brilliant success of their application in practice gave a direction to the conversation which led it comfortably away from other and less discussable topics.

XVIII.—THE LAST ACT

SHORTLY before leaving Thorndyke’s chambers with Marion and Miss Boler, I managed to secure his permission to confide to them, in general terms, what was to happen on the morrow; and very relieved I was thereafter, for I had little doubt that questions would be asked which it would seem ungracious to evade. Events proved that I was not mistaken; indeed, we were hardly clear of the precincts of the Temple when Marion opened the inquisition.

“You said yesterday,” she began, “that Dr. Thorndyke might have something to tell us to-day, and I hoped that he might. I even tried to pluck up courage to ask him, but then I was afraid that it might seem intrusive. He isn’t the sort of man that you can take liberties with. So I suppose that whatever it was that happened this morning is a dead secret?”

“Not entirely,” I replied. “I mustn’t go into details at present, but I am allowed to give you the most important item of information. There is going to be an arrest tomorrow.”

“Do you mean that Dr. Thorndyke has discovered the man?” Marion demanded incredulously.

“He says that he has, and I take it that he knows. What is more, he offered to conduct the police to the house. He has actually given them the address.”

“I would give all that I possess,” exclaimed Miss Boler, “to be there and see the villain taken.”

“Well,” I said, “you won’t be far away, for the man lives in Abbey Road, nearly opposite the studio.”

Marion stopped and looked at me aghast. “What a horrible thing to think of!” she gasped. “Oh, I am glad I didn’t know! I could never have gone to the studio if I had. But now we can understand how he managed to find his way to the place that foggy night, and to escape so easily.”
“Oh, but it is not that man,” I interposed, with a sudden ease of hopeless bewilderment. For I had forgotten this absolute discrepancy when I was talking to Thorndyke about the identification.

“Not that man!” she repeated, gazing at me in wild astonishment. “But that man was my father’s murderer. I feel certain of it.”

“So do I,” was my rather lame rejoinder.

“Besides,” she persisted, “if he was not the murderer, who was he, and why should he want to kill me?”

“Exactly,” I agreed. “It seems conclusive. But apparently it isn’t. At any rate, the man they are going to arrest is the man whose mask Thorndyke found at the studio.”

“Then they are going to arrest the wrong man,” said she, looking at me with a deeply troubled face. I was uncomfortable, too, for I saw what was in her mind. The memory of the ruffian who had made that murderous attack on her still lingered in her mind as a thing of horror. The thought that he was still at large and might at any moment reappear made it impossible for her ever to work alone in the studio, or even to walk abroad without protection. She had looked, as I had, to the discovery of the murderer to rid her of this abiding menace. But now it seemed that even after the arrest of the murderer this terrible menace would remain.

“I can’t understand it,” she said dejectedly. “When you showed me that photograph of the man who tried to kill me, I naturally hoped that Dr. Thorndyke had discovered who he was. But now it appears that he is at large and still untraced, yet I am convinced that he is the man who ought to have been followed.”

“Never mind, my dear,” I said cheerfully. “Let us see the affair out. You don’t understand it and neither do I. But Thorndyke does. I have absolute faith in him, and so, I can see, have the police.”

She assented without much conviction, and then Miss Boler began to press for further particulars. I mentioned the probable time of the arrest and the part that I was required to play in identifying the accused.

“You don’t mean that you are asked to be present when the actual arrest is made, do you?” Marion asked anxiously.

“Yes,” I answered. “You see, I am the only person who really knows the man by sight.”

“But,” she urged, “you are not a policeman. Suppose this man should be violent, like that other man; and he probably will be.”

“Oh,” I answered airily, “that will be provided for. Besides, I am not asked to arrest him; only to point him out to the police.”

“I wish,” she said, “you would stay in the studio until they have secured him. Then you could go and identify him. It would be much safer.”

“No doubt,” I agreed. “But it might lead to their arresting the wrong man and letting the right one slip. No, Marion, we must make sure of him if we can. Surely you are at least as anxious as any of us that he should be caught and made to pay the penalty?”

“Yes,” she answered, “if he is really the right man—which I can hardly believe. But still, punishing him will not bring poor Daddy back, whereas if anything were to happen to you, Stephen—Oh! I don’t dare to think of it!”

“You needn’t think of it, Marion,” I rejoined, cheerfully. “I shall be all right. And you wouldn’t have your—apprentice hang back when the bobbies are taking the affair as a mere every-day job.”

She made no reply beyond another anxious glance; and I was glad enough to let the subject drop, bearing in mind Thorndyke’s words with regard to the pistol. As a diversion, I suggested a visit to the National Gallery, which we were now approaching, and the suggestion being adopted, without acclamation, we drifted in and rather listlessly perambulated the galleries, gazing vacantly at the exhibits and exchanging tepid comments. It was a spiritless proceeding, of which I remember very little but some rather severe observations by Miss Boler concerning a certain ‘hussy’ (by one Bronzino) in the great room. But we soon gave up this hollow pretence and went forth to board a yellow bus which was bound for the Archway Tavern; and so home to an early supper.

On the following morning I made my appearance betimes at Ivy Cottage, but it was later than usual when Marion and I started to walk in leisurely fashion to the studio.

“I don’t know why we are going at all,” said she. “I don’t feel like doing any work.”

“Let us forget the arrest for the moment,” said I. “There is plenty to do. Those arms of Polton’s have got to be taken out of the moulds and worked. It will be much better to keep ourselves occupied.”

“I suppose it will,” she agreed; and then, as we turned a corner and came in sight of the studio, she exclaimed:

“Why, what on earth is this? There are some painters at work on the studio! I wonder who sent them. I haven’t given any orders. There must be some extraordinary mistake.”

There was not, however. As we came up, one of the two linen-coated operators advanced, brush in hand, to meet us and briefly explained that he and his mate had been instructed by Superintendent Miller to wash down the paint-work and keep an eye on the premises opposite. They were, in fact, ‘plain-clothes’ men on special duty.
“We have been here since seven o’clock,” our friend informed us, as we made a pretence of examining the window-sashes, “and we took over from a man who had been watching the house all night. My nabs is there all right. He came home early yesterday evening and he hasn’t come out since.”

“Then you know the man by sight?” Marion asked eagerly.

“Well, miss,” was the reply, “we have a description of him, and the man who went into the house seemed to agree with it; and, as far as we know, there isn’t any other man living there. But I understand that we are relying on Dr. Gray to establish the identity. Could I have a look at the inside woodwork?”

Marion unlocked the door and we entered, followed by the detective, whose interest seemed to be concerned exclusively with the woodwork of windows; and from windows in general finally became concentrated on a small window in the lobby which commanded a view of the houses opposite. Having examined the sashes of this, with his eye cocked on one of the houses aforesaid, he proceeded to operate on it with his brush, which, being wet and dirty and used with a singular lack of care, soon covered the glass so completely with a mass of opaque smears that it was impossible to see through it at all. Then he cautiously raised the sash about an inch, and whipping out a prism binocular from under his apron, stood back a couple of feet and took a leisurely survey through the narrow opening of one of the opposite houses.

“Hallo!” said he. “There is a woman visible at the first-floor window. Just have a look at her, sir. She can’t see us through this narrow crack.”

He handed me the glass, indicating the house, and I put the instrument to my eyes. It was a powerful glass, and seemed to bring the window and the figure of the woman within a dozen feet of me. But at the moment she had turned her head away, apparently to speak to someone inside the room, and all that I could see was that she seemed to be an elderly woman who wore what looked like an old-fashioned widow’s cap. Suddenly she turned and looked out over the half-curtain, giving me a perfectly clear view of her face; and then I felt myself lapsing into the old sense of confusion and bewilderment.

I had, of course, expected to recognize Mrs. Morris. But this was evidently not she, although not such a very different-looking woman, an elderly, white-haired widow in a crape cap and spectacles—reading-spectacles they must be, since she was looking over and not through them. She seemed to be a stranger—and yet not quite a stranger; for as I looked at her some chord of memory stirred. But the cup of my confusion was not yet full. As I stared at her, trying vainly to sound a clearer note on that chord of memory, a man slowly emerged from the darkness of the room behind and stood beside her; and him I recognized instantly as the bottle-nosed person whom I had watched from my ambush at the top of Dartmouth Park Hill.

“Well, sir,” said the detective, as the man and woman turned away from the window and vanished, “what do you make of ‘em? Do you recognize ‘em?”

“I recognize the man,” I replied, “and I believe I have seen the woman before, but they aren’t the people I expected to see.”

“Oh, dear!” said he. “That’s a bad look-out. Because I don’t think there is anybody else there.”

“Then,” I said, “we have made a false shot; and yet—well, I don’t know. I had better think this over and see if I can make anything of it.”

I turned into the studio, where I found Marion—who had been listening attentively to this dialogue—in markedly better spirits.

“It seems a regular muddle,” she remarked cheerfully. “They have come to arrest the wrong man and now it appears that he isn’t there.”

“Don’t talk to me for a few minutes, Marion, dear,” said I. “There is something behind this and I want to think what it can be. I have seen that woman somewhere, I feel certain. Now, where was it?”

I cudgelled my brains for some time without succeeding in recovering the recollections connected with her. I revisualized the face that I had seen through the glass, with its deep-set, hollow eyes and strong, sharply sloping eyebrows, and tried to connect it with some person whom I had seen, but in vain. And then in a flash it came to me. She was the widow whom I had noticed at the inquest. The identification, indeed, was not very complete, for the veil that she had worn on that occasion had considerably obscured her features. But I had no doubt that I was right, for her present appearance agreed in all that I could see with that of the woman at the inquest.

The next question was, who could she be? Her association with the bottle-nosed man connected her in some way with what Thorndyke would have called ‘the case’; for that man, whoever he was, had certainly been shadowing me. Then her presence at the inquest had now a sinister suggestiveness. She would seem to have been there to watch developments on behalf of others. Could she be a relative of Mrs. Morris? A certain faint resemblance seemed to support this idea. As to the man, I gave him up. Evidently there were several persons concerned in this crime, but I knew too little about the circumstances to be able to make even a profitable guess. Having reached this unsatisfactory conclusion, I turned, a little irritably, to Marion, exclaiming:

“I can make nothing of it. Let us get on with some work to pass the time.”

Accordingly we began, in a half-hearted way, upon Polton’s two moulds. But the presence of the two detectives was disturbing, especially when, having finished the exterior, they brought their pails and ladders inside and took up their
station at the lobby window. We struggled on for a time; but when, about noon, Miss Boler made her appearance with a basket of provisions and a couple of bottles of wine, we abandoned the attempt and occupied ourselves in tidying up and laying a table.

“Don’t you think, Marion,” I said, as we sat down to lunch (having provided for the needs of the two ‘painters,’ who lunched in the lobby), “that it would be best for you and Arabella to go home before any fuss begins?”

“Whatever Miss Marion thinks,” Arabella interposed firmly, “I am not going home. I came down expressly to see this villain captured, and here I stay until he is safely in custody.”

“And I,” said Marion, “am going to stay with Arabella. You know why, Stephen. I couldn’t bear to go away and leave you here after what you have told me. We shall be quite safe in here.”

“Well,” I temporised, seeing plainly that they had made up their minds, “you must keep the door bolted until the business is over.”

“As to that,” said Miss Boler, “we shall be guided by circumstances,” and from this ambiguous position neither she nor Marion would budge.

Shortly after lunch I received a farther shock of surprise. In answer to a loud single knock, I hurried out to open the door. A tradesman’s van had drawn up at the kerb and two men stood on the threshold, one of them holding a good—sized parcel. I stared at the latter in astonishment, for I recognized him instantly as the second shadower of the Dartmouth Park Hill adventure; but before I could make any comment, both men entered—with the curt explanation ‘police business’—and the last—comer shut the door, when I heard the van drive off.

“I am Detective-Sergeant Porter,” the stranger explained. “You know what I am here for, of course.”

“Yes,” I replied; and turning to the other man, I said:

“I think I have seen you before. Are you a police-officer, too?”

My acquaintance grinned. “Retired Detective-Sergeant,” he explained, “name of Barber. At present employed by Dr. Thorndyke. I think I have seen you before, sir,” and he grinned again, somewhat more broadly.

“I should like to know bow you were employed when I saw you last,” said I. But here Sergeant Porter interposed:

“Better leave explanations till later, sir. You’ve got a back gate, I think.”

“Yes,” said one of the ‘painters’. “At the bottom of the garden. It opens on an alley that leads into the next road—Chilton Road.”

“Can we get into the garden through the studio?” the sergeant asked, and on my answering in the affirmative, he requested permission to inspect the rear premises. I conducted both men to the back door and let them out into the garden, where they passed out at the back gate to reconnoitre the alley. In a minute or two they returned; and they had hardly re-entered the studio when another knock at the door announced more visitors. They turned out to be Thorndyke and Superintendent Miller; of whom the latter inquired of the senior painter:

“Is everything in going order, Jenks?”

“Yes, sir,” was the reply. “The man is there all right. Dr. Gray saw him; but I should mention, sir, that he doesn’t think it’s the right man.”

“The devil he doesn’t!” exclaimed Miller, looking at me uneasily and then glancing Thorndyke.

“That man isn’t Morris,” said I. “He is that red-nosed man whom I told you about. You remember.”

“I remember,” Thorndyke replied calmly. “Well, I suppose we shall have to content ourselves with the red-nosed man;” upon which ex-Sergeant Barber’s countenance became wreathed in smiles and the superintendent looked relieved.

“Are all the arrangements complete, Sergeant?” Miller inquired, turning to Sergeant Porter.

“Yes, sir,” the latter replied. “Inspector Follett has got some local men, who know the neighbourhood well, posted in the rear watching the back garden, and there are some uniformed men waiting round both the corners to stop him, in case he slips past us. Everything is ready, sir.”

“Then,” said the superintendent, “we may as well open the ball at once. I hope it will go off quietly. It ought to. We have got enough men on the job.”

He nodded to Sergeant Porter, who at once picked up his parcel and went out into the garden, accompanied by Barber. Miller, Thorndyke and I now adjourned to the lobby window, where, with the two painter-detectives, we established a look-out. Presently we saw the sergeant and Barber advancing separately on the opposite side of the road, the latter leading and carrying the parcel. Arrived at the house, he entered the front garden and knocked a loud single knock. Immediately, the mysterious woman appeared at the ground-floor window—it was a bay-window—and took a long, inquisitive look at ex-Sergeant Barber. There ensued a longish pause, during which Sergeant Porter walked slowly past the house. Then the door opened a very short distance—being evidently chained—and the woman appeared in the narrow opening. Barber offered the parcel, which was much too large to go through the opening without unchaining the door, and appeared to be giving explanations. But the woman evidently denied all knowledge of it, and having refused to receive it, tried to shut the door,
into the opening of which Barber had inserted his foot; but he withdrew it somewhat hastily as a coal-hammer descended, and before he could recover himself the door shut with a bang and was immediately bolted.

The ball was opened, as Miller had expressed it, and the developments followed with a bewildering rapidity that far out-paced any possible description.

The sergeant returning and joining Barber, the two men were about to force the ground-floor window, when pistol-shots and police whistles from the rear announced a new field of operations. At once Miller opened the studio door and sallied forth, with the two detectives and Thorndyke; and when I had called out to Marion to bolt the door, I followed, shutting it after me. Meanwhile, from the rear of the opposite houses came a confused noise of police-whistles, barking dogs and women’s voices, with an occasional report. Following three rapid pistol-shots there came a brief interval, then, suddenly, the door of a house farther down the street burst open and the fugitive rushed out, wild-eyed and terrified, his white face contrasting most singularly with his vividly-red nose. Instantly, the two detectives and Miller started in pursuit, followed by the sergeant and Barber; but the man ran like a hare and was speedily drawing ahead when suddenly a party of constables appeared from a side-turning and blocked the road. The fugitive zigzagged and made as if he would try to dodge between them, flinging away his empty pistol and drawing out another. The detectives and Miller were close on him, when in an instant he turned and, with extraordinary agility, avoided them. Then, as the two sergeants bore down on him, he fired at them at close range, stopping them both, though neither actually fell. Again he out-ran his pursuers, racing down the road towards us, yelling like a maniac and firing his pistol wildly at Thorndyke and me. And suddenly my left leg doubled up and I fell heavily to the ground nearly opposite the studio door.

The fall confused me for a moment and as I lay, half-dazed, I was horrified to see Marion dart out of the studio. In an instant she was kneeling by my side with her arm around my neck. “Stephen! Oh, Stephen, darling!” she sobbed and gazed into my face with eyes full of terror and affecion, oblivious of everything but my peril. I besought her to go back, and struggled to get out my pistol, for the man, still gaining on his pursuers, was now rapidly approaching. He had flung away his second pistol and had drawn a large knife, and as bore down on us, mad with rage and terror, he gibbered and grinned like a wild cat.

When he was but a couple of dozen paces away, I saw Thorndyke raise his pistol and take a careful aim. But before he had time to fire, a most singular diversion occurred. From the open door of the studio Miss Boler emerged, swinging a massive stool with amazing ease. The man, whose eyes were fixed on me and Marion, did not observe her until she was within a few paces of him; when, gathering all her strength, she hurled the heavy stool with almost incredible force. It struck him below the knees, knocking his feet from under him, and he fell with a sort of dive or half-somersault, falling with the hand that grasped the knife under him.

He made no attempt to rise, but lay with slightly twitching limbs but otherwise motionless. Miss Boler stalked up to him and stood looking down on him with grim interest until Thorndyke, still holding his pistol, stooped and, grasping one arm, gently turned him over. Then we could see the handle of the knife sticking out from his chest near the right shoulder.

“Ha!” said Thorndyke. “Bad luck to the last. It must have gone through the arch of the aorta. But perhaps it is just as well.”

He rose and, stepping across to where I sat, supported by Marion and still nursing my pistol, bent over me with an anxious face.

“What is it, Gray?” he asked. “Not a fracture, I hope?”

“I don’t think so,” I replied. “Damaged muscle and perhaps nerve. It is all numb at present, but it doesn’t seem to be bleeding much. I think I could hobble if you would help me up.”

He shook his head and beckoned to a couple of constables, with whose aid he carried me into the studio and deposited me on the sofa. I immediately afterwards the two wounded officers were brought in, and I was relieved to hear that neither of them was dangerously hurt, though the sergeant had a fractured arm and Barber a flesh-wound of the chest and a cracked rib. The ladies having been politely ejected into the garden, Thorndyke examined the various injuries and applied temporary dressings, producing the materials from a very business-like-looking bag which he had providently brought with him. While he was thus engaged, three constables entered carrying the corpse, which, with a few words of apology, they deposited on the floor by the side of the sofa.

I looked down on the ill-omened figure with lively curiosity; and especially was I impressed and puzzled by the very singular appearance of the face. Its general colour was of that waxen pallor characteristic of the faces of the dead, particularly of those who have died from haemorrhage. But the nose and the acne patches remained unchanged. Indeed, their colour seemed intensified, for their vivid red ‘stared’ from the surrounding white like the painted patches on a down’s face. The mystery was solved when, the surgical business being concluded, Barber came and seated himself on the edge of the sofa.

“Mastery make-up, that,” said he, nodding at the corpse. “Looks queer enough now; but when he was alive you couldn’t spot it, even in daylight.”

“Make-up!” I exclaimed. “I didn’t know you could make-up off the stage.”

“You can’t wear a celluloid nose off the stage, or a tie-on beard,” he replied. “But when it is done as well as this—a touch or two of nose-paste or toupee-paste, tinted carefully with grease-paint and finished up with powder—it’s hard to spot.
These experts in make-up are a holy terror to the police."

"Did you know that he was made up? I asked, looking at Thorndyke.

"I inferred that he was," the latter replied, "and so did Sergeant Barber. But now we had better see what his natural appearance is."

He stooped over the corpse and with a small ivory paper-knife scraped from the end of the nose and the parts adjacent a layer of coloured plastic material about the consistency of modelling—wax. Then with vaseline and cotton-wool he cleaned away the red pigment until the pallid skin showed unsullied.

"Why, it is Morris after all!" I exclaimed. "It is perfectly incredible; and you seemed to remove such a very small quantity of paste, too! I wouldn't have believed that it would make such a change."

"Not after that very instructive demonstration that Miss D'Arblay gave us with the day and the plaster mask?" he asked with a smile.

I smiled sheepishly in return. "I told you I was a fool, sir," and then, as a new idea burst upon me, I asked: "And that other man—the hook-nosed man?"

"Morris—that is to say, Bendelow," he replied, "with a different, more exaggerated make-up."

I was pondering with profound relief on this answer when one of the painter-detectives entered in search of the superintendent.

"We got into the house from the back, sir," he reported. "The woman is dead. We found her lying on the bed in the first-floor front; and we found a tumbler half-full of water and this by the bedside."

He exhibited a small, wide-mouthed bottle labelled 'Potassium Cyanide', which the superintendent took from him.

"I will come and look over the house presently," the latter said. "Don't let anybody in; and let me know when the cabs are here."

"There are two here now, sir," the detective announced, "and they have sent down three wheeled stretchers."

"One cab will carry our two casualties and I expect the Doctor will want the other. The bodies can be put on two of the stretchers, but you had better send the woman here for Dr. Gray to see."

The detective saluted and retired, and in a few minutes a stretcher dismounted from its carriage was borne in by two constables and placed on the floor beside Morris's corpse. But even now, prepared as I was, and knowing who the new arrival must be, I looked doubtfully at the pitiful effigy that lay before me so limp and passive, that but an hour since had been a strong, courageous, resourceful woman. Not until the white wig, the cap and the spectacles had been removed, the heavy eyebrows detached with spirit and the dark pigment cleaned away from the eyelids, could I say with certainty that this was the corpse of Mrs. Morris.

"Well, Doctor," said the superintendent, when the wounded and the dead had been borne away and we were alone in the studio, "you have done your part to a finish, as usual, but ours is a bit of a failure. I should have liked to bring that fellow to trial."

"I sympathize with you, Miller," replied Thorndyke. "The gallows ought to have had him. But yet I am not sure that what has happened is not all for the best. The evidence in both cases—the D'Arblay and the Van Zellen murders—is entirely circumstantial and extremely intricate. That is not good evidence for a jury. A conviction would not have been a certainty either here or in America; and an acquittal would have been a disaster that I don't dare to think of. No, Miller, I think that, on the whole, I am satisfied, and I think that you ought to be, too."

"I suppose I ought," Miller conceded, "but it would have been a triumph to put him in the dock, after he had been written off as dead and cremated. However, we must take things as we find them, and now I had better go and look over that house."

With a friendly nod to me, he took himself off, and Thorndyke went off to notify the ladies that the intruders had departed.

As he returned with them I heard Marion cross-examining him with regard to my injuries and listened anxiously for his report.

"So far as I can see. Miss D'Arblay," he answered, "the damage is confined to one or two muscles. If so, there will be no permanent disablement and he should soon be quite well again. But he will want proper surgical treatment without delay. I propose to take him straight to our hospital, if he agrees."

"Miss Boler and I were hoping," said Marion, "that we might have the privilege of nursing him at our house."

"That is very good of you," said Thorndyke, "and perhaps you might look after him during his convalescence. But for the present he needs skilled surgical treatment. If it should not be necessary for him to stay in the hospital after the wound has been attended to, it would be best for him to occupy one of the spare bedrooms at my chambers, where he can be seen daily—the surgeon and I can keep an eye on him. Come," he added coaxingly, "let us make a compromise. You or Miss Boler shall come to the Temple every day for as long as you please and do what nursing is necessary. There is a spare room of which you can take possession; and as to your work here, Polton will give you any help that he can. How will that do?"
Marion accepted the offer gratefully (with my concurrence), but begged to be allowed to accompany me to the hospital.

“That was what I was going to suggest,” said Thorndyke. “The cab will hold the four of us, and the sooner we start the better.”

Our preparations were very soon made. Then the door was opened. I was assisted out through a lane of hungry-eyed spectators, held at bay by two constables, and deposited in the cab; and when the studio had been locked up, we drove off, leaving the neighbourhood to settle down to its normal condition.

XIX. — THORNDYKE DISENTANGLES THE THREADS

THE days of my captivity at Number 5A Kings Bench Walk passed with a tranquillity that made me realize the weight of the incubus that had been lifted. Now, in the mornings, when Polton ministered to me—until Arabella arrived and was ungrudgingly installed in office—I could let my untroubled thoughts stray to Marion, working alone in the studio with restored security, free for ever from the hideous menace which hung over her. And later, when she herself, released by her faithful apprentice, came to take her spell of nursing, what a joy it was to see her looking so fresh and rosy, so youthful and buoyant!

Of Thorndyke—the giver of these gifts—I saw little in the first few days, for he had heavy arrears of work to make up. However, he paid me visits from time to time, especially in the mornings and at night, when I was alone, and very delicate those visits were. For he had now dropped the investigator and there had come into his manner something new, something fatherly or elder-brotherly; and he managed to convey to me that my presence in his chambers was a source of pleasure to him—a refinement of hospitality that filled up the cup of my gratitude to him.

It was on the fifth day, when I was allowed to sit up in bed—for my injury was no more than a perforating wound of the outer side of the calf, which had missed every important structure—that I sat watching Marion making somewhat premature preparations for tea, and observed with interest that a third cup had been placed on the tray.

“Yes,” Marion replied to my inquiry, “the Doctor is coming to tea with us to-day. Mr. Polton gave me the message when he arrived.” She gave a few further touches to the tea-set and continued: “How sweet Dr. Thorndyke has been to us, Stephen! He treats me as if I were his daughter, and however busy he is, he always walks with me to the Temple gate and puts me into a cab. I am infinitely grateful to him—almost as grateful as I am to you.”

“I don’t see what you have got to be grateful to me for,” I remarked.

“Don’t you?” said she. “Is it nothing to me, do you suppose, that in the moment of my terrible grief and desolation, I found a noble chivalrous friend whom I trusted instantly, that I have been guarded through all the dangers that threatened me, and that at last I have been rescued from them and set free to go my ways in peace and security? Surely, Stephen, dear, all this is abundant matter for gratitude. And I owe it all to you.”

“To me!” I exclaimed in astonishment, recalling secretly what a consummate donkey I had been. “But there, I suppose it is the way of a woman to imagine that her particular gander is a swan.”

She smiled a superior smile. “Women,” said she, “are very intelligent creatures. They are able to distinguish between swans and ganders, whereas the swans themselves are apt to be muddle-headed and self-depreciatory.”

“I agree to the muddle-headed factor,” I rejoined, “and I won’t be unduly ostentatious as to the ganderism. But to return to Thorndyke, it is extraordinarily good of him to allow himself to be burdened with me.”

“With us,” she corrected.

“It is the same thing, sweetheart. Do you know if he is going to give us a long visit?”

“I hope so,” she replied. “Mr. Polton said that he had got through his arrears of work and had this afternoon free.”

“Then,” said I, “perhaps he will give us the elucidation he promised me some time ago. I am devoured by curiosity as to how he unravelled the web of mystification that the villain, Bendelow, spun round himself.”

“So am I,” said she; “and I believe I can hear his footsteps on the stair.”

A few moments later Thorndyke entered the room and, having greeted us with quiet geniality, seated himself in the easy-chair by the table and regarded us with a benevolent smile.

“We were just saying, sir,” said I, “how very kind it is of you to allow your chambers to be invaded by a stray cripple and his—his belongings.”

“I believe you were going to say ‘baggage’;” Marion murmured.

“Well,” said Thorndyke, smiling at the interpolation, “I may tell you both in confidence that you were talking nonsense. It is I who am the beneficiary.”

“It is a part of your goodness to say so, sir,” I said.

“But,” he rejoined, “it is the simple truth. You enable me to combine the undoubted economic advantages of bachelordom with the satisfaction of having a family under my roof, and you even allow me to participate in a way, as a
sort of supercargo, in a certain voyage of discovery which is to be undertaken by two young adventurers in the near future—in the very near future, as I hope."

"As I hope, too," said I, glancing at Marion, who had become a little more rosy than usual and who now adroitly diverted the current of the conversation.

"We were also wondering," said she, "if we might hope for some enlightenment on things which have puzzled us so much lately."

"That," he replied, "was in my mind when I arranged to keep this afternoon and evening free. I wanted to give Stephen—who is my professional offspring, so to speak—a full exposition of this very intricate and remarkable case. If you, my dear, will keep my cup charged as occasion arises, I will begin forthwith. I will address myself to Stephen, who has all the facts first-hand; and if, in my exposition, I should seem somewhat callously to ignore the human aspects of this tragic story—aspects which have so much in irreparable loss and bereavement to you, poor child—remember that it is an exposition of evidence, and necessarily passionless and impersonal."

"I quite realize that," said Marion, "and you may trust me to understand."

He bowed gravely, and, after a brief pause, began: "I propose to treat the subject historically, so to speak; to take you over the ground that I traversed myself, recounting my observations and inferences in the order in which they occurred. The inquiry falls naturally into certain successive stages, corresponding to the emergence of new facts, of which the first was concerned with the data elicited at the inquest. Let us begin with them.

"First, as to the crime itself. It was a murder of a very distinctive type. There was evidence, not only of premeditation in the bare legal sense, but of careful preparation and planning. It was a considered act and not a crime of impulse or passion. What could be the motive for such a crime? There appeared to be only two alternative possibilities: either it was a crime of revenge or a crime of expediency. The hypothesis of revenge could not be explored, because there were no data excepting the evidence of the victim's daughter, which was to the effect that deceased had no enemies, actual or potential; and this evidence was supported by the very deliberate character of the crime.

"We were therefore thrown back on the hypothesis of expediency, which was, in fact, the more probable one, and which became still more probable as the circumstances were further examined. But having assumed, as a working hypothesis, that this crime had been committed in pursuit of a definite purpose which was not revenge, the next question was: What could that purpose have been? And that question could be answered only by a careful consideration of all that was known of the parties to the crime—the criminal and the victim and their possible relations to one another.

"As to the former, the circumstances indicated that he was a person of some education, that he had an unusual acquaintance with poisons and such social position and personal qualities as would enable him to get possession of them; that he was subtle, ingenious and resourceful, but not far-sighted, since he took risks that could have been avoided. His mentality appeared to be that of the gambler, whose attention tends to be riveted on the winning chances and who makes insufficient provision for possible failure. He staked everything on the chance of the needle-puncture being overlooked and the presence of the poison being undiscovered.

"But the outstanding and most significant quality was his profound criminality. Premeditated murder is the most atrocious of crimes; and murder for expediency is the most atrocious form of murder. This man, then, was of a profoundly criminal type and was, most probably, a practising criminal.

"Turning now to the victim, the evidence showed that he was a man of high moral qualities; honest, industrious, thrifty, kindly and amiable and of good reputation—the exact reverse of the other. Any illicit association between these two men was therefore excluded; and yet there must have been an association of some kind. Of what kind could it have been?

"Now, in the case of this man, as in that of the other, there was one outstanding fact. He was a sculptor. And not only a sculptor but an artist in the highest class of waxwork. And not only this. He was probably the only artist of this kind practising in this country. For waxwork is almost exclusively a French art. So far as I know, all the wax figures and high-class lay figures that are made are produced in France. This man, therefore, appeared to be the unique English practitioner of this very curious art.

"The fact impressed me profoundly. To realize its significance we must realize the unique character of the art. Waxwork is a fine art, but it differs from all other fine arts in that its main purpose is one that is expressly rejected by all those other arts. An ordinary work of sculpture, no matter how realistic, is frankly an object of metal, stone or pottery. Its realism is restricted to truth of form. No deception is aimed at, but, on the contrary, is expressly avoided. But the aim of waxwork is complete deception; and its perfection is measured by the completeness of the deception achieved. How complete that may be can be judged by incidents that have occurred at Madame Tussaud's. When that exhibition was at the old Baker Street Bazaar, the snuff-taker—whose arms, head and eyes were moved by clock-work—used to be seated on an open bench; and it is recorded that, quite frequently, visitors would sit down by him on the bench and try to open conversation with him. So, too, the waxwork policeman near the door was occasionally accosted with questions by arriving visitors.

"Bearing this fact in mind, it is obvious that this art is peculiarly adapted to employment in certain kinds of fraud, such as personation, false alibi and the like; and it is probable that the only reason why it is not so employed is the great difficulty of obtaining first-class waxworks.

"Naturally, then, when I observed this connexion of a criminal with a waxwork artist, I asked myself whether the motive
of the murder was not to be sought in that artist’s unique powers. Could it be that an attempt had been made to employ the deceased on some work designed for a fraudulent purpose? If such an attempt had been made, whether it had or had not been successful, the deceased would be in possession of knowledge which would be highly dangerous to the criminal; but especially if a work had actually been executed and used as an instrument of fraud.

“But there were other possibilities in the case of a sculptor who was also a medallist. He might have been employed to produce—quite innocently—copies of valuable works which were intended for fraudulent use: and the second stage of the investigation was concerned with these possibilities. That stage was ushered in by Follett’s discovery of the guinea, the additional facts that we obtained at the Museum, and later, when we learned that the guinea that had been found was an electrotype copy, and that deceased was an expert electrotyper, all seemed to point to the production of forgeries as the crime in which Julius D’Arblay had been implicated. That was the view to which we seemed to be committed; but it did not seem to me satisfactory, for several reasons. First, the motive was insufficient—there was really nothing to conceal. When the forgeries were offered for sale, it would be obvious that someone had made them and that someone could be traced by the purchaser through the vendor. The killing of the actual maker would give no security to the man who sold the forgeries and who would have to appear in the transaction. And then, although deceased was unique as a waxworker, he was not as a copist or electrotyper. For those purposes, much more suitable accomplices might have been found. The execution of copies by deceased appeared to be a fact; but my own feeling was that they had been a mere by-product—that they had been used as a means of introduction to deceased for some other purpose connected with waxwork.

“At the end of this stage we had made some progress. We had identified this unknown man with another unknown man, who was undoubtedly a professional criminal. We had found, in the forged guinea, a possible motive for the murder. But, as I have said, that explanation did not satisfy me, and I still kept a look-out for new evidence connected with the waxworks.

“The next stage opened on that night when you arrived at Cornish’s, looking like a resuscitated ‘found drowned’. Your account of your fall into the canal and the immediately antecedent events made a deep impression on me, though I did not, at the time, connect them with the crime that we were investigating. But the whole affair was so abnormal that it seemed to call for very careful consideration; and the more I considered it, the more abnormal did it appear.

“The theory of an accident could not be entertained, nor could the dropping of that derrick have been a practical joke. Your objection that no one was in sight had no weight, since there was a gate in the wall by which a person could have made his escape. Someone had attempted to murder you; and that attempt had been made immediately after you had signed a cremation certificate. That was a very impressive fact. As you know, it is my habit to look very narrowly at cremation cases, for the reason that cremation offers great facilities for certain kinds of crime. Poisoners—and particularly arsenic and antimony poisoners—have repeatedly been convicted on evidence furnished by an exhumed body. If such poisoners can get the corpse of the victim cremated, they are virtually safe; for whatever suspicions may thereafter arise, no conviction is possible, since the means of proving the administration have been destroyed.

“Accordingly, I considered very carefully your account of the proceedings, and as I did so, strong suggestions of fraud arose in all directions. There was, for instance, the inspection window in the coffin. What was its object? Inspection windows are usually provided only in cases where the condition of the body is such that it has to be enclosed in a hermetically sealed coffin. But no such condition existed in this case. There was no reason why the friends should not have viewed the body in the usual manner in an open coffin. Again, there was the curious alternation of you and the two witnesses. First they went up and viewed deceased—through the window. Then, after a considerable interval, you and Cropper went up and viewed deceased—through the window. Then you took out the body, examined it and put it back. Again, after a considerable interval, the witnesses went up a second time and viewed the deceased—through the window.

“It was all rather queer and suspicious, especially when considered in conjunction with the attempt on your life. Reflecting on the latter, the question of the gate in the wall by the canal arose in my mind, and I examined the map to see if I could locate it. It was not marked, but the wharf was; and from this and your description it appeared certain that the gate must be in the wall of the garden of Morris’s house. Here was another suspicious fact. For Morris—who could have let you out by this side-gate—sent you by a long, roundabout route to the tow-path. He knew which way you must be going—westward—and could have slipped out of the gate and waited for you in the hut by the wharf. It was possible, and there seemed to be no other explanation of what had happened to you. Incidentally, I made another discovery. The map showed that Morris’s house had two frontages—one on Field Street and one on Market Street—and that you appeared to have been admitted by the back entrance. Which was another slightly abnormal circumstance.

“I was very much puzzled by the affair. There was a distinct suggestion that some fraud—some deception—had been practised, that what the spinsters saw through the coffin window was not the same thing as that which you saw. And yet, what could the deception have been? There was no question about the body. It was a real body. The disease was undoubtedly genuine and was, at least, the effective cause of death. And the cremation was necessarily genuine; for though you can bury an empty coffin, you can’t cremate one. The absence of calcined bone would expose the fraud instantly.

“I considered the possibility of a second body; that of a murdered person, for instance. But that would not do. For if a substitution had been effected, there would still have been a redundant body to dispose of and account for. Nothing would have been gained by the substitution.

“But there was another possibility to which no such objection applied. Assuming a fraud to have been perpetrated, here was a case adapted in the most perfect manner to the use of a waxwork. Of course, a full-length figure would have been
impossible because it would have left no calcined bones. But the inspection window would have made it unnecessary. A wax head would have done; or better still, a wax mask, which could have been simply placed over the face of the real corpse. The more I thought about it the more I impressed by the singular suitability of the arrangements to the use of a wax mask. The inspection window seemed to be designed for the very purpose—to restrict the view to a mere face and to prevent the mask from being touched and the fraud thus discovered—and the alternate inspections by you and the spinsters were quite in keeping with a deception of that kind.

“There was another very queer feature in the case. These people, living at Hoxton, elected to employ a doctor who lived miles away at Bloomsbury. Why did they not call in a neighbouring practitioner? Also, they arranged the days and even the hours at which the visits were to be made. Why? There was an evident suggestion of something that the doctor was not to know—something or somebody that he was not desired to see, that some preparations had to be made for his visits.

“Again, the note was addressed to Dr. Stephen Gray, not to Dr. Cornish. They knew your name and address, although you had only just come there, and they did not know Dr. Cornish, who was an old resident. How was this? The only explanation seemed to be that they had read the report of the inquest, or even been present at it. You there stated publicly that your temporary address was at 61 Mecklenburgh Square; that you were, in fact, a bird of passage; and you gave your full name and your age. Now, if any fraud was being carried out, a bird of passage, who might be difficult to find later, and a young one at that, was just the most suitable kind of doctor.

“To sum up the evidence at this stage: The circumstances, taken as a whole, suggested in the strongest possible manner that there was something fraudulent about this Cremation. That fraud must be some kind of substitution or personation with the purpose of obtaining a certificate that some person had been cremated, who in fact had not been cremated. In that case it was nearly certain that the dead man was not Simon Bendelow, for the certificates would be required to agree with false appearances, not true. There was a suggestion—but only a speculative one—that the deception might have been effected by means of a wax mask.

“There were, however two objections. As to the wax mask, there was the great difficulty of obtaining one. A perfect portrait mask could have been obtained only either from an artist in Paris or from Julius D’Arblay. The objection to the substitution theory was that there was a real body—the body of a real person. If the cremation was in a name which was not the name of that person, then the disappearance of that person would remain unaccounted for.

“So you see that the whole theory of the fraud was purely conjectural. There was not a single particle of direct evidence. You also see that at two points there was a faint hint of a connexion between this case and the murder of Mr. D’Arblay. These people seemed to have read of, or attended at, the inquest, and if a wax mask existed, it was quite probably made by him.

“The next stage opens with the discovery of the mask at the studio. But there are certain antecedent matters that must first be glanced at. When the attempt was made to murder Marion, I asked myself the questions: ‘1. Why did this man want to kill Marion; 2. What did he come to the studio on the preceding night to search for? 3. Did he find it, whatever it was? 4. Why had he delayed so long to make the search?’

“Let us begin with the second question. What had he come to look for? The obvious suggestion was that he had come to get possession of some incriminating object. But what was that object? Could it be the mould of some forged coin or medal? I did not believe that it was. For since the forgery or forgeries were extant, the moulds had no particular significance; and what little significance they had, applied to Mr. D’Arblay, who was, technically, the forger. My feeling was that the object was in some way connected with waxwork, and in all probability with a wax portrait mask, as the most likely thing to be used for a fraudulent purpose. And I need hardly say that the cremation case lurked in the back of my mind.

“This view was supported by consideration of the third question. Did he find what he came to seek? If he came for moulds of coins or medals, he must have found them, for none remained. But the fact that he came the next night and attempted to murder Marion—believing her to be alone—suggested that his search had failed. And consideration of the fourth question led—less decisively—to the same conclusion as to the nature of the object sought.

“Why had he waited all this time to make the search? Why had he not entered the studio immediately after the murder, when the place was mostly unoccupied? The most probable explanation appeared to me to be that he had only recently become aware that there was any incriminating object in existence. Proceeding on the hypothesis that he had commissioned Mr. D’Arblay to make a wax portrait mask, I further assumed that he knew little of the process, and—perhaps misunderstanding Mr. D’Arblay—confused the technique of wax with that of plaster. In making a plaster mask from life—as you probably know by this time—you have to destroy the mould to get the mask out. So when the mask has been delivered to the client, there is nothing left.

“But to make a wax mask, you must first make one of plaster to serve as a matrix from which to make the gelatine mould for the wax. Then, when the wax mask has been delivered to the client, the plaster matrix remains in the possession of the artist.

“The suggestion, then, was that this man had supposed that the mould had been destroyed in making the mask, and that only some time after the murder had he, in some way, discovered his mistake. When he did discover it, he would see what an appalling blunder he had made; for the plaster matrix was the likeness of his own face.

“You see that all this was highly speculative. It was all hypothetical and it might all have been totally fallacious. We still had not a single solid fact; but all the hypothetical matter was consistent, and each inference seemed to support the
"And what," I asked, "did you suppose was his motive for trying to make away with Marion?"

"In the first place," he replied, "I inferred that he looked on her as a dangerous person who might have some knowledge of his transactions with her father. This was probably the explanation of his attempt when he cut the brake-wire of her bicycle. But the second, more desperate attack, was made, I assume, when he had realized the existence of the plaster mask, and supposed that she knew of it, too. If he had killed her, he would probably have made another search with the studio fully lighted up.

"To return to our inquiry. You see that I had a mass of hypothesis but not a single real fact. But I still had a firm belief that a wax mask had been made and that—if it had not been destroyed—there must be a plaster mask somewhere in the studio. That was what I came to look for that morning; and as it happens that I am some six inches taller than Bendelow was, I was able to see what had been invisible to him. When I discovered that mask, and when Marion had disclaimed all knowledge of it, my hopes began to rise. But when you identified the face as that of Morris, I felt that our problem was solved. In an instant my card-house of speculative hypothesis was changed into a solid edifice. What had been but bare possibilities had now become so highly probable that they were almost certainties.

"Let us consider what the finding of this mask proved—subject, of course, to verification. It proved that a wax mask of Morris had been made—for here was the matrix, varnished, as you will remember, in readiness for the gelatine mould; and that mask was obviously obtained for the purpose of a fraudulent cremation. And that mask was made by Julius D'Arblay.

"What was the purpose of the fraud? It was perfectly obvious. Morris was clearly the real Simon Bendelow, and the purpose of the fraud was to create undeniable evidence that he was dead. But why did he want to prove that he was dead? Well, we knew that he was the murderer of Van Zellen, for whom the American police were searching, and he might be in more danger than we knew. At any rate, a death-certificate would make him absolutely secure—on one condition: that the body was cremated. Mere burial would not be enough; for an exhumation would discover the fraud. But perfect security could be secured only by destruction of all evidence of the fraud. Julius D'Arblay held such evidence. Therefore Julius D'Arblay must be got rid of. Here, then, was an amply sufficient motive for the murder. The only point which remained obscure was the identity of your patient and the means by which his disappearance had been accounted for.

"My hypothesis, then, had been changed into highly probable theory. The next stage was the necessary verification. I began with a rather curious experiment. The man who tried to murder Marion could have been no other than her father's murderer. Then he must have been Morris. But it seemed that he was totally unlike Morris, and the mask evidently suggested to her no resemblance. But yet it was probable that the man was Morris, for the striking features—the hook nose and the heavy brows—would be easily 'made up,' especially at night. The question was whether the face was Morris's with these additions. I determined to put that question to the test. And here Polton's new accomplishment came to our aid.

"First, with a pinch of clay, we built up on Morris's mask a nose of the shape described and slightly thickened the brows. Then Polton made a gelatine mould and from this produced a wax mask. He fitted it with glass eyes and attached it to a rough plaster head, with ears which were casts of my own painted. We then fixed on a moustache, beard and wig, and put on a shirt, collar and jacket. It was an extraordinarily crude affair, suggestive of the fifth of November. But it answered the purpose, which was to produce a photograph; for we made the photograph so had—so confused and ill-focused—that the crudities disappeared, while the essential likeness remained. As you know, that photograph was instantly recognized, without any sort of suggestion. So the first test gave a positive result. Marion's assailant was pretty certainly Morris.

"I should like to have seen Mr. Polton's prentice effort," said Marion, who had been listening, enthralled by this description.

"You shall see it now," Thorndyke replied with a smile. "It is in the next room, concealed in a cupboard."

He went out, and presently returned, carrying what looked like an excessively crude hair-dresser’s dummy, but a most extraordinarily horrible and repulsive one. As he turned the face towards us, Marion gave a little cry of horror and then tried to laugh—without very striking success.

"It is a dreadful-looking thing!" she exclaimed, "and so hideously like that fiend." She gazed at it with the most extreme repugnance for a while and then said, apologetically: "I hope you won't think me very silly, but—"

"Of course I don't," Thorndyke interrupted. "It is going back to its cupboard at once," and with this he bore it away, returning in a few moments with a smaller object, wrapped in a cloth, which he laid on the table. "Another 'exhibit,' as they say in the courts," he explained, "which we shall want presently. Meanwhile we resume the thread of our argument."

"The photograph of this waxwork, then, furnished corroboration of the theory that Morris was the man whom we were seeking. My next move was to inquire at Scotland Yard if there were any fresh developments of the Van Zellen case. The answer was that there were; and Superintendent Miller arranged to come and tell us all about them. You were present at the interview and will remember what passed. His information was highly important, not only by confirming my inference that Bendelow was the murderer, but especially by disposing of the difficulty connected with the disappearance of your patient. For now there came into view a second man—Crile—who had died at Hoxton of an abdominal cancer and had been duly buried; and when you were able to give me this man's address, a glance at the map and at the Post Office Directory showed that the two men had died in the same house. This fact, with the farther facts that they had died of virtually the same disease and within a day or two of the same date, left no reasonable doubt that we were really dealing with one man
who had died and for whom two death certificates, in different names, and two corresponding burial orders had been obtained. There was only one body, and that was cremated in the name of Bendelow. It followed that the coffin which was buried at Mr. Crile's funeral must have been an empty coffin. I was so confident that this must be so that I induced Miller to apply for an exhumation, with the results that you know.

“There now remained only a single point requiring verification: the question as to what face it was that those two ladies saw when they looked into the coffin of Simon Bendelow. Here again Polton's new accomplishment came to our aid. From the plaster mask your apprentice made a most realistic wax mask, which I offer for your critical inspection.”

He unfolded the cloth and produced a mask of thin, yellowish wax and a most cadaverous aspect, which he handed to Marion.

“Yes,” she said approvingly, “it is an excellent piece of work; and what beautiful eyelashes. They look exactly like real ones.”

“They are real ones,” Thorndyke explained with a chuckle.

She looked up at him inquiringly, and then, breaking into a ripple of laughter, exclaimed: “Of course! They are his own! Oh! how like Mr. Polton! But he was quite right, you know. He couldn't have got the effect any other way.”

“So he declared,” said Thorndyke. “Well, we hired a coffin and had an inspection window put in the lid, and we got a black skull-cap. We put a dummy head in the coffin with a wig on it; we laid the mask where the face should have been and we adjusted the jaw-bandage and the skull-cap so as to cover up the edges of the mask, and we got the two ladies here and showed them the coffin. When they had identified the tenant as Mr. Bendelow, the verification was complete, the hypothesis was now converted into ascertained fact, and all that remained to be done was to lay hands on the murderer.”

“How did you find out where Morris was living?” I asked.

“Barber did that,” he replied. “When I learned that you were being stalked, I employed Barber to shadow you. He, of course, observed Morris on your track and followed him home.”

“That was what I supposed,” said I; and for a while we were all silent. Presently Marion said: “It is all very involved and confusing. Would you mind telling us exactly what happened?”

“In a direct narrative, you mean?” he said, “Yes; I will try to reconstruct the events in the order of their occurrence. It began with the murder of Van Zellen by Bendelow. There was no evidence against him at the time, but he had to fly from America for other reasons and he left behind him incriminating traces which he knew must presently be discovered and which would fix the murder on him. His friend Crile, who fled with him, developed gastric cancer and only had a month or two to live. Then Bendelow decided that when Crile should die, he would make believe to die at that same time. To this end, he commissioned your father to make a wax mask—a portrait mask of himself with his eyes closed. His wife must then have persuaded the two spinsters to visit him—he, of course, taking to his bed when they called and being represented as a mortally sick man. Then they moved from Hornsey to Hoxton, taking Crile with him. There he engaged two doctors—Usher and Gray, both of whom lived at a distance—to attend Crile and to visit him on alternate days. Crile seems to have been deaf, or at least, hard of hearing, and was kept continuously under the influence ofmorphia. Usher, who was employed by Mrs. Bendelow—whom he knew as Mrs. Pepper—came to the front of the house in Field Street to visit Mr. Crile, while Stephen, who was employed by the Bendelows—whom he knew by the name of Morris—entered at the rear of the house in Market Street to visit the same man under the name of Bendelow. About the time of the move, Bendelow committed the murder in order to destroy all evidence of the making of the wax mask.

“Eventually Crile died—or was finished off with an extra dose of morphia—on a Thursday. Usher gave the certificate and the funeral took place on the Saturday. But previously—probably on the Friday night—the coffin-lid was unscrewed by Bendelow, the body taken out and replaced by a sack of sawdust with some lead pipe in it.

“On the Monday the body was again produced; this time as that of Simon Bendelow, who was represented as having died on the Sunday afternoon. It was put in a cremation coffin with a celluloid window in the lid. The wax mask was placed over the face; the jaw-bandage and the skull-cap adjusted to hide the place where the wax face joined the real face; and the two spinsters were brought up to see Mr. Bendelow in his coffin. They looked in through the window and, of course, saw the wax mask of Bendelow. Then they retired. The coffin-lid was taken off, the wax mask removed, the coffin-lid screwed on again, and then the two doctors were brought up. They removed the body from the coffin, examined it and put it back; and Bendelow—or Morris—put on the coffin-lid.

“As soon as the doctors were gone, the coffin-lid was taken off again, the wax mask was put back and adjusted and the coffin-lid replaced and screwed down finally. Then the two ladies were brought up again to take a last look at poor Mr. Bendelow; not actually the last look, for, at the funeral, they peeped in at the window and saw the wax face just before the coffin was passed through into the crematorium.”

“It was a diabolically clever scheme,” said I.

“It was,” he agreed. “It was perfectly convincing and consistent. If you and those two ladies had been put in the witness-box, your testimony and theirs would have been in complete agreement. They had seen Simon Bendelow (whom they knew quite well) in his coffin. A few minutes later, you had seen Simon Bendelow in his coffin, had taken the body out, examined it thoroughly and put it back, and had seen the coffin-lid screwed down; and again a few minutes later they had looked in through the coffin-window and had again seen Simon Bendelow. The evidence would appear to be beyond the possibility of
a doubt. Simon Bendelow was proved conclusively to be dead and cremated and was doubly certified to have died from natural causes. Nothing could be more complete.

"And yet," he continued, after a pause, "while we are impressed by the astonishing subtlety and ingenuity displayed, we are almost more impressed by the fundamental stupidity exhibited along with it—
a stupidity that seems to be characteristic of this type of criminal. For all the security that was gained by one part of the scheme was destroyed by the idiotic efforts to guard against dangers that had no existence. The murder was not only a foul crime; it was a tactical blunder of the most elementary kind. But for that murder, Bendelow would now be alive and in unchallenged security. The cremation scheme was completely successful. It deceived everybody. Even the two detectives, though they felt vague suspicions, saw no loophole. They had to accept the appearances at their face value.

"But it was the old story. The wrong-doer could not keep quiet. He must be forever making himself safer and yet more safe. At each move he laid down fresh tracks. And so, in the end, he delivered himself into our hands."

He paused and for a while seemed to be absorbed in reflection on what he had been telling us. Presently he looked up, and, addressing Marion, said in quiet, grave tones:

"We have ended our quest and we have secured retribution. Justice was beyond our reach; for complete justice implies restitution; and to attain that, the dead must have been recalled from beyond the grave. But, at least sometimes, out of evil cometh good. Surely it will seem to you when, in the happy years which I trust and confidently believe lie before you, your thoughts turn back to the days of your mourning and grief, that the beloved father, who, when living, made your happiness his chief concern, even in dying bequeathed to you a blessing."
THE tropic moon shone brightly on the village of Adaffia in the Bight of Benin as a fishing-canoe steered warily through the relatively quiet surf of the dry season towards the steep beach. Out in the roadstead an anchored barque stood up sharply against the moonlit sky, the yellow spark of her riding light glimmering warmly, and a white shape dimly discernible in the approaching canoe hinted of a visitor from the sea. Soon the little craft, hidden for a while in the white smother of a breaking wave, emerged triumphant and pushed her pointed nose up the beach; the occupants leaped out and, seizing her by her itmurned gunwales, hauled her forthwith out of reach of the following wave.

"You know where to go?" the Englishman demanded, turning a grim, hatchet face towards the 'headman'. "Don't take me to the wrong house."

The headman grinned. "Only one white man live for Adaffia. Me sabby him proper." He twisted a rag of cotton cloth into a kind of turban, clapped it on his woolly pate and, poising on top a battered cabin-trunk, strode off easily across the waste of blown sand that separated the beach from a forest of coconut palms that hid the village. The Englishman followed less easily, his shod feet sinking into the loose sand; and as he went, he peered with a stranger's curiosity along the deserted beach and into the solemn gloom beneath the palms, whence came the rhythmical clamour of drums and the sound of many voices joining in a strange, monotonous chant.

Through the ghostly colonnade of palm trunks, out into the narrow, tortuous alleys that served for streets, between rows of mud-built hovels roofed with unkempt grass thatch, where all was inky blackness in the shadow and silvery grey in the light, the stranger followed his guide; and ever the noise of the drums and the melancholy chant drew nearer. Suddenly the two men emerged from an alley into a large open space and in an instant passed from the stillness of the empty streets into a scene of the strangest bustle and uproar. In the middle of the space was a group of men, seated on low stools, who held between their knees drums of various sizes, which they were beating noisily, though by no means unskilfully, some with crooked sticks, others with the flat of the hand. Around the musicians a circle of dancers moved in an endless procession, the men and the women forming separate groups; and while the former danced furiously, writhing with starting muscles and streaming skins, in gestures grotesque and obscene, the latter undulated languorously with half-closed eyes and rhythmically moving arms.

The Englishman had halted in the black shadow to look on at this singular scene and to listen to the strange chant that rang out at intervals from dancers and spectators alike, when his guide touched him on the arm and pointed.

"Look, Mastah!" said he; "dem white man live. You look um?"

The stranger looked over the heads of the dancers, and, sure enough, in the very midst of the revellers, he espied a fellow-countryman seated on a green-painted gin-case, the sides of which he was pounding with his fists in unsuccessful emulation of the drummers. He was not a spectacle to engender undue pride of race. To begin with, he was obviously drunk, and as he drummed on the case and bellowed discordantly at intervals, he was not dignified. Perhaps to be drunk and dignified at one and the same time is not easy, and assuredly the task is made no easier by a costume consisting of a suit of ragged pyjamas, the legs tucked into scarlet socks, gaudy carpet slippers, and a skullcap of plaited grass. But such was the garb of this representative of a superior race, and the final touch was given to a raffish ensemble by an unlit cigar that waggled from the corner of his mouth.

The stranger stood for a minute or more watching, in silence and with grim disapproval, this unedifying spectacle, when a sudden interruption occurred. One of the dancers, a big, powerful ruffian, in giving an extra flourish to his performance, struck his foot against the gin-case and staggered on to the seated white man, who, with a loud, foolish laugh, caught him playfully by the ankle. As a result, the big negro toppled over and fell sprawling amongst the drummers. In an instant all was confusion and uproar. The drummers pummelled the fallen man, the women howled, the men shouted, and the drunken white man yelled with idiotic laughter. Then the big negro leaped to his feet with a roar of fury, and rushing at the white man, closed with him. The gin-case turned turtle at the first onset, the two combatants flew off gyrating amongst the legs of the crowd, mowing down a little lane as they went; and for some moments nothing could be distinguished save a miscellaneous heap of black bodies and limbs with a pair of carpet slippers kicking wildly in the air. But the white man, if lacking in dignity and discretion, was not deficient in valour. He was soon on his feet and hitting out right and left with uncommon liveliness and spirit. This, however, could not, and did not, last long; a simultaneous rush of angry negroes soon bore him to the ground and there seemed every prospect of his being very severely mauled.

It was at this moment that the stranger abandoned his role of a neutral spectator. Taking off his helmet and depositing it carefully in the angle of a mud wall, he lowered his head, thrust forward his shoulder, and charged heavily into the midst of the shouting mob. Now, the Slave Coast native is a sturdy, courageous fellow and truculent withal; but he does not play the Rugby game and he is a stranger alike to the subler aspects of pugilism and the gentle art of ju-jitsu. Consequently the tactics of the new assailant created quite a sensation among the Adaffia men. Their heels flew up unaccountably, their heads banged together from unknown causes, mysterious thumps, proceeding from nowhere in particular with the weight of a pile-monkey, stretched them gasping on the earth; and when they would have replied in kind, behold! the enemy was not there! They rushed at him with outstretched hands and straightway fell upon their stomachs; they grabbed at his head
and caught nothing but a pain in the shoulder or a tap under the chin; and the sledge hammer blow that was to have annihilated him either spent itself on empty air or, impinging upon the countenance of an ally, led to misunderstanding and confusion. Hampered by their own numbers and baffled by the incredible quickness of their elusive adversary, they began to view his strange manoeuvres as feats of magic. The fire of battle died down, giving place to doubt, bewilderment, and superstitious fear. The space widened round the white, silent, swiftly-moving figure; the more faint-hearted made off with their hands clapped to their mouths, screeching forth the hideous Efé alarm cry; the panic spread, and the remainder first backed away and then fairly broke into a run. A minute later the place was deserted save for the two Europeans and the headman.

The stranger had pursued the retreating mob for some distance, tripping up the stragglers or accelerating their movements by vigorous hammerings from behind, and he now returned, straightening out his drill jacket and dusting the grimy sand from his pipe-clayed shoes with a silk handkerchief. The other white man had by this time returned to the gin-case, on which he was once more enthroned with one of the abandoned drums between his knees, and, as his compatriot approached, he executed a martial roll and would have burst into song but that the cigar, which had been driven into his mouth during the conflict, now dropped into his throat and reduced him temporarily to the verge of suffocation.

"Many thanks, dear chappie," said he, when he had removed the obstruction; "moral s'port most valuable; uphold dignity of white man; congratulate you on your style; do credit to Richardson's. Excuse my not rising; reasons excellent; will appear when I do." In fact his clothing had suffered severely in the combat.

The stranger looked down at the seated figure silently and with tolerant contempt. A stern-faced, grim-looking man was this new-comer, heavy-browed, square-jawed, and hatchet-faced, and his high-shouldered, powerful figure set itself in a characteristic pose, with the feet wide apart and the hands clasped behind the back as he stood looking down on his new acquaintance.

"I suppose," he said, at length, "you realize that you're as drunk as an owl?"

"I s'pected it," returned the other gravely. "Not's an owl, though; owls very temp'rate in these parts."

At this moment the headman rose from the cabin-trunk, on which he had seated himself to view the conflict, and, picking up the stranger's helmet, brought it to him.

"Mastah," said he, earnestly, "you go for house one time. Dis place no good. Dem people be angry too much; he go fetch gun."

"You hear that?" said the stranger. "You'd better clear off home."

"Ver' well, dear boy," replied the other, suavely. "Call hansom; we'll both go."

"Whereabouts do you live?" demanded the stranger.

The other man looked up with a bland smile. "Grosvener Square, ol' fellow, A1; brass knocker 'stinguishers on doorstep. Tell cabby knock three times and ring bottom bell." He picked up the cigar and began carefully to wipe the sand from it.

"Do you know where he lives?" asked the stranger, turning to the headman.

"Yass; me sabby. He live for factory. You make him come one time, Mastah. You hear dat?"

The sound of the strange and dismal Efé alarm cry (produced by shouting or screaming continuously and patting the mouth quickly with the flat of the hand) was borne down from the farther end of the village. The headman caught up the trunk and started off up the street, while the stranger, having hoisted the seated man off the gin-case with such energy that he staggered round in a half-circle, grasped him from behind by both arms and urged him forward at a brisk trot.

"Here, I say!" protested the latter, "nusso fast, d'ye hear? I've dropped my slipper. Lemme pick up my slipper."

To these protests the stranger paid no attention, but continued to hustle his captive forward with undiminished energy.

"Lemme go, confound you! You're shaking me all to bits!" exclaimed the captive; and, as the other continued to shuffle silently, he continued: "Now I un'stand why you boosted those niggers so neatly. You're a bobby, that's what you are. I know the professional touch. A blooming escaped hobby. Well, I'm jiggered!" He lapsed, after this, into gloomy silence, and a few minutes' more rapid travelling brought the party to a high palm-leaf fence. A primitive gate was unfastened, by the simple process of withdrawing a skewer from a loop of cord, and they entered a compound in the middle of which stood a long, low house. The latter was mud-built and thatched with grass like the houses in the village, from which, indeed, it differed only in that its mud walls were whitewashed and pierced for several windows.

"Lemme welcome you to my humble cot," said the proprietor, following the headman, who had unceremoniously walked into the house and dumped down the cabin-trunk. The stranger entered a small, untidy room lighted by a hurricane-lamp, and, having dismissed the headman with a substantial 'dash', or present, turned to face his host.

"Siddown," said the latter, dropping into a dilapidated Madeira chair and waving his hand towards another. "Less' have a talk. Don't know your name, but you seem to be a decent feller—for a bobby. My name's Larkom, John Larkom, agent for Foster Brothers. This is Fosters' factory."

The stranger looked curiously round the room—so little suggestive of a factory in the European sense—and then, as he seated himself, said: "You probably know me by name: I am John Walker, of whom you have—"
He was interrupted by a screech of laughter from Larkom, who flung himself back in his chair with such violence as to bring that piece of furniture to the verge of dissolution.

"Johnny Walker!" he howled. "My immortal scissors! Sh'd think I do know you; more senses than one. I've got a letter about you—I'll show it to you. Where is that blamed letter?" He dragged out a table-drawer and rooted among a litter of papers, from which he at length extracted a crumpled sheet of paper. "Here we are. Letter from Hepburn. You 'member Hepburn? He and I at Oxford together. Merton, y'know. Less see what he says. Ah! here you are; I'll read it: 'And now I want you to do me a little favour. You will receive a visit from a pal of mine who, in consequence of certain little indiscretions, is for the moment under a cloud, and I want you, if you can, to put him up and keep him out of sight. His name I am not permitted to disclose, since being, as I have said, 'sub nube', just at present, and consequently not in search of fame or notoriety he elects to travel under the modest and appropriate name of Walker.'" At this point Larkom once more burst into a screech of laughter. "Funny devil, Hepburn! awful rum devil," he mumbled, leering idiotically at the letter that shook in his hand; then, wiping his eyes on the gaudy 'trade' tablecloth, he resumed his reading. "'He need not cause you any inconvenience, and you won't mind his company as he is quite a decent fellow—he entered at Merton just after you went down—and he won't be any expense to you; in fact, with judicious management, he may be made to yield a profit, since he will have some money with him and is, between ourselves, somewhat of a mug.' Rum devil, awful rum devil," sniggered Larkom. "Doncher think so?" he added, grinning foolishly in the other man's face.

"Very," replied the stranger, stolidly. But he did not look particularly amused.

"I think that is all I have to tell you," Larkom continued, reading from the letter. "'I hope you will be able to put the poor devil up, and, by the way, you need not tell on that I have told you about his little misfortunes.'" Larkom looked up with a ridiculous air of vexation. "There now," he exclaimed, "I've given old Hepburn away like a silly fool. But no, it was he that was a silly fool. He shouldn't have told me."

"No, he should not," agreed Walker.

"'Course not," said Larkom with drunken gravity. "Breach o' confidence. However, 's all right. 'Pend on me. Close as a lock-jawed oyster. What'll you drink?"

He waved his hand towards the table, on which a plate of limes, a stone gin jar, a bottle of bitters with a quill stuck through the cork, and a swizzle-stick, stained purple by long service, invited to conviviality.

"Have a cocktail," said Larkom. "Wine of the country. Good old swizzle-stick. I'll mix it. Or p'rhaps," he sniggered, slyly, "p'raps you'd rather have a drop of Johnny Walker—ha! ha! Hallo! Here they are. D'ye hear 'em?" A confused noise of angry voices was audible outside the compound and isolated shouts separated themselves now and again from the general hubbub.

"They're callin' us names," chuckled Larkom. "Good thing you don't un'stand the language. The nigger can be rude. Personal abuse as a fine art. Have a cocktail."

"Hadn't I better go out and send them about their business?" asked Walker.

"Lor' bless you, they haven't got any business," was the reply. "No, siddown. Lerrum alone and they'll go home. Have a cocktail." He compounded one for himself, swizzling up the pink mixture with deliberate care and pouring it down his throat with the skill of a juggler; and when Walker had declined the refreshment and lit his pipe, the pair sat and listened to the threats and challenges from the outer darkness. The attitude of masterly inactivity was justified by its results, for the noise subsided by degrees, and presently the rumble of drums and the sound of chanting voices told them that the interrupted revels had been resumed.

After the third application to the stone bottle Larkom began to grow sleepy and subsided into silence, broken at intervals by an abortive snore. Walker meanwhile smoked his pipe and regarded his host with an air of gloomy meditation. At length, as the latter became more and more somnolent, he ventured to rouse him up.

"You haven't said what you are going to do, Larkom," said he. "Are you going to put me up for a time?"

Larkom sat up in the squeaking chair and stared at him owlishly. "Put you up, ol' f'ler?" said he. "Lor bless you, yes. Wodjer think? Bed been ready for you for mor'n a week. Come'n look at it. Gettin' dam late. Less' turn in." He took up the lamp and walked with unsteady steps through a doorway into a small, bare room, the whitewashed walls of which were tastefully decorated with the mud-built nests of solitary wasps. It contained two bedsteads, each fitted with a mosquito net and furnished with a mattress, composed of bundles of rushes lashed together, and covered with a grass mat.

"Thash your doss, ol' f'ler," said Larkom, placing the lamp on the packing-case that served for a table, 'this is mine. Goo' night!' He lifted the mosquito-curtain, crept inside, tucked the curtain under the mattress, and forthwith began to snore softly.

Walker fetched in his trunk from the outer room, and, as he exchanged his drill clothes (which he folded carefully as he removed them) for a suit of pyjamas, he looked curiously round the room. A huge, hairy spider was spread out on the wall as if displayed in a collector's cabinet, and above him a brown cockroach of colossal proportions twirled his long antennae thoughtfully. The low, bumpy ceiling formed a promenade for two pallid, goggle-eyed lizards, who strolled about, defiant of the laws of gravity, picking up an occasional moth or soft-shelled beetle as they went. When he was half undressed an enormous fruit-bat, with a head like that of a fox-terrier, blundered in through the open window and flopped about the room in noisy panic for several minutes before it could find its way out again.
At length he put out the lamp, and creeping inside his curtain, tucked it in securely; and soon, despite the hollow boom of the surf, the whistle of multitudinous bats, the piping of the mosquitoes, and the sounds of revelry from the village, he fell asleep and slept until the sun streamed in on to the whitewashed wall.
II. — THE LEGATEE

LARKOM appeared to have that tolerance of alcohol that is often to be observed in the confirmed soaker. As he sat with his guest in the living-room, taking his early tea, although he looked frail and broken in health, there was nothing in his appearance to suggest that he had quite recently been very drunk. Nor, on the other hand, was his manner very different from that of the previous night, save that his articulation and his wits were both clearer.

"What made you pick out this particular health-resort for your little holiday?" he asked. "It isn't what you would call a fashionable watering-place."

"No," replied Walker. "That was the attraction. I had heard about you from Hepburn—he is my brother-in-law, you know—and as it seemed, from what he said, that your abode was on the very outside edge of the world, I marked it down as a good place to disappear in."

Larkom grinned. "You are not a bad judge, old chappie. Disappearing is our speciality. We are famous for it. Always have been. How does the old mariners' ditty run? You remember it? 'Oh, the Bight of Benin, the Bight of Benin, One comes out where three go in.' But perhaps that wasn't exactly what was in your mind?"

"It wasn't. I could have managed that sort of disappearance without coming so far. But look here, Larkom, let us have a clear understanding. I came here on spec, not having much time to make arrangements, on the chance that you might be willing to put me up and give me a job. But I haven't come to fasten on to you. If my presence here will be in any way a hindrance to you, you've only got to say so and I will move on. And I shan't take it as unfriendly. I quite understand that you have your principals to consider."

"Principals be blowed!" said Larkom. "They don't come into it; and as to me, I can assure you, J. W., that this is the first stroke of luck I've had for years. After vegetating in this God-forgotten hole with nobody but buck-niggers to speak to, you can imagine what it is to me to have a pukka white man—and a gentleman at that—under my roof. I feel like chanting 'Domine, non sum dignus'; but if you can put up with me, stay as long as you care to, and understand that you are doing me a favour by staying."

"It is very handsome of you, Larkom, to put it in that way," said Walker, a little huskily. "Of course, I understand the position and I accept your offer gratefully. But we must put the arrangement on a business footing. I'm not going to sponge on you. I must pay my share of the expenses, and if I can give you any help in working the factory—"

"Don't you be afraid, old chappie," interrupted Larkom. 'I'll keep your nose on the grindstone; and as to sharing up, we can see to that later when we cast up the accounts. As soon as we have lapped up our tea, we will go out to the store and I will show you the ropes. They aren't very complicated, though they are in a bit of a tangle just now. But that is where you will come in, dear boy."

Larkom's statement as to the 'tangle' was certainly no exaggeration. The spectacle of muddle and disorder that the store presented filled Walker at once with joy and exasperation. After a brief tour of the premises, during which he listened in grim silence to Larkom's explanations, he deliberately peeled off his jacket—which he folded up neatly and put in a place of safety—and fell to work on the shelves and lockers with a concentrated energy that reduced the native helper to gibbering astonishment and Larkom to indulgent sniggers.

"Don't overdo it, old chap," the latter admonished. "Remember the climate. And there's no hurry. Plenty of spare time in these parts. Leave yourself a bit for to-morrow." To all of which advice Walker paid no attention whatever, but slogged away at the confused raffle of stock-in-trade without a pause until close upon noon, when the cook came out to announce that "chop live for table." And even this was but a temporary pause; for soon after breakfast—or tiffin, as the Anglo-Indian calls it—when Larkom showed a tendency to doze in his chair with a tumbler of gin toddy, he stole away to renew his onslaught while the native assistant attended to the 'trade'.

During the next few days he was kept pretty fully occupied. Not that there was much business doing at the factory, but Larkom’s hand having become of late so tremulous that writing was impossible, the posting of books and answering of letters had automatically ceased.

"You're a perfect godsend to me, old chappie," said Larkom, when, by dint of two days' continuous labour, the books had been brought up to date, and Walker attacked the arrears of correspondence. "The firm wouldn't have stood it much longer. They've complained of my handwriting already. If you hadn't come I should have got the order of the boot to a certainty. Now they'll think I've got a native clerk from somewhere at my own expense."

"How about the signature?" Walker asked. "Can you manage that?"

"That's all right, dear boy," said Larkom cheerfully. "You sign slowly while I kick the table. They'll never twig the difference."

By means of this novel aid to calligraphy the letter was completed and duly dispatched by a messenger to catch the land post at Quittah. Then Walker had leisure to look about him and study the methods of West Coast trade and the manners and customs of his host. Larkom sober was not very different from Larkom drunk—amiable, easy-going, irresponsible, and only a little less cheerful. Perhaps he was better drunk. At any rate, that was his own opinion, and he acted up to it consistently. What would have happened had there been any appreciable trade at Adaffia it is impossible to guess. As it
was, the traffic was never beyond the capacity of Larkom even at his drunkest. Once or twice during the day a party of bush natives would stroll into the compound with a demijohn of palm oil or a calabash full of kernels, or a man from a neighbouring village would bring in a bushel or so of copra, and then the premises would hum with business. The demijohn would be emptied into a puncheon or the kernels stowed in bags ready for shipment, and the vendors would receive their little dose of threepenny pieces—the ordinary currency of the coast. Then the vendors would change into purchasers. A length of baft or calico, a long flint-lock gun with red-painted stock, a keg of powder, or a case of gin would replace the produce they had brought; the threepenny pieces would drift back into the chest whence they had come, and the deal would be completed.

At these functions Walker, owing to his ignorance of the language, appeared chiefly in the role of onlooker, though he took a hand at the scales, when he was about, and helped to fill the canvas bags with kernels. But he found plenty of time to wander about the village and acknowledge the appreciative grins of the men whom he had hammered on the night of his arrival or the courteous salutations of the women. Frequently in the afternoons he would stroll out to sit on the dry sand at high-water mark and, as the feathery leaves of the sea-washed palms pattered above him in the breeze, would gaze wistfully across the blue and empty ocean. One day a homeward-bound steamer came into the bay to anchor in Quittah roads; and then his gaze grew more wistful and the stern face softened into sadness.

Presently Larkom hove in sight under the palms, carolling huskily and filling a gaudy trade pipe. He came and sat down by Walker, and having struck some two dozen Swedish matches without producing a single spark, gazed solemnly at the steamer.

"Yellow funnel boat," he observed; "that'll be the Niger, old Rattray's boat. She's going home, dear boy, home to England, where hansom cabs and green peas and fair ladies and lamb chops—"

"Oh, shut up, Larkom!" exclaimed the other, gruffly.

"Right, dear boy. Mum's the word," was the bland reply, as Larkom resumed his fruitless attack on the matches. "But there's one thing I've been going to say to you," he continued after a pause, "and it's this—confound these damstinkers; I've used up a whole box for nothing—I was going to say that you'd better not show yourself out on the beach unnecessarily. I don't know what your little affair amounts to, but I should say that, if it was worth your while to cut away from home, it's worth your while to stop away."

"What do you mean?"

"I mean that you are still within the jurisdiction of the English courts; and if you should have been traced to the ship and you let yourself be seen, say, by any of the Germans who pass up and down from Quittah to Lomé or Bagiá, why, some fine day you may see an officer of the Gold Coast bearing down on you with a file of Hausas, and then it would be ho! for England, home, and beauty. You sabby?"

"I must take that risk," growled Walker. "I can't stay skulking in the house, and I'm not going to."

"As you please, dear boy," said Larkom. "I only mentioned the matter. Verbum sap. No offence, I hope."

"Of course not," replied Walker.

"I don't think you are in any immediate danger," pursued Larkom. "Old chief Akolatchi looked in on me just now and he tells me that there are no white officers at Quittah. The doctor died of blackwater fever two days ago, and the commissioner is sick and is off to Madeira by this steamer. Still, you had better keep your weather eyelid lifting."

"I mean to," said Walker; and knocking out his pipe on the heel of his shoe, he rose and shook the sand from his clothes.

"If you'll excuse my harping on a disagreeable topic, old chappie," said Larkom, as they strolled homewards along the beach, "I think you would be wise to take some elementary precautions."

"What sort?" asked Walker.

"Well, supposing you were traced to that barque, the Sappho, it would be easy to communicate with her skipper when she comes to her station at Half-Jack. Then they might ascertain that a gent named Johnny Walker with a golden beard and a Wellington nose had been put ashore at Adafia. You're a fairly easy chappie to describe, with that Romanesque boko, and fairly easy to recognize from a description."

"But, damn it, Larkom! You're not suggesting that I should cut off my nose, are you?"

"God forbid, dear boy! But you might cut off your beard and drop Johnny Walker. A clean shave and a new name would make a world of difference. No native would recognize you without your beard."

"Perhaps not. But a white police officer would spot me all right. A clean shave and a different name wouldn't deceive him."

"Not if he really meant business. But the local officials here will be pretty willing to turn a blind eye. They are not keen on arresting a white man with a parcel of niggers looking on. Lowers the prestige of the race. If a constabulary officer came down here to arrest a bearded man named Walker and found only a clean-shaved covey of the name of Cook, he'd probably say that there was no one here answering the description and go back perfectly satisfied with his tongue in his cheek."

"Do you think he really would?"
"I do. At any rate, you may as well give the authorities a chance; meet 'em half-way. Don't you think so?"

"I suppose it is the reasonable thing to do. Very well, Larkom, I will take your advice and turn myself into a bald-faced stag—I noticed that you have some razors in the store. And as to the name, well, I will adopt your suggestion in that, too. 'Cook' will do as well as any other."

"Better, old chap. Distinguished name. Great man, James Cook. Circumnavigator; all round my hat."

"All the same," said Walker, alias Cook, "I fancy you are a trifle over-optimistic. If an officer were sent down here with a warrant, I think he would have to execute it if he could. He would be running a biggish risk if he let himself be bamboozled."

"Well, dear boy," replied Larkom, "you do the transformation trick and trust in Providence. It's quite likely that the local authorities will make no move; and if a G.C.C. officer should turn up and insist on mistaking James Cook for Johnny Walker, I daresay we could find some way of dealing with him."

The other man smiled grimly. "Yes," he agreed. "I don't think he'd mistake James Cook for Mary's little lamb."

As they entered the compound a quarter of an hour later, a native rose from the kernel bag on which he had been seated, and disengaging from the folds of his cloth a soiled and crumpled letter, held it out to Larkom. The latter opened it with tremendous haste and, having glanced through it quickly, emitted a long, low whistle.

"Sacked, by jiggers!" he exclaimed, and handed the letter to his guest. It was a brief document and came to the point without circumlocution. The Adaffia factory was a financial failure, "whatever it might have been under other management," and the firm hereby dispensed with Mr. Larkom's services. "But," the letter concluded, "as we are unwilling to leave a white man stranded on the Coast, we hereby make over to you, in lieu of notice, the factory and such stock as remains in it, the same to be your own property; and we hope that you will be able to carry on the trade to more advantage for yourself than you have for us."

"Devilish liberal of them," groaned Larkom, "for I've been a rotten bad servant to the firm. But I shall never make anything of it. I'm a regular waster, old chappie, and the sooner the land-crabs have me, the better it will be for everyone.

He lifted the lid of a gin-case and dejectedly hoisted a long, low whistle.

"Stop this boozing, Larkom," said Cook, late Walker. "Pull yourself together, man, and let us see if we can't make a do of it." He spoke gently, with his hand on the other man's shoulder, for the thought of his own wrecked life had helped him to understand. It was not the mere loss of employment that had hit Larkom so hard. It was the realization, sudden and complete, of his utter futility; of his final irrevocable failure in the battle of life.

"It's awfully good of you, old chap," he said dismally; "but I tell you, I'm beyond redemption." He paused irresolutely and then added: "However, we'll stow the lush for the present and talk things over," and he let the bottle slip back into its compartment and, shut down the lid.

But he was in no mood for talking things over, at present. The sense of utter failure appeared to have overwhelmed him completely, and, though he made no further attempt upon the gin-case that evening, his spirits seemed to sink lower and lower until, about ten o'clock, he rose from his chair and silently tottered off to bed, looking pitifully frail and broken.

It was about two o'clock in the morning when Cook awoke to the consciousness of a very singular noise. He sat up in bed to listen. A strange, quick rattle, like the chatter of a jigsaw, came from the rickety bed on which Larkom slept, and with it was mingled a confused puffing that went in quick gusts.

"Anything the matter, Larkom?" he asked anxiously; and then, as a broken mumble and a loud chattering of teeth came in reply, he sprang from the bed and struck a match. A single glance made everything clear. The huddled body, shaking from head to foot, the white, pinched face, the bloodless hands with blue finger-nails, clutching the scanty bed-coverings to the trembling chin, presented a picture of African fever that even a newcomer could recognize. Hastily he lit a candle, and, gathering up every rag that he could lay hands on, from his own travelling-rug to the sitting-room table-cloth, piled them on to his shivering comrade until the sick man looked like a gigantic caddis worm.

After an hour or so the violence of the shivering fit abated; gradually the colour returned to the white face until its late pallor gave place to a deep flush. The heaped coverings were thrown on the floor, the sufferer fidgeted restlessly about the bed, his breathing became hurried, and presently he began to babble at intervals, this state of affairs lasted for upwards of an hour. Then a few beads of perspiration appeared on the sick man's forehead; the chattering and mumblings and broken snatches of song died away, and, as the parched skin broke out into dewy moisture, a look of intelligence came back to the vacant face.

"Cover me up, old chappie," said Larkom, turning over with a deep sigh. "Air strikes chilly. Thanks, old fellow; let's have the table-cloth, too. That's ripping. Now you turn in and get a bit of sleep. Sorry to have routed you up like this." He closed his eyes and at once began to doze, and Cook, creeping back to bed, lay and watched him by the light of the flickering candle. Then he, too, fell asleep.

When he awoke it was broad daylight, and through the open door he could see Larkom standing by the table in the sitting-room, wrapped in the rug. The Fanti cook was seated at the table and the solitary Kroo boy, who formed the staff of the factory, stood by his supplementary chair, his eyes a-goggle with curiosity.

"Now, Kwaku," Larkom was saying, "you see that pencil mark. Well, you take this pen and make a mark on top of it—so."
He handed the pen to the cook, who evidently followed the instructions, for his tongue protruded several inches, and he presently rose, wiping his brow. The Kroo boy took his place and the ceremony was repeated, after which the two natives retired grinning with pride.

"Gad, Larkom," exclaimed Cook, when he came out and joined his host; "that dose of fever has taken the starch out of you. You oughtn't to be up, surely?" He looked earnestly at his comrade, shocked at the aspect of the pitiful wreck before him and a little alarmed at the strange, greenish-yellow tint that showed through the waxen pallor of the face.

"Shan't be up long, dear boy," said Larkom. "Just setting things straight before I turn in for good. Now, just cast your eye over this document—deevil of a scrawl, but I expect you can make it out." He took up a sheet of paper and handed it to Cook. The writing was so tremulous as to be almost illegible, but with difficulty Cook deciphered it; and its purport filled him with astonishment. It read thus:

'This is the last will and testament of me John Larkom of Adaffia in the Gold Coast Colony, West Africa. I give and devise all my estate and effects, real and personal, which I may die possessed of or be entitled to, unto James Cook absolutely, and I appoint him the executor of this my will.

'Dated this thirteenth day of November one thousand eight hundred and ninety-seven.

'Signed by the testator in the presence of us, who thereupon made our marks in his and each other's presence.

'JOHN LARKOM.

'Kwaku Mensah of Cape Coast. His + mark

'Pea Soup of Half-Jack. His + mark.'

'I've given you your new name, you see," Larkom explained. "Take charge of this precious document and keep that letter from the firm. Burn all other papers."

"But," exclaimed Cook, "why are you talking as if you expected to snuff out? You've had fever before, I suppose?"

"Rather," said Larkom. "But you're a new-comer; you don't sabby. I'm an old coaster, and I sabby proper. Look at that, dear boy. Do you know what that means?" He held out a shaking, lemon-coloured hand, and as his companion regarded it silently, he continued:

"That means blackwater fever; and when a Johnny like me goes in for that luxury, it's a job for the gardener. And talking of that, you'd better plant me in the far corner of the compound where the empty casks are kept, by the prickly-pear hedge; I shall be out of the way of traffic there, though graves are a damned nuisance in business premises, anyhow."

"Oh, dry up, Larkom, and get to bed," growled Cook; "and, I say, aren't there any doctors in this accursed place?"

Larkom grinned. "In the fossil state, dear boy, they are quite numerous. Otherwise scarce. The medico up at Quittah died three days ago, as I told you, and there are no others on tap just now. No good to me if they were. Remember what I've told you. Burn all papers and, when you've planted me, take over the factory and make things hum. There's a living to be made here and you'll make it. Leave the swizzle-stick alone, old chappie, and if ever you should chance to meet Hepburn again, give him my love and kick him—kick him hard. Now I'm going to turn in."

Larkom's forecast of the probable course of his illness bid fair to turn out correct. In the intervals of business—which, perversely enough, was unusually brisk on this day—Cook looked in on the invalid and at each visit found him visibly changed for the worse. The pale-lemon tint of his skin gave place to a horrible dusky yellow; his voice grew weaker and his mind more clouded, until at last he sank into a partial stupor from which it was almost impossible to rouse him. He wanted nothing, save an occasional sip of water, and nothing could be done to stay the march of the fell disease.

So the day passed on, a day of miserable suspense for Cook; the little caravans filed into the compound, the kernels and copra and knobs of rubber rolled out of the calabashes on to the ground, the oil gurgled softly into the puncheon, the bush people chattered vivaciously in the store and presently departed gleefully with their purchases; and still Larkom lay silent and apathetic and ever drawing nearer to the frontier between the known and the unknown. The evening fell, the store was locked up, the compound gate was shut, and Cook betook himself with a shaded lamp to sit by the sick man's bed.

But presently the sight of that yellow face, grown suddenly so strangely small and pinched, the sharpened nose, and the sunken eyes with the yellow gleam of the half-seen eyeballs between the lids, was more than he could bear, and he stole softly through into the sitting-room, there to continue his vigil. So hour after weary hour passed. The village sank to rest (for it was a moonless night) and the sounds that came in through the open window were those of beast and bird and insect. Bats whistled out in the darkness, cicadas and crickets chirred and chirruped, the bark of the genet and the snuffling mutter of prowling civets came from without the compound, while far away the long-drawn, melancholy cry of a hyena could be heard in the intervals of the booming surf.

And all the while the sick man slowly drew nearer to the dread frontier.

It wanted but an hour to dawn when a change came. The feeble babblings and mumblings, the little snatches of forgotten songs chanted in a weak, quavering treble, had ceased for some time, and now through the open door came a new sound—the sound of slow breathing mingled with a soft, moist rattling. The watcher rose from his chair and once again crept, lamp in hand, into the dimly-lighted room, there to stand looking down gloomily at the one friend that Fate had left him. Larkom was now unconscious and lay quite still, save the heaving chest and the rise and fall of the chin with each breath.
Cook took put down the lamp, and, sitting down, gently took the damp and chilly hand in his, while he listened, in agony at his own helplessness, to the monotonous, rattling murmur that went on and on, to and fro, like the escapement of some horrible clock.

By and by it stopped, and Cook fumbled at the tepid wrist; then, after a pause, it began again with an altered rhythm and presently paused again, and again went on; and so the weary, harrowing minutes passed, the pauses growing ever longer and the rattling murmur more and more shallow. At last there came a pause so long that Cook leaned over the bed to listen. A little whispering sigh was borne to his ear, then all was still; and when, after waiting yet several minutes more, he had reverently drawn the gaudy table-cloth over the silent figure, he went back to his chair in the sitting room, there to wait, with grim face and lonely heart, for the coming of the day.

The late afternoon sun was slanting eagerly over the palm-tops as he took his way to the far corner of the compound that faced towards the western beach. The empty barrels had been rolled away and, in the clear space, close to the low prickly-pear hedge, a smooth mound of yellow sand and a rough wooden cross marked the spot where Larkom, stitched up in sacking in lieu of a coffin, had been laid to rest. The cross had occupied most of Cook's scanty leisure since the hurried burial in the morning (for trade was still perversely brisk, despite the ragged house-flag half-mast on the little flag-pole), and he was now going to put the finishing touches to it.

It was a rude enough memorial, the upright from a board from one of the long gun-crates, and the cross-piece formed by a new barrel stave cut to the requisite length; and the lack of paint left it naked and staring.

Cook laid down on the sand a box containing his materials—a set of zinc stencil plates, used for marking barrels and cases, a stencil brush, and a pot of thin black paint—and sketched out lightly in pencil the words of the inscription:

JOHN LARKOM 14TH NOVEMBER 1897

Then he picked out a J from the set of stencil plates, dipped the brush in the pot, and made the first letter, following it in order with O, H, and N. Something in the look of the familiar name—his own name as well as Larkom's—made him pause and gaze at it thoughtfully, and his air was still meditative and abstracted as he stooped and picked up the L to commence the following word. Rising with the fresh plate in his hand, he happened to glance over the low hedge along the stretch of beach that meandered away to a distant, palm-clad headland; and then he noticed for the first time a little group of figures that stood out sharply against the yellow background. They were about half a mile distant and were evidently coming towards the village; and there was something in their appearance that caused him to examine them narrowly. Four of the figures walked together and carried some large object that he guessed to be a travelling hammock; four others struggled some little distance behind; and yet three more, who walked ahead of the hammock, seemed to carry guns or rifles on their shoulders.

Still holding the plate and brush, Cook stood motionless, watching with grim attention the approach of the little procession. On it came, at a rapid pace, each step bringing it more clearly into view. The hammock was now quite distinct and the passenger could be seen lying in the sagging cloth; eight of the figures were evidently ordinary natives while the other three were plainly black men dressed in a blue uniform, wearing red caps and carrying rifles and bayonets.

Cook stopped and dropped the plate back into the box, picking out, in place of it, a plate pierced with the letter O. Dipping his brush into the paint, he laid the plate over the pencilled L on the cross and brushed in the letter. Quietly and without hurry, he followed the O with an S, M, O, N, and D; and he had just finished the last letter when an English voice hailed him from over the hedge.

He turned and saw, a little distance away, a fresh-laced Englishman in a quiet undress uniform and a cheese-cutter cap, peering at him curiously from the top a sand-hill, at the base of which stood the group of hammockmen and the three Hausas.

"There's a gate farther down," said Cook; and, as the officer turned away, he dropped the plate that he was holding back into the box, laid down the brush, and took up a camel's-hair pencil. Dipping this into the paint-pot, he proceeded deliberately and with no little skill to write the date in small letters under the name. Presently the sound of footsteps was audible from behind. Cook continued his writing with deliberate care and the footsteps drew nearer, slowing as they approached. Close behind him they halted, and a cheery voice exclaimed: "Good Lord! What a let-off!" and then added, "Poor beggar! When did he die?"

"This morning, just before dawn," replied Cook.

"Phew!" whistled the officer. "He wasn't long getting his ticket. But, I say, how did you know his name? I thought he called himself Walker."

"So he did. But he wished his name to be put on his grave."

"Naturally," said the officer. "It's no use giving an alias at the last muster. Well, poor devil! He's had rough luck, but perhaps it's best, after all. It's certainly best for me."

"Why for you?" asked Cook.

"Because I've got a warrant in my pocket to arrest him for some trouble at home—signed the wrong cheque or something of that kind—and I wasn't very sweet on the job, as you may guess. Blood's thicker than water, you know, and the poor
chap was an English gentleman after all. However, those black devils of mine don’t know what I have come for, so now nothing need be said.”

"No." He looked round into the bluff, rosy face and clear blue eyes of the officer and asked: "How did you manage to run him to earth?"

"He was traced to Bristol and to the barque Sappho after she had sailed. Then the Sappho was seen from Quittah to bring up here, right off her station—she trades to Half-Jack—and, as we were on the look-out, we made inquiries and found that a white man had come ashore here. Good thing we didn't find out sooner. Well, I'll be getting back to Quittah. I've just come down with a new doctor to take over there. My name’s Cockeram, assistant inspector G.C.C. You're Mr. Larkom, I suppose?"

"Won't you stop and have a cocktail?" asked Cook, ignoring the question.

"No, thanks. Don't take 'em. H2O is the drink for this country."

He touched his cap and sauntered to the gate, and Cook saw him walk slowly up and down behind the hedge, apparently gathering something. Presently he sauntered back into the compound looking a little sheepish, and, as he came, twisting some blossoming twigs of wild cotton into a kind of grommet and shelling the little ‘prayer-beads’ out of some Jequirity pods that he had gathered. He walked up the sandy mound and, sprinkling the scarlet seeds in the form of a cross, laid the loop of cotton-blossoms above it.

"It's a scurvy wreath," he said, gruffly, without looking at Cook, "but it's a scurvy country. So long." He walked briskly out of the compound and, flinging himself into the hammock, gave the word to march.

The other looked after him with an unwonted softening of the grim face—yet grimmer and more lean now that the beard was gone—only resuming his writing when the little procession was growing small in the distance. The date was completed now, but, dipping his brush afresh, he wrote below in still smaller letters: 'Now shall I sleep in the dust; and thou shalt seek me in the morning, but I shall not be."

Then he picked up the box and went back into the house.
III. — THE MUTINY ON THE SPEEDWELL

For a man in search of quiet and retirement, the village of Adaffia would seem to be an ideally eligible spot; especially if the man in question should happen be under a rather heavy cloud. Situated in a little known part of the Slave Coast, many miles distant from any town or settlement where white men had their abodes, it offered a haven of security to the Ishmaelite if it offered little else.

Thus reflected John Osmond, late John Walker, and now ‘Mr. James Cook’, if the need for a surname should arise. But hitherto it had not arisen; for, to the natives, he was simply ‘the white man’ or ‘mastah’, and no other European had passed along the coast since the day on which he had buried Larkom—and his own identity—and entered into his inheritance.

He reviewed the short interval with its tale of eventless and monotonous days as he sat smoking a thoughtful pipe in the shady coconut grove that encompassed the hamlet, letting his thoughts travel back anon to a more distant and eventful past, and all the while keeping an attentive eye on a shabby-looking brigantine that was creeping up from the south. It was not, perhaps, a very thrilling spectacle, but yet Osmond watched the approaching vessel with lively interest. For though, on that deserted coast, ships may be seen to pass up and down on the rim of the horizon, two or three, perhaps, in a month, this was the first vessel that had headed for the land since the day on which he had become the owner of the factory and the sole representative of European civilization in Adaffia. It was natural, then, that he should watch her with interest and curiosity, not only as a visitor from the world which he had left, but as one with which he was personally concerned; for if her people had business afloat, that business was pretty certainly with him.

At a distance of about a mile and a half from the shore the brigantine luffed up, fired a gun, hoisted a dirty red ensign, let go her anchor, scandalized her mainsail, lowered her head-sails, and roughly dewed up the square-sails. A fishing canoe, which had paddled out to meet her, ran alongside and presently returned shored with a couple of white men on board. And still Osmond made no move. Business considerations should have led him to go down to the beach and meet the white men, since they were almost certainly bound for his factory; but other considerations restrained him. The fewer white men that he met, the safer he would be: for, to the Ishmaelite, every stranger is a possible enemy or, worse still, a possible acquaintance. And then, although he felt no distaste for the ordinary trade with the natives, he did not much fancy himself standing behind a counter selling gin and tobacco to a party of British shell-backs. So he loitered under the coconuts and determined to leave the business transactions to his native assistant, Kwaku Mensah.

The canoe landed safely through the surf; the two white men stepped ashore and disappeared towards the village. Osmond refilled his pipe and walked a little farther away. Presently a file of natives appeared moving towards the shore, each carrying on his head a green-painted gin-case. Osmond counted them—there were six in all—and watched them stow the cases in the canoe. Then, suddenly, the two white men appeared, running furiously. They made straight for the canoe and jumped in; the canoe men pushed off and the little craft began to wriggle its way cautiously through the surf. And at this moment another figure made its appearance on the beach and began to make unmistakable demonstrations of hostility to the receding canoe.

Now, a man who wears a scarlet flannelette coat, green cotton trousers, yellow carpet slippers, and a gold-laced tief, sah! He tief six case gin!

"Dem sailor man, sah!" he gasped, when he had come within earshot, "he dam tief, sah! He tief six case gin!"

"Do you mean that those fellows didn’t pay for that gin?" Osmond demanded.

"No, sah. No pay nutting. Dey send de case down for beach and dey tell me find some country cloth. I go into store to look dem cloth, den dey run away for deir canoe. Dey no pay nutting."

"Very well, Mensah. We’ll go on board and collect the money or bring back the gin. Can you get a canoe?"

"All canoe go out fishing excepting dat one," said Mensah.

"Then we must wait for that one to come back," was the reply; and Osmond seated himself on the edge of dry sand that overhung the beach and fixed a steady gaze on the dwindling canoe. Mensah sat down likewise and glanced dubiously at his grim-faced employer; but whatever doubts he had as to the wisdom of the proposed expedition, he kept them to himself. For John Osmond—like Father O’Flynn—had a ‘wonderful way with him’; a way that induced unruly intruders to leave the compound hurriedly and rub themselves a good deal when they got outside. So Mensah kept his own counsel.

The canoe ran alongside the brigantine, and, having discharged its passengers and freight, put off for its return shored away. Then a new phase in the proceedings began. The brigantine’s head-sails, which lay loose on the jib-boom, began to slide up the stays; the untidy bunches of canvas aloft began to flatten out to the pull of the sheets. The brigantine, in fact, was preparing to get under way. But it was all done in a very leisurely fashion; so deliberately that the last of the square-sails was barely sheeted home when the canoe grounded on the beach.

Osmond wasted no time. While Mensah was giving the necessary explanations, he set his shoulder to the peak of the
canoe and shoved her round head to sea, regardless of the cloud of spray that burst over him.

The canoe-men were nothing loath, for the African is keenly appreciative of a humorous situation. Moreover, they had some experience of the white man's peculiar methods of persuasion and felt a natural desire to see them exercised on persons of his own colour—especially as those persons had been none too civil. Accordingly they pushed off gleefully and plunged once more into the breakers, digging their massive, trident-shaped paddles into the water to the accompaniment of those uncanny hisses, groans, and snatches of song with which the African canoe-man sweetens his labour.

Meanwhile their passenger sat in the bow of the canoe, wiping the sea water from his face and fixing a baleful glance on the brigantine, as she wallowed drunkenly on the heavy swell. Slowly the tack of the mainsail descended, and then, to a series of squeaks from the halyard-blocks, the peak of the sail rose by stow jerks. The canoe bounded forward over the great rollers, the hull of the vessel rose and began to loom large above the waters, and Osmond had just read the name 'Speedwell, Bristol' on her broad counter, when his ear caught a new sound—the 'clink, clink' of the windlass-pawl. The anchor was being hove up.

But the canoe-men had heard the sound, too, and, with a loud groan, dug their paddles into the water with furious energy. The canoe shot forward under the swaying counter and swept alongside, the brigantine rolled over as if she would annihilate the little craft, and Osmond, grasping a chain-plate, swung himself up into the channel, whence he climbed to the bulwark rail and dropped down on the deck.

The windlass was manned by six of the crew, who bobbed up and down slowly at the ends of the long levers; a seventh man was seated on the deck, with one of the gin cases open before him, in the act of uncorking a bottle. The other five cases were ranged along by the bulwark.

"Good afternoon," said Osmond, whose arrival had been unnoticed by the preoccupied crew; "you forgot to pay for that gin."

The seated man looked up with a start, first at Osmond and then at Mensah, who now sat astride the trail in a strategic position that admitted of advance or retreat as circumstances might suggest. The clink of the windlass ceased, and the six men came sauntering aft with expectant grins.

"What are you doin' a'board this ship?" demanded the first man.
"I've come to collect my dues," replied Osmond.
"Have yer?" said the sailor. "You'll be the factory bug, I reckon?"
"I'm the owner of that gin."

"Now that's where you make a mistake, young feller. I'm the owner of this here gin."

"Then you've got to pay me one pound four."

The sailor set the bottle down on the deck and rose to his feet.

"Look here, young feller," said he, "I'm goin' to give you a valuable tip—gratis. You git overboard. Sharp. D'ye hear?"
"I want one pound four," said Osmond, in a misleadingly quiet tone.

"Pitch 'im overboard, Dhoody," one of the other sailors counselled. "Send 'im for a swim, mate."

"I'm a-goin' to," said Dhoody, "if he don't clear out," and he began to advance, crabwise, across the deck in the manner of a wrestler attacking.

Osmond stood motionless in a characteristic attitude, with his long legs wide apart, his hands clasped behind him, his gaunt shoulders hunched up, and his chin thrust forward, swaying regularly to the heave of the deck, and with his grim, hatchet face turned impassively towards his adversary, presented a decidedly uninviting aspect. Perhaps Dhoody appreciated this fact; at any rate, he advanced with an ostentatious show of strategy and much intimidating air-clawing. But he made a bad choice of the moment for the actual attack, for he elected to rush in just as the farther side of the deck was rising. In an instant Osmond's statuesque immobility changed to bewilderingly rapid movement. There was a resounding "Smack, smack"; Dhoody flew backwards, capsizing two men behind him, staggered down the sloping deck, closely followed by Osmond (executing a continuous series of 'postman's knocks' on the Dhoodian countenance), and finally fell sprawling in the scuppers, with his head jammed against a stanchion. The two capsized men scrambled to their feet, and, with their four comrades, closed in on Osmond with evidently hostile intentions. But the latter did not wait to be attacked. Acting on the advice of the Duke of Wellington—whom, by the way, he somewhat resembled in appearance—to 'hit first and keep on hitting', he charged the group of seamen like an extremely self-possessed bull, hammering right and left, regardless of the unskilful thumps that he got in return, and gradually drove them, bewildered by his extraordinary quickness and the weight of his well-directed blows, through the space between the fore mast and the bulwark. Slowly they backed away before his continuous battering, hitting out at him ineffectively, hampered by their numbers and the confined space, until one man, who had had the bad luck to catch two upper cuts in succession, uttered a howl of rage and whipped out his sheath-knife. Osmond's quick eye caught the dull glint of the steel just as he was passing the file-rail. Instantly he whisked out an unoccupied iron belaying-pin, whirled it over and brought it down on the man's head. The fellow dropped like a pole-axed ox, and as the belaying-pin rose aloft once more, the other five men sprang back out of range.

How the combat might have ended under other circumstances it is impossible to say. Dhoody had disappeared—with a
bloody scalp and an obliterated eye; the man with the knife lay unconscious on the deck with a little red pool collecting by his head; the other five men had scattered and were hastily searching for weapons and missiles, so far as was possible with this bloodthirsty Bedlamite of a 'factory bug' flying up and down the deck flourishing a belaying-pin. Their principal occupation, in fact, was in keeping out of reach; and they did not always succeed.

Suddenly a shot rang out. A little cloud of splinters flew from the side of the mainmast, and the five seamen ducked simultaneously. Glancing quickly forward, Osmond beheld his late antagonist, Dhoody, emerging from the forecastle hatch and taking aim at him with a still smoking revolver. Now, the 'factory bug' was a pugnacious man and perhaps over-confident, too. But he had some idea of his limitations. You can’t walk up twenty yards of deck to punch the head of a man who is covering you with a revolver. At the moment, Osmond was abreast of the uncovered main hatch. A passing glance had shown him a tier of kernel bags covering the floor of the hold. Without a moment’s hesitation he stooped with his hands on the coaming, and, vaulting over, dropped plump on the bags, and then, picking himself up, scrambled forward under the shelter of the deck.

The hold of the Speedwell, like that of most vessels of her class, was a simple cavity, extending from the forecastle bulkhead to that of the after-cabin. Of this the forward part still contained a portion of the out ward cargo, while the homeward lading was stowed abaft the main hatch. But the hold was two-thirds empty and afforded plenty of room to move about.

Osmond took up a position behind some bales of Manchester goods and waited for the next move on the part of the enemy. He had not long to wait. Voices from above told him that the crew had gathered round the hatch; indeed, from his retreat, he could see some of them craning over the coamings, peering into the dark recesses of the hold.

"What are yer goin' to do, Dhoody?" one of the men asked.

"I’m goin’ below to finish the beggar off," was the reply in a tone of savage determination.

The place of a ladder was supplied by wooden footholds nailed to the massive stanchion that supported the deck and rested on the kelson. Osmond kept a sharp eye on the top foothold, clambering quickly on the closely packed bales to get within reach; and as a booted foot appeared below the beam and settled on the projection, he brought down his belaying-pin on the toe with a rap that elicited a yell of agony and caused the hasty withdrawal of the foot. For a minute or more the air was thick with executions, and, as Osmond crept back into shelter, an irregular stamping on the deck above suggested some person hopping actively on one leg.

But the retreat was not premature. Hardly had Osmond squeezed himself behind the stack of bales when a succession of shots rang out from above, and bullet after bullet embedded itself in the rolls of cotton cloth. Osmond counted five shots and when there came an interval—presumably to reload—he ventured to peer between the bales, and was able to see Dhoody frantically emptying the discharged chambers of the revolver and ramming in fresh cartridges, while the five sailors stared curiously into the hold.

"Now then," said Dhoody, when he had re-loaded, "you just nip down, Sam Winter, and see if I've hit him, and I'll stand by here to shoot if he goes for yer."

"Not me," replied Sam. "You ’and me the gun and just pop down yerself. I'll see as he don't hurt yer."

"How can I?" roared Dhoody, "with me fut hammerered into a jelly?"

"Well," retorted Sam, "what about my feet? D'ye think I can fly?"

"Oh," said Dhoody, contemptuously, "if you funk the job, I won't press yer. Bob Simmons ain't afraid, I know. He'll go."

"Will he?" said Simmons. "I'm jiggered if he will! That bloke's too handy with that pin for my taste. But I'll hold the gun while you go, Dhoody."

Dhoody cursed the whole ship's company collectively and individually for a pack of chicken-livered curs. But not one of them would budge. Each was quite willing, and even eager, to do the shooting from above; but no one was disposed to go below and 'draw the badger.' The proceedings seemed to have come to a deadlock when one of the sailors was inspired with a new idea.

"Look'ere, mates," he said, oracularly; "'Tis like this 'ere: 'ere's this 'ere bloomin' ship with a homicidal maniac in 'er 'old. Now, none of us ain't a-goin' down there for to fetch 'im out. We don't want our 'eds broke same as what 'e's broke Jim Darker's 'ed. Contrarywise, so long as 'e's loose on this ship, no man's life ain't worth a brass farden. Wherefore I says, bottle 'im up, I says; clap on the hatch-covers and batten down. Then we've got 'im, and then we can sleep in our bunks in peace."

"That's right enough, Bill," another voice broke in, "but you're forgettin' that we've got a little job to do down below there."

"Not yet, we ain't," the other rejoined; "not afore we gets down Ambriz way, and he'll be quiet enough by then."

This seemed to satisfy all parties, including even the ferocious Dhoody, and a general movement warned Osmond that his incarceration was imminent. For one moment he was disposed to make a last, desperate sortie, but the certainty that he would be a dead man before he reached the deck decided him to lie low. Many things might happen before the brigantine reached Ambriz.
As the hatchcovers grated over the coaming and dropped into their beds, the prisoner took a rapid survey of his surroundings before the last glimmer of daylight should be shut out. But he had scarcely time to memorize the geographical features of the hold before the last of the hatch-covers was dropped into its place. Then he heard the tarpaulin drag over the hatch, shutting out the last gleams of light that had filtered through the joints of the covers; the battens were dropped into their catches, the wedges driven home, and he sat, in a darkness like that of the tomb.

The hold was intolerably hot and close. The roasting deck above was like the roof of an oven. A greasy reek arose from the bags of kernels, a strange, mixed effluvium from the bales of cotton cloth. And the place was full of strange noises. At every roll of the ship, as the strain of the rigging changed sides, a universal groan arose; bulkheads squeaked, timbers grated, the masts creaked noisily in their housings, and unctuous gurgles issued from the tier of oil puncheons. It was clear to Osmond that this was no place for a prolonged residence. The sweat that already trickled down his face meant thirst in the near future, and death if he failed to discover the tank or water-casks. A diet of palm kernels did not commend itself; and, now that the hatch was covered, the water in the bilge made its peculiar properties manifest. The obvious necessity was to get out; but the method of escape was not obvious at all.

From his own position Osmond's thoughts turned to the state of the vessel. From the first, it had been evident to him that there was something very abnormal about this ship. Apart from the lawless behaviour of the crew, there was the fact that since he had come on board he had seen no vestige of an officer. Dhoody had seemed to have some sort of authority, but the manner in which the men addressed him showed that he had no superior status. Then, where was the 'afterguard'? They had not gone ashore. And there had been enough uproar to bring them on deck if they had been on board. There was only one reasonable conclusion from these facts, and it was confirmed by Dhoody's proprietary air and by a certain brown stain that Osmond had noticed on the deck. There had been a mutiny on the Speedwell.

The inverterate smoker invokes the aid of tobacco in all cases where concentrated thought is required. Osmond made shift to fill his pipe in the dark, and, noting that his tobacco was low, struck a match. The flame lighted up the corner into which he had crept and rendered visible some objects that he had not noticed before; and, at the first glance, any lingering uncertainty as to the state of affairs on the Speedwell vanished in an instant. For the objects that he had seen comprised a shipwright's auger, a caulking mallet, and a dozen or more large wooden pegs cut to a taper at one end.

The purpose of these appliances was unmistakable, and very clearly explained the nature of the 'little job' that the sailors had to do down below. Those rascals intended to scuttle the ship. Holes were to be bored in the bottom with the auger and the plugs driven into them. Then, when the mutineers were ready to leave, the plugs would be pulled out, and the ship abandoned with the water pouring into her hold. It was a pretty scheme, if not a novel one, and it again suggested the question: Where were the officers?

Turning over this question, Osmond remembered that Dhoody had gone to the forecastle to fetch his revolver. Then the crew would appear to be still occupying their own quarters; whence it followed that, if the officers were on board, they were probably secured in their berths aft.

This consideration suggested a new idea. Osmond lit another match and explored the immediate neighbourhood in the hope of finding more tools; but there were only the auger and the mallet, the pegs having probably been tapered with a sheath-knife. As the match went out, Osmond quenched the glowing tip, and, picking up the auger and mallet, though for the latter he had no present use, began to grope his way aft. The part of the hold abaft the main hatch had a ground tier of oil-puncheons, above which was stowed a quantity of produce, principally copra and kernels in bags. Climbing on top of this, Osmond crawled aft until he brought up against the bulkhead that separated the cabin from the hold. Here he commenced operations without delay. Rapping with his knuckles to make sure of the absence of obstructing stanchions, he set the point of the auger against the bulkhead, and, grasping the cross lever, fell to work vigorously. It was a big tool, boring an inch and a half hole, and correspondingly heavy to turn; but Osmond drove it with a will, and was soon rewarded by feeling it give with a jerk, and when he withdrew it, there was a circular hole through which streamed the welcome daylight.

He applied his eye to the hole (which, in spite of the thickness of the planking, afforded a fairly wide view) and looked into what was evidently the cuddy or cabin. He could see a small, nearly triangular table fitted with 'fiddles', or safety rims, between which a big water-bottle slid backwards and forwards as the ship rolled, pursued by a dozen or more green limes and an empty tumbler—a sight which made his mouth water. Opposite was the companion-ladder and at each side of it a door—probably those of the captain's and mate's cabins. Above the table would be the sky light, though he could not see it; but he could make out some pieces of broken glass on the floor and one or two on the table; and he now recalled that he had noticed, when on deck, that the skylight glass was smashed.

Having made this survey, he returned to his task. Above the hole that he had bored, he proceeded to bore another, slightly intersecting it, and above this another, and so on; tracing a continuous curved row of holes, each hole encroaching a little on the next, and the entire series looking, from the dark hold, like a luminous silhouette of a string of beads. It was arduous work, and monotonous, but Osmond kept at it with only an occasional pause to wipe his streaming face and steal a wistful look at the water-bottle on the cabin table. No sign did he perceive there of either officers or crew; indeed the latter were busy on deck, for he had heard the clink of the windlass, and when that had ceased, the rattle of running gear as the sails were trimmed. And meanwhile the curved line of holes extended along the bulkhead and began to define an ellipse some eighteen inches by twelve.

By the time he had made the twenty-fourth hole, a sudden weakening of the light that came through informed him that
the sun was setting. He took a last peep into the cabin before the brief tropic twilight should have faded, and was surprised to note that the tumbler seemed to have vanished and that there appeared to be less water in the bottle. Speculating vaguely on the possible explanation of this, he fell to work again, adding hole after hole to the series, guiding himself by the sense of touch when the light failed completely.

The thirty-eighth hole nearly completed the ellipse, and was within an inch of the first one bored. Standing back from the bulkhead, Osmond gave a vigorous kick on the space enclosed by the line of holes, and sent the oval piece of planking flying through into the cabin. Passing his head through the opening, he listened awhile. Sounds of revelry from the deck, now plainly audible, told him that the gin was doing its work and that the crew were fully occupied. He slipped easily through the opening, and, groping his way to the table, found the water-bottle and refreshed himself with a long and delicious draught. Then, feeling his way to the companion-ladders he knocked with his knuckles on the door at its port side.

No one answered; and yet he had a feeling of some soft and stealthy movement within. Accordingly he knocked again, a little more sharply, and as there was still no answer, he turned the handle and pushed gently at the door, which was, however, bolted or locked. But the effort was not in vain, for as he gave a second, harder push, a woman's voice—which sounded quite near, as if the speaker were close to the door—demanded "Who is there?"

Considerably taken aback by the discovery of this unexpected denizen of the mutiny-ridden ship, Osmond was for a few moments at a loss for a reply. At length, putting his mouth near to the keyhole (for the skylight was open and the steersman, at least, not far away), he answered softly: "A friend."

The reply did not appear to have the desired effect, for the woman—also speaking into the keyhole—demanded sharply: "But who are you? And what do you want?"

These were difficult questions. Addressing himself to the first, and boggling awkwardly at the unaccustomed lie, Osmond stammered:

"My name is—er—is Cook, but you don't know me. I am not one of the crew. If you wouldn't mind opening the door, I could explain matters."

"I shall do nothing of the kind," was the reply.

"There's really no occasion for you to be afraid," Osmond urged.

"Isn't there?" she retorted. "And who said I was afraid? Let me tell you that I've got a pistol, and I shall shoot if I have any of your nonsense. So you'd better be off."

Osmond grinned appreciatively but decided to abandon the parley.

"Is there anyone afoot besides you?" he asked.

"Never you mind," was the tart reply. "You had better go back where you came from."

Osmond rose with a grim smile and began cautiously to feel his way towards the companion-steps and past them to the other door that he had seen. Having found it and located the handle, he rapped sharply but not too loudly.

"Well?" demanded a gruff voice from within.

Osmond turned the handle, and, as a stream of light issued from the opening door, he entered hastily and closed it behind him. He found himself in a small cabin lighted by a candle-lamp that swung in gimballs from the bulkhead. One side was occupied by a bunk in which reclined a small, elderly man, who appeared to have been reading, for he held an open volume, which Osmond observed with some surprise to be Apollin's Commentary On the Book of Job. His head was roughly bandaged and he wore his left arm in a primitive sling.

"Well," he repeated, taking off his spectacles to look at Osmond.

"You are the captain, I presume?" said Osmond.

"Yes. Name of Hartup. Who are you?"

Osmond briefly explained the circumstances of his arrival on board.

"Ah!" said the captain. "I wondered who was boring those holes when I went into the cabin just now. Well, you've put your head into a hornet's nest, young man."

"Yes," said Osmond "and I'm going to keep it there until I'm paid to take it out."

The captain smiled sourly. "You are like my mate, Will Redford; very like him you are to look at, and the same quarrelsome disposition, apparently."

"Where is the mate now?"

"Overboard," replied the captain. "He got flourishing a revolver and the second mate stabbed him."

"Is the second mate's name Dhoody?"

"Yes. But he's only a substitute. The proper second mate died up at Sherbro, so I promoted Dhoody from before the mast."
"I take it that your crew have mutinied?"

"Yes," said the captain, placidly. "There is over a ton of ivory on board and two hundred ounces of gold dust in that chest that you are sitting on. It was a great temptation. Dhoody began it and Redford made it worse by bullying."

"Dhoody seems to be a tough customer."

"Very," said the captain. "A violent man. A man of wrath. I am surprised that he didn't make an end of you."

"So is he, I expect," Osmond replied with a grin; "and I hope to give him one or two more surprises before we part. What are you going to do?"

The captain sighed. "We are in the hands of Providence," said he.

"You'll be in the hands of Davy Jones if you don't look out," said Osmond. "They are going to scuttle the ship when they get to Ambriz. Can I get anything to eat?"

"There is corned pork and biscuit in that locker," said the captain "and water and limes on the cabin table. No intoxicants. This is a temperance ship."

Osmond smiled grimly as a wild chorus from above burst out as if in commentary on the captain's statement. But he made no remark. Corned pork was better than discussion just now.

"You seem to have been in the wars," he remarked, glancing at the skipper's bandaged head and arm.

"Yes. Fell down the companion; at least, Dhoody shoved me down. I'll get you to fix a new dressing on my arm when you've finished eating. You'll find some lint and rubber plaster in the medicine chest there."

"By the way," said Osmond, as he cracked a biscuit on his knee, "there's a woman in the next berth. Sounded like quite a ladylike person, too. Who is she?"

The captain shook his head. "Yes," he groaned, "there's another complication. She is a Miss Burleigh; daughter of Sir Hector Burleigh, the Administrator or Acting Governor, or something of the sort, of the Gold Coast."

"But what the deuce is she doing on an old rattle trap of a windjammer like this?"

The captain sat up with a jerk. "I'll trouble you, young man," he said, severely, "to express yourself with more decorum. I am the owner of this vessel, and if she is good enough for me she will have to be good enough for you. Nobody asked you to come aboard, you know."

"I beg your pardon," said Osmond. "Didn't mean to give offence. But you'll admit that she isn't cut out for the high-class passenger trade."

"She is not," Captain Hartup agreed, "and that is what I pointed out to the young woman when she asked for a passage from Axim to Accra. I told her we had no accommodation for females, but she just giggled and said that didn't matter. She is a very self-willed young woman."

"But why didn't she take a passage on a steamer?"

"There was no steamer due for the Leeward Coast. Her father, Sir Hector, tried to put her off; but she would have her own way. Said it would be a bit of an adventure; travelling on a sailing ship."

"Gad! She was right there," remarked Osmond.

"She was, indeed. Well, she came aboard and Redford gave her his berth, he moving into the second mate's berth, as Dhoody remained in the forecastle. And there she is; and I wish she was at Jericho."

"I expect she does, too. What happened to her when the mutiny broke out?"

"I told her to go to her berth and lock herself in. But no one attempted to molest her."

"I am glad to hear that," said Osmond, and as he broke another biscuit, he asked: "Did you secure the companion-hatch?"

"Miss Burleigh did. She fixed the bar across the inside of the doors. But it wasn't necessary, for they had barricaded the doors outside. They didn't want to come down to us, they only wanted to prevent us from going up on deck."

"She was wise to bolt the doors, all the same," said Osmond; and for a time there was silence in the cabin, broken only by the vigorous mastication of stony biscuit.
IV. — THE PHANTOM MATE

WHEN he had finished his rough and hasty meal, Osmond attended to his host's injuries, securing a pad of lint on the lacerated arm with strips cut from a broad roll of the sticky rubber plaster. Then he went out into the cabin to reconnoitre and take a drink of water, closing the door of the captain's berth so that the light should not be seen from above.

The hubbub on deck had now subsided into occasional snatches of indistinct melody. The men had had a pretty long bout and were—to judge by the tone of the songs—getting drowsy. Osmond climbed on to the table and began carefully to pick the remainder of the glass out of the skylight frame. The skylight had a fixed top—there being a separate ventilator for the cabin—and, instead of the usual guard-bars, had loose wood shutters for use in bad weather. Hence the present catastrophe; and hence, when Osmond had picked away the remains of the glass, there was a clear opening through which he could, by hoisting himself up, thrust out his head and shoulders. To avoid this fatiguing position, however, he descended and placed on the table a case that he had noticed by daylight on a side-locker; then, mounting, he was able, by standing on this, to look out at his ease, and yet pop down out of sight if necessary.

When he cautiously thrust out his head to look up and down the deck, he was able at first to see very little, though there was now a moderate starlight. Forward, whence drowsy mumblings mingled with snores came from the neighbourhood of the cabin, he could see only a projecting pair of feet; and aft, where a single voice carolled huskily intervals, his view was cut off by the boat—which lay at the side of the deck—and by the hood of the companion-hatch. He craned out farther; and now he could catch a glimpse of the man at the wheel. The fellow was not taking his duties very seriously, for he was seated on the grating unhandily filling his pipe and letting the ship steer herself; which she did well enough, if direction was of no consequence, the light breeze being a couple of points free and the main-sheet well slacked out. Osmond watched the man light his pipe, recognizing then the flat, shaven face—which he had punched earlier in the day—and as he watched he rapidly reviewed the strategic position and considered its possibilities. The flat, shaven face, with its wide mouth, offered a vague suggestion. He considered; looked out again; listened awhile; and then descended with a distinctly purposeful air. First he crept silently up the steps of the companion and softly removed the bar from the inside of the doors. Then he made his way to the skipper's cabin.

As he entered, the "old man" looked up from his book inquiringly.

"I've come down for a bit of rubber plaster," said Osmond.

The skipper nodded towards the medicine-chest and resumed his studies, while Osmond cut off a strip of plaster some seven inches by four.

"You haven't got any thin rope or small-stuff in here, I suppose?" said Osmond.

"There's a coil of rope-yarn on the peg under those oilskins—those smart yellow ones; those were poor Redford's. He was too much of a dandy to wear common black oilies like the rest of us. What do you want the stuff for?"

"I want to try a little experiment," replied Osmond. "But I'll tell you about it afterwards.; and he took down the oilskins and the coil of line, the latter of which he carried away with him to the main cabin together with the roll of plaster and the scissors. Here, by the faint starlight that now mitigated the darkness, he cut off a couple of lengths of the line and, having pocketed one and made a bowline-knot or fixed loop in the end of the other, ascended the table and once more looked out on deck. Save for some resonant snoring from forward, all was quiet and the ship seemed to have settled down for the night. The helmsman, however, was still awake, for Osmond heard him yawn wearily; but he had left the wheel with a rope hitched round one of the spokes, and was now leaning over the quarter-rail, apparently contemplating the passing water.

It was an ideal opportunity. Grasping the frame of the skylight, Osmond gave a light spring and came through the opening like a very stealthy harlequin. Then, creeping along the deck in the shelter of the boat and that of the companion-hood, he rose and stole noiselessly on the toes of his rubber-soled shoes towards the preoccupied seaman. Nearer and nearer he crept, grasping an end of the line between the fingers of either hand, and holding the strip of plaster spread out on the palm of the left, until he stood close behind his quarry. Then, as the sailor removed his pipe to emit another enormous yawn, he slipped his left hand round, clapped the plaster over the open mouth, and instantly pinioned the man's arms by clasping him tightly round the chest. The fellow struggled furiously and would have shouted, but was only able to utter muffled grunts and snorts through his nose. His arms were gripped to his sides as if in a vice and his efforts to kick were all foreseen and adroitly frustrated. He had been taken by surprise by a man who was his superior in mere strength and who was an expert wrestler into the bargain; and he was further handicapped by superstitious terror and lack of breath.

The struggle went on with surprisingly little noise—since the sailor could not cry out—and meanwhile Osmond contrived to pass the end of the line through the loop of the bowline and draw it inch by inch until it was ready for the final pull. Then, with a skilful throw, he let the man down softly, face downwards, on the deck; jerked the line tight and sat on his prisoner's legs. He was now master of the situation. Taking another turn with the line round the man's body, he secured it with a knot in the middle of the back, and with the other length of line, which he had in his pocket, he lashed his captive's ankles together.

The almost noiseless struggle had passed unnoticed by the sleepers forward. No watch or look-out had been set and it had apparently been left to the helmsman to rouse up his relief when he guessed his "trick" at the wheel to have expired.
Osmond listened for a few moments, and then, removing the batten with which the doors of the companion had been secured on the outside, opened the hatch, slid his helpless prisoner down the ladder; closed the doors again, replaced the batten, and, creeping through the opening of the sky light, let himself down into the cabin. Here he seized his writhing captive, and, dragging him across the cabin, thrust him head-first through the hole in the bulkhead and followed him into the hold, where he finally deposited him as comfortably as possible on the kernel bags under the main hatch.

"Now, listen," he said, sternly. "I'm going to take that plaster off your mouth; but if you utter a sound, I shall stick it on again and fix it with a lashing." He peeled the plaster off, and, as the man drew a long breath, he demanded: "Do you hear what I say?"

"Yes," was the reply; "I hear. You've got me, governor, fair on the hop, you have. You won't hear no more of me. And if you can cop that there Dhoody the same way, there won't be no more trouble on this ship."

"I'll see what can be done," said Osmond; and with this he returned into the cabin, and, cutting off two fresh lengths of rope-yarn and another piece of plaster, prepared for a fresh capture.

But, at present, there was no one to capture. The wheel jerked to and fro in its lashing, the brigantine walloped along quietly before the soft breeze, the crew slumbered peacefully forward, and Osmond looked out of the skylight on an empty deck, listening impatiently to the chorus of snores and wondering if he would get another chance.

It is impossible to say how long this state of affairs would have lasted if nothing had happened to disturb it. As it was, a sudden accident dispelled the universal repose. The unsteered vessel, yawning from side to side, lifted her stern to a following sea and yawed so far that her mainsail got by the lee. The long boom swung inboard and the big sail jibed over with a slam that shook the entire fabric. The vessel immediately broached to with all her square-sails aback, and heeled over until the water bubbled up through her scupper holes.

The noise and the jar roused some of the sleepers forward and a hoarse voice bawled out angrily: "Now you, Sam! What the devil are you up to? You'll have the masts overboard if you don't look out."

Immediately after, Dhoody came staggering aft along the sloping deck, followed by one or two bewildered sailors. The group stood gazing in muddled surprise at the untended wheel, and Dhoody exclaimed:

"Where's the beggar gone to? Here, you Sam! Where are you?"

"Praps he's gone down to the cabin," one of the men suggested.

"No, he ain't," said Dhoody. "The companion's fastened up."

"So it is, mate," agreed the other with a glance at the battened doors; and the party rambled slowly round the poop, peering out into the darkness astern and speculating vaguely on the strange disappearance.

"He's gone overboard," said Dhoody; "that's what he's done. So you'd better take the wheel now, Bob Simmons; and you just mind yer helm, or you'll be goin' overboard, too, with all that lush in yer 'ed."

Accordingly Simmons, protesting sleepily that it "wasn't his trick yet," took his place at the wheel. The vessel was put once more on her course, and the men, with the exception of Dhoody, crawled forward to the shelter of the caboose. The second mate remained awhile, yawning drearily and impressing on the somnolent Simmons the responsibilities of his position. Then, at last, he too went forward, and the ship settled down to its former quiet.

Osmond waited for some time in case Dhoody should return to see that the new helmsman was attending to his instructions; but as he made no reappearance and was now probably asleep, it seemed safe to resume operations. Osmond thrust his head and shoulders out through the opening, but, though he could see that the wheel was already deserted, the unfaithful Simmons was invisible. Presently, however, a soft snore from somewhere close by invited him to further investigation, and as he crept out on deck, the enormity of Simmons's conduct was revealed. He had not sunk overpowered at his post, but had deliberately seated himself on the deck in a comfortable position with his back against the doors of the companion, where he now reclined at his ease, wrapped in alcoholic slumber. If only Dhoody would keep out of the way, the capture was as good as made.

Osmond stole up to the sleeping seaman and softly encircled his arms with the noose, leaving it slack with the end handy for the final pull. Then he put the man's feet together, and passing the lashing round the ankles, secured it firmly. This aroused the sleeper, who began to mumble protests. Instantly, Osmond slapped the plaster on his mouth, jerked the arm-lashing tight and secured it with a knot; unbattened the doors, and, opening them, slid the wriggling captive down the ladder on to the cabin floor. Then he came up, closed and re-battened the doors, slipped down through the skylight, and, dragging his prisoner to the bulkhead, bundled him neck and crop through the opening and finally deposited him on the kernel-bags beside the other man, who was now slumbering peacefully. Having removed the plaster, he remained awhile, for Simmons was in no condition to give promises of good behaviour; but in a few minutes he gave what was more reassuring, a good healthy snore; on which Osmond departed, leaving him to sleep the sleep of the drunk.

The capture had been made none too soon. As Osmond came through into the cabin, he was aware of voices on deck, and, climbing on to the table, put his head up to listen, but keeping carefully out of sight.

"It's a dam rum go," a hoarse voice exclaimed. "Seems as if there was somethink queer about this bloomin' ship. First of all this factory devil comes aboard like a roarin' lion seekin' who can bash on the 'ed; then Sam goes overboard; then Bob Simmons goes overboard. 'Tain't nateral, I tell yer. There's somethink queer, and it's my belief as it's all along o' this
mutiny."

"Oh, shut up, Bill," growled Dhoody.

"Bill's right, though," said another voice. "We ain't 'ad no luck since we broke out. I'm for chuckin' this Ambriz job and lettin' the old man out."

"And what about Redford?" demanded Dhoody.

"Redford ain't no affair of mine," was the sulky reply; to which Dhoody rejoined in terms that cannot, in the interests of public morality, be literally recorded; concluding with the remark that 'if he'd got to swing, it wouldn't be for Redford only'.

"Then," said the first speaker, "you'd better take the wheel yerself. I ain't goin' to."

"More ain't I," said another. "I don't want to go overboard."

A prolonged wrangle ensued, the upshot of which was that the men drifted away forward, leaving Dhoody to steer the ship.

Osmond quietly renewed his preparations, though he realized that a considerably tougher encounter loomed ahead. Dhoody was not only less drunk than the others; he was a good deal more alert and intelligent and he probably had a revolver in his pocket. And the other men would now be more easily roused after this second catastrophe. He peeped out from time to time, always finding Dhoody wide awake at his post, and sensible of drowsy conversation from the sailors forward.

It was fully an hour before a chance seemed to present itself; and Osmond was too wary to attack blindly without a chance. By that time the mumbles from forward had subsided into snores and the ship was once more wrapped in repose. Looking out at that moment, he saw Dhoody staring critically aloft, as if dissatisfied with the trim of the sails. Presently the second mate stepped away from the wheel, and, casting off one of the lee braces, took a long pull at the rope. Now was the time for action. Slipping out through the skylight, Osmond stole quickly along in the shelter of the boat, and, emerging behind Dhoody, stood up just as the latter stooped to belay the rope. He waited until his quarry had set a half-hitch on the last turn and rose to go back to the wheel; then he sprang at him, clapped the plaster on his mouth, and encircled him with his arms.

But Dhoody was a tough adversary. He was stronger, more sober, and less nervous than the others. And he had a moustache, which interfered with the set of the plaster, so that his breathing was less hampered. In fact, Osmond had to clap his hand on it to prevent the man from calling out; and thus it was that the catastrophe befell. For as Osmond relaxed his bear-hug with one arm, Dhoody wriggled himself partly free. In a moment his hand flew to his pocket, and Osmond grabbed his wrist only just in time to prevent him from pointing the revolver. Then followed a struggle at the utmost tension of two strong men; a struggle, on Osmond's side, at least, for dear life. Gripping the other man's wrists, he watched the revolver, all his strength concentrated on the effort to prevent its muzzle from being turned on him. And so the two men stood for a space, nearly motionless, quite silent, trembling with the intensity of muscular strain.

Suddenly Dhoody took a quick step backwards. A fatal step; for the manoeuvre failed, and Osmond followed him up, pressing him farther backward. The bulwark on the poop was comparatively low. As Dhoody staggered against it with accumulated momentum, his body swung outboard and his feet rose from the deck. It was impossible to save him without releasing the pistol hand. He remained poised for an instant on the rail and then toppled over; and as he slithered down the side and his wrist slipped from Osmond's grasp, the revolver discharged, blowing a ragged hole in the bulwark and waking the echoes in the sails with the din of the explosion.

Osmond sprang back to the companion-hatch and crouched behind the hood. There was no time for him to get back to the skylight; indeed he hardly had time to unfasten the doors and drop on to the ladder before the men came shambling aft, muttering and rubbing their eyes. Quietly closing the doors, he descended to the cabin and took up his old post of observation on the table.

"He's gone, right enough," said an awe-stricken voice, "and I reckon it'll be our turn next. This is a bad look-out, mates."

There was a brief and dismal silence; then a distant report was heard, followed quickly by two more.

"That's Dhoody," exclaimed another voice. "He's a-swimmin' and makin' signals. What's to be done? We can't let 'im drowned without doin' nothin'."

"No," agreed the first man, "we must have a try at pickin' 'im up. You and me, Tom, will put off in the dinghy, while Joe keeps the ship hove-to."

"What!" protested Joe. "Am I to be left alone on the ship with no one but Jim Darker, and him below in his bunk?"

"Well, yer can't let a shipmate drown, can yer?" demanded the other. "And look here, Joe Bradley, as soon as you've got the ship hove-to, you just fetch up the fo'c'sle lamp and show us a glim, or we shall be goners, too. Now hard down with the helm, mate!"

Very soon the loud flapping of canvas announced that the ship had come up into the wind, and immediately after the squeal of tackle-blocks was heard. The Speedwell carried a dinghy, slung from davits at the taffrail, in addition to the larger boat on deck, and it was in this that the two men were putting out on their rather hopeless quest.
Osmond rapidly reviewed the situation. Of the original seven men one was overboard, two were in the hold, one was below in his bunk, and two were away in the boat. There remained only Joe Bradley. It would be pretty easy to overpower him and stow him in the hold; but a yet easier plan suggested itself. Joe was evidently in a state of extreme superstitious funk and the other two were in little better case. He recalled the captain's remark as to his resemblance to the dead mate and also the fact that Redford's oilskins were different from any others on board. These circumstances seemed to group themselves naturally and indicate a course of action.

He made his way to the captain's berth and, knocking softly and receiving no answer, entered. The skipper had fallen asleep over his book and lay in his bunk, a living commentary on the Book of Job. Osmond took the oilskins from the peg, and, stealing back silently to the cabin, invested himself in the borrowed raiment. Presently a passing gleam of light from above told him that Joe was carrying the fore castle lamp aft to 'show a glim' from the taffrail. Remembering that he had left the companion hatch unfastened, he ascended the ladder, and, softly opening one door, looked out. At the moment, Joe was engaged in hanging the lamp from a fair-lead over the stern, and, as his back was towards the deck, Osmond stepped out of the hatch and silently approached him.

Having secured the lamp, Joe took a long look over the dark sea and then turned towards the deck; and as his eyes fell on the tall, oilskinned figure, obscurely visible in the gloom—for the lamp was below the bulwark—he uttered a gasp of horror and began rapidly to shuffle away backwards. Osmond stood motionless, watching him from under the deep shade of his sou'-wester as he continued to edge away backwards. Suddenly his heel caught on a ring-bolt and he staggered and fell on the deck with a howl of terror; but in another instant he had scrambled to his feet and raced away forward, whence the slam of the forecastle scuttle announced his retirement to the sanctuary of his berth.

More than a quarter of an hour elapsed before a hoarse hail from the sea heralded the return of the boat.

"Joe ahoy! It's no go, mate. He's gone." There was a pause. Then came the splash of oars, a bump under the counter, the sound of the hooking on of tackles, and another hail.

"Joe ahoy! Is all well aboard?"

Osmond stepped away into the shadow of the main sail, whence he watched the taffrail. Soon the two men came actively up the tackle-ropes, their heads appeared above the rail, and they swung themselves on board simultaneously.

"Joe ahoy!" one of them sang out huskily, as he looked blankly round the deck. "Where are yer, Joe?" There was a brief silence; then, in an awe-stricken voice, he exclaimed: "Gawd-anglitty, Tom! If he ain't gone overboard, too!"

At this moment the other man caught sight of Osmond, and, silently touching his companion on the shoulder, pointed to the motionless figure. Osmond moved a little out of the shadow and began to pace aft, treading without a sound. For one instant the two men watched as if petrified; then, with one accord, they stampeded forward, and once more the forecastle scuttle slammed. Osmond followed, and quietly thrusting a belaying-pin through the staple of the scuttle, secured them in their retreat.
V. — THE NEW AFTERGUARD

When Captain Hartup, brusquely aroused from his slumbers, opened his eyes and beheld a tall, yellow oilskinned figure in his berth, the Book of Job faded instantly from his memory and he scrambled from his bunk with a yell of terror. Then, when Osmond took off his sou'-wester, he recognized his visitor and became distinctly uncivil.

"What the devil do you mean by masquerading in this idiotic fashion?" he demanded angrily. "I don't want any of your silly schoolboy jokes on this ship, so you please understand that."

"I came down," said Osmond, smothering a grin and ignoring the reproaches, "to report progress. I have hove the ship to, but there is no one at the wheel and no look-out."

The skipper stared at him in bewilderment as he crawled back into his bunk. "What do you mean?" he asked. "You've hove the ship to? Isn't there anybody on deck?"

"No. The ship is taking care of herself at the moment."

"Queer," said the skipper. "I wonder what Dhoody's up to."

"Dhoody is overboard," said Osmond.

"Overboard!" exclaimed the skipper, staring harder than ever at Osmond. Then, after an interval of silent astonishment, he said severely:

"You are talking in riddles, young man. Just try to explain yourself a little more clearly. Do I understand that you have hove my second mate overboard?"

"No," replied Osmond. "He went overboard by accident. But it was all for the best;" and hereupon he proceeded to give the skipper a somewhat sketchy account of the stirring events of the last few hours, to which the latter listened with sour disapproval.

"I don't hold with deeds of violence," he said when the story was finished, "but what you have done is on your own head. Where do you say the crew are?"

"Two are in the hold and the other four in the fo'c'sle, bolted in. They are all pretty drunk, but you'll find them as quiet as lambs when they've slept off their tipple. But the question is, what is to be done now. The men won't be any good for an hour or two, but there ought to be someone at the wheel and some sort of watch on deck. And I can't take it on until I have had a sleep. I've been hard at it ever since I came on board yesterday."

"Yes," Captain Hartup agreed, sarcastically, "I daresay you found it fatiguing, chucking your fellow-creatures overboard and breaking their heads. Well, you had better take the second mate's berth—the one Redford had—and I will go on deck and keep a look out. But I can't do much with my arm in a sling."

"What about the lady?" asked Osmond. "Couldn't she hold on to the wheel if you stood by and told her what to do?"

"Ha!" exclaimed the skipper. "I had forgotten her. Yes, she knows how to steer—in a fashion. She used to wheel Redford into letting her take a trick in his watch while he stood by and instructed her; a parcel of silly philandering, really, but it wasn't any affair of mine. I'd better go and rouse her up."

"Wait till I've turned in," said Osmond. "I am not fit to meet a lady until I have had a sleep and a wash. If you will show me my berth, I will go and cast the lashings off those two beggars in the hold and then turn in for an hour or two."

The captain smiled sardonically but made no comment; and when Osmond, furnished with a lantern, had visited the hold and removed the lashings from the still slumbering seamen, he entered the tiny berth that the skipper pointed out to him, closed the door, and, having taken off his jacket and folded it carefully, and wound his watch, blew out the candle in the lantern, stretched himself in the bunk and instantly fell asleep.

When he awoke, the gleam from the deck-light over his head—the berth had no port-hole—told him that it was day. Reference to his watch showed the hour to be about half-past eight; and the clink of crockery and a murmur of voices—one very distinctly feminine—suggested that breakfast was in progress.

Which, again, suggested that the conditions of life on board had returned to the more or less normal.

Osmond sprang out of the bunk, and, impelled by hunger and curiosity, made a lightning toilet with the aid of Redford's razor, sponge, and brushes. There was, of course, no bath; but a 'dry' rub-down in the oven-like cabin was a fair substitute. In a surprisingly short time, with the imperfect means at hand, he had made himself almost incredibly presentable and after a final 'look over' in Redford's minute shaving-glass, he opened the door and entered the cuddy.

The little table, roughly laid for breakfast, was occupied by Captain Hartup and a lady, and a flat-faced seaman with a black eye officiated as cabin steward. They all looked up as Osmond emerged from his door and the sailor grinned a little sheepishly.

"Had a short night, haven't you?" said the captain. "Didn't expect you to turn out yet. Let me present you to our passenger. Miss Burleigh, this is Mr.—Mr.—"

"Cook," said Osmond, ready for the question this time.
"Mr. Cook, the young man I was telling you about."

Miss Burleigh acknowledged Osmond's bow, gazing at him with devouring curiosity and marvelling at his cool, trim, well appearance.

"I think," she said, "we had a brief interview last night, if you can call it an interview when there was a locked door between us. I am afraid I wasn't very civil. But you must try to forgive me. I've been sorry since."

"There is no need to be," replied Osmond. "It was perfectly natural."

"Oh, but it isn't mere remorse. I am so mad with myself for having missed all the excitements. If I had only known! But, you see, I had happened to look out of my door in the evening, hearing a peculiar sort of noise, and then I saw somebody boring holes in the partition, and of course I thought it was those wretches trying to get into the cabin. Then, when I heard your voice, I made sure it was Dhoody or one of those other ruffians, trying to entice me out. And so I missed all the fun."

"Just as well that you did," said the captain. "Females are out of place in scenes of violence and disorder. What are you going to have, Mr. Cook? There's corned pork and biscuit and I think there's some lobscouse or sea-pie in the galley, if the men haven't eaten it all."

Osmond turned suddenly to the sailor, who instantly came to 'attention'.

"You're Sam Winter, aren't you?"

"Aye, sir," the man replied, considerably taken aback by the 'factory bug's' uncanny omniscience. "Sam Winter it is, sir."

"How is Jim Darker?"

"He's a-doin' nicely, sir," replied Sam, regarding Osmond with secret awe. "Eat a rare breakfast of lobscouse, he did."

"Is there any left?"

"I think there is, sir."

"Then I'll have some;" and, as the man saluted and bustled away up the companion-steps, he seated himself on the fixed bench by the table.

Captain Hartup smiled sourly, while Miss Burleigh regarded Osmond with delighted amusement.

"Seem quite intimate with 'em all," the former remarked. "Regular friend of the family. I suppose it was you who gave Winter that black eye?"

"I expect so," replied Osmond. "He probably caught it in the scrum when I first came on board. Did you have any trouble in getting the men to go back to duty?"

"The men in the fo'c'sle wouldn't come out till daylight, and the two men in the hold took a lot of rousing from their drunken sleep. Of course, I couldn't get through that hole with my arm in this sling, so I had to prod them with a boat-hook. It's a pity you made that hole. Lets the smell of the cargo and the bilge through into the cabin."

He looked distastefully at the dark aperture in the bulkhead and sniffed—quite unnecessarily, for the air of the cuddy was charged with the mingled aroma of bilge and kernels.

"Well, it had to be," said Osmond; "and it will be easy to cover it up. After all, a smell in the cuddy is better than seawater."

Here Sam Winter was seen unsteadily descending the companion-steps with a large enamelled-iron plate in his hands; which plate, being deferentially placed on the table before Osmond, was seen to be loaded with a repulsive-looking mixture of 'salt horse', shreds of fat pork and soaked biscuit floating in a greasy brown liquid.

"That's all there was left, sir," said he, transferring a small surplus from his hands to the dorsal aspect of his trousers.

Osmond made no comment on this statement but fell-to on the unsavoury mess with wolfish voracity, while the captain filled a mug with alleged coffee and passed it to him.

"Who is at the wheel, Winter?" the captain asked.

"Simmons, sir," was the reply. "I woke him up again as I come aft."

"Well, you'd better go up and take it from him. Carry on till I come up."

As Winter disappeared up the companionway Miss Burleigh uttered a little gurgle of enjoyment. "Aren't they funny?" she exclaimed. "Fancy waking up the man at the wheel! It's like a comic opera."

The captain looked at her sourly as he tapped the table with a piece of biscuit for the purpose of evicting a couple of fat weevils; but he made no comment, and for a time the meal proceeded in silence. The skipper was fully occupied with cutting up his corned pork with one hand and in breaking the hard biscuit and knocking out the weevils, while Osmond doggedly worked his way through the lobscouse with the silent concentration of a famished man, all unconscious of the interest and curiosity with which he was being observed by the girl opposite him.

However, the lobscouse came to an end—all too soon—and as he reached out to the bread-barge for a handful of biscuit he met her eyes; and fine, clear, bright blue eyes they were, sparkling with vivacity and humour. She greeted his glance
with an affable smile and hoped that he was feeling revived.

"That looked rather awful stuff," she added.

"It was all right," said he, "only there wasn't enough of it. But I hope you had something more suitable."

"She has had what the ship's stores provide, like the rest of us," snapped the captain. "This is not a floating hotel."

"No, it isn't," Osmond agreed, "and that's a fact. But it is something that she still floats; and it would be just as well to keep her floating."

"What do you mean?" demanded the skipper.

Osmond thoughtfully extracted a weevil with the prong of his fork as he replied: "You've got a crew of six, three to a watch, and one of them has got to do the cooking. But you have got no officers."

"Well, I know that," said the captain. "What about it?"

"You can't carry on without officers."

"I can and I shall. I shall appoint one of the men to be mate and take the other watch myself."

"That won't answer," said Osmond. "There isn't a man among them who could be trusted or who is up to the job; and you are not in a fit state to stand regular watches."

Captain Hartup snorted. "Don't you lay down the law to me, young man. I am the master of this ship." And then he added, a little inconsistently "Perhaps you can tell me how I am to get a couple of officers."

"I can," replied Osmond. "There will have to be some responsible person on deck with each watch."

"Well?"

"Well, there are two responsible persons sitting at this table with you."

For a few moments the captain stared at Osmond in speechless astonishment (while Miss Burleigh murmured "Hear, hear!" and rapped the table with the handle of her knife). At length he burst out: "What! Do I understand you to suggest that I should navigate this vessel with a landsman and a female as my mates?"

"I am not exactly a landsman," Osmond replied. "I am an experienced yachtsman and I have made a voyage in a sailing ship."

"Pah!" exclaimed the skipper. "Fresh-water sailor and a passenger! Don't talk nonsense. And a female, too!"

"What I am suggesting," Osmond persisted calmly, "is that you should be about as much as is possible in your condition and that Miss Burleigh and I should keep an eye on the men when you are below. I could take all the night watches and Miss Burleigh could be on deck during the day."

"That's just rank foolishness," said the skipper. "Talk of a comic opera! Why, you are wanting to turn the ship into a Punch and Judy show! I've no patience to listen to you," and the captain rose in dudgeon and crawled—not without difficulty—up the companion-steps. Miss Burleigh watched him with a mischievous smile, and as his stumbling feet disappeared she turned to Osmond.

"What a lark it would be!" she exclaimed, gleefully. "Do you think you will be able to persuade him? He is rather an obstinate little man."

"The best way with obstinate people," replied Osmond, "is to assume that they have agreed, and carry on. Can you steer—not that you need, being an officer. But you ought to know how to."

"I can steer by the compass. But I don't know much about the sails excepting that you have to keep the wind on the right side of them."

"Yes, that is important with a square vessel. But you will soon learn the essentials—enough to enable you to keep the crew out of mischief. We will go on deck presently and then I will show you the ropes and explain how the gear works."

"That will be jolly," said she. "But there's another thing that I want you to explain: about this mutiny, you know. Captain Hartup was awfully muddled about it. I want to know all that happened while I was locked in my berth."

"I expect you know all about it now," Osmond replied evasively. "There was a bit of a rumpus, of course, but as soon as Dhoody was overboard it was all plain sailing."

"Now, you are not going to put me off like that," she said, in a resolute tone. "I want the whole story in detail, if you please, sir. Does a second mate say 'sir' when he, or she, addresses the first mate?"

"Not as a rule," Osmond replied, with a grin.

"Then I won't. But I want the story. Now." Osmond looked uneasily into the delicately fair, slightly freckled face and thought it, with its crown of red-gold hair, the prettiest face that he had ever seen. But it was an uncommonly determined little face, all the same.

"There really isn't any story," he began. But she interrupted sharply:
"Now listen to me. Yesterday there were seven ferocious men going about this ship like roaring and swearing lions. Today there are six meek and rather sleepy lambs—I saw them just before breakfast. It is you who have produced this miraculous change, and I want to know how you did it. No sketchy evasions, you know. I want a clear, intelligible narrative."

"It isn't a very suitable occasion for a long yarn," he objected. "Don't you think we ought to go on deck and keep an eye on the old man?"

"Perhaps we ought," she agreed. "But I'm not going to let you off the story, you know. That is understood, isn't it?"

He gave a reluctant assent, and when she had fetched her pith helmet from her cabin and he had borrowed a Panama hat of Redford's, they ascended together to the deck.

The scene was reminiscent of 'The Ancient Mariner'. The blazing sun shone down on a sea that seemed to be composed of oil, so smooth and unruffled was its surface. The air was absolutely still, and the old brigantine wallowed foolishly as the great, glassy rollers swept under her, her sails alternately filling and backing with loud, explosive flaps as the masts swung from side to side, and her long main-boom banging across with a heavy jar at each roll. Sam Winter stood at the wheel in a posture of easy negligence (but he straightened up with a jerk as Osmond's head rose out of the companion-hood); the rest of the crew, excepting Jim Darker, lounged about drowsily forward; and the skipper appeared to be doing sentry-go before a row of green gin-cases that were ranged along the side of the cabin. He looked round as the new-comers arrived on deck, and pointing to the cases, addressed Osmond.

"These boxes of poison belong to you, I understand. I can't have them lying about here."

"Better stow them in the lazarette when I've checked the contents," replied Osmond.

"I can't have intoxicating liquors in my lazarette. This is a temperance ship. I've a good mind to chuck 'em overboard."

"All right," said Osmond. "You pay me one pound four, and then you can do what you like with them."

"Pay!" shrieked the captain. "I pay for this devil's elixir! I traffic in strong drink that steals away men's reason and turns them into fiends! Never! Not a farthing!"

"Very well," said Osmond, "then they had better go below. Here, you, Simmons and Bradley, bear a hand with those cases. Will you see them stowed away in the lazarette, Miss Burleigh?"

"Aye, aye, sir," the latter replied, touching her helmet smartly; whereupon the two men, with delighted grins, pounced upon two of the cases, while Miss Burleigh edged up close to Osmond.

"What on earth is the lazarette?" she whispered, "and where shall I find it?"

"Under the cuddy floor," he whispered in reply. "The trap is under the table."

As the two seamen picked up their respective loads and went off beaming, followed by Miss Burleigh, the captain stood gazing open-mouthed. "Well, I'm—I'm—sure!" he exclaimed, at length. "What do you mean by giving orders to my crew? And I said I wouldn't have that gin in my lazarette."

"Can't leave it about for the men to pinch. You'll have them all drunk again. And what about the watches? We can't have the regular port and starboard watches until you are fit again. Better do as I suggested. Let me keep on deck during the night, and you take charge during the day. Miss Burleigh can relieve you if you want to go below."

"I'll have no women playing the fool on my ship," snapped the skipper; "but as to you, I don't mind your staying on deck at night if you undertake to call me up when you get into a mess—as you certainly will."

"Very well," said Osmond, "we'll leave it at that. And now you'd better come below and let me attend to your bandages. There's nothing to do on deck while this calm lasts."

The skipper complied, not unwillingly; and when Osmond had very gently and skillfully renewed the dressings and rebandaged the injured arm and head—the captain reclining in his bunk for the purpose—he retired, leaving his patient to rest awhile with the aid of the Commentary On the Book of Job.

As soon as he arrived on deck, he proceeded definitely to take charge. The stowage of the gin was now completed and the crew were once more collected forward, gossiping idly but evidently watchful and expectant of further developments from the 'after-guard.' Osmond hailed them in a masterful tone. "Here, you men, get a pull on the main-sheet and stop the boom from slamming. haul her in as taut as she'll go."

The men came aft with ready cheerfulness, and as Osmond cast off the fall of the rope and gave them a lead, they tailed on and hauled with a will until the sheet-blocks were as close as they could be brought. Then, when the rope had been belayed, Osmond turned to the crew and briefly explained the arrangements for working the ship in her present, short-handed state.

"So you understand," he concluded, "I am the mate for the time being, and Miss Burleigh is taking the duties of the second mate. Is that clear?"

"Aye, aye, sir," was the reply, accompanied by the broadest of grins, "we understand, sir."

"Who is the cook?" inquired Osmond.
"Bill Foat 'as been a-doin' the cookin', sir," Simmons explained.
"Then he'd better get on with it. Whose watch on deck is it?"

"Starboard watch, sir," replied Simmons; "that's me and Winter and Darker."
"I must have a look at Darker," said Osmond. "Meanwhile you take the wheel, and you, Winter, keep a look-out forward. I haven't heard the ship's bell sounded this morning."

"No, sir," Winter explained. "The clock in the companion has stopped and none of us haven't got the time."

"Very well," said Osmond. "I'll wind it up and start it when I make eight bells."

The routine of the duties being thus set going, Osmond went forward and paid a visit to the invalid in the forecastle, with the result that Jim Darker presently appeared on deck with a clean bandage and a somewhat sheepish grin. Then the chief officer turned his attention to the education of his subordinate, observed intently by six pairs of inquisitive eyes.

"I think, Miss Burleigh," he said, "you had better begin by learning how to take an observation. Then you will be able to do something that the men can't, as an officer should. Do you know anything about mathematics?"

"As much as is necessary, I expect. I took second class honours in maths. Will that do?"

"Of course it will. By the way, where did you take your degree?"
"Oxford—Somerville, you know."

"Oh," said Osmond, rather taken aback. "When were you up at Oxford?"

She regarded him with a mischievous smile as she replied: "After your time, I should say. I only came down a year ago."

It was, of course, but a chance shot. Nevertheless, Osmond hastily reverted to the subject of observations. "It is quite a simple matter to take the altitude of the sun, and you work out your results almost entirely from tables. You will do it easily the first time. I'll go and get Redford's sextant, or better still, we might go below and I can show you how to use a sextant and how to work out your latitude."

"Yes," she agreed eagerly, "I would sooner have my first lesson below. Our friends here are so very interested in us."

She bustled away down to the cabin, and Osmond, following, went into his berth, whence he presently emerged with two mahogany cases and a portly volume, inscribed 'Norie's Navigation'.

"I've found the second mate's sextant as well as Redford's, so we can have one each," he said, laying them on the table with the volume. "And now let us get to work. We mustn't stay here too long or we shall miss the transit."

The two mates seated themselves side by side at the table, and Osmond, taking one of the sextants out of its case, explained its construction and demonstrated its use. Then the volume was opened, the tables explained, the mysteries of 'dip' refraction and 'parallax' expounded, and finally an imaginary observation was worked out on the back of an envelope.

"I had no idea," said Miss Burleigh, as she triumphantly finished the calculation, "that the science of navigation was so simple."

"It isn't," replied Osmond. "Latitude by the meridian altitude of the sun is the A B C of navigation. Some of it, such as longitude by lunar distance, is fairly tough. But it is time we got on deck. It is past eleven by my watch and the Lord knows what the time actually is. The chronometer has stopped. The skipper bumped against it when he staggered into his berth on the day when the mutiny broke out."

"Then how shall we get the longitude?" Miss Burleigh asked.

"We shan't. But it doesn't matter much. We must keep on a westerly course. There is nothing, in that direction, between us and America."

The appearance on deck of the two officers, each armed with a sextant, created a profound impression. It is true that, so far as the 'second mate' was concerned, the attitude of the crew was merely that of respectful amusement. But the effect, in the case of Osmond, was very different. The evidence that he was able to 'shoot the sun' established him in their eyes as a pukka navigator, and added to the awe with which they regarded this uncannily capable 'factory bug'. And there was plenty of time for the impression to soak in; for the first glance through the sextant showed that the sun was still rising fairly fast; that there was yet some considerable time to run before noon. In fact, more than half an hour passed before the retardation of the sun's motion heralded the critical phase. And at this moment the skipper's head rose slowly above the hood of the companion-hatch.

At first his back was towards the observers, but when he emerged and, turning forward, became aware of them, he stopped short as if petrified. The men ceased their gossip to watch him with ecstatic grins, and Sam Winter edged stealthily towards the ship's bell.

"What is the meaning of this play-acting and tom foolery?" the skipper demanded, sourly. "Women and landsmen monkeying about with nautical instruments."

Osmond held up an admonitory hand, keeping his eye glued to the eyepiece of the sextant.

"I'm asking you a question," the captain persisted. There was another brief silence. Then, suddenly, Osmond sang out
"Eight bells!" and looked at his watch. Winter, seizing the lanyard that hung from the clapper of the bell, struck the eight strokes, and the second mate—prompted in a hoarse whisper—called out: "Port watch, there! Bradley will take the first trick at the wheel."

"Aye, aye, sir—Miss, I means," responded Bradley, and proceeded purple-faced and chuckling aloud, to relieve the gratified Simmons.

At these proceedings the captain looked on in helpless bewilderment. He watched Osmond wind and set the clock in the companion and saw him disappear below, followed by his accomplice, to work out the reckoning, and shook his head with mute disapproval. But yet to him, as to the rest of the ship's company, there came a certain sense of relief. Osmond's brisk, confident voice, the cheerful sound of the ship's bell, and the orderly setting of the watch, seemed definitely to mark the end of the mutiny and the return to a reign of law and order.
VI. — BETTY MAKES A DISCOVERY

For reasons best known to herself, Miss Burleigh made no further attempt that day to satisfy her curiosity as to the quelling of the mutiny. There was, in fact, little opportunity. For shortly after the mid-day meal—sea-pie and corned pork with biscuit—Osmond turned in regardless of the heat, to get a few hours' sleep before beginning his long night vigil. But on the following day the captain was so far recovered as to be able to take the alternate watches—relieved to some extent in the daytime by the second mate—and this left ample time for Osmond to continue the education of his junior, which now extended from theoretical navigation to practical seamanship.

It was during the afternoon watch, when the two mates were seated on a couple of spare cases in the shadow of the mainsail, practising the working of splices on some oddments of rope, that the 'examination-in-chief' began; and Osmond, recognizing the hopelessness of further evasion, was fain to tell the story of his adventure, dryly enough, indeed, but in fairly satisfying detail. And as he narrated, in jerky, colourless sentences, with his eyes riveted on the splice that he was working, his spellbound listener let her rope's-end and marlinspike lie idle on her lap while she watched his impassive face with something more than mere attention.

"I wonder," she said when the tale was told, "whether the men realize who the spectre mate really was."

"I don't think they can quite make out what happened. But I fancy they look upon me as something rather uncanny; which is all for the best, seeing how short we are and what a helpless worm the skipper is."

"Yes, they certainly have a holy fear of you," she agreed, smiling at the grim, preoccupied face. She reflected awhile and then continued: "But I don't quite understand what brought you on board. You say that Dhoody had stolen those cases of gin. But what business was that of yours?"

"It was my gin."

"Your gin? But you don't drink gin."

"No, I sell it. I am a trader. I run a store, or factory, as they call it out here."

As Osmond made this statement, her look of undisguised admiration changed to one of amazement. She smothered an exclamation and managed to convert it at short notice into an unconcerned "I see"; but her astonishment extinguished her powers of conversation for the time being. She could only gaze at him and marvel at the incongruity of his personality with his vocation. She had encountered a good many traders, and though she had realized that the 'palm-oil ruffian' was largely the invention of the missionary and the official snob and that West African traders are a singularly heterogeneous body, still that body did not ordinarily include men of Osmond's class. And her sly suggestion of his connection with Oxford had been something more than a mere random shot. There are certain little tricks of speech and manner by which members of the ancient universities can usually be recognized, especially by their contemporaries and though Osmond was entirely free from the deliberate affectations of a certain type of 'varsity' man, her quick ear had detected one or two turns of phrase that seemed familiar. And he had not repudiated the suggestion.

"I wonder," she said, after an interval of some what uncomfortable silence, "what made you take to trading. The métier doesn't seem to fit you very well."

"No," he admitted with a grim smile; "I am a bit of a mug at a business deal."

"I didn't mean that," she rejoined hastily. "But there are such a lot of things that would suit you better. It is a sin for a man of your class and attainments to be keeping a shop—for that is what it amounts to."

"That is what it actually is," said he.

"Yes. But why on earth do you do it?"

"Must do something, you know," he replied, lamely.

"Of course you must, but it should be something suitable, and selling gin is not a suitable occupation for a gentleman. And it isn't as if you were a 'lost dog.' You are really extremely capable."

"Yes," he admitted with a grin, "I'm pretty handy in a scrum."

"Don't be silly," she admonished, severely. "I don't undervalue your courage and strength—I shouldn't be a natural woman if I did—but I am thinking of your resourcefulness and ingenuity. It wasn't by mere thumping that you got your ascendancy over the men. You beat them by sheer brains."

"Jim Darker thinks it was an iron belaying-pin."

"Now don't quibble and prevaricate. You know as well as I do that, if it had been a matter of mere strength and courage, you would never have got out of the hold, and we should have been at the bottom of the sea by now. It was your mental alertness that saved us all."

"I'm glad to hear it," said Osmond. "But you aren't getting on very fast with that splice. Have you been watching me?"

"Oh! bother the splices!" she exclaimed, impatiently. "I want you to tell me why you are throwing yourself away on this ridiculous factory."
"It isn't a bad sort of life," he protested. "I don't think I mind it."

"Then you ought to," she retorted. "You ought to have some ambition. Think of all the things that you might have done—that you still might do with, your abilities and initiative."

She looked at him earnestly as she spoke; and some thing that she saw in his face as she uttered those last words gave her pause. Suddenly it was borne in on her that she had met other men who seemed to be out of their element; men who, report whispered, had been driven by social misadventure—by debt, entanglements, or drink—to seek sanctuary on the remote West Coast. Was it possible that he might be one of these refugees? He was obviously not a drinker and he did not look like a wastrel of any kind. Still, there might be a skeleton in his cupboard. At any rate, he was extraordinarily reticent about himself.

She changed the subject rather abruptly. "Is your factory in the British Protectorate?"

"Yes. At Adaffia, a little, out-of-the-way place about a dozen miles east of Quittah."

"I know it—at least I have heard of it. Isn't it the place where that poor fellow Osmond died?"

"Yes," he replied, a little startled by the question.

"What was he like? I suppose you saw him?"

"Yes. A biggish man. Short moustache and Vandyke beard."

"Quite a gentlemanly man, wasn't he?"

"He seemed to be. But he didn't have a great deal to say to anybody."

"It was rather pathetic, his dying in that way, like a hunted ox that has run into a trap."

"Well," said Osmond, "there wasn't much to choose. If the climate hadn't had him, the police would."

"I am not so sure," she replied. "We all hoped he would get away, especially the officer who was detailed to arrest him. I think he meant to make a fuss about all the wrong houses in the village by way of giving notice that he was there and scaring the fugitive away. Still, I think he was rather relieved when he found that trader man—what was his name?—Larkin or Larkom?—painting the poor fellow's name on the cross above his grave. You heard about that, I suppose?"

"Yes. Queer coincidence, wasn't it?"

"Don't be so callous. I think it was a most pathetic incident."

"I suppose it was," Osmond agreed. "And now, don't you think you had better have another try at that splice?"

With a little grimace she took up the piece of rope and began obediently to unlay its ends and the interrupted course of practical seamanship was resumed, with intervals of desultory conversation, until eight bells, when the teapot was brought forth from the galley and conveyed below to the cabin. After tea, through what was left of the first dog-watch, there was another spell of knots and splices; and then, when the sun set and darkness fell on the sea, more desultory talk, in which Osmond mostly played the role of listener, which—with an interval for dinner—lasted until it was time for the second mate to turn in.

So life went on aboard the Speedwell day after day.

The calm persisted as calms are apt to do in the Doldrums, with nothing to suggest any promise of a change. Now and again, at long intervals, the oily surface of the sea would be dimmed by a little draught of air—just enough to 'put the sails asleep' and give momentary life to the steering-wheel. But in a few minutes it would die away, leaving the sails to back and fill as the vessel rolled inertly on the glassy swell. The first observation had shown the ship's position to be about four degrees north of the equator, with the coast of the Bight of Benin some eighty miles away to the north; and subsequent observations revealed a slow southerly drift. It was pretty certain that she had a more rapid easterly drift on the Guinea current, but as the chronometer was out of action, there was no means of ascertaining this or of determining her longitude. Sooner or later, if the calm continued, she would drift into the Bight of Biafra, where she might pick up the land and sea breezes or find an anchorage where she could bring up and get the chronometer rated.

To a seaman there is nothing more exasperating than a prolonged calm. The crew of the Speedwell were not sailors of a strenuous type, but the inaction and monotony that prevailed on the idly ship bored them—if not to tears, at least to bad language and chronic grumbling. They lounged about with sulky looks and yawned over the odd jobs that Osmond found for them, whistling vainly for a breeze and crawling up the rigging from time to time to see if anything—land or another ship—was in sight. As to the captain, he grew daily more sour and taciturn as he saw his stores of provisions dwindling with nothing to show for the expenditure.

But by two of the ship company the calm was accepted with something more than resignation. The two mates had no complaint whatever to make. They were, indeed, cut off from all the world; marooned on a stationary ship in an unfrequented sea. But they had one another and asked for nothing better; and the longer the calm lasted the more secure were they of the continuance of this happy condition. For the inevitable thing had happened. They had fallen in love.

It was very natural. Both were more than commonly attractive, and circumstances had thrown them together in the closest and most intimate companionship through every hour of the long days. They had worked together, though the work was more than half play; they had a common interest which kept them apart from the others. Together they had sat,
talking endlessly, in little patches of shadow when the sun was high in the heavens, or leaned upon the bulwark rail and watched the porpoises playing round the idle ship or the Portuguese men-of-war gliding imperceptibly past on their rainbow-tinted floats. They had paced the heaving deck together when the daylight was gone and earnestly studied the constellations 'that blazed in the velvet blue', or peered down into the dark water alongside where the Nautilus shone like submarine stars and shoals of fish darted away before the pursuing dolphin lurid flashes of phosphorescent light. No more perfect setting for a romance could be imagined.

And then the personality of each was such as to make a special appeal to the other. In the eyes of the girl, Osmond was a hero, a paladin. His commanding stature, his strength, his mastery of other men, and above all his indomitable courage, had captured her imagination from the first. And in his rugged way he was a handsome man; and if he could be a little brutal on occasion, he had always been, to her, the soul of courtesy and chivalry. As to the 'past' of which she had a strong suspicion, that was no concern of hers; perhaps it even invested him with an added interest.

As to Osmond, he had been captivated at once, and, to do him justice he had instantly perceived the danger that loomed ahead. But he could do nothing to avoid it. Flight was impossible from this little self-contained world, so pleasantly cut off from the unfriendly world without; nor could he, even if he had tried, help being thrown constantly into the society of this fascinating little lady. And if, during the long, solitary night-watches, or in his stifling berth, he gnashed his teeth over the perverseness of Fate and thought bitterly of what might have been, that did not prevent him from succumbing during the day to the charm of her frank, unconcealed friendliness.

It was in the forenoon of the eighth day of the calm that the two cronies were leaning on the rail, each holding a stout line. The previous day Osmond had discovered a quantity of fishing tackle among Redford's effects, and a trial cast had provided not only excellent sport, but a very welcome addition to the ship's meagre diet. Thereupon an epidemic of sea-angling had broken out on board, and Bill Foat, the cook, had been kept busy with the preparation of snappers, horse and other deep-sea fish.

"I wonder," the girl mused as she peered over the side, "how much longer this calm is going to last."

"It may last for weeks," Osmond replied. "I hope it won't for your sake. You must be getting frightfully bored."

"Indeed, I'm not," she rejoined. "It is the jolliest holiday I have ever had. The only fly in the ointment is the fear that my father may be a little anxious about me. But I don't suppose he is really worrying. He is like me—not much given to fussing and he knows that I am fairly well able to take care of myself, though he doesn't know that I have got a Captain James Cook to stand by me. But I expect you are getting pretty sick of this monotonous life, aren't you, Captain J.?

Osmond shook his head. "Not a bit," he replied. "It has been a delightful interlude for me. I should be perfectly satisfied for it to go on for the rest of my life."

She looked at him thoughtfully, speculating on the inward meaning of this statement and noting a certain grave wistfulness that softened the grim face.

"That sounds rather as if Adaffia were not a perfect Paradise, for it has been a dull life for you since the mutiny collapsed and the calm set in, with no one to talk to but me."

"Adaffia would be all right under the same conditions," said he.

"What do you mean by the same conditions?" she asked, flushing slightly; and as he did not immediately answer, she continued: "Do you mean that life would be more pleasant there if you had your second mate to gossip with?"

"Yes," he answered, reluctantly, almost gruffly. "Of course that is what I mean."

"It is very nice of you, Jim, to say that, but you needn't have spoiled it by speaking in that crabby tone. It is nothing to be ashamed of. I don't mind admitting that I shall miss you most awfully if we have to separate when this voyage is over. You have been the best of chums to me."

She flushed again as she said this and then looked at him a little shyly. For nearly a minute he made no response, but continued to gaze intently and rather gloomily at the water below. At length he said, gravely, still looking steadily at the water:

"There is something, Miss Burleigh, that I feel I ought to tell you; that I wouldn't tell any one else in the world."

"Thank you, Jim," she said. "But please don't call me Miss Burleigh. It is so ridiculously stiff between old chums like us. And, Jim, you are not to tell me anything that it might be better for you that I should not know. I am not in the least inquisitive about your affairs."

"I know that," he replied. "But this is a thing that I feel you ought to know. It has been on my mind to tell you for some days past." He paused for a few seconds and then continued: "You remember, Betty, that man Osmond that you spoke about?"

"Yes; but don't call him 'that man Osmond.' Poor fellow! I don't suppose he had done anything very dreadful, and at any rate we can afford to speak kindly of him now that he is dead."

"Yes, but that is just the point. He isn't dead."

"Isn't dead?" she repeated. "But Captain Cockcram saw that other man, Larkom, painting the name on his grave. Was it
a dummy grave?"

"No. But it was Larkom who died. The man Cockeram saw was Osmond."

"Are you sure? But of course you would be. Oh, Jim! You won't tell anybody else, will you?"

"I am not very likely to," he replied with a grim smile, "as I happen to be the said John Osmond."

"Jim!" she gasped, gazing at him with wide eyes and parted lips. "I am astounded! I can't believe it."

"I expect it is a bit of a shock," he said bitterly, "to find that you have been socialising for more than a week with a man who is wanted by the police."

"I didn't mean that," she exclaimed, turning scarlet. "You know I didn't. But it is so astonishing. I can't understand how it happened. It seems so extraordinary, and so—so opportune."

Osmond chuckled grimly. "It does," he agreed. "Remarkably opportune. Almost as if I had polished Larkom off ad hoc. Well, I didn't."

"Of course you didn't. Who supposed for a moment that you did? But do tell me exactly how it happened."

"Well, it was quite simple. Poor old Larkom died of blackwater fever. He was a good fellow. One of the very best, and the only friend I had. He knew all about me—or nearly all—and he did everything he could to help me. It was an awful blow to me when he died. But he never had a chance when once the fever took hold of him. He was an absolute wreck and he went out like the snuff of a candle, though he managed to make a will before he died, leaving the factory and all his effects to his friend James Cook. It was he who invented that name for me.

"Well, of course, when he was dead, I had to bury him and stick up a cross over his grave. And—then I just painted the wrong name on it. That's all."

She nodded without looking at him and a shadow seemed to fall on her face. "I see," she said, a little coldly. "It was a tempting opportunity; and events have justified you in taking it."

Something in her tone arrested his attention. He looked at her sharply and with a somewhat puzzled expression. Suddenly he burst out: "Good Lord, Betty! You don't think I did this thing in cold blood, do you?"

"Didn't you?" she asked. "Then how did you come to do it?"

"I'll tell you. Poor old Larkom's name was John, like mine. I had painted in the 'John' and was just going to begin the 'Larkom' when I happened to look along the beach. And there I saw Cockeram with his armed party bearing down on Adaffia. Of course, I guessed instantly what his business was, and I saw that there was only one thing to be done. There was the blank space on the cross. I had only to fill it in with my own name and the situation would be saved. So I did."

Her face cleared at this explanation. "I am glad," she said, "that it was only done on the spur of the moment. It did seem a little callous."

"I should think so," he agreed, "if you thought of me sitting by the poor old fellow's bedside and calmly planning to use his corpse to cover my retreat. As it was, I hated doing it; but necessity knows no law. I have thought more than once of making a dummy grave for myself and shifting the cross to it and of setting up a proper memorial to Larkom. And I will do it when I get back."

She made no comment on this; and as, at the moment her line tightened, she hauled it in, and impassively detaching a big red snapper from the hook, re-baited and cast the line overboard with a curiously detached, preoccupied air. Apparently, she was reflecting profoundly on what she had just learned, and Osmond, glancing at her furtively from time to time, abstained from interrupting her meditations. After a considerable interval she turned towards him and said in a low, earnest tone: "There is one thing that I want to ask you. Just now you said that you felt you ought to tell me this; that I ought to know. I don't quite see why."

"There was a very good reason," he replied, "and I may as well make a clean breast of it. To put it bluntly, I fell in love with you almost as soon as I saw you, and naturally, I have grown to love you more with every day that has passed."

She flushed deeply, and glancing at him for an instant, turned her eyes once more on her line.

"Still," she said in a low voice, "I don't see why you thought I ought to know."

"Don't you?" he rejoined. "But surely it is obvious. You accepted me as your chum and you seemed to like me well enough. But you had no inkling as to who or what I was. It was my clear duty to tell you."

"You mean that there was the possibility that I might come to care for you and that you felt it your duty to warn me off?"

"Yes. It wasn't very likely that there would be anything more than friendship on your side; but still it was not impossible. Women fall in love with the most unlikely men."

At this she smiled and looked him squarely in the face, "I thought you meant that," she said, softly, "and, of course, you were quite right. But if your intention was to put me on my guard and prevent me from caring for you, your warning has come too late. You would have had to tell me before I had seen you—and I don't believe it would have made a scrap of difference even then. At any rate, I don't care a fig what you have done—I know it was nothing mean. But all the same, I am glad you told me. I should have hated to find it out afterwards by myself."
He gazed at her in dismay. "But, Betty," he protested, "you don't seem to grasp the position. There is a warrant out for my arrest."

"Who cares?" she responded. "Besides, there isn't. John Osmond is dead and there is no warrant out for Captain James Cook. It is you who don't grasp the position."

"But," he expostulated, "don't you realize that I can never go home? That I can't even show my face in Europe?"

"Very well," said she. "So much the worse for Europe. But there are plenty of other places; and what is good enough for you is good enough for me. Now, Jim, dear," she added, coaxingly, "don't create difficulties. You have said that you love me—I think I knew it before you told me—and that is all that matters to me. Everything else is trivial. You are the man to whom I have given my heart, and I am not going to have you crying off."

"Good God, Betty!" he groaned, "don't talk about 'crying off.' If you only know what it means to me to look into Paradise and be forced to turn away! But, my dearest love, it has to be. I would give my life for you gladly, joyfully. I am giving more than my life in refusing the sacrifice that you, in the nobleness of your heart, are willing to make. But I could never accept it. I could never stoop to the mean selfishness of spoiling the life of the woman who is more to me than all the world."

"I am offering no sacrifice," she said. "I am only asking to share the life of the man I love. What more does a woman want?"

"Not to share such a life as mine," he replied, bitterly. "Think of it, Betty, darling! For the rest of my days I must sneak about the world under a false name, hiding in obscure places, scanning the face of every stranger with fear and suspicion lest he should discover my secret and drag me from my sham grave. I am an outcast, an Ishmaelite. Every man's hand is against me. Could I allow a woman—a beautiful girl, a lady of position—to share such a sordid existence as mine? I should be a poor lover if I could think of such contemptible selfishness."

"It isn't so bad as that, Jim, dear," she pleaded. "We could go abroad—to America—and make a fresh start. You would be sure to do well there with your abilities, and we could just shake off the old world and forget it."

He shook his head, sadly. "It is no use, darling, to delude ourselves. We must face realities. Mine is a wrecked life. It would be a crime, even if it were possible, for me to take you from the surroundings of an English lady and involve you in the wreckage. It was a misfortune, at least for you, that we ever met, and there is only one remedy. When we separate, we must try to forget one another."

"We shan't, Jim," she exclaimed, passionately. "You know we shan't. We aren't, either of us, of the kind that forgets. And we could be so happy together! Don't let us lose everything for a mere scruple."

At this moment all on deck were startled by a loud hail from aloft. One of the men had climbed up into the swaying foretop and stood there holding on to the topmast shrouds and with his free hand pointing to the north. Osmond stepped forward and hailed him.

"Foretop there! What is it?"

"A steamer, sir. Seems to be headin' straight on to us."

Osmond ran below, and having fetched Redford's binocular from the berth, climbed the main rigging to just below the cross-tree. There, securing himself with one arm passed round a shroud, he scanned the northern horizon intently for a minute or two and then descended slowly with a grave, set face. From his loftier station he had been able to make out the vessel's hull; and the character of the approaching ship had left him in little doubt as to her mission. His comrade met him with an anxious, inquiring face as he jumped down from the rail.

"Small man-o'-war," he reported in response to the unspoken question; "barquentine-rigged, buff funnel, white hull. Looks like a gun-boat."

"Ha!" she exclaimed. "That will be the Widgeon. She was lying off Accra."

The two looked at one another in silence for a while as they look who have heard bad tidings. At length Osmond said, grimly: "Well, this is the end of it, Betty. She has been sent out to search for you. It will be 'good-bye' in less than an hour."

"Not 'good-bye,' Jim," she urged. "You will come, too, won't you?"

"No," he replied; "I can't leave the old man in this muddle."

"But you'll have to leave him sooner or later."

"Yes; but I must give him the chance to get another mate, or at least to ship one or two native hands."

"Oh, let him muddle on as he did before. My father will be wild to see you when he hears of all that has happened. Don't forget, Jim, that you saved my life."

"I saved my own," said he, "and you chanced to benefit. But I couldn't come with you in any case, Betty. You are forgetting that I have to keep out of sight. There may be men up at head-quarters who know me. There may be even on this gun-boat."

She gazed at him despairingly and her eyes filled. "Oh, Jim," she moaned, "how dreadful it is. Of course I must go. But I feel that we shall never see one another again."
"It will be better if we don't," said he.

"Oh, don't say that!" she pleaded. "Think of what we have been to one another and what we could still be for ever and ever if only you could forget what is past and done with. Think of what perfect chums we have been and how fond we are of one another. For we are, Jim. I love you with my whole heart and I know that you are just as devoted to me. It is a tragedy that we should have to part."

"It is," he agreed, gloomily, "and the tragedy is of my making."

"It isn't," she dissent, indignantly; and then, softly and coaxingly, she continued: "But we won't lose sight of each other altogether, Jim, will we? You will write to me as soon as you get ashore. Promise me that you will."

"Much better not," he replied; but with so little decision that she persisted until, in the end, and much against his judgment, he yielded and gave the required promise.

"That makes it a little easier," she said, with a sigh. "It leaves me something to look forward to."

She took the glasses from him and searched the rim of the horizon, over which the masts of the approaching ship had begun to appear.

"I suppose I ought to report to the old man," said Osmond, and he was just turning towards the companion when Captain Hartup's head emerged slowly and was in due course followed by the remainder of his person. His left arm was now emancipated from the sling and in his right hand he carried a sextant.

"Gun-boat in sight, sir," said Osmond. "Seems to be coming our way."

The captain nodded, and stepping to the taffrail, applied his eye to the eyepiece of the sextant.

"It has gone seven bells," said he. "Isn't it about time you got ready to take the latitude—you and the other officer?" he added, with a sour grin.

In the agitating circumstances, Osmond had nearly forgotten the daily ceremony—a source of perennial joy to the crew. He now ran below and presently returned with the two sextants, one of which he handed to 'the other officer'.

"For the last time, little comrade," he whispered.

"And we'll work the reckoning together. Norie's Navigation will be a sacred book to me after this."

She took the instrument from him and advanced with him to the bulwark. But if the truth must be told, her observation was a mere matter of form, and twice before the skipper called "eight bells" she had furtively to wipe a tear from the eyepiece. But she went below to the cuddy and resolutely worked twice before the skipper called "eight bells" she had furtively to wipe a tear from the eyepiece.

"They are queer keepsakes," she said in a half-whisper as the door of the captain's cabin opened, "but they will tell us exactly when and where we parted. Who knows when and where we shall meet again—if we ever do?"

"If we ever do," he repeated in the same tone; and then, as the captain came out and looked at them inquiringly, he reported the latitude that they had found, and followed him up the companion-steps.

When they arrived on deck they found the crew ranged along the bulwark watching the gun-boat, which was now fully in view, end-on to the brigantine, and approaching rapidly, her bare masts swinging like pendulums as she rolled along over the big swell.

"I suppose we shall make our number, sir," said Osmond; and as the skipper vouchsafed no reply beyond an unintelligible grunt, he added: "The flag locker is in your cabin, isn't it?"

"Never you mind about the flag locker," was the sour reply. "Our name is painted legibly on the bows and the counter, and I suppose they've got glasses if they want to know who we are." He took the binocular from Osmond, and after a leisurely inspection of the gun-boat, continued: "Looks like the Widgeon. Coming to pick up a passenger, I reckon. About time, too. I suppose you are both going—if they'll take you?"

"I am not," said Osmond. "I am going to stay and see you into port."

The skipper nodded and emitted an ambiguous grunt, which he amplified with the addition: "Well, you can please yourself," and resumed his inspection of the approaching stranger.

His forecast turned out to be correct, for the gunboat made no signal, but, sweeping past the Speedwell's stern at a distance of less than a quarter of a mile, slowed down and brought-to on the port side, when she proceeded to lower a boat; whereupon Captain Hartup ordered a rope ladder to be dropped over the port quarter. These preparations Miss Burleigh watched anxiously and with an assumption of cheerful interest, and when the boat ran alongside, she joined the skipper at the head of the ladder, while Osmond, lurking discreetly in the background, kept a watchful eye on the officer who sat in the stern-sheets until the lessening distance rendered him distinguishable as an undoubted stranger, when he also joined the skipper.

As the new-comer—a pleasant-faced, clean-shaved man in a lieutenant's uniform—reached the top of the ladder, he exchanged salutes with the skipper and the lady, who advanced and held out her hand.
"Well, Miss Burleigh," said the lieutenant as he shook her hand, heartily, "this is a relief to find you safe and sound and looking in the very pink of health. But you have given us all a rare fright. We were afraid the ship had been lost."

"So she was," replied Betty. "Lost and found. I think I have earned a fatted calf, don't you, Captain Darley?"

"I don't know," rejoined the lieutenant (the honorary rank was in acknowledgment of his position as commander of the gun-boat); "we must leave that to His Excellency. But it doesn't sound very complimentary to your shipmates or to your recent diet. I needn't ask if you are coming back with us. My cabin has been made ready for you."

"But how kind of you, Captain Darley. Yes, I suppose I must come with you, though I have been having quite a good time here; mutinies, fishing, and all sorts of entertainments."

"Mutinies, hey!" exclaimed Darley, with a quick glance at the captain. "Well, I am sorry to tear you away from these entertainments, but orders are orders. Perhaps you will get your traps packed up while I have a few words with the captain. I shall have to make a report of what has happened."

On this there was a general move towards the companion. Betty retired—somewhat precipitately—to her berth and the lieutenant followed Captain Hartup to his cabin.

Both parties were absent for some time. The first to reappear was Betty, slightly red about the eyes and carrying a small hand-bag. Having dispatched Sam Winter below to fetch up her portmanteau, she drew Osmond away to the starboard side.

"Jack," she said, in a low, earnest tone—"I may call you by your own name just for once, mayn't I?—you have made me a promise. You won't go back on it, will you, Jack?"

"Of course I shan't, Betty," he replied.

"I want you to have my cabin when I've gone," she continued. "It is a better one than yours and it has a tiny port-hole. And if you open the locker, you will find a little note for you. That is all. Here they come. Good-bye, Jack, darling!"

She turned away abruptly as he murmured a husky farewell, and having shaken hands with Captain Hartup and thanked him for his hospitality, was stepping on to the ladder when she paused suddenly and turned back.

"I had nearly forgotten," said she. "I haven't paid my passage."

"There is no passage-money to pay," the skipper said, gruffly. "My contract was to deliver you at Accra, and I haven't done it. Besides," he added, with a sour grin, "you've worked your passage."

"Worked her passage!" exclaimed the lieutenant. "What do you mean?"

"She has been taking the second mate's duties," the skipper explained.

Darley stared open-mouthed from the skipper to the lady. Then, with a fine, hearty British guffaw, he assisted the latter down to the boat.
VII. — THE MATE TAKES HIS DISCHARGE

As an instance of the malicious perversity which the forces of nature often appear to display, the calm which had for so many days cut off Miss Betty from any communication with the world at large seemed unable to survive her departure. Before the gun-boat was fairly hull down on the horizon, a dark line on the glassy sea announced the approach of a breeze, and a few minutes later the brigantine’s sails filled, her wallowings subsided, and a visible wake began to stream out astern.

The change in the vessel’s motion brought the captain promptly on deck, and Osmond listened somewhat anxiously for the orders as to the course which was to be set. But he knew his commander too well to make any suggestions.

"Breeze seems to be about sou’-sou’-west," the skipper remarked with one eye on the compass-dial and the other on the upper sails. "Looks as if it was going to hold, too. Put her head west-nor’-west."

"Did the lieutenant give you our position?" Osmond inquired.

"No, he didn’t," the skipper snapped. "He wasn’t asked. I don’t want any of your brass-bound dandies teaching me my business. The continent of Africa is big enough for me to find without their help."

Osmond smothered a grin as he thought of the chronometer, re-started and ticking away aimlessly in the captain’s cabin, its error and rate alike unknown. But again he made no comment, and presently the skipper resumed: "I suppose you will be wanting to get back to Adaffia?"

"I’m not going to leave you in the lurch."

"Well, you can’t stay with me for good excepting as a seaman, as you haven’t got a ticket—at least, I suppose you haven’t."

"No. I hold a master’s certificate entitling me to navigate my own yacht, but, of course, that is no use on a merchant vessel, excepting in an emergency. But I don’t quite see what you are going to do."

"It is a bit of a problem," the skipper admitted. "I shall take on one or two native hands to help while we are on the Coast, and appoint Winter and Simmons to act as mates. Then perhaps I shall be able to pick up an officer from one of the steamers for the homeward trip."

"I will stay with you until you are fixed up, if you like," said Osmond; but the captain shook his head.

"No," he replied. "I shall put you ashore at Adaffia. I can manage all right on the Coast, and I must have a regular mate for the homeward voyage."

Thus the programme was settled, and, on the whole, satisfactorily to Osmond. It is true that, if there had been no such person as Elizabeth Burleigh, he would have held on to his position, even with the rating of ordinary seaman, for the homeward voyage, on the chance of transferring later to some ship bound for South America or the Pacific Islands. But although he had renounced all claim to her and all hope of any future connected with her, he still clung to the ill omened land that was made glorious to him by her beloved presence.

The captain’s forecast was justified by the event. The breeze held steadily and seemed inclined to freshen rather than to fail. The old brigantine heeled over gently and forged ahead with a pleasant murmur in her sails and quite a fine wake trailing astern. It was a great relief to everybody after the long calm, with its monotony and inaction and the incessant rolling of the ship and flapping of the sails. The captain was almost pleasant and the crew were cheerful and contented, though they had little to do, for when once the course was set there was no need to touch sheet or brace, and the trick at the wheel was the only active duty apart from the cook’s activities.

To Osmond alone the change brought no obvious satisfaction. All that had recently happened had been, as he could not but recognize, for the best. The parting had to come, and every day that it was delayed forged his fetters only the more firmly. But this reflection offered little consolation. He loved this sweet, frank, open-hearted girl with an intensity possible only to a man of his strength of will and constancy of purpose. And now she was gone; gone out of his life for ever. It was a final parting. There was no future to look forward to; not even the most distant and shadowy. The vision of a great happiness had floated before him and had passed, leaving him to take up again the burden of his joyless life, haunted for ever by the ghost of the might-have-been.

Nevertheless, he went about his duties briskly enough, finding jobs for the men and for himself, overhauling the cordage, doing small repairs on the rigging, and even, with his own hands, putting a patch on a weak spot on the bottom of the long-boat and lining it inside and out with scraps of sheet copper. And if he was a little grimmer and more silent than before, the men understood and in their rough way sympathized, merely remarking that "Pore old Cook do seem cut up along o’ losin’ his Judy."

At dawn on the third day the land was in sight; that is to say to the north there was an appearance as if a number of small entomological pins had been stuck into the sea-horizon in irregular groups. Viewed from the fore-top, however, through Redford’s glasses, this phenomenon resolved itself into a narrow band of low-lying shore, dotted with coconut palms, the characteristic aspect of the Bight of Benin.

As the day wore on, the brigantine gradually closed in with the land. Before noon, the captain was able, through his telescope, to identify a group of white buildings as the German factories at the village of Bagidá. Then the neighbouring
village of Lomé came in sight and slowly crept past; and as the *Speedwell* drew yet nearer to the land, Osmond was able to recognize, among a large grove of coconuts, the white-washed bungalow at Denu, and, a few miles ahead, the dark mass of palms that he knew to be Adaffia.

"Well, Mr. Cook," said the captain, "you'll soon be back by your own fireside. If the breeze holds, we ought to be in Adaffia roads by four at the latest. I suppose you have got all your portmanteaux packed?"

"I'm all ready to go ashore, if you are still of the same mind."

"I never change my mind," replied the skipper; and Osmond believed him.

"Are you making any stay at Adaffia?" he asked.

"I am going to put you ashore," the captain answered. "What I shall do after that is my business."

"I asked," said Osmond, "because I thought I might be able to get you one or two native hands. However, you can let me know about that later. Now, as it is your watch on deck, I will go below and take a bit of a rest."

He went down to the berth, into which he had moved when Betty departed, and, shutting the door, looked thoughtfully round the little apartment. Nothing had been altered since she left. All the little feminine tidinesses had been piously preserved. It was still, to the eye, a woman's cabin, and everything in its aspect spoke to him of the late tenant. Presently he lay down on the bunk—the bunk in which she had slept—and for the hundredth time drew from his pocket the letter which she had left in the locker. It was quite short—just a little note hastily written at the last moment when the boat was waiting. But to him it was inexhaustible; and though by now he knew it by heart, he read it again as eagerly as when he had first opened it.

'My Dearest Jim,' it ran.

*I am writing you a few words of farewell (since we must say 'good-bye' in public) to tell you that when you read them I shall be thinking of you. I shall think of you, best and dearest comrade, every day of my life, and I shall go on hoping that somehow we shall meet again and be as we have been on this dear old ship. And Jim, dearest, I want you to understand that I am always yours. Whenever you want me—no, I don't mean that; I know you want me now—but whenever you can cast away things that ought to be forgotten, remember that I am waiting for you. Try, dear, to forget every thing but your love and mine."

'Au revoir!

Your faithful and loving

'Betty.'"

It was a sweet letter, written in all sincerity; and even though Osmond never wavered in the renunciation that honour demanded, still it told him in convincing terms that the door was not shut. The gate of Paradise was still ajar. If he could forget all justice and generosity; if he, who had nothing to give, could bring himself to accept the gift so generously held out to him, he still had the option to enter. He realized that—and never, for an instant, entertained the thought. Perhaps there were other ways out. But if there were, he dismissed them, too. Like Captain Hartup, he was not given to altering his mind. Free as he was from the captain's petty obstinacy, he was a man of inflexible purpose, even though the purpose might have been ill-considered.

His long reverie was at length interrupted by a voice which came in through the little port-hole. "No soundings!"

He glanced up at the tell-tale compass which formed a rather unusual fitting to the mate's bunk and noted that the ship's course had been altered three points to the north. She was now heading almost directly for the land and was presumably nearly opposite Adaffia. He re-folded the letter and put it away, but his thoughts went back to its message and to the beloved writer. Presently the voice of the man in the channel who was heaving the lead was heard again; and this time it told of a nearer approach to that dreary shore.

"By the deep, eighteen!"

He noted the depth with faint interest and began to think of the immediate future. As soon as he got ashore he must write to her. It was quite wrong, but he had promised, and he could not but be glad that she had exacted the promise. It would be a joy to write to her, and yet he could feel that he was doing it under compulsion. But it must be a careful letter. There must be in it no sign of weakening or wavering that might mislead her. She must be free and she must fully realize it; must realize that he belonged to her past and had no part in her future. It would be a difficult letter to write; and here he set himself to consider what he should say. And meanwhile the leads-man's voice came in from time to time, recording the gradual approach to the land.

"By the deep, ele-vern!" "By the mark, ten!" "By the deep, eight!"

At this point he was aware of sounds in the cuddy as if some heavy objects were being moved, and he surmised that the gin-cases were being disinterred from the lazarette. Then he heard the trap fall and heavy footsteps stumbled up the companion-stairs. A moment later the leadsman sang out: "By the mark, sev-ern!" and as Osmond rose from the bunk there came a thumping at his door and a voice sang out:

"The captain wants you on deck, sir, and there's a canoe a-comin' alongside."
Osmond cast a farewell glance round the little cabin and followed the man up on deck, where he found the captain waiting on the poop, standing guard, apparently, over two leathern bags and one of canvas. Looking forward, he saw the crew gathered at the open gangway, regarding with sheepish grins four unopened gin-cases, while a canoe, bearing a scarlet-coated grandee, was just running alongside. As he stepped out of the companion, the captain picked up the three bags, and walking with him slowly towards the gangway, addressed him in a gruff tone and a somewhat aggressive manner.

"According to law," said he, "I believe you are entitled to a third of the ship's value for salvage services. There are nearly two hundred ounces of gold-dust in these two leather bags—that is, roughly, eight hundred pounds—and there is forty-eight pounds ten in sovereigns and half-sovereigns, in the canvas bag. Will that satisfy you?

"Rubbish," said Osmond. "I want eight shillings for two cases of gin broached by your men."

"You won't get it from me," snapped the skipper. "I'll have nothing to do with intoxicating liquor."

"If you don't pay, I'll sue you," said Osmond.

"I haven't had the gin," retorted the skipper. "It was brought on board without my authority. You must recover from the men who had it. But what do you say about the question of salvage?"

"Hang the salvage!" replied Osmond. "I want to be paid for my gin."

"You won't get a ha'penny from me for your confounded poison," exclaimed the skipper, hotly. "I hold very strict views on the liquor traffic. There are the men who drank the stuff. Make them pay. It's no concern of mine. But about this salvage question: are you satisfied with what I offer?"

Osmond glanced through the gangway. The gin-cases were all stowed in the canoe; Mensah was beaming up at him with an expectant grin and the canoe-men grasped their paddles. He felt in his pocket, and then, taking the canvas bag from the skipper, thrust his hand in and brought out a handful of coins. From these he selected a half-sovereign, and returning the others, dropped in a couple of shillings from his pocket.

"Two shillings change," he remarked. He threw the bag down on the deck, and pocketing the half sovereign, dropped down into the canoe. But he had hardly taken his seat on the tie-tie thwart when two heavy thumps on the floor of the canoe, followed by a jingling impact, announced the arrival of the two bags of gold-dust and the bag of specie.

Osmond stood up in the dancing canoe with a leather bag in each hand.

"Now, Mensah," he sang out, "tell the boys to get away one time."

The paddles dug into the blue water; the canoe bounded forward. Aiming skilfully at the open gang way, Osmond sent the heavy leathern bags, one after the other, skimming along the deck, and the little bag of specie after them. The skipper grabbed them up and rushed to the gangway. But he was too late. The canoe was twenty yards away and leaping forward to the thud of the paddles. Looking back at the brigantine with a satisfied smile, Osmond saw a row of six grinning faces at the rail, and at the gangway a small figure that shook its fist at the receding canoe with valedictory fury.

His homecoming was the occasion of a pleasant surprise. At intervals during his absence he had given a passing thought to his factory and the little solitary house by the beach and had wondered how they would fare while their master was away. Now he found that in Kwaku Mensah he had a really faithful steward, and not only faithful but strangely competent in his simple way. The house was in apple-pie order and the store was neatly kept and evidently a going concern, for when he arrived, Mensah's pretty Fanti wife was behind the counter, chaffering persuasively with a party of 'bush' people from Agotimi, and a glance into the compound showed a good pile of produce, awaiting removal to the produce store. Accounts, of course, there were none, since Mensah 'no sabby book', but nevertheless that artless merchantman had kept an exact record of all the transactions with that uncanny precision of memory that one often observes in the intelligent illiterate.

So Osmond settled down at once, with a satisfaction that rather surprised him, into the old surroundings; and as he sat that evening at the table, consuming with uncommon relish a dinner of okro soup, 'chickum cotrecks', and 'banana flitters', the product of Mrs. Mensah's skill (her name was Ekua Bochwi, from which one learned that she had been born on Wednesday and was the eighth child of her parents), he was inclined to congratulate himself on Captain Hartup's refusal to retain him as the provisional mate of the Speedwell.

But in spite of the triumphant way in which he had out-manoeuvred the skipper, Osmond had a suspicion that he had not seen the last of his late commander. For the brigantine, which he had left hove-to and apparently ready to proceed on her voyage, had presently let go her anchor and stowed her sails as if the captain contemplated a stay at Adaffia. And the event justified his suspicions. On the following morning, while he was seated at the breakfast-table, with a fair copy of his letter to Betty before him, he became aware of shod feet on the gravelled compound, and a few moments later the doorway framed the figure of Captain Hartup, while in the background lurked Sam Winter, grinning joy and carrying two leathern bags.

The captain entered, and regarding his quondam mate with an expression that almost approached geniality, wished him "good morning" and even held out his hand. Osmond grasped it cordially, and drawing up a second chair, pressed his visitor to join him.

"A little fresh food," he remarked, untactfully, with his eye on the leathern bags, "and a cup of real coffee will do you good."
"I don’t know what you mean by that," snorted the skipper. "I’m not starving, and neither are you. The ship’s grub hasn’t killed you. Still," he added, "as I see you are breakfasting like a Christian and not in the beastly Coast fashion, I don’t mind if I do try a bit of shore tuck with you. And you needn’t look at those bags like that. I am not going to force anything on you. I am not an obstinate man" (which was a most outrageous untruth).

"What have you brought them here for?" Osmond demanded stolidly.

"I’ll tell you presently," replied the skipper. "Bring ’em in, Winter, and dump ’em on that sideboard."

Winter deposited the two bags on the stack of empty cases thus politely designated and then backed to the doorway, where he was encountered by Kwaku, who was directed to take him to the store and feed him.

"I’ve come ashore," the captain explained when they were alone, "to see if I can make one or two little arrangements with you."

Osmond nodded as he helped his guest to stuffed okros and fried eggs (eggs are usually served, on the Coast, fried or poached or in some other overt form, as a precaution against embryological surprises).

"To begin with," continued the skipper, "I want about half a dozen niggers—a cook, a cabin-boy, and a few hands to do the rough work. Do you think you can manage that for me?"

"I’ve no doubt I can," was the reply.

"Good. Well, then, there is this gold-dust. If you care to change your mind, say so, and the stuff is yours."

Osmond shook his head. "I came on board for my own purposes," said he, "and I am not going to take any payment for looking after my own business."

"Very well," the skipper rejoined: "then if you won’t have it, I may as well keep it; and I shan’t if it remains on board. It was that gold-dust that tempted Dhoody and the others. Now I understood from you that you have got a safe. Is it a pretty strong one?"

"It’s strong enough. There are no skilled burglars out here."

"Then I’m going to ask you to take charge of this stuff for me. You see that both bags are sealed up, and there is a paper inside each giving particulars of the contents and full directions as to how they are to be disposed of if anything should happen to me. Will you do this for me—as a matter of business, of course?"

"Not as a matter of business," replied Osmond. "That would make me responsible for the safe custody of the bags, which I can’t be, as I may have to be absent from Adaffia and leave my man, Mensah, in charge of the factory. I will put the stuff in my safe with pleasure, and I think it will be perfectly secure there; but I won’t take any payment or accept any responsibility beyond exercising reasonable care. Will that do?"

"Yes," replied the captain, "that will do. What is good enough for your own property is good enough for mine. So I will ask you to lock the stuff up for me and keep it till I ask for it; but if you should hear that anything has happened to me—that I am dead, in fact—then you will open the bags and read the papers inside and dispose of the property according to the directions written in those papers. Will you do that? It will be a weight off my mind if you will."

"Certainly I will," said Osmond. "But have you any reason to expect that anything will happen to you?"

"Nothing immediate," the captain replied. "But, you see, I am not as young as I was, and I am not what you would call a very sound man. I am subject to occasional attacks of giddiness and faintness. I don’t know how much they mean, but my doctor at Bristol warned me not to treat them too lightly. He gave me a supply of medicine, which I keep in the chest, and when I feel an attack coming on, I turn in and take some. But still, ’in the midst of life we are in death,’ you know; and I’m ready to answer to my name when the call comes."

"Well," said Osmond, "let us hope it won’t come until you have got your goods safely home to Bristol. But in any case, you can depend on me to carry out your instructions."

"Thank you, Mr. Cook," said the captain. "I am glad to get that little matter settled. The only anxiety that is left now is the ivory. I had thought of asking you to take charge of that, too, but it would be awkward for you to store. And, after all, it’s fairly safe in the hold. A man can’t nip off with a dozen eighty-pound tusks in his pocket. So I think we will leave that where it is, ready stowed for the homeward voyage. By the way, have you got any produce that you want to dispose of?"

"Yes, I have a ton or two of copra and a couple of puncheons of oil; and I can let you have some kernels and rubber. Perhaps you would like to take some of the produce in exchange for trade goods."

The arrangement suited Captain Hartup exactly, and accordingly, when they had finished breakfast and stowed the gold-dust in the safe, they adjourned to the produce store to settle the details of the exchange. Then half a dozen canoes were chartered, the new hands mustered by Kwaku, and for the rest of the day the little factory compound and the usually quiet beach were scenes of unwonted bustle and activity. Sam Winter (secretly fortified with a substantial ‘tot’ of gin) was sent on board to superintend the stowage and breaking-out of cargo, while the skipper remained ashore to check off the goods landed and embarked.

The sun was getting low when the two white men set forth to follow the last consignment down to the beach. When they had seen it loaded into the canoes and watched its passage through the surf, Captain Hartup turned to Osmond, and
having shaken his hand with almost unnatural cordiality, said, gruffly but not without emotion:

"Well, good-bye, Mr. Cook. I've a good deal to thank you for, and I don't forget it. Providence brought us together when I badly needed a friend, and He will bring us together again, no doubt, in His own good time. But how or when, no one can foresee."

He shook Osmond's hand again and, stepping into the waiting canoe, took his seat on a parcel of rubber. The incoming breaker surged up and spent its last energy in a burst of spray on the canoe's beak. The little craft lifted and, impelled by a hearty shove from the canoe-men, slid down the beach on the backwash and charged into the surf. For a few minutes Osmond stood at the brink of the sea watching the canoe as it hovered amidst clouds of spray, dodging the great combers and waiting for its chance to slip through the 'shouting seas' to the quiet rollers outside. At length the periodical 'lull' came; the paddles drummed furiously on the green-blue water; the canoe leaped at the following wave, disappeared in a burst of snowy froth, and reappeared prancing wildly but safely outside the line of surf. A little figure in the canoe turned and waved its hand; and Osmond, after a responsive flourish of his hat and a glance at the anchored brigantine, turned away from the beach with an odd feeling of regret and walked slowly back to the factory, pondering on the captain's curious and rather cryptic farewell.
VIII.—THE LAST OF THE ‘SPEEDWELL’

FOR a couple of months Osmond’s life at Adaffia drifted on monotonously enough, yet not at all drearily to a man of his somewhat solitary habits and self-contained nature. The factory prospered in a modest way with very little attention on his part, causing him often to reflect regretfully on poor Larkom’s melancholy and unnecessary failure. That kindly wastrel was now secured—for a time—from injury by a neatly-made wooden cross, painted white and inscribed with his name, a date, and a few appreciative words, which had been set above his grave when the other cross had been removed to grace an elongated heap of sand which represented the resting-place of the late John Osmond.

Moreover, there were breaks in the monotony which had not existed before the adventure of the Speedwell. His letter to Betty (in which, among other matters, he had related with naive satisfaction the incident of the leathern bags and the defeat of Captain Hartup) had evoked a lengthy reply with a demand for a further letter; and so, much against his judgment, he had been drawn into a regular correspondence which was the occasion of alternate and conflicting emotions. Every letter that he wrote racked his conscience and filled him with self-contempt. But the arrival of the inevitable and always prompt reply was a delight which he accepted and enjoyed without a qualm. It was very inconsistent. To the half-naked native who acted as the semi-official postman, he would hand his letter shamefacedly, with a growl of disapproval, admonishing himself that "this sort of thing has got to stop." And then, on the day when the reply was expected, he would take a telescope out on the sand-hills and remain for hours watching the beach for the appearance in the remote distance of that same native postman.

These letters, mostly written from head-quarters, kept him informed respecting events of local interest, and, what was much more to the point, of Betty’s own doings and movements. He learned, for instance, that there were rumours of a native rising in Anglob (officially spelt Awuna), the region at the back of Adaffia; and that—regardless of this fact—Betty was trying to get her father’s permission for a little journey of exploration into this very district.

This latter item of news set his emotional seesaw going at double speed. His judgment denounced the project violently. First, there was the danger—obvious, though not so very great; for the African is essentially a gentlemanly fighter, if rather heavy-handed, and would avoid injuring white women. But he is a shockingly bad marksman and uses slugs and gravel for ammunition, so that accidents are very liable to happen. But apart from the danger, this expedition was highly undesirable, for it would bring Betty into his neighbourhood, and of course they would meet—she would see to that. And that meeting ought not to take place. It would only prolong a state of affairs that was disturbing to him and ruinous to her future prospects. He felt this very sincerely, and was foolish enough to say so in his reply to her letter.

From time to time his thoughts wandered to Captain Hartup, and always with a tendency to speculate on the meaning—if there were any—of the note of foreboding which he thought he had detected in the captain’s last words as they said “good-bye” on the deck. Those words seemed to him—toogether with something final and testamentary in his manner when he had deposited the bags of gold-dust in the safe—seemed to hint at an uncertainty of life and distrust of the future on the captain’s part, on which Osmond reflected uneasily. And at last, there came a day on which the skipper’s meaning was made clear.

One morning, in the short interval between the night and the dawn, he awoke suddenly and became aware of a dusky figure between his bed and the window.

"Mastah!” the voice of Mensah exclaimed, excitedly, “dat ship, Speedwell! I look um. He fit for come on de beach.”

Osmond lifted the mosquito-curtain and, springing out of bed, dropped into his slippers, snatched up the telescope, and followed Mensah out to the end of the compound whence there was a clear view of the sea. And there she was looming up sharp and clear against the grey dawn; and the first glance of a nautical eye read tragedy and disaster in every detail of her aspect. No telescope was needed. She was close in shore, within a couple of cable-lengths of the surf, with her square-sails aback and head-sails shivering, drifting slowly but surely to the destruction that roared under her lee. Obviously, there was no one at the wheel, nor was there any sign of life on board. She was a perfect picture of a derelict.

For a few moments Osmond stared at her in horrified amazement. Then, with a sharp command to Mensah to “get canoe one time,” he ran out of the compound and made his way to the beach.

But his order had been anticipated. As he and Mensah came out on the shore, they found a group of excited fishermen dragging a canoe down to the water’s edge, while another party were already afloat and padding out through the surf towards the derelict brigantine. Osmond and his henchman at once joined the fishermen, and though the latter looked askance at the white man—for the accommodation of the little craft was rather limited—they made no demur, experience having taught them that he would have his own way—and pay for it. Accordingly they hauled and shoved with a will, and in a very few moments got the canoe down to the water’s edge. Osmond and Mensah stepped in and took their seats, the fishermen grasped the gunwales, and when a big wave swept in and lifted the canoe, they shoved off and went sliding down on the backwash and charged into the surf.

Meanwhile the brigantine continued to drift by the wind and current nearly parallel to the shore, but slowly approached the latter. At the moment she was turning sluggishly and beginning to ‘pay off’ on the star board tack. Her sails filled and she began to move ahead. If anyone had been on board she might even now have been saved, for there was still room for her to ‘claw off’ the lee shore. Osmond gazed at her with his heart in his mouth and urged the canoe-men to greater efforts; though they wanted little urging, seeing that their friends in the other canoe were now quite near to the receding ship.
Moment by moment his hopes rose as the brigantine gathered way, though she was now less easy to overtake. Breathlessly he watched the leading canoe approach her nearer and nearer until at last the fishermen were able to lay hold of the vacant tackles that hung down from the stern davits and swarm up them to the poop. And even as they disappeared over the taffrail, the flicker of life that the old brigantine had displayed faded out. Under the pressure of the mainsail she began slowly to turn to windward. The head-sails shivered, the square-sails blew back against the mast; she ceased to move ahead, and then began once more to drift stern-foremost towards the white line of surf.

As Osmond’s canoe ran alongside, where the other canoe was now towing, the first arrivals came tumbling over the side in a state of wild excitement, jabbering as only an excited African can jabber. Mensah proceeded hastily to interpret.

"Dose fishermen say dis ship no good. Dead man live inside him."

Osmond acknowledged the information with an in articulate growl, and grasping a chain-plate, hauled himself up into the channel, whence he climbed over the rail and dropped on deck.

His first act was to run to the wheel, jam it hard over to port and fix it with a lashing. Then he ran forward to look at the anchors; both of them were stowed securely and—for the present purposes—useless. He looked up despairingly at the sails, and for a moment thought of trying to swing the yards; but a glance over the stern at the snowy line of surf showed him that the time for manœuvring was past. For an instant he stood scanning the deck; noting the absence of both boats and the yawning main hatch. Then he ran aft and scrambled down the companion-steps.

The door of the captain’s cabin was open—had been left open by the fishermen—and was swinging idly as the ship rolled. But though the whereabouts of the dead man was evident enough before he reached it, he entered without hesitation, intent only on learning exactly what had happened on that ill-omened ship.

The little cabin was just as he had last seen it—with certain differences. And in the bunk lay something that had once been Captain Hartup. It was a dreadful thing to look upon, for the Tropics deal not kindly with the unsepulchred dead. But as Osmond stood looking down on the bunk, mere physical repulsion was swallowed up in a profound feeling of pity for the poor, cross-grained, honest-hearted little shipmaster. There he lay—all that was left of him. There, in the bunk, still lightly held by the blackened, puffy hand, was the inexhaustible Commentary, and on the deck, by the bunk-side, an open box containing a tumber and a large medicine-bottle the label of which bore written directions and a Bristol address.

Osmond picked up the bottle and read the minute directions with a sense of profound relief. Its presence suggested what his inspection of the dead man confirmed; that at least death had come to Captain Hartup peaceably and decently. The traces of a murderous attack which he had feared to find were not there. Everything tended to show that the captain had died, as he had seemed to expect, from the effects of some long-standing malady.

From the dead man Osmond turned a swift attention to the cabin. He had noticed, when he entered, that the chronometer was not in its place on the little chart-table. He now observed that other things had disappeared—the telescope, the marine glasses, the sextant, and the mathematical instrument case In short, as he looked round, he perceived that the little cabin had been gutted. Every portable thing of value had been taken away.

His observations were interrupted by the voice of Mensah calling to him urgently to come away "one time," and at the same moment he felt the ship give a heavy lurch followed by a quick recovery. He backed out of the cabin and was about to run up the companion-steps when his glance fell on the door of the adjoining berth, which had been his own and Betty’s, and he was moved irresistibly to take a last, farewell look at the little hutch which held so many and so dearly prized memories. He thrust the door open and looked in; and even as he looked, a flash of dazzling white came through the tiny porthole, and a moment later a thunderous crash resounded and the ship trembled as if struck by a thousand monstrous hammers.

He waited no more, but, springing up the steps, thrust his head cautiously out of the companion-hatch. Glancing seaward, he saw a great, sparkling green mass sweeping down on the ship. In another instant, its sharp, tremulous crest whitened; a hissing sound was borne to his ears and quickly rose to a hoarse roar which ended in a crash that nearly shook him off his feet. Then sea and sky, masts and deck, were swallowed up in a cloud of blinding white; there was another roar, and the snowy cataract descended, filling the deck with a seething torrent of foaming water.

Osmond sprang out of the hatch and took a quick glance round. The two canoes were hovering on the outside edge of the surf and obviously unable to approach the ship. Towards the land, the sea was an unbroken expanse of white, while to seaward the long ranks of sharp-crested waves were turning over and breaking as they approached. Warned by a hissing roar from the nearest wave, he stepped back into the shelter of the companion. Again the ship staggered to the crashing impact. Again the visible world was blotted out by the white cloud of spray and foam; and then, as the deluge fell, came a sickening jar with loud cracking noises as the ship struck heavily on the ground. Twice she lifted and struck again, but the third time, rending sounds from below told that her timbers had given way and she lifted no more. Then, under the hammering of the surf, which filled her lower sails with green water, she heeled over towards the shore until the deck was at an angle of nearly forty-five.

Osmond looked out from his shelter and rapidly considered what he should do. There was not much time to consider, for the ship would soon begin to break up. He thought of dropping overboard on the land side and swimming ashore; but it was not a very safe plan, for at any moment the masts might go over the side, and it would not do for him to be underneath when they fell.
Still, he had to act quickly if he were to escape from the impending collapse of the whole fabric, and he looked about eagerly to find the least perilous method. Suddenly his glance fell upon a large cork fender which was washing about in the lee scuppers. The way in which it floated showed that it was dry and buoyant, and it appeared to him that with its aid he might venture into the surf beyond the shelter of the ship and wash safely ashore.

He watched for an opportunity to secure it. Waiting for the brief interval between the descent of the deluge and the bursting of the next wave, he slipped out, and grasping the end of the main sheet, which had washed partly loose from the cleat, ran down to the scupper, seized the fender, and hauling himself up again, crept into his shelter just in time to escape the next wave. When this had burst on the ship and the cataract had fallen, he kicked off his slippers, darted out, and clawing his way past the wheel, reached the taffrail. Holding on firmly to the fender with one hand, with the other he grasped the lee davit-tackle, and springing out, let the tackle slip through his hand.

Just as he reached the water, the next wave burst on the ship; and for the next few moments he was conscious of nothing but a roaring in his ears, a sudden plunge into darkness, and a sense of violent movement. But he still clung tenaciously to the fender, and presently his head rose above the seething water. He took a deep breath, shook the water from his eyes, and began to strike out with his feet, waiting anxiously for the next wave and wondering how much submersion he could stand without drowning. But when the next wave came, its behaviour rather surprised him. The advancing wall of hissing foam seemed simply to take hold of the fender and bear it away swiftly shoreward, leaving him to hold on and follow with his head comfortably above the surface.

In this way, amidst a roar like that of steam from an engine's escape-valve, he was borne steadily and swiftly for about a quarter of a mile. Then the spent wave left him and he could see it travelling away towards the shore. But the following wave overtook him after a very short interval and carried him forward another stage. And so he was borne along with surprising ease and speed until he was at last flung roughly on the beach and forthwith smothered in foaming water. He clawed frantically at the wet sand and strove to rise. But the beach was steep and the undertow would have dragged him back but for the help of a couple of fishermen, who, holding on to a grass rope that was held by their companions, waded into the surf, and grabbing him by the arms, dragged him up on to the dry sand beyond the reach of the waves.

As he rose to his feet, he turned to look at the ship. But she was a ship no longer. The short time occupied by his passage ashore had turned her into a mere wreck. Her masts lay flat on the water and her deck had been burst through from below; and through the yawning spaces where the planks had been driven out, daylight could be seen in several places where her side was stowed. The two canoes had already come ashore, and their crews stood at the water's edge, watching the flotsam that was even now beginning to drift shoreward on the surf. Osmond, too, watched it with interest, for he now recalled that the instantaneous glance that he had cast through the open main hatch had shown an unexpectedly empty condition of the hold. And this impression was confirmed when Mensah joined him (apparently quite unmoved by the proceedings of his eccentric employer) and remarked:

"Dose fishermen say only small-small cargo live in side dat ship. Dey say de sailor-man tief de cargo and go away in de boats."

Osmond made no comment on this. Obviously the cargo could not have been taken away in two small boats. But equally obviously it was not there, nor were the boats. It was clear that the ship had been abandoned—probably after the skipper's death—and she had been abandoned at sea. The suggestion was that the crew had transhipped on to some passing vessel and that the cargo had been transferred with them. It might be a perfectly legitimate transaction. But the presence in the cabin of the unburied body of the captain, and the open main hatch, hinted at hurried proceedings of not very scrupulous agents. A responsible shipmaster would certainly have buried the dead captain. Altogether it was a mysterious affair, on which it was possible only to speculate.

The spot where the brigantine had come ashore was about halfway between Adaffia and the adjoining village of Denu. Osmond decided to walk the three or four miles into Adaffia, and when he had washed, dressed, and breakfasted, to return and examine the wreckage. Meanwhile, he left Mensah on guard to see that nothing was taken away—or at any rate, to keep account of anything that was removed by the natives, who were now beginning to flock in from the two villages. Accordingly, having borrowed from the fishermen a large, shallow calabash to put over his head—for the sun was now well up and making itself felt—he strode away westward along the beach, walking as far as was possible on the wet sand to avoid delivering his bare feet to the attacks of the chiggers—sand-fleas—which infested the 'Aeolian sands' above the tide-marks.

When he returned some three hours later all that was left of the Speedwell was a litter of wreckage and flotsam strewn along the margin of the sea or on the blown sand, to which some of the more valuable portions had been carried. The vessel's keel, with the stern and stern-posts and a few of the main timbers still attached, lay some distance out, but even this melancholy skeleton was gradually creeping shoreward under the incessant pounding of the surf. The masts, spars, and sails were still in the water, but they, too, were slowly creeping up the beach as the spent waves struck them every few seconds. As to the rest, the ship seemed almost to have decomposed into her constituent planks and beams. There is no ship-breaker like an Atlantic surf.

Osmond cast a pensive glance over the disorderly frame that had once been a stout little ship, and as Mensah observed him and approached, he asked:

"How much cargo has come ashore, Kwaku?"
Mensah flung out his hands and pointed to the litter on the shore. "Small, small cargo come," said he. "One, two puncheons of oil, two or three dozen bags kernels, some bags copra, two, three bales Manchester goods—finish."

"I don't see any Manchester goods," said Osmond.

"No, sah. Dem country people. Dey darn tief. Dey take eberyting. Dey no leave nutting"; and in confirmation he pointed to sundry little caravans of men, women, and children, all heavily laden and all hurrying homeward, which were visible, mostly in the distance. Indeed, Osmond had met several of them on his way.

"You have not seen any ivory?"

"No, sah. I look for um proper but I no see um."

"Nor any big crates or cases?"

"No, sah. Only de bales and crates of Manchester goods, and de country people break dem up."

"Has the captain—the dead man—come ashore?"

"Yas, sah. He live for dat place," and Mensah pointed to a spot at the eastern end of the beach where a clump of coconut palms grew almost at high-water mark. Thither Osmond proceeded with Mensah, and there, at the spot indicated, he found the uncomely corpse of the little skipper lying amidst a litter of loose planks and small flotsam, on the wet sand in the wash of the sea, and seeming to wince as the spent waves alternately pushed it forward and drew it back.

"Mensah," said Osmond, looking down gravely at the body, "this man my countryman, my friend. You sabby?"

"Yas, sah. I sabby he be your brudder."

"Well, I am going to bury him in the compound with Mr. Larkom and Mr. Osmond."

"Yas, sah," said Mensah, with a somewhat puzzled expression. That second grave was a mystery that had caused him much secret cogitation. But discretion had restrained him from asking questions.

"You think," pursued Osmond, "these people fit for bring the dead man to Adaffia?"

"Dey fit," replied Mensah, "s'pose you dash um plenty money."

"Very well," said Osmond, with characteristic incaution, "see that he is brought in and I will pay them what they ask."

"I go look dem people one time," said Mensah, who had instantly decided that, on these advantageous terms, he would undertake the contract himself.

Before starting to walk back, Osmond took another glance at the wreckage and at the crowd of natives who were, even now, carrying it away piecemeal. For a moment he had a thought of constituting himself Lloyd's agent and taking possession of what was left. But he had no authority, and as the mere wreckage was of no realizable value, and as the little cargo there had been was already carried away, he dismissed the idea and set out homeward, leaving the delighted natives in undisputed possession.

His first proceeding on arriving home was to unlock the safe and break open the leathern bags to see what directions Captain Hartup had given as to the disposal of his property. He was not entirely unprepared to find that the captain had formally transferred the gold-dust to him. But he was totally unprepared for the contents of the bulky paper which he drew out of the second bag, and as he opened and read it he could hardly believe the evidence of his eyesight. The paper was a regularly-drawn will, witnessed by Winter and Simmons, which made 'my friend and temporary mate, Mr. James Cook', sole executor and legatee.

It began with a preamble, setting forth that 'I, Nicholas Hartup, being a widower without offspring, dependants, or near relations, give and bequeath my worldly possessions to the man who has dealt with me honestly, faithfully, and without thought of material profit or reward' and then went on to make the specific bequests, describing each of the items clearly and in detail. These included the gold-dust, giving the exact weight, a consignment of ivory consisting of 'thirty-nine large tusks in three large crates, at present in the hold of the brigantine Speedwell, and fifty-one scribellos in a large canvas bag wired up and sealed, also in the hold' also the vessel herself, and, most astonishing of all, 'my freehold house in Bristol, known as number sixty-five Garlic Street' and a sum of about three thousand pounds, a part invested in certain named securities and the remainder lying on deposit at a specified bank in Bristol. It was an amazing document. As Osmond read and re-read it he found himself wondering at the perverseness of the little shipmaster in hiding his kindly, appreciative feelings under so forbidding an exterior; but, to judge by the wording of the preamble, his experience of men would seem not to have been happy. Osmond, having put back the will in the bag, tied up that and the other and replaced them in the safe. As he locked the door and pocketed the key, he reflected on the irony of his present position. In all the years during which he had lived amidst his friends and relatives, no one had ever bequeathed to him a single penny. Yet in the course of a few months, in this unfrequented and forgotten corner of the world, he had twice been made the sole legatee of almost complete strangers. And now he had be come a man of modest substance, an owner of landed property; and that in a country which prudence insisted that he must never revisit.
IX. — ARMS AND THE MAN

SPEAKING in general terms, Welshmen cannot be fairly described as excessively rare creatures; in fact, there are some parts of the world—Wales, for instance—in which they are quite common. But circumstances alter cases. When Jack Osmond, busily engaged in posting up his account-books, lifted his eyes and beheld a specimen of this well-known type of mammal, he was quite startled; not merely because he had never before heard anyone say "Good morning" with an accent on the "ning"—which the present example did, although it was actually three in the afternoon—but because no ship had called in the neighbourhood quite lately and he had not known of the presence of any European in the village.

The stranger introduced himself by the name of Jones, which being not entirely without precedent was accepted without difficulty. He had an additional name, but as Osmond failed to assimilate it, and it could be expressed in writing only by an extravagant expenditure of Is and double d's, it is omitted from this merely Saxon chronicle. He shook Osmond's hand exuberantly and smiled until his face—particularly the left side—was as full of lines as a ground-plan of Willesden Junction.

"I come to you, Mr. Larkom," said the visitor, retaining Osmond's unwilling hand and apparently adopting the name that remained unaltered over the door of the factory, "as a fellow-countryman in distress, craving a charitable judgment and a helping hand."

He would have been well advised to leave it at that; for Osmond's natural generosity needed no spur, and the memory of his own misfortunes was enough to ensure his charity to others. But Mr. Jones continued, smiling harder than ever: "I come to you confidently for this help because of the many instances of your kindness and generosity and good-fellowship that I have heard—"

"From whom?" interrupted Osmond.

"From—er—from—well, I may say, from every one on the Coast who knows you."

"Oh," said Osmond; and his face relaxed into a grim smile. Jones saw that he had made a mistake and wondered what the deuce it was.

"Come into my room," said Osmond, "and tell me what you want me to do. Have a cocktail?"

Mr. Jones would have a cocktail, thank you; and while Osmond twirled the swizzle-stick and raised a pink froth in the tumbler, he cautiously opened his business.

"I am taking some risk in telling you of my little affair, but I am sure I can trust you not to give me away."

"Certainly you can," Osmond replied, incautiously.

"You promise on your honour as a gentleman not to give me away?"

"I have," said Osmond, handing him the cocktail.

Jones still hesitated somewhat, as if desirous of further formalities, but at length plunged into the matter in a persuasive whisper, with much gesticulation and a craftily watchful eye on Osmond's face.

It was not an encouraging face. A portrait of the 'Iron Duke' at the age of thirty, executed in very hard wood by a heavy-handed artist with a large chisel and mallet, would give you the kind of face that Mr. Jones looked upon; and as the 'little affair' unfolded itself, that face grew more and more wooden. For Osmond's charity in respect of errors of conduct did not extend to those that were merely in contemplation.

It transpired gradually that Mr. Jones's sufferings and distress were occasioned by a little cargo that he had been unable to land; which cargo happened to include—er—in fact, to be quite candid, consisted largely of Mauser rifles, together with some miscellaneous knick-knacks—such as Mauser cartridges, for instance—all of which were at present rolling in the hold of a privately-chartered vessel (name not mentioned). It also appeared that the Colonial Government had most unreasonably prohibited the importation of arms and ammunition on account of the silly little insurrection that had broken out inland; which very circumstance created an exceptional opportunity—don't you understand?—for disposing of munitions of war on profitable terms. It appeared, finally, that Mr. Larkom's factory was an ideal place in which to conceal the goods and from which to distribute them among local sportsmen interested in target-practice or partridge-shooting.

"To put it in a nutshell," said Osmond, "you're doing a bit of gun-running and you want to use me as a cat's paw; and to put it in another nutshell, I'll see you damned first."

"But," protested Jones, "you sell arms yourself, don't you?"

"Not while this row is on. Besides, the niggers don't buy my gas-pipes for war-palaver. My customers are mostly hunters from the bush."

Mr. Jones lingered a while to ply the arts of persuasion and consume two more cocktails; and when at last he departed, more in sorrow than in anger, he paused on the threshold to remark:

"You have promised, on your honour, not to give me away."

"I know I have, like a fool," replied Osmond "Wish I hadn't. Know better next time. Good day." And he followed his
departing guest to the compound gate and shut it after him.

From that moment Mr. Jones seemed to vanish into thin air. He was seen no more in the village, and no whispers as to his movements came from outside. But a few nights later Osmond had a rather curious experience that somehow recalled his absent acquaintance. He had gone out, according to his common custom, to take a quiet stroll on the beach before turning in, and think of his future movements and of the everlasting might-have-been. Half a mile west of the village he came on a fishing canoe, drawn up above tide-marks, and as he had just filled his pipe he crept under the lee of the canoe to light it—for one learns to husband one’s matches in West Africa. Having lighted his pipe, he sat down to think over a trading expedition that he had projected, but, finding himself annoyed by the crabs, which at nightfall pour out of their burrows in myriads, he shifted to the interior of the canoe. Here he sat, looking over the spectral breakers out into the dark void which was the sea, and immersed in his thoughts until he was startled by the sudden appearance of a light. He watched it curiously and not without suspicion. It was not a ship’s anchor-light, nor was it a flare-lamp in a fishing-canoe. By the constant variation in its brightness Osmond judged it to be a bull’s-eye lantern which was being flashed to and fro along the coast from some vessel in the offing to signal to someone ashore.

He looked up and down the dark beach for the answering signal, and presently caught a dull glimmer, as of a bull’s-eye lantern seen from one side, proceeding from the beach a short distance farther west. Watching this spot, he soon made out a patch of deeper darkness which grew in extent, indicating that a crowd of natives had gathered at the water’s edge; and, after a considerable interval a momentary flash of the lantern fell on a boat dashing towards the beach in a smother of spray.

Soon after this a number of dark shapes began to separate themselves from the mass and move in single file across the low sand-dunes, passing within a few dozen yards of the canoe. Osmond could see them distinctly, though himself unseen; a long procession of carriers, each bearing a load on his head; and whereas some of these loads were of an oblong shape, like small gun-crates—about the length of a Mauser rifle—the others were more nearly cubical and quite small, though obviously heavy. Osmond watched the file of carriers and counted upwards of forty loads. Perhaps it was none of his business. But as those parcels of death and destruction were borne silently away into the darkness to swell the tale of slaughter in the inland villages, he cursed Mr. Jones and his own folly in giving that unconsidered promise.

The last of the carriers had vanished and he had just risen from the canoe to return up the now deserted beach when a new phenomenon presented itself. The clouds which had hidden the rising moon, thinned for a few moments, leaving a patch of coppery light in the eastern sky; and against this, sharp and distinct as if cut out of black paper, stood the shape of a schooner. But not an ordinary trading schooner. Brief as was the gleam that rendered her visible, her character was perfectly obvious to a yachtsman’s eye. She was a large yacht of the type that was fashionable when the America Cup was new; when spoon bows and bulb keels were things as yet undreamed of. Osmond stared at her in astonishment; and even as he looked, the clouds closed up, the sky drew dark, and she was lost in the blackness of the night.

He was up betimes on the following morning and out on the beach in the grey dawn to see if any confirmatory traces of these mysterious proceedings were visible. But his questioning eye ranged over the grey sea in vain. The schooner had vanished as if she had never been. There were, however, multitudinous tracks of bare feet leading up from the shore to the sand-hills, where they were lost; deep footprints such as would be made by heavily-laden men. And there was something else, even more significant. Just at high-water mark, hardly clear of the wash of the sea, was a ship’s boat, badly battered, broken-backed, and with one bilge stove in. Some fool, who knew not the West Coast surf, had evidently landed a heavy lading in her with this inevitable result.

But it was not her condition alone that caused Osmond to stride so eagerly towards her. There was something in her size and build that he seemed to recognize. As he reached her, he walked round to examine her stern. There had, of course, been a name painted on her transom, but it had been scraped out and the stern re-painted. Then Osmond stepped in and lifted one of the bottom-boards; and there, on the starboard side close to the keel, was a patch covered with sheet-copper, while inspection from without showed an external covering of copper. There was no mistaking that patch. It was his own handiwork. This poor battered wreck was the Speedwell’s long-boat; and as he realized this, he realized, too, what had become of the Speedwell’s cargo.

The discovery gave Osmond considerable food for thought for the remainder of the morning. But about mid-day an unlooked-for letter from Betty arrived and for the time being occupied his attention to the exclusion of all other matters. And not entirely without reason. For it conveyed tidings of a somewhat disturbing kind. The message was, indeed, smuggled in inconsequently, as important messages often are in ladies’ letters, at he end. But there it was; and Osmond read it with deep disapproval and no small uneasiness.

“You will probably not hear from me again for a week or two as I am going for a little trip inland and may not have a chance to send a letter. I shall let you know directly I get back, and until you hear from me you had better not write—or, at least, you can write, and make it a nice long letter, but don’t send it until you get mine.”

That was the message. She did not give a hint as to the region into which the 'little trip' would take her. But Osmond had a strong and uncomfortable suspicion that her route would take her into the country at the back of the great lagoon and would bring her finally to Adaffia.

He pondered the situation at length. As to the danger of such a journey, it was probably negligible—if the reports were correct. The disturbed area was far away to the north, on the borders of Krepi. The country at the back of the lagoon was believed to be quite peaceful and safe. But one never knew. These Efé peoples were naturally warlike and turbulent. At any
moment they might break out in support of their inland relatives. Even now they might have provided themselves with some of Mr. Jones’s knick-knacks and be preparing for “war-palaver.”

The result of his cogitations was somewhat curious and not very easy to understand. For some time past he had been turning over in his mind a project which had really been held up by the regular arrival of Betty’s letters. That project was concerned with a trading expedition to the interior—to the country at the back of the lagoon. But that ‘little trip’ would have taken him out of the region in which the receipt of letters was possible, and he had accordingly put it off to some more opportune time. Now that more opportune time seemed to have arrived. There would be no more letters for a week or two, so there was nothing to prevent him from starting. That was how he put it to himself, What was actually in his mind it is impossible to guess. Whether his purpose was to be absent from Adaffia when Betty should make her inevitable visit, to avoid the meeting for which he had yearned but which he felt to be so undesirable; or whether he had some vague hopes of a possible encounter on the road: who can say? Certainly not the present chronicler, and probably not Osmond himself. At any rate, the upshot of it was that he decided on the journey, and with characteristic promptitude set about his preparations forthwith; and as they were far from elaborate and had been well considered before hand, a single day’s work saw everything ready for the start.

On the following morning he set forth, leaving the faithful Mensah in charge of the factory. A dozen carriers bore the loads of goods for the trading venture, and his recently engaged servant, Kofi Kuma, carried his simple necessaries in a light box. In spite of his anxieties and haunting regrets, he was in high spirits at the promised change from the monotony of Adaffia, which, but for the infinitely precious letters, would have been intolerably wearisome. The universal sand, varied only by the black lagoon mud, the everlasting coconut palms chattering incessantly in the breeze, and the bald horizon of the unpeopled sea, had begotten in him an intense yearning for a change of scene; for the sight of veritable trees with leaves, growing in actual earth, and of living things other than the sea-birds and the amphibious denizens of the beach.

A couple of hours’ steady marching carried him and his little party across the bare plain of dry mud that had once been part of the great lagoon and brought him to the mainland and the little nine-inch trail that did duty as a road. Gleefully he strode along in the rear of his little caravan, refreshing his eyes and ears with the novel sights and sounds. The tiresome boom of the surf had faded into a distant murmur that mingled with the stirring of leaves; strange birds, unseen in the bush, piped queer little Gregorian chants, while others, silent, but gorgeous of plumage—scarlet cardinals and rainbow-hued sun-birds—disported themselves visibly among the foliage. Little striped Barbary mice gambolled beside the track, and great, blue-bodied lizards with scarlet heads and tails perched on the tall ant-hills that rose on all sides like pink monuments, and nodded their heads defiantly at the passing strangers. It was a new world to Osmond. The bright pink soil, the crowded bush, the buttressed forest trees, the uncouth baobabs, with their colossal trunks and absurdly dwarfed branches—all were new and delightful after the monotony of the beach village, and so fully occupied his attention that when they entered a hamlet of pink-walled houses, he was content to leave the trading to Kofi, while he watched a troop of dog-faced monkeys who seemed to have established a sort of modus vivendi with the villagers.

Thus, with occasional halts for rest or barter, the caravan worked its way through the bush until about four o’clock in the afternoon; when Osmond, who had lagged behind to avoid the chatter of his carriers, rounded a sharp turn in the road and found himself entering the main street of a village. But he was not the only visitor. An instantaneous glance showed him a couple of stands of piled arms, by the side of which some half-dozen bare-footed native soldiers were seated on the ground eating from a large calabash; a fierce and sullen looking native, secured with manacles and a leading-rope and guarded by two more of the Hausa soldiers as he was fed by some of the villagers; and two white officers, seated under the village shade tree and engaged at the moment in conversation with Kofi, who seemed to have been captured by a Hausa sergeant.

As Osmond came in sight the two officers looked at one another and rose with a rather stiff salutation.

"You are Mr. Cook of Adaffia, I understand?" one of them said.

"Yes," Osmond replied; and as the two officers again looked at one another with an air of some embarrassment, he continued, bluntly: "I suppose you want to know if I have got any contraband of war?"

"Well, you know," was the half-apologetic reply, "someone has been selling rifles and ammunition to the natives, so we have to make inquiries."

"Of course you do," said Osmond; "and you’d better have a look at my goods. Kofi, tell the carriers to bring their loads here and open them."

A very perfunctory inspection was enough to satisfy the constabulary officers of the harmless character of the trade goods, and having made it, they introduced themselves by the respective names of Stockbridge and Westall and invited Osmond to join them in their interrupted tea under the shade tree.

"Troublesome affair this rising," said Westall, as he handed Osmond a mug of tea; "there’ll be wigs on the green before it’s over. Now that the beggars have got rifles, they are ready to stand up to the constabulary. Think they’re as good as we are; and they’re not so far wrong, either."

"Where are you bound for now?" Osmond asked.

"We are going back to Quittah with some prisoners from Agotimé." Westall nodded at the manacled native and added: "That’s one of the ring-leaders—a rascal named Zippah; a devil of a fellow, vicious as a bush-cat and plucky, too. Stockbridge and I are keeping him with us, in case of a rescue, but there are over a dozen other prisoners with the main
body of Hausas. They marched out of the village just before you turned up."

"And we'd better be marching out, too," said Stockbridge, "or we shan't catch them up. Will you have any more tea, Cook? If not, we'd better get on the road. There's only a native sergeant-major with those men ahead. Are you coming our way?"

"Yes," replied Osmond, "I'll come with you as far as Afferingba, and then work my way home along the north shore of the lagoon."

The three Englishman rose, and, as Westall's servant repacked the tea apparatus, the little procession formed up. The six Hausas led with fixed bayonets; then came Westall followed by the prisoner, Zippah, and his guard; next came half a dozen carriers loaded with bundles of confined muskets and powder then Osmond and Stockbridge; and the rear was brought up by Osmond's carriers and the three servants.

The road, or path, after leaving the village, passed through a number of yam and cassava plantations and then entered a forest of fan-palms; a dim and ghostly place now that the sun was getting low, pervaded by a universal rustling from the broad, ragged leaves above and a noisy crackling from the dry branches underfoot. For nearly an hour the party threaded its way through the gloomy aisles, then the palms gradually thinned out, giving place to ordinary forest trees and bush.

"Quite pleasant to get a look at the sky again," Osmond remarked as they came out into the thin forest.

"Yes," said Stockbridge; "but you won't see it for long. There's a bamboo thicket just ahead."

Even as he spoke there loomed up before them an immense, cloudy mass of soft, blue-green foliage; then appeared a triangular black hole like the entrance to a tunnel, into which the Hausas, the prisoners, and the carriers successively vanished. A moment later and Osmond himself had entered through that strange portal and was groping his way in almost total darkness through a narrow passage, enclosed and roofed in by solid masses of bamboo stalks. Ahead, he could dimly make out the vague shapes of the carriers, while all around the huge clusters of bamboos rose like enormous piers, widening out until they met overhead to form a kind of groined roof. It was an uncanny place; a place in which voices echoed weirdly, mingling with strange, unexplained noises and with the unceasing, distant murmur of the soft foliage far away overhead.

Osmond stumbled on over the crackling canes that formed the floor, gradually growing accustomed to the darkness until there appeared ahead a triangular spot of light that grew slowly larger, framing the figures of the Hausas and carriers; and then, quite suddenly, he emerged, blinking, into broad daylight on the margin of a smallish but deep and rapid river, which at this spot was spanned by a primitive bridge.

Now a native bridge is an excellent contrivance—for natives; for the booted European it is much less suitable. The present one was formed of the slender trunk of a young silk-cotton tree, barkless and polished by years of wear, and Osmond watched enviously as the Hausas strolled across, grasping the cylindrical surface handily with their bare feet, and wondered if he had not better take off his boots. However, Westall had no false pride. Recognizing the disabilities involved by boots, he stooped, and, getting astride the slender log, crossed the river with ease and safety, if without much dignity; and the other two white men were not too proud to follow his example.

Beyond the river the path, after crossing a narrow belt of forest, entered a valley bordered by hills covered with dense bush, which rose steeply on either side. Osmond looked at the little party ahead, straggling in single file along the bottom of the valley, and inwardly wondered where Westall had picked up his strategy.

"It's to be hoped, Stockbridge," he remarked, "that there are none of Mr. Zippah's friends hanging about here. You couldn't want a prettier spot for an ambush."

He had hardly spoken when a tall man, wearing a hunter's lionskin cap and carrying a musket, stepped quietly out of the bush on to the track just in front of Westall. The prisoner, Zippah, uttered a yell of recognition and held up his manacled hands. The deep, cannon-like report of the musket rang out and the narrow gorge was filled with a dense cloud of smoke.

There was an instant's silence. Then a scattering volley was heard from the Hausas ahead, the panic-stricken carriers came flying back along the trail, shouting with terror, and the two white men plunged forward into the choking smoke. Leaping over the prostrate Zippah, who was being held down by two Hausas, they came upon Westall, lying across the path, limp and motionless. A great ragged patch on his breast, all scorched and bloody, told the tale that his pinched, grey face and glazing eyes confirmed. Indeed, even as they stooped over him, heedless of the bellowing muskets and the slugs that shrieked past, he drew one shallow breath and was gone.

There was no time for sentiment. With set faces the two men turned from the dead officer and ran forward to where the shadowy forms of the Hausas appeared through the smoke, holding their ground doggedly and firing right and left into the bush. But a single glance showed the hopelessness of the position. Two of the Hausas were down, and of the remaining four, three, including the sergeant, were more or less wounded. Not a man of the enemy was to be seen, but from the wooded slope on either hand came jets of flame and smoke, accompanied by the thunderous reports of the muskets and the whistle of flying slugs, while a thick cloud of smoke rolled down the hillsides and filled the bottom of the valley as with a dense fog.

Osmond snatched up the rifle of one of the fallen Hausas and, clearing out the man's cartridge-pouch, began firing into likely spots in the bush when Stockbridge interposed. "It's no go, Cook. We must fall back across the bridge. You clear out while you've got a whole skin. Hallo! did you hear that? Those weren't trade guns."
As he spoke there were heard, mingling with the noisy explosions of the muskets, a succession of sharp, woody reports, each followed by the musical hum of a high-speed bullet.

"Back you go, Cook," he urged. "This is no place for—"

He stopped short, staggered back a few paces, and fell, cursing volubly, with a bloody hand clasped on his leg just below the knee.

Osmond stooped over him, and, finding that the bone was not broken, quickly tied his handkerchief over the wound to restrain the bleeding. "That will do for the present," said he. "Now you tell the men to fall back, and I'll bring the prisoner."

"Never mind the prisoner," said Stockbridge. "Get the wounded back and get back yourself."

"Not at all," said Osmond. "The prisoner is going to cover our retreat. Put your arm round the sergeant's neck and hop along on your sound leg."

In spite of the galling fire, the retreat was carried out quickly and in good order. Stockbridge was hustled away by the sergeant—who was only disabled in one arm—and the two helpless men and the dead officer were borne off by the three native servants. Meanwhile Osmond took possession of the prisoner—just as one of his guards was preparing to cut his throat with a large and very unofficial-looking knife—and, rapidly pinioning his arms with the leading-rope, held him up with his face towards the enemy; in which position he served as excellent cover, not only for Osmond but also for the two Hausas, who were able to keep up a brisk fire over his shoulders.

In this fashion Osmond and his two supporters slowly backed after the retreating party. The firing from the bush practically ceased, since the enemy had now no mark to fire at but their own chief; and though they continued to follow up, as the moving bushes showed, their wholesome respect for the Snider rifle—with which the Hausas were armed—prevented them from coming out of cover or approaching dangerously near.

In less than a quarter of an hour the open space by the river was reached; and here Osmond's retreat was covered by the rest of the party, who had crossed the river and had taken up a safe position in the bamboo thicket, whence they could, without exposing themselves, command the approaches to the bridge. The two Hausas were turning to run across the log when Osmond noticed a large basket of produce—containing among other things, a number of balls of shea butter—which one of his carriers had dropped in retreat.

"Hi!" he sang out, "pick up that basket and take him across,;" and then, as a new idea suggested itself: "Put those balls of shea tulu in my pocket."

The astonished Hausa hesitated, especially as a Mauser bullet had just hummed past his head, but when Osmond repeated the order impatiently he hurriedly grabbed up the unsavoury-looking balls of grease and emptied them into Osmond's pocket. Then he turned and ran across the bridge.

Osmond continued to back towards the river, still holding the struggling Zippah close before him as a shield. Arriving at the end of the bridge, he cautiously sat down and got astride the log, pulling his captive, with some difficulty, into the same position, and began to wriggle across. Once started, Zippah was docile enough; for, with his pinioned arms, he could not afford to fall into the swirling water. He even assisted his captor so far as he was able, being evidently anxious to get the perilous passage over as quickly as possible. When they had crept about a third of the way across, Osmond took one of the balls of shea butter from his pocket and, reaching past his prisoner, smeared the mass thickly on the smooth surface of the log; and this proceeding he repeated at intervals as he retired, leaving a thick trail of the solid grease behind him. Zippah was at first profoundly mystified by the white man's manoeuvres, which he probably regarded as some kind of fetish ceremonial or magic; but when its purpose suddenly dawned on him, his sullen face relaxed into a broad and appreciative grin, and as he was at length dragged backwards from the head of the bridge, through the opening into the dark bamboo thicket, he astonished the besieged party (and no doubt the besiegers also) by letting off a peal of honest African guffaws.
X. — BETTY’S APPEAL

As the prisoner was withdrawn by his guard into the dark opening of the thicket, Osmond halted for a moment to look back across the river. Not a sign of the enemy was to be seen excepting the pall of smoke that hung over the wooded shore. But the reports of unseen muskets and rifles and the hum of slugs and bullets warned him of the danger of exposing himself—though he, too, was probably hidden from the enemy by the dense smoke of the black powder. Accordingly he turned quickly and, plunging into the dark tunnel-like passage, groped his way forward, unable, at first, to distinguish anything in the all-pervading gloom. Presently he perceived a little distance ahead a cluster of the great bamboo stalks faintly lighted as if by a hidden fire or torch, and a moment later, a turn of the passage brought him in view of the light itself, which seemed to be a rough shea-butter candle or lamp, set on the ground and lighting dimly the forlorn little band whose retreat he had covered.

This much he took in at the first glance. But suddenly he became aware of a new presence at the sight of which he stopped short with a smothered exclamation. Stockbridge, sitting beside his dead comrade, had uncovered his wounded leg; and kneeling by him as she applied a dressing to the wound was a woman. He could not see her face, which was partly turned away from him and concealed by a wide pith helmet; but the figure was—to him—unmistakable, as were the little, dainty, capable hands on which the flickering light shone. He approached slowly, and as Stockbridge greeted him with a wry grin, she turned her head quickly and looked up at him. "Good evening, Mr. Cook," she said, quietly. "What a fortunate chance it is that you should be here."

"Yes, by Jove," agreed Stockbridge; "at least a fortunate chance for us. He is a born tactician."

Osmond briefly acknowledged the greeting, and in the ensuing silence, as Betty methodically applied the bandage, he looked about him and rapidly assessed the situation. Stockbridge looked weak and spent and was evidently in considerable pain, though he uttered no complaint; the wounded Hausas lay hard by, patiently awaiting their turn to have their injuries attended to, and the carriers crouched disconsolately in gloomy corners out of the way of chance missiles. A continuous firing was being kept up from the other side of the river, and slugs and Mauser bullets ploughed noisily through the bamboo, though none came near the fugitives. The position of the latter, indeed, was one of great natural strength, for the river made a horse-shoe bend at this spot and the little peninsula enclosed by it was entirely occupied by the bamboo. An attack was possible in only two directions; by the bridge, or by the path that entered the thicket at the other end.

"Well," said Osmond, as Betty, having finished the dressing, transferred her attention to one of the wounded Hausas, "here we are, safe for the moment. They can't get at us in here."

"No," agreed Stockbridge. "It's a strong position, if we could stay here, though they will probably try to rush the bridge when it's dark."

Osmond shook his head with a grim smile. "They won't do that," said he. "I've taken the precaution to grease the log; so they'll have to crawl across carefully, which they won't care to do with the Hausas potting at them from shelter. But we can't stay here. We'd better clear out as soon as it is dark; and the question is, which way?"

"We must follow the river, I suppose," said Stockbridge, in a faint voice. "But you'd better arrange with the sergeant. I'm no good now. Tell him he's to take your orders. Our carriers know the country."

The sergeant, who had witnessed Osmond's masterly retreat, accepted the new command without demur. A guard was posted to watch the bridge from safe cover, and the carriers were assembled to discuss the route.

"Now," said Osmond, "where is the next bridge?" There was apparently no other bridge, but there was a ford some miles farther up, and a couple of miles below there was a village which possessed one or two of the large, punt-shaped canoes that were used for trading across the lagoon.

"S'pose dey no fit to pass de bridge," said the head carrier, "dey go and fetch canoe for carry um across de river."

"I see," said Osmond. "Then they'd attack us from the rear and we should be bottled up from both sides. That won't do. You must get ready to march out as soon as it is dark, sergeant. Your carriers can take Mr. Westall's body and some of the wounded and the sound men must carry the rest. And send my carriers back the way they came. There are too many of us as it is."

"And dem muskets and powder, dat we bring in from the villages?" said the sergeant. "What we do wid dem?"

"We must leave them here or throw them in the river. Anyhow, you get off as quickly as you can."

The sergeant set about his preparations without delay and Osmond's carriers departed gleefully towards the safe part of the country. Meanwhile Osmond considered the situation. If the enemy obtained canoes from the lower river, they would probably ferry a party across and attack the bamboo fortress from front and rear simultaneously. Then they would find the nest empty, and naturally would start in pursuit; which would be unpleasant for the helpless fugitives, crawling painfully along the river bank. He turned the position over again and again with deep dissatisfaction, while Stockbridge watched him anxiously and Betty silently continued her operations on the wounded. If they were pursued, they were lost. In their helpless condition they could make no sort of stand against a large body attacking from the cover of the bush. And the pursuit would probably commence before they had travelled a couple of miles towards safety.
Suddenly his eye fell on the heap of captured muskets and powder-kegs that, were to be left behind or destroyed. He looked at them meditatively, and, as he looked, there began to shape itself in his mind a plan by which the fugitives might at least increase their start by a mile or so. A fantastic scheme, perhaps, but yet, in the absence of any better, worth trying.

With characteristic energy, he set to work at once, while the carriers hastily fashioned rough litters of bamboo for the dead and wounded. Broaching one of the powder-kegs, he proceeded to load all but two of the muskets—of which there were twenty-three in all—cracking the barrels with powder and filling up each with a heavy charge of gravel. Six of the loaded and primed muskets he laid on the ground about fifty yards from the bridge end of the long passage, with their muzzles pointing towards the bridge; the remaining fifteen he laid in batches of five about the same distance from the opposite entrance, towards which their muzzles pointed. Then, taking a length of the plaited cord with which the muskets had been lashed into bundles, he tied one end to the stock of one of the unloaded guns and the other to the trigger of one of the wounded Hausas' rifles. Fixing the rifle upright against the bamboo with its muzzle stuck in the half-empty powder-keg, of which he broke out two or three staves, he carried the cord—well greased with shea butter—through a loop tied to one of the slanting bamboo. Then he propped the musket in a standing position on two bamboo sticks, to one of which he attached another length of cord. It was the mechanism of the common sieve bird-trap. When the cord was pulled, the stick would be dislodged, the musket would fall, and in falling jerk the other cord and fire the rifle.

Broaching another keg, he carried a large train of powder from the first keg to the row of loaded muskets, over the pans of which he poured a considerable heap. Leaving the tripping-cord loose, he next proceeded to the opposite end of the thicket and set up a similar trap near the landward entrance, connecting it by a large powder train with the three batches of loaded muskets.

"You seemed to be deuced busy, Cook," Stockbridge remarked as Osmond passed the hammock in which he was now reclining.

"Yes," Osmond replied; "I am arranging a little entertainment to keep our friends amused while we are getting a start. Now, sergeant, if you are ready, you had better gag the prisoner and move outside the bamboos. It will be dark in a few minutes. And give me Mr. Westall's revolver and pouch."

At this moment, Betty, having applied such "first aid" as was possible to the wounded Hausas, came to him and said in a low voice:

"Jim, dear, you will let me help you, if I can, won't you?"

"Certainly I will, dearest," he replied, "though I wish to God you weren't here."

"I don't," said she. "If it comes to the worst, we shall go out together. But it won't. I am not a bit frightened now you are with me."

"I see you have given Stockbridge your hammock," said he. "How far do you think you can walk?"

"Twenty miles, easily, or more at night. Now, Jim, don't worry about me. Just tell me what I am to do and forget me. You have plenty to think about."

"Well, then, I want you and Stockbridge to keep in the middle of the column. The carrier who knows the way will lead, and the sergeant and I will march at the rear to look out for the pursuers. And you must get along as fast as you can."

"Aye, aye, sir," she replied, smiling in his face and raising her hand smartly to the peak of her helmet; and without another word she turned away to take her place in the retiring column.

As the little procession moved towards the opening, Osmond ran back to the bridge end of the track to clear out the guard before he set his traps. A brisk fusillade was proceeding from the concealed enemy when he arrived, to which the guards were replying from their cover.

"I tink dey fit for come across de bridge," one of the Hausas remarked as Osmond gave them the orders to retire.

"Very well," he replied; "you be off one time. I stop to send them back."

The two Hausas accordingly retired, reluctant and protesting, and Osmond took their place behind the screen of bamboo, from which he looked out across the river. It was evident by the constant stirring of the bush and the occasional appearance of men in the openings that some sort of move was in progress, and in fact the footsteps of the two Hausas had hardly died away when it took definite shape. The attack opened with a thundering volley which sent the leaves and splinters of bamboo flying in all directions; then, out of the bush, a compact body of warriors each armed with a Mauser rifle, emerged in single file and advanced towards the bridge at a smart trot. Osmond watched them with a grim smile. Down the narrow track they came in perfect order and on to the foot of the bridge, stepping along the smooth log with perfect security they reached the greased portion. Then came the catastrophe. As the leading warrior stepped on the greasy surface, his feet flew from under him and down he slithered, grabbing frantically at the legs of the next man, who instantly clawed hold of his neighbour and thus passed on the disturbance. In a moment the whole file was capsized like a row of ninepins, and as each man's rifle exploded as he fell and the whole body broke out into simultaneous yells of rage and terror, the orderly dignity of the attack was destroyed utterly.

The cause of the disaster was not immediately perceived, and as soon as the struggling warriors had been rescued from the river or had drifted down stream, the attack was renewed, to end in another wholesale capsize. After the third attempt, however, it apparently began to dawn on the warriors that there was something unnatural about the bridge. A noisy
consultation followed, and when Osmond opened a smart fire with his revolver, the entire body retreated hastily into the bush.

As it was pretty certain that there would be no further attempt to rush the bridge at present, and as the darkness was fast closing in, Osmond proceeded to finish his arrangements before evacuating the fortress. Having set the tripping-cord across the path about six inches from the ground, he loaded and cocked the rifle. The trap was now set. If the warriors should presently manage to crawl across the bridge and enter the thicket, the first comer would certainly strike the cord; and the musket volley and the flying gravel, though they would probably do little harm, would send the attacking party back to the cover of the bush.

Having set the trap, Osmond knocked in the heads of the remaining powder-kegs and spread the powder about among the dry dead bamboo stalks that covered the ground. Then he retired to the landward end of the thicket, and, having set the second trap, started in pursuit of his friends.

The fugitives had evidently travelled at a good pace despite their encumbrances, for he had walked nearly a mile along the riverside track before he overtook them. As he turned a sharp bend he came on them quite suddenly, crouching down in the undergrowth as if in hiding; and, as he appeared, the two Hausas who formed the rear-guard motioned to him to crouch down too.

"What is it?" he whispered, kneeling beside the last Hausa.

"S't! Someone live for river. You no hear um, sah?"

Osmond listened attentively. From somewhere down the river came a sound of muffled voices and the rhythmical swish of something moving through water. He crept nearer to the brink and cautiously peered through the bushes across the dark river. The sounds drew nearer, and soon he could dimly make out the shapes of two long canoes poling up-stream in the shallows on the other side. Each canoe held only three or four men, just enough to drive it swiftly against the stream; but in spite of this, there could be little doubt as to the business on which these stealthily-moving craft were bent. As they faded into the darkness, Osmond touched the Hausa on the shoulder, and, whispering to him to follow, began softly to retrace his steps. His experience of the happy-go-lucky native had inspired him with a new hope.

Attended by the puzzled but obedient Hausa, he followed the sound of the retreating canoes until it suddenly ceased. Then he crept forward still more cautiously and presently caught sight of the two craft, brought up under the opposite bank and filling rapidly with men. He crouched down among the bushes and watched. Very soon the canoes, now crowded with men, put out, one after the other, and swiftly crossing the river, grounded on a small beach or hard under the high bank; when the men, each of whom, as Osmond could now see, carried a gun or rifle, landed and crept up a sloping path. The canoe immediately put off and returned to the other side, whence, having taken up a fresh batch of passengers they crossed to the hard. This manoeuvre was repeated six times, and, as each canoe carried over a dozen men, there were now assembled on the near bank about a hundred and fifty warriors, who remained in a mass, talking in hoarse undertones and waiting for the word to advance.

The last load apparently completed the contingent, for, this time, all the passengers landed and crept up the path, leaving the two canoes drawn up on the hard. This was what Osmond had hoped for and half expected. Feverishly he watched the mob of warriors form up and move off in orderly single file, each shouldering his musket or rifle and no one making a sound. As the silent procession vanished towards the lately evacuated fortress, he crept forward to see if any guards had been posted. But not a soul was in sight. Then he stole along the track until he was above the hard, when he turned to the Hausa.

"Wait," he whispered, "until I get the canoes. Then go back quickly and tell the sergeant I come."

He crept down the path to the hard, and, stepping into one of the canoes, walked to the stern, holding on to the second canoe. As his weight depressed the stern, the bow lifted from the ground and he was able to push off, walking slowly forward as the craft went astern. Then, from the bow, he threw his weight on the stern of the second canoe, which lifted free of the ground in the same manner, and the two craft began silently to drift away down stream on the swift current.

Osmond waved his free hand to the Hausa, and, when he had seen the man steal away to carry the good tidings to the fugitives, he set himself to secure the two canoes together. Each had a primitive painter of grass rope rove through a hole in the bluff bow and a small thwart or cross-band of the same material close to the stern to strengthen the long sides. By making fast the painter of the second canoe to the stern thwart of the one he was in, he secured them together and left himself free to ply the pole; which he began to do as noiselessly as possible, when he had drifted down about a quarter of a mile from the hard, steering the canoes close along the side on which his friends would be waiting. Presently there came a soft hail from the bank; on which, checking their way with the pole, he brought the two canoes up on a spit of sandy mud close underneath.

As he stepped ashore, holding on to the painter of the leading canoe, a little, white-skirted figure came scrambling down the bank, and running to him, seized both his hands.

"Jim!" she whispered, "you are a wonder! You have saved us all! Of course you have! I knew you would!" She gave his hands a final squeeze and then abruptly returned to business. "I will see to the wounded if you tell me where they are to go."

Osmond indicated the larger of the two canoes, and she at once climbed up the bank to arrange the embarkation, while
Osmond, having drawn both canoes up on the spit, called to two of the Hausas to take charge of the painters so that the craft should not get adrift while loading. Then he went up to superintend. The first problem, that of canoe-men, was easily solved, for the carriers, who were natives of the lagoon country, all had some skill in the use of the pole and cheerfully volunteered for duty.

But it was not without some difficulty that the three rough litters—one of them containing the body of poor Westall—were lowered down the steep bank and the wounded men helped down to the spit; but when once they were there, the rooky, punt-like canoes afforded ample and comfortable accommodation for the whole party. The sound men, with three canoe-men and the prisoner, were packed into the smaller canoe, leaving plenty of space in the other for the wounded to lie at their ease. Stockbridge's hammock was stowed in the bows, so that he should not be disturbed by the movements of the canoe-men, the body of Westall came next, decently covered with a country cloth, and then the rest of the wounded. When all was ready, Betty and Osmond stepped on board and took their places side by side in the stern.

As they pushed off into the river Stockbridge settled himself comfortably on his pillow with a sigh of relief at exchanging the jolting of the bush road for the easy motion of the canoe.

"By Jove, Cook!" he exclaimed, "it was a stroke of luck for us that you happened to overtake us. But for your wits they would have made a clean sweep of us. Hallo! What the deuce is that?"

From up the river came three thunderous volleys in quick succession, followed by a confused noise of shouting and the reports of muskets and rifles; then the sound of another volley, more shouts and rattling reports; and as they looked back, the sky was lighted for a few moments by a red glare. Osmond briefly explained the nature of his 'little arrangements', while the alarmed carriers poled along the shallows for dear life.

"But," said Stockbridge, after listening awhile, "what are the beggars going on firing for? Just hark at them! They're blazing away like billy-oh!"

"I take it," replied Osmond, "that they have gorged the bait. Apparently, a party has managed to crawl across the bridge to attack the bamboo thicket from the front while the other force, which ferried across the river, attacked from the rear, and that each party is mistaken the other for us. The trifling error ought to keep them amused for quite a long time; in fact until we are beyond reach of pursuit."

Stockbridge chuckled softly. "You are an ingenious beggar, Cook," he declared with conviction; "and how you managed to keep your wits about you in that hurly-burly, I can't imagine. However, I think we are safe enough now." With this comfortable conclusion, he snuggled down into his hammock and settled himself for a night's rest.

"Oh, Jim, dear," whispered Betty, "how like you! To think out your plans calmly with the bullets flying around and everybody else in a hopeless twitter. It reminds me of the 'phantom mate' on the dear old Speedwell. By the way, how did you happen to be there in that miraculously opportune fashion?"

Osmond chuckled. "Well," he exclaimed, "you are a pretty cool little fish, Betty. You drop down from the clouds and then inquire how I happened to be there. How did you happen to be there?"

"Oh, that is quite simple," she replied. "I got Daddy's permission to take a trip from Accra across the Akwapim Mountains to Akuse; and when I got there I thought I should like to have a look at the Country where the robbery was going on. So I crossed the river and was starting off gaily towards the Krepi border when an interfering though well-meaning old chief stopped me and said I mustn't go any farther because of war-palaver. I wanted to go on, but my carriers wouldn't budge; so back I came, taking the road for Quittah, and by good luck dropped into a little war-palaver after all."

"Why were you going to Quittah?"

"Now, Jim, don't ask silly questions. You know perfectly well. Of course I was going to run over to Adaffia to call on my friend Captain J.; and by the same token, I shouldn't have found him there. Now tell me how you came to be in the bush at this particular time."

Osmond stated baldly the ostensible purpose of his expedition, to which Betty listened without comment. She had her suspicions as to the ultimate motive, but she asked no questions. The less said on that subject, the better.

This was evidently Osmond's view, for he at once plunged into an account of the loss of the Speedwell and of Captain Hartup's testamentary arrangements. Betty was deeply affected, both by the loss of the ship and the death of the worthy but cross-grained little skipper.

"How awfully sad!" she exclaimed, almost in tears. "The dear old ship, where I spent the happiest days of my life! And poor Captain Hartup! I always liked him, really. He was quite nice to me, in spite of his gruff manner. I used to feel that he was just a little human porcupine with India-rubber quills. And now I love him because, in his perverse little heart, he understood and appreciated my Captain Jim. May I come, one day, and put a wreath on his grave?"

"Yes, do, Betty," he replied. "I buried him next to Osmond's new grave, and I put up an oaken cross which I made out of some of the planking of the old Speedwell. He was very fond of his ship. And I have kept a couple of her beams—thought you might like to have something made out of one of them."

"How sweet of you, Jim, to think of it!" she exclaimed, nestling close to him and slipping her hand round his arm, "and to know exactly what I should like! But we do understand each other, don't we, Jim, dear?"
"I think we do, Betty, darling," he replied, pressing the little hand that had stolen into his own.

For a long time nothing more was said. After the turmoil and the alarms of the escape, it was very peaceful to sit in the gently-swaying canoe and listen to the voices of the night; the continuous "chirr" of countless cicadas, punctuated by the soft swish of the canoe-poles as they were drawn forward for another stroke; the deep-toned, hollow whistle of the great fox-bats, flapping slowly across the river; the long drawn cry, or staccato titter, of far-away hyenas, and now and again, the startling shriek of a potto in one of the loftly trees by the river-bank. It was more soothing than absolute silence. The sounds seemed so remote and unreal, so eloquent of utter solitude; of a vast, unseen wilderness with its mysterious population of bird and beast, living on its strange, primeval life unchanged from the days when the world was young.

After a long interval, Betty spoke again. "It seems," she said, reflectively, "dreadfully callous to be so perfectly happy. I wonder if it is."

"Why should it be?" her companion asked.

"I mean," she explained, "with poor Mr. Westall lying there dead, only a few feet away."

Osmond felt inwardly that Westall had not only thrown away his own life but jeopardized the lives of the others which were in his custody. But he forbore to express what he felt and answered, simply: "I don't suppose the poor chap would grudge us our happiness. It won't last very long."

"Why shouldn't it, Jim?" she exclaimed. "Why should we part again and be miserable for the want of one another? Oh, Jim, darling, my own mate, won't you try to put away your scruples—your needless scruples, though I love and respect you for having them? But don't let them spoil our lives. Forget John Osmond. He is dead and buried. Let him rest. I am yours, Jim, and you know it; and you are mine, and I know it. Those are the realities, which we could never change if we should live for a century. Let us accept them and forget what is past and done with. Life is short enough, dear, and our youth is slipping away. If we make a false move, we shall never get another chance. Oh, say it, Jim. Say you will put away the little things that don't matter and hold fast to the reality of our great love and the happiness that is within our reach. Won't you, Jim?"

He was silent for a while. This was what he had dreaded. To have freely offered, yet again, the gift beside which all the treasures of the earth were to him as nothing; and, even worse, to be made to feel that he, himself, had something to give which he must yet withhold; it was an agony. The temptation to yield—to shut his eyes to the future and snatch at the golden present—was almost irresistible. He knew that Betty was absolutely sincere. He knew quite well that whatever might befall in the future, she would hold him blameless and accept all mischances as the consequences of her own considered choice. His confidence in her generosity was absolute, nor did he undervalue her judgment. He even admitted that she was probably right. John Osmond was dead. The pursuit was at an end and the danger of discovery negligible. In a new country and in a new character he was sure that he could make her life all that she hoped. Then why not forget the past and say "yes"?

It was a great temptation. One little word, and they would possess all that they wished for, all that mattered to either of them. And yet—"Betty," he said at length, in a tone of the deepest gravity, "you have said that we understand one another. We do; perfectly; absolutely. There is no need for me to tell you that I love you, or that if there were any sacrifice that I could make for you, I would make it joyfully and think it an honour and a privilege. You know that as well as I do. But there is one thing that I cannot do. Whatever I may be or may have done, I cannot behave like a cad to the woman I love. And that is what I should do if I married you. I should accept your sterling gold and give you base metal in exchange. You would be the wife of an outlaw, you would live under the continual menace of scandal and disaster. Your children would be the children of a nameless man and would grow up to the inheritance of an ancestry that could not be spoken of."

"Those are the realities, Betty. I realize, and I reverence, your great and noble love for me, unworthy as I am. But I should be a selfish brute if I accepted what you offer to me with such incredible generosity. I can't do it, Betty. It was a disaster that you ever met me, but that we cannot help. We can only limit its effects."

She listened silently while he pronounced the doom of her newly-born hopes, holding his hand tightly grasped in hers and scarcely seeming to breathe. She did not reply immediately when he ceased speaking, but sat a while, her head resting against his shoulder and her hand still clasped in his. Once she smothered a little sob and furtively wiped her eyes. But she was very quiet, and, at length, in a composed, steady voice, though sadly enough, she rejoined: "Very well, Jim, dear. It must be as you think best, and I won't tease you with any more appeals. At any rate, we can go on loving each other, and that will be something. The gift of real love doesn't come to everyone."

For a long time they sat without further speech, thinking each their own thoughts. To Betty the position was a little puzzling. She understood Osmond's point of view and respected it, for she knew that the sacrifice was as great to him as to her. And though, woman-like, she felt their mutual devotion to be a full answer to all his objections, yet—again, woman-like—she approved, though reluctantly, of his rigid adherence to a masculine standard of conduct.

But here came another puzzle. What was it that he had done? What could it possibly be that a man like this should have done? He had said plainly—and she knew that it was true—that there had been a warrant for his arrest. He had been, and in a sense still was, a fugitive from justice. Yet his standard of honour was of the most scrupulous delicacy. It had compelled him quite unnecessarily to disclose his identity. It compelled him now to put away what she knew was his dearest wish. Nothing could be more unlike a criminal; who, surely, is above all things self-indulgent. Yet he was an offender against the law. Now, what, in the name of Heaven, is the kind of offence against the law of which a man of this
type could be guilty? He had never given a hint upon the subject, and of course she had never sought to find out. She was not in the least inquisitive now. But the incongruity, the discrepancy between his character and his circumstances, perplexed her profoundly.

Finally, she gave up the puzzle and began to talk to him about Captain Hartup and the pleasant old times on board the Speedwell. He responded with evident relief at having passed the dreaded crisis; and so, by degrees, they got back to cheerful talk and frank enjoyment of one another's society, letting the past, the future, and the might-have-been sink into temporary oblivion.
XI. — THE ORDER OF RELEASE

IT was a long journey down the winding river and across the great lagoon. How long Osmond never knew; for, as hour after hour passed and the canoe sped on noiselessly through the encompassing darkness, the fatigues of the day began to take effect, not only on him, but on his companion too. Gradually the conversation slackened, the intervals of silence grew longer and longer, merging into periods of restful unconsciousness and punctuated by little smothered yawns on the part of Betty; until, at length, silence fell upon the canoe, unbroken save by the sounds of sleeping men and the rhythmical 'swish' of the poles.

At the sound of a distant bugle Osmond opened his eyes and became aware that the day was breaking and that the journey was nearly at an end. Also that his head was very comfortably pillowed on the shoulder of his companion, who now slumbered peacefully at his side. Very softly he raised himself and looked down at the sleeping girl, almost holding his breath lest he should disturb her. How dainty and frail she looked, this brave, hardy little maid! How delicate, almost childlike, she seemed as she lay, breathing softly, in the easy posture of graceful youth! And how lovely she was! He gazed adoringly at the sweet face, so charmingly wreathed with its golden aureole, at the peacefully-closed eyes with their fringes of long, dark lashes, and thought half-bitterly, half-proudly, that she was his own for the asking; and even as he looked, she opened her eyes and greeted him with a smile.

"What are you looking so solemn about, Jim?" she asked, as she sat up and reached for her helmet.

"Was I looking solemn? I expect it was only foolishness. Most fools are solemn animals."

"Don't be a guffin, Jim," she commanded, reprovingly.

"What is a guffin?" he asked.

"It is a thing with a big, Roman nose and most abnormal amount of obstinacy, which makes disparaging comments on my Captain Jim."

"A horrid sort of beast it must be. Well, I won't, then. Is that Quittah, where all those canoes are?"

"I suppose it is, but I've never been there. Yes, it must be. I can see Fort Firminger—that thing like a Martello tower out in the lagoon opposite the landing-place. Mr. Cockeram says it is an awfully strong fort. You couldn't knock it down with a croquet mallet."

Osmond looked about him with the interest of a traveller arriving at a place which he has heard of but never seen. Behind and on both sides, the waste of water extended as far as the eye could see. Before them was a line of low land with occasional clumps of coconut palms that marked the position of beach villages. Ahead was a larger mass of palms, before which was a wide 'hard' or landing-place, already thronged with market people, towards which numbers of trading canoes were converging from all parts of the lagoon.

As they drew nearer, an opening in the palms revealed a whitewashed fort above which a flag was just being hoisted; and now, over the sandy shore, the masts of two vessels came into view.

"There is the Widgeon," said Betty, pointing to the masts of a barquentine, "and there is another vessel, a schooner. I wonder who she is."

Osmond had observed and was also wondering who she was; for he had a suspicion that he had seen her before. Something in the appearance of the tall, slim masts seemed to recall the mysterious yacht-like craft that he had seen one night at Adaffia revealed for a moment in 'the glimpses of the moon'.

They were now rapidly approaching the landing-place. The other canoe had already arrived, and its disembarked crew could be seen on the hard surrounded by a crowd of natives.

"That looks like a naval officer waiting on the beach," said Osmond, looking at a white-clad figure which had separated itself from the crowd and appeared to be awaiting their arrival.

"It is," replied Betty. "I believe it is Captain Darley. And there is a constabulary officer coming down, too. I expect they have heard the news. You'll get a great reception when they hear Mr. Stockbridge's story—and mine. But they will be awfully upset about poor Mr. Westall. You are coming up to the fort with me, of course?"

Osmond had intended to go straight on to Adaffia, but he now saw that this would be impossible. Besides, there was the schooner. "Yes," he replied, "I will see you to your destination."

"It isn't my destination," said she. "I shall rest here for a day—the German deaconesses will give me a bed, I expect—and then I am coming on with you to Adaffia to put a wreath on Captain Hartup's grave. You can put up either at the fort or with one of the German traders or missionaries. There are no English people here excepting the two officers at the fort."

Osmond made no comment on this, for they were now close inshore. The canoe slid into the shallows and in a few moments more was hauled up by a crowd of willing natives until her bows were high and dry on the hard.

The officer who had joined Darley turned out to be the doctor, under whose superintendence Stockbridge's hammock was carefully landed and the rest of the wounded brought ashore. Then the litter containing the body of the dead officer was lifted out and slowly borne away, while Darley and the native soldiers stood at the salute, and the doctor, having
mustered the wounded, led the way towards the little hospital. As the melancholy procession moved off, Darley turned to greet Betty and Osmond, who had stepped ashore last.

"How do you do, Miss Burleigh? None the worse for your adventures, I hope. Been having rather a strenuous time, haven't you?"

"We have rather," she replied. "Isn't it a dreadful thing to have lost poor Mr. Westall?"

"Yes," he replied, as they turned away from the lagoon and began to walk towards the fort. "Shocking affair. Still, fortune of war, you know. Can't make omelettes without breaking eggs. And here is Mr. Cook, in the thick of the bobbery, as usual. What a fellow you are, Cook! Always in hot water."

As he shook Osmond's hand heartily, the latter replied: "Well, the bobbery wasn't of my making, this time. I found it ready made and just bore a hand. By the way, what schooner is that out in the roads?"

"That," replied Darley, "is an ancient yacht named the Primula—a lovely old craft—sails like a witch. But she has come down in the world now. We met her coming up from the leeward coast and brought her in here."

"Brought her in? Is she in custody, then?"

"Well, we brought her in to overhaul her and make some inquiries. There is just a suspicion that she has been concerned in the gun-running that has been going on. But we haven't found anything up to the present. She seems to be full up with ordinary, legitimate cargo."

"Ha!" exclaimed Osmond.

"Why 'ha'?” demanded Darley with a quick look at Osmond. "Do you know anything about her?"

"Let us hear some more," said Osmond. "Is there a Welshman named Jones on board?"

"There is. He's the skipper, purser, and super cargo all combined."

"Have you looked through her manifest?"

"I have; and I've jotted down some notes of the items of her lading."

"Is there any ivory on board?"

"Yes," replied Darley, with growing excitement.

"Three large crates and a big canvas bag?"

"Yes!"

"Containing in all, thirty-nine large tusks and fifty-one scribellos?"

Darley dragged a pocket-book out of his pocket and feverishly turned over the leaves. "Yes, by Jove!" he fairly shouted. "The very numbers. Now, what have you got to tell us?"

"I think you can take it that the ivory and probably the rest of the lading, too, is stolen property."

"Why," exclaimed Betty, "that must be your ivory, Jim."

Darley flashed an astonished glance at her and then looked inquiringly at Osmond. "Is that so?" he asked.

"I have no doubt that it is," the latter replied. "But if it should happen that there is a man on board named Sam Winter—"

"There is," interrupted Darley.

"And another named Simmons and others named Fop, Bradley, and Darker, I think, if you introduce me to them, that we shall get the whole story. And as to the gun-running, I can't make a voluntary statement, but if you were to put me in the witness-box, I should have to tell you all that I know, and I may say that I know a good deal. Will that do, for the present?"

Darley smiled complacently. "It seems like a pretty straight tip," said he. "I will just skip on board, now, and take possession of the manifest; and if you will give me that list of names again, I will see if those men are on board, and bring them ashore, if they are. You will be staying at the fort, I suppose? There are only Cockeram and the doctor there."

"Yes," said Betty, "I shall ask Mr. Cockeram to put him up, for to-night, at any rate."

"Very well," said Darley, "then I shall see you again later. And now I will be off and lay the train."

He touched his cap, and as they emerged into an open space before the gateway of the fort, he turned and walked away briskly down a long, shady avenue of wild fig-trees that led towards the shore.

Quittah fort was a shabby-looking, antique structure adapted to the conditions of primitive warfare. It was entered by an arched gateway graced by two ancient cannon set up as posts and guarded by a Hausa sentry in a blue serge uniform and a scarlet fez. Towards the gateway Osmond and Betty directed their steps, and as they approached, the sentry sprang smartly to attention and presented arms; whereupon Betty marched in with impressive dignity and two tiny fingers raised to the peak of her helmet.

"This seems to be the way up," she said, turning towards a mouldering wooden staircase, as a supercilious-looking
pelican waddled towards them and a fish-eagle on a perch in a corner uttered a loud yell. "What a queer place it is! It looks like a menagerie. I wonder if there is anyone at home."

She tripped up the stairs, followed by Osmond and watched suspiciously by an assemblage of storks, coots, rails, and other birds which were strolling about at large in the quadrangle, and came out on an open space at the top of a corner bastion. Just as they reached this spot a man came hurrying out of a shabby building which occupied one side of the square; and at the first glance Osmond recognized him as the officer who had come to Adaffia to execute the warrant on the day when he had buried poor Larkom. The recognition was mutual, for as soon as he had saluted Betty, the officer turned to him and held out his hand.

"Larkom, by Jove!" said he.

"My name is Cook," Osmond corrected.

"Oh," said the other; "glad you set me right, because I have been going to send you a note. You remember me—Cockeram. I came down to Adaffia, you know, about that poor chap, Osmond."

"I remember. You said you had been going to write to me."

"Yes. I was going to send you something that I thought would interest you. I may as well give it to you now." He began to rummage in his pockets and eventually brought forth a bulging letter-case, the very miscellaneous contents of which he proceeded to sort out. "It's about poor Osmond," he continued, disjointedly, and still turning over a litter of papers. "I felt that you would like to see it. Poor chap! It was such awfully rough luck."

"What was?" asked Osmond.

"Why, you remember," replied Cockeram, suspending his search to look up, "that I had a warrant to arrest him. It seemed that he was wanted for some sort of jewel robbery and there had been a regular hue-and-cry after him. Then he managed to slip away to sea and had just contrived to get into hiding at Adaffia when the fever got him. Frightful hard lines!"

"Why hard lines?" demanded Osmond.

"Why? Because he was innocent."

"Innocent!" exclaimed Osmond, staring at the officer in amazement.

"Yes, innocent. Had nothing whatever to do with the robbery. No one can make out why on earth he scooted."

As Cockeram made his astounding statement, Betty turned deathly pale. "Is it quite certain that he was innocent?" she asked in a low, eager tone.

"Perfectly," he replied, turning an astonished blue eye on the white-faced girl and then hastily averting it. "Where is that confounded paper—newspaper cutting? I cut it out to send to Lark—Cook. There is no doubt whatever. It seems that they employed a criminal lawyer chap—a certain Dr. Thorndyke—to work up the case against Osmond. So this lawyer fellow got to work. And the upshot of it was that he proved conclusively that Osmond couldn't possibly be the guilty party."

"How did he prove that?" Osmond demanded.

"In the simplest and most satisfactory way possible," replied Cockeram. "He followed up the tracks until he had spotted the actual robber and held all the clues in his hand. Then he gave the police the tip; and they swooped down on my nabs—caught him fairly on the hop with all the stolen property in his possession. There isn't the shadow of a doubt about it."

"What was the name of the man who stole the gems?" Osmond asked anxiously.

"I don't remember," Cockeram replied. "What interested me was the name of the man who didn't steal them."

Betty, still white-faced and trembling, stood gazing rather wildly at Osmond. For his face bore a very singular expression—an expression that made her feel sick at heart. He did not look relieved or joyful. Surprised he certainly was. But it was not joyous surprise. Rather was it suggestive of alarm and dismay. And meanwhile Cockeram continued to turn over the accumulations in his letter-case. Suddenly he drew forth a crumpled and much-worn envelope from which he triumphantly extracted a long newspaper cutting.

"Ah!" he exclaimed, as he handed it to Osmond, "here we are. You will find full particulars in this. You needn't send it back to me. I have done with it. And now I must hook off to the court-house. You will take possession of the mess-room, Miss Burleigh, won't you? and order whatever you want. Of course, Mr. Cook is my guest." With a formal salute he turned, ran down the rickety stairs and out at the gate, pursued closely as far as the wicket by the pelican.

But Betty's whole attention was focussed on Osmond; and as he fastened hungrily on the newspaper cutting, she took his arm and drew him gently through a ramshackle lattice porch into the shabby little white washed mess-room, where she stood watching with mingled hope and terror the strange, enigmatical expression on his face as he devoured the printed lines.

Suddenly—in the twinkling of an eye—that expression changed. Anxiety, even consternation, gave place to the wildest astonishment; his jaw fell, and the hand which held the newspaper cutting dropped to his side. And then he laughed aloud; a weird, sardonic laugh that made poor Betty's flesh creep.
"What is it, Jim, dear?" she asked nervously.
He looked in her face and laughed again.
"My name," said he, "is not Jim. It is John. John Osmond."
"Very well, John," she replied, meekly. "But why did you laugh?"
He placed his hands on her shoulders and looked down at her with a smile.
"Betty, darling," said he, "do I understand that you are willing to marry me?"
"Willing indeed!" she exclaimed. "I am going to marry you."
"Then, my darling," said he, "you are going to marry a fool."
BOOK II. — THE INVESTIGATOR

XII. — THE INDICTMENT

MR. JOSEPH PENFIELD sat behind his writing-table in a posture of calm attention, allowing his keen grey eyes to travel back and forth from the silver snuff box which lay on the note-pad before him to the two visitors who confronted him from their respective chairs. One of these, an elderly hard-faced man, square of jaw and truculent of eye, was delivering some sort of statement, while the other, a considerably younger man, listened critically, with his eyes cast down, but stealing, from time to time, a quick, furtive glance either at the speaker or at Mr. Penfield. He was evidently following the statement closely; and to an observer there might have appeared in his concentrated attention something more than mere interest; something inscrutable, with, perhaps, the faintest suggestion of irony.

As the speaker came, somewhat abruptly, to an end, Mr. Penfield opened his snuff-box and took a pinch delicately between finger and thumb.

"It is not quite clear to me, Mr. Woodstock," said he, "why you are consulting me in this matter. You are an experienced practitioner, and the issue is a fairly simple one. What is there against your dealing with the case according to your own judgment?"

"A good deal," Mr. Woodstock replied. "In the first place, I am one of the interested parties—the principal one, in fact. In the second, I practise in a country town, whereas you are here in the very heart of the legal world; and in the third, I have no experience whatever of criminal practice; I am a conveyancer pure and simple."

"But," objected Mr. Penfield, "this is not a matter of criminal practice. It is just a question of your liability as a bailee."

"Yes, true. But that question is closely connected with the robbery. Since no charge was made for depositing this property in my strong-room, obviously, I am not liable unless it can be shown that the loss was due to negligence. But the question of negligence turns on the robbery."

"Which I understand was committed by one of your own staff?"

"Yes, the man Osmond, whom I mentioned; one of my confidential clerks—Hepburn, here, is the other—who had access to the strong-room and who absconded as soon as the robbery was discovered."

"When you say he had access," said Mr. Penfield, "you mean—"

"That he had access to the key during office hours. As a matter of fact, it hangs on the wall beside my desk, and when I am there the strong-room is usually kept open—the door is in my private office and opposite to my desk. Of course, when I leave at the end of the day, I lock up the strong-room and take the key away with me."

"Yes. But in the interval—hm? It almost looks as if a claim might be—hm? But you have given me only an outline of the affair. Perhaps a more detailed account might enable us better to form an opinion on the position. Would it be troubling you too much?"

"Not at all," replied Mr. Woodstock; "but it is rather a long story. However, I will cut it as short as I can. We will take the events in the order in which they occurred; and you must pull me up, Hepburn, if I overlook anything."

"The missing valuables are the property of a client of mine named Hollis; a retired soap manufacturer, as rich as Croesus, and like most of these over-rich men, having made a fortune, was at his wit's end what to do with it. Eventually, he adopted the usual plan. He became a collector. And having decided to burden himself with a lot of things that he didn't want, he put the lid on it by specializing in goldsmith's work, jewellery and precious stones. Wanted a valuable collection, he said, that could be kept in an ordinary dwelling-house."

"Well, of course, the acquisitive mania, once started, grew by what it fed on. The desire to possess this stuff became an obsession. He was constantly planning expeditions in search of new rarities, scurrying the Continent for fresh loot, flitting from town to town and from dealer to dealer like an idiotic bee. And whenever he went off on one of these expeditions he would bring the pick of his confounded collection to me to have it deposited in my strong-room. I urged him to take it to the bank; but he doesn't keep an account with any of the local branches and didn't want to take the stuff to London. Moreover, he had inspected my strong-room and was a good deal impressed by it."

"It is really strong, is it?" asked Mr. Penfield.

"Very. Thick reinforced concrete lined with steel. Very large, too. Not that the strength is material as it was not broken into. Well, eventually I agreed to deposit the things in the strong-room—couldn't refuse an important client—but I resolutely declined to make any charge or accept any sort of consideration for the service. I wasn't going to make myself responsible for the safety of things of that value. And I explained my position to Hollis; but he said that a strong-room that was good enough for my valuable documents was good enough for his jewels. Which was talking like a fool. Burglars don't break into safes to steal leases.

"Well, this business began about six years ago, and—so far as I can tell—nothing amiss occurred until quite lately. I say so far as I can tell, for of course we can't date the robbery. We only know when it was discovered. But I assume that the theft was committed pretty recently or it would surely have been discovered sooner."
"And when was it first ascertained that a robbery had been committed?" asked Mr. Penfield, dipping a quill into the ink.

"On the fourth of October," replied Mr. Woodstock; and having paused while Mr. Penfield noted the date, he continued: "On that day Hollis took a great ruby up to South Kensington, where it had been accepted for a loan exhibition. He delivered it himself to the precious stones, and was a little taken aback when that gentleman, after a preliminary inspection, began to pore over it with a magnifying-glass and then sent for one of his colleagues. The second expert raised his eyebrows when he had looked at the gem, and he, too, made a careful scrutiny with the lens. Finally, they sent for a third official; and the upshot of it was that the three experts agreed that the stone was not a ruby at all but only a first-class imitation.

"Of course Hollis didn't believe them, and said so. He had bought the stone for four thousand pounds from a well-known dealer and had shown it to a number of connoisseurs, who had all been enthusiastic about the colour and lustre of the gem. There had never been any question that it was not merely a genuine ruby, but a ruby of the highest class. However, when e had heard the verdict of the experts, he pocketed his treasure and went straight off to Cawley's in Piccadilly. But when Mr. Cawley shook his head over the gem and pronounced it an unquestionable counterfeit, he became alarmed and danced off in a deuce of a twitter to the dealer from whom he had bought it.

"That interview settled the matter. The dealer remembered the transaction quite well and knew all about the stone, for he had full records of the circumstances under which he had acquired it. Moreover, he recognized the setting—a pendant with a surround of small diamonds—but he was quite clear that the stone in it was not the stone that he had sold to Hollis. In fact it was not a stone at all; it was just a good-class paste ruby. The original had been picked out of the setting and the counterfeit put in its place; and the person who had done the job was apparently not a skilled jeweller, for there were traces on the setting of some rather amateurish work."

"There is no doubt, I suppose," said Mr. Penfield, "of the bona-fides of the dealer?"

"Not the slightest," was the reply. "He is a man of the highest reputation; and as a matter of fact, no regular dealer would palm off a counterfeit. It wouldn't be business. But the question doesn't really arise, as you will see when I proceed with the story.

"As soon as Hollis was convinced that a substitution had been effected, he commissioned an independent expert to come down and make a critical survey of his collection; and it was then ascertained that practically every important gem in his cabinets was a counterfeit. And in every case in which the stone was a false one, the same traces of clumsy workmanship were discoverable by an expert eye.

"The conclusion was obvious. Since the original gems had come from all sorts of different sources, there could be no question of fraud on the part of the various vendors; to say nothing of the fact that Hollis—who has practically no knowledge of stones himself—always obtained an expert opinion before concluding a deal. It was obvious that a systematic robbery had been carried out, and the question that arose was, who could the robber be?

"But that question involved certain others; as, for instance, when had the robbery been committed? where were the jewels at that time? and who had access to the place in which they were?

"These were difficult questions. At first it seemed as if they were unanswerable, and perhaps some of them would have been if the robber had not lost his nerve. But I am anticipating. Let us take the questions in their order.

"First as to the date of the robbery. It happens that a little less than two years ago Professor Eccles came down by invitation and made a careful inspection of Hollis's collection with a view to a proposed bequest to the nation, and marked off what he considered to be the most valuable specimens. Now, I need not say that if Professor Eccles detected no counterfeit stones, we may take it that no counterfeiters were there. Consequently, the collection was then intact and the robbery must have been committed since that date. But it happens that that date coincides almost exactly with the arrival of Osmond at my office. Just two years ago Hepburn introduced him to me; and as he is Hepburn's brother-in-law, I accepted him with perfect confidence.

"The other questions seemed more difficult. As to Hollis's own premises, the jewel-room had a Chubb detector lock on its only door, the cabinets have similar locks, the windows are always kept securely fastened, and no attempt has ever been made to break into the place. Besides, burglars would simply have taken the jewels away. They would not have left substitutes. The personnel of his household—a lady secretary, a housekeeper, and two maids—appear beyond suspicion. Moreover, they had all been with him many years before the robbery occurred. In short, I think we may consider Hollis's premises as outside the field of inquiry."

"Do you really?" said Mr. Penfield, in a tone which clearly indicated that he did not.

"Certainly; and so will you when you have heard the rest of the story. We now come to the various occasions on which the more valuable parts of this collection were deposited in my strong-room. Let me describe the procedure. In the first place, Hollis himself packed the jewels in a number of wooden boxes which he had had made specially for the purpose, each about fourteen inches by nine by about five inches deep. Every box had a good lock with a sunk disc on each side of the keyhole for the seals. When the boxes were packed they were locked and a strip of tape put across the keyhole and secured at each end with a seal. They were then wrapped in strong paper and sealed at all the joints with Hollis's seal—an antique Greek seal set in a ring which he always wears on his finger. On the outside of the cover was written a list of the contents in Hollis's own handwriting and signed by him, and each box bore in addition a number. The boxes were brought
to my office by Hollis and by him delivered personally to me; and I gave him a receipt, roughly describing and enumerating the boxes, but, of course, not committing myself in respect of the contents. I then carried them myself into the strong-room and placed them on an upper shelf which I reserved for them; and there they remained until Hollis fetched them away, when he used to give me a receipt in the same terms as my own. That concluded the particular transaction.

"Now, it happened that at the time when the robbery was discovered, several of the boxes which Hollis had taken back from me about a month previously still remained packed and in their paper wrappings. And it further happened that one of these—there were eight in all—contained an emerald which Hollis had bought only a few days before he packed it. There was no question as to the genuineness of this stone; and when the box was opened, there was no question as to the fact that it had been replaced by a counterfeit. Even Hollis was able to spot the change. So that seemed to fix the date of the robbery to the period during which the box had been in my strong-room."

"Apparently," Mr. Penfield agreed. "But you speak of the box as being still in its paper wrapping. What of the seals?"

"Ah!" exclaimed Woodstock, "that is the most mysterious feature of the affair. The seals were unbroken and, so far as Hollis could see, the package was absolutely intact, just as it had been handed to me."

Mr. Penfield pursed up his lips and took snuff to the verge of intemperance.

"If the seals were unbroken," said he, "and the package was in all other respects intact, that would seem to be incontestable proof that it had never been opened since it was closed and sealed."

"That was what I pointed out," interposed Hepburn, "when Mr. Woodstock talked the matter over with Osmond and me. The unbroken seals seemed a conclusive answer to any suggestion that the robbery took place in our office."

"So they did," Woodstock agreed, "and so they would still if Osmond had kept his head. But he didn't. He had evidently reckoned on the question of a robbery from our strong-room never being raised, and I imagine that it was that emerald that upset his nerve. At any rate, within a week of our discussion he bolted, and then, of course, the murder was out."

Mr. Penfield nodded gravely and asked, after a short pause: "And how is Mr. Hollis taking it? Is he putting any pressure on you?"

"Oh, not at all—up to the present. He has not suggested any claim against me; he merely wants to lay his hand on the robber and, if possible, get his jewels back. He entirely approves of what I have done."

"What have you done?" Mr. Penfield asked.

"I have done the obvious thing," was the reply, delivered in a slightly truculent tone. "As soon as it was clear that Osmond had absconded, I communicated with the police. I laid an information and gave them the leading facts."

"And do they propose to take any action?"

"Most undoubtedly; in fact I may say that they have been most commendably prompt. They have already traced Osmond to Bristol, and I have every hope that in due course they will run him to earth and arrest him."

"That is quite probable," said Mr. Penfield. "And when they have arrested him—?"

"He will be brought back and charged before a magistrate, when we may take it that he will be committed for trial."

"It is possible," Mr. Penfield assented, doubtfully. "And then—"

"Then," replied Woodstock, reddening and raising his voice, "he will be put on his trial and, I make no doubt, sent to penal servitude."

Mr. Penfield took snuff deprecatingly and shook his head. "I think not," said he; "but perhaps there is some item of evidence which you have omitted to mention?"

"Evidence!" Woodstock repeated impatiently. "What evidence do you want? The property has been stolen and the man who had an opportunity to steal it has absconded. What more do you want?"

Mr. Penfield looked at his brother solicitor with mild surprise.

"The judge," he replied, "and I should think the magistrate, too, would want some positive evidence that the accused stole the jewels. There appears to be no such evidence. The unexplained disappearance of this man is a suspicious circumstance; but it is useless to take suspicions into court. You have got to make out a case, and at present you have no case. If the charge were not dismissed by the magistrate, the bill would certainly be thrown out by the Grand Jury."

Mr. Woodstock glowered sullenly at the old lawyer, but he made no reply, while Hepburn sat with downcast eyes and the faintest trace of an ironical smile.

"Consider," Mr. Penfield resumed, "what would be the inevitable answer of the defence. They would point out that there is not a particle of evidence that the robbery—if there has really been a robbery—occurred in your office at all, and that there are excellent reasons for believing that it did not."

"What reasons are there?"

"There are the unbroken seals. Until you can show how the jewels could have been abstracted without breaking the seals, you have not even a prima-facie case. Then there is the method of the alleged robbery. It would have required not merely
access but undisturbed possession for a considerable time. It was not just a matter of picking out the stones. They were replaced by plausible counterfeits which had to be made or procured. Take the case of the ruby that you mentioned. It deceived Hollis completely. Then it must have been very like the original in size, form, and colour. It could not have been picked up casually at a theatrical property dealer’s; it must have been made ad hoc by careful comparison with the original. But all this and the subsequent setting and finishing would take time. It would be quite possible while the jewels were lying quietly in Hollis’s cabinets, but it would seem utterly impossible under the alleged circumstances. In short,” Mr. Penfield concluded, “I am astounded that you ever admitted the possibility of the robbery having occurred on your premises. What do you say, Mr. Hepburn?”

“I agree with you entirely,” the latter replied. “My position would have been that we had received certain sealed packages and that we had handed them back in the same condition as we received them. I should have left Hollis to prove the contrary.”

“And I think he could have done it,” said Woodstock doggedly. “You seem to be forgetting that emerald. But in any case I have accepted the suggestion and I am not going to draw back, especially as my confidential clerk has absconded and virtually admitted the theft. The question is, what is to be done? Hollis is mad to get hold of the robber and recover his gems, and he is prepared to stand the racket financially.”

“In that case,” said Mr. Penfield, taking a final pinch and pocketing his snuff-box, “I will venture to make a suggestion. This case is out of your depth and out of mine. I suggest that you allow me to take counsel’s opinion; and the counsel I should select would be Dr. John Thorndyke.”

“Thorndyke—hm!” grunted Woodstock. “Isn’t he an irregular practitioner of some sort?”

“Not at all,” Mr. Penfield dissented warmly. “He is a scientific expert with an unrivalled knowledge and experience of criminal practice. If it is possible for anyone to unravel this tangle, I am confident that he is the man; and I know of no other.”

“Then,” exclaimed Woodstock, “for God’s sake get hold of him, and let me know what he says, so that I can report to Hollis. And let him know that there will be no trouble about costs.”

With this Mr. Woodstock rose and, after an unemotional leave-taking, made his way out of the office, followed by Hepburn.
XIII. — THORNDYKE TAKES UP THE INQUIRY

MR. PENFIELD'S visit to Dr. Thorndyke's chambers in King's Bench Walk, Inner Temple, was productive of some little surprise, as such visits were rather apt to be. For the old solicitor had definitely made up his mind that Woodstock's theory of the robbery was untenable and that the burden of proof ought to be cast on Hollis; and he was therefore not a little disconcerted to find Thorndyke tending to favour the view that the probabilities pointed to the strong-room as the scene of the robbery.

"After all," the latter said, "we must not ignore the obvious. It is undeniable that Osmond's disappearance—which has the strongest suggestion of flight—is a very suspicious circumstance. It occurred almost immediately after the discovery of the thefts and the suggestion that the gems had been stolen from the strong-room. Osmond had access to the strong-room—though I admit that a good many other persons had, too. Then there is the striking fact that the period of the robberies coincides exactly with the period of Osmond's presence at the office. During the four years which preceded his arrival no robbery appears to have occurred, although all the other conditions seem to have been the same. So far as we can see, the robberies must have commenced very shortly after his arrival. These are significant facts which, as I have said, we cannot ignore."

"I am entirely with you," Mr. Penfield replied, "when you say that we must not ignore the obvious. But are you not doing so? These packages were most carefully and elaborately sealed; and it is admitted that they were returned to the owner with the seals unbroken. Now, it seems to me obvious that if the seals were unbroken, the packages could not have been opened. But apparently you think otherwise. Possibly you attach less importance to seals than I do?"

"Probably," Thorndyke admitted. "It is easy to exaggerate their significance. For what is a seal, when all is said? It is an artificial thing which some artist or workman has made and which another artist or workman could copy if necessary. There is no magic in seals."

"Dear, dear!" Mr. Penfield exclaimed with a wry smile. "Another illusion shattered! But I think a Court of Law would share my erroneous view of the matter. However, we will let that pass. I understand that you look upon Osmond as the probable delinquent?"

"The balance of probabilities is in favour of that view. But I am keeping an open mind. There are other possibilities, and they will have to be explored. We must take nothing for granted."

Mr. Penfield nodded approvingly. "And suppose," he asked, "the police should arrest Osmond?"

"Then," replied Thorndyke, "Mr. Woodstock would be in difficulties, and so would the police—who have shown less than their usual discretion—unless the prisoner should get into a panic and plead 'guilty.' There is not even a prima-facie case. They can't call upon Osmond to prove that he did not steal the gems."

"Exactly," Mr. Penfield agreed. "That is what I tried to impress on Woodstock—who is really a most extraordinarily unlegal lawyer. But have you any suggestion to offer?"

"I can only suggest that, as we are practically without data, we should endeavour to obtain some. The only fact that we have is that the stones have been removed from their settings and replaced by imitations. There seems to be no doubt about that. As to how they came to be removed, there are evidently four possibilities. First, they may have been taken from Hollis's cabinets by some person unknown. Second, the substitution may have been effected by Hollis himself, for reasons unknown to us and by no means easy to imagine. Third, they may have been stolen from the strong-room by some person other than Osmond. Fourth, they may have been stolen from the strong-room by Osmond. The last is, I think, the most probable. But all of the four hypotheses must be impartially considered. Do I understand that Hollis is prepared to offer facilities?"

"He agrees to give every assistance, financial or other."

"Then," said Thorndyke, "I suggest that we make a beginning by inspecting the boxes. I understand that there are still some unopened."

"Yes; six. Hollis reserved them to be opened in the presence of witnesses."

"Let Hollis bring those six boxes together with those that have been opened, with their packings and wrappings, if he has them. If we can fix a day, I will arrange for an expert to be present to witness the opening of the six boxes and give an opinion on the stones in them. If it appears that any robbery has been committed, I shall ask Hollis to leave the boxes and the counterfeit jewels that I may examine them at my leisure."

Mr. Penfield chuckled softly and helped himself to a pinch of snuff.

"Your methods, Dr. Thorndyke," said he, "are a perennial source of wonder to me. May I ask what kind of information you expect to extract from the empty boxes?"

"I have no specific expectations at all," was the reply; "but it will be strange indeed if we learn nothing from them. They will probably have little enough to tell us; but, seeing that we have, at present, hardly a single fact beyond that of the substitution—and that is not of our own observing—a very small addition to our knowledge would be all to the good."

"Very true, very true," agreed Mr. Penfield. "A single definite fact might enable us to decide which of those four
possibilities is to be adopted and pursued; though how you propose to extract such a fact from an empty box, or even a full one, I am unable to imagine. However, I leave that problem in your hands. As soon as you have secured your expert, perhaps you will kindly advise me and I will then make the necessary arrangements with Mr. Hollis."

With this Mr. Penfield rose and took his departure, leaving Thorndyke to read over and amplify the notes that he had taken during the consultation.

As matters turned out, he was able to advise Mr. Penfield within twenty-four hours that he had secured the services of an expert who was probably the greatest living authority on gem stones; with the result that a telegram arrived from Mr. Hollis accepting the appointment for the following day at eleven in the forenoon, that time having been mentioned by the expert as the most suitable on account of the light.

It wanted several minutes to the appointed hour when the first visitor arrived; for the Treasury clock had hardly struck the third quarter when, in response to a smart rat-tat on the little brass knocker, Thorndyke opened the door and admitted Professor Eccles.

"I am a little before my time," the latter remarked as he shook hands, "but I wanted to have a few words with you before Mr. Hollis arrived. I understand that you want me to give an opinion on some doubtful stones of his. Are they new ones? Because I may say that I looked over his collection very carefully less than two years ago and I can state confidently that it contained no gems that were not unquestionably genuine. But I have heard some rumours of a robbery—unfounded, I hope, seeing that Hollis proposes to bequeath his treasures to the national collection."

"I am afraid," replied Thorndyke, "that the rumours are correct; but that is what you are going to help us to decide. It is not a case of simple robbery. The stolen stones seem to have been replaced by imitations; and as you examined the collection when it was undoubtedly intact, you will see at once if there has been any substitution."

He proceeded to give the professor a brief account of the case and the curious problem that it presented, and he had barely finished when a cab was heard to draw up below. A minute later, as the two men stood at the open door, the visitor made his appearance, followed by the cabman, each carrying a bulky but apparently light wooden case.

Mr. Hollis was a typical business man—dry, brisk, and shrewd-looking. Having shaken hands with the professor and introduced himself to Thorndyke, he dismissed the cabman and came to the point without preamble.

"This case, marked A, contains the full boxes. The other, marked B, contains the empty ones. I will leave you to deal with that at your convenience. My concern and Professor Eccles's is with the other, which I will open at once and then we can get to work."

He thrust the despised case B into a corner, and hoisting the other on to the table, unbuckled the straps, unlocked it, threw open the lid, and took out six sealed packages, which he placed side by side on the table.

"Shall I open them?" he asked, producing a pocket knife, "or will you?"

"Before we disturb them," said Thorndyke, "we had better examine the exteriors very carefully."

"I've done that," said Hollis. "I've been over each one most thoroughly and, so far as I can see, they are in exactly the same condition as they were when I handed them to Woodstock. The writing on them is certainly my writing and the seals are impressions of my seal, which, as you see, I carry on my finger in this ring."

"In that case," said Thorndyke, "we may as well open them forthwith. Perhaps I had better take off the wrappings, as I should like to preserve them and the seals intact."

He took up the first package and turned it over in his hands, examining each surface closely. And as he did so, his two visitors watched him—the professor with slightly amused curiosity, the other with a dry, rather impatient manner not without a trace of scepticism. The package was about fourteen inches in length by nine wide and five inches deep. It was very neatly covered with a strong, smooth white paper bearing a number—thirteen—and a written and signed list of the contents, and sealed at each end in the middle. The paper was further secured by a string, tied tightly and skilfully, of which the knot was embedded in a mass of wax on which was an excellent impression of the seal.

"You see," Hollis pointed out, "that the parcel has been made as secure as human care could make it. I should have said that it was perfectly impossible to open it without breaking the seals."

"But surely," exclaimed the professor, "it would be an absolute impossibility! Don't you agree, Dr. Thorndyke?"

"We shall be better able to judge when we have seen the inside," the latter replied. With a small pair of scissors he cut the string, which he placed on one side, and then, with great care, cut round each of the seals, removing them with the portions of paper on which they were fixed and putting them aside with the string. The rest of the paper was now taken off, disclosing a plain, white-wood box, the keyhole of which was covered by a strip of tape secured at each end by a seal seated in a small circular pit. Thorndyke cut the tape and held the box towards Hollis, who already held the key in readiness. This having been inserted and turned, Thorndyke raised the lid and laid the box on the table.

"There, Professor," said he; "you can now answer your own question. The list of contents is on the cover. It is for you to say whether that list correctly describes the things which are inside."

Professor Eccles drew a chair up to the table, and lifting from the inside of the box a thick pad of tissue paper (which Thorndyke took from him and placed with the string and the seals), ran his eye quickly over the neatly-arranged
assemblage of jewels that reposed on a second layer of tissue. Very soon a slight frown began to wrinkle his forehead. He bent more closely over the box, looked narrowly first at one gem, then at another, and at length picked out a small, plain pendant set with a single oval green stone about half an inch in diameter.

"Leaf-green jargoon," said he, reading from the list as he produced a Coddington lens from his pocket; "that is the one, isn't it?"

Hollis grunted an assent as he watched the professor inspecting the gem through his lens.

"I remember the stone," said the professor. "It was one of the finest of the kind that I have ever seen. Well, this isn't it. This is not a jargoon at all. It is just a lump of green glass—flint glass, in fact. But it is quite well cut. The lapidary knew his job better than the jeweller. There has been some very rough work on the setting."

"How much was the stone worth?" Thorndyke asked.

"The original? Not more than thirty pounds, I should say. It was a beautiful and interesting stone, but rather a collector's specimen than a jeweller's piece. The public won't give big prices for out-of-the-way stones. They like diamonds, rubies, sapphires, and emeralds."

"Is this counterfeit a true facsimile of the original? I mean as to size and style of cutting?"

Professor Eccles took from his pocket a small leather case, from which he extracted a calliper gauge. Applying this delicately to the exposed edges of the "girdle" between the claws, he read the vernier and then reapplied it in the other diameter.

"Seven-twelfths by three-quarters of an inch, brilliant cut," he announced. "Do you happen to remember the dimensions, Mr. Hollis? These can't be far out, as the stone fits the setting."

"I've brought my catalogue," said Hollis, producing a small, fat volume from his pocket. "Thought we might want it. What's the number? Three-sixty-three. Here we are. 'Jargoon. Full leaf-green. Brilliant cut. Seven-twelfths by three-quarters.'"

"Then," said the professor, "this would seem to be a perfect replica. Queer, isn't it? I see your point, Doctor. This fellow has been to endless pains and some expense in lapidary's charges—unless he is a lapidary himself—to say nothing of the risk; and all to get possession of a stone worth only about thirty pounds, and not easily marketable at that."

"Some of the other stones are worth more, though," remarked Hollis.

"True, true," agreed the professor. "Let us look at some of the others. Ha! Here is one that looks a little suspicious, if my memory serves."

He picked out a gold ornament set with a large cat's-eye bordered with small diamonds and exhibited it to Hollis, who bent down to inspect it.

"Cat's-eye," he commented, after a long and anxious inspection. "Well, it looks all right to me. What's the matter with it?"

"Oh, it is a cat's-eye, sure enough, but not the right kind, I think. What does the catalogue say?"

"I thought so," said the professor. "This is a cat's-eye, but not a chrysoberyl. It is a quartz cat's-eye. But I should hardly have thought it would have been worth the trouble and expense of making the exchange. You see," he added, taking the dimensions with his gauge, "this stone is apparently a facsimile of the missing one in size and shape and not a bad match in colour. The diamonds don't appear to have been tampered with."

"What about that emerald?" Hollis asked anxiously, indicating a massive ring set with a large, square stone bordered with diamonds. Professor Eccles picked up the ring, and at the first glance he pursed up his lips, dubiously. But he examined it carefully through his lens, nevertheless.

"Well?" demanded Hollis. The professor shook his head sadly. "Paste," he replied. "A good imitation as such things go, but unmistakable glass. Will you read out the description?"

Hollis did so; and once again the correspondence in dimensions and cutting showed the forgery to be a carefully-executed facsimile.

"This fellow was a conscientious rascal," said the professor. "He did the thing thoroughly—excepting the settings."

"Yes, damn him!" Hollis agreed, savagely. "That ring cost me close on twelve hundred pounds. It came from Lord Pycroft's collection."

Professor Eccles was deeply concerned; naturally enough, for any robbery of precious things involves a wicked waste. And then there was the depressing fact that the valuable "Hollis bequest" was melting away before his eyes. Gloomily, he picked out one after another of the inmates of the box and regretfully added them to the growing heap of the rejected.
When the first box had been emptied, the second was attacked with similar procedure, and so on with the remainder, until the last box had been probed to the bottom, when the professor sat back in his chair and drew a deep breath. "Well," he exclaimed, "it is a terrible disaster and profoundly mysterious. In effect, the collection has been skimmed of everything of real value. Even the moonstones have been exchanged for cheap specimens with the rough native cutting untouched. I have never heard of anything like it. But I don't understand why the fellow took all this trouble. He couldn't have supposed that the robbery would pass undetected."

"It might easily have remained undetected long enough to confuse the issues," said Thorndyke. "If the jewels had been returned to the cabinets and lain there undisturbed for a few months, it would have been very difficult to determine exactly when, or where, or how the robbery had been carried out."

"Yes," growled Hollis. "The scoundrel must have known that I am no expert and reckoned on my not spotting the change. And I don't suppose I should, for that matter. However, the cat slipped out of the bag sooner than he expected and now the police are close on his heels. I'll have my pound of flesh out of him yet."

As he snapped out this expression of his benevolent intentions, Mr. Hollis gathered up the remnant of unrifled jewels and was about to deposit them in one of the empty boxes when Thorndyke interposed.

"May I lend you a deed-box with some fresh packing? I think we agreed that the empty boxes and the packing should be left with me, that I might examine them thoroughly before returning them."

"Very well," said Hollis, "though it seems a pretty futile thing to do. But I suppose you know your own business. What about those sham stones?"

"I should like to examine them too, as they are facsimile imitations; and we may possibly learn some thing from the settings."

"What do you expect to learn?" Hollis inquired in a tone which pretty plainly conveyed his expectations.

"Very little," Thorndyke replied (on which Hollis nodded a somewhat emphatic agreement). "But," he continued, "this case will depend on circumstantial evidence—unless the robber confesses—and that evidence has yet to be discovered. We can do no more than use our eyes to the best advantage in the hope that we may light on some trace that may give us a lead."

Hollis nodded again. "Sounds pretty hopeless," said he. "However, Mr. Penfield advised me to put the affair in your hands, so I have done so. If you should discover anything that will help us with the prosecution, I suppose you will let me know."

"I shall keep Mr. Penfield informed as to what evidence, if any, is available, and he will, no doubt, communicate with you."

With this rather vague promise Mr. Hollis appeared to be satisfied, for he pursued the subject no farther, but, having packed the poor remainder of his treasures in the deed-box, prepared to depart.

"Before you go," said Thorndyke, "I should like to take a trial impression of your seal, if you would allow me."

Hollis stared at him in amazement. "My seal!" he exclaimed. "Why, good God, sir, you have already got some seventy impressions—six from each of these boxes and all those from the empties!"

"The seals that I have," Thorndyke replied, "are the questioned seals. I should like to have what scientists call a 'control.'"

"I don't know what you mean by 'questioned seals,'" Hollis retorted. "I haven't questioned them, I have acknowledged them as my own seals."

"I think," Thorndyke rejoined with a faint smile, "that Mr. Penfield would advise you to acknowledge nothing. But, furthermore, none of these seals is a really perfect impression such as one would require for purposes of comparison."

"Comparison!" exclaimed Hollis. "Comparison with what? But there," he concluded with a sour smile, "it's no use arguing. Have it your own way. I suppose you know what you are about."

With this, he drew off the ring, and, laying it on the table, bestowed a glance of defiance on Thorndyke. The latter had, apparently, made his preparations, for he promptly produced from a drawer a small box, the opening of which revealed a supply of sealing-wax, a spirit-lamp, a metal plate, a little crucible or melting-ladle with a wooden handle, a bottle of oil, a camel's-hair brush, and a number of small squares of white paper. While he was setting out this apparatus the professor examined the seal through his lens.

"A fine example," he pronounced. "Syracusan, I should say, fourth or fifth century B.C. Not unlike the decadrachm of that period—the racing Quadriga with the winged Victory above and the panoply of armour below seem to recall that coin. The stone seems to be green chalcedony. It is a beautiful work. Seems almost a pity to employ it in common use."

He surrendered it regretfully to Thorndyke, who, having taken an infinitesimal drop of oil on the point of the brush and wiped it off on the palm of his hand, delicately brushed the surface of the seal. Then he laid a square of paper on the metal plate, broke off a piece from one of the sticks of sealing-wax and melted it in the crucible over the lamp. When it was completely liquefied, he poured it slowly on the centre of the square of paper, where it formed a circular, convex pool. Having given this a few seconds to cool, he took the ring and pressed it steadily on the soft wax. When he raised it—which
he did with extreme care, steadying the paper with his fingers—the wax bore an exquisitely perfect impression of the seal.

Hollis was visibly impressed by the carefully manipulated procedure, and when Thorndyke had repeated the process, he requested that a third impression might be made for his own use. This having been made and bestowed in the deed-box, he replaced the ring on his finger, bade the professor and Thorndyke a curt farewell, and made his way down to the waiting cab.

As the door closed behind him, the professor turned to Thorndyke with a somewhat odd expression on his face.

"This is a very mysterious affair, Doctor," said he.

The curiously significant tone caused Thorndyke to cast a quick, inquiring glance at the speaker. But he merely repeated the latter's remark.

"A very mysterious affair, indeed."

"As I understand it," the professor continued, "Hollis claims that these gems were stolen from the boxes while they were in the solicitor's strong-room; and that they were taken without breaking the seals. But that sounds like sheer nonsense. And yet the solicitor appears to accept the suggestion."

"Yes. Hollis claims that the gems that were put into the boxes were the real gems; and both he and the solicitor, Woodstock, base their beliefs on the fact that Woodstock's confidential clerk appears to have absconded immediately after the discovery of the robbery."

"I'm!" grunted the professor. "Is it quite clear that the clerk has really absconded?"

"He has disappeared for no known reason."

"IfI'm. Not quite the same thing, is it? But has it been established that the real stones were actually in the boxes when they were handed to the solicitor?"

"I wouldn't use the word 'established,'" Thorndyke admitted. "There is evidence that one stone, at least, was intact a day or two before the boxes were deposited; and that stone—a large emerald—was found to have been changed when the box was opened."

The professor grunted dubiously and reflected awhile. Then he looked hard at Thorndyke and appeared to be about to make some observation; and then he seemed to alter his mind, for he concluded with the somewhat colourless remark: "Well, I daresay you are quite alive to all the possibilities; and with this he prepared to take his departure.

"Do you happen," asked Thorndyke, "to know the addresses of any lapidaries who specialize in imitation stones?"

Professor Eccles reflected. "Imitations are rather out of my province," he replied. "Of course any lapidary could cut a paste gem or make a doublet or triplet, and would if paid for the job. I will write down the addresses of one or two men who have worked for me and they will probably be able to give you any further information." He wrote down two or three addresses, and as he put away his pencil, he asked: "How is your colleague, Jervis? He is still with you, I suppose?"

"Jervis," was the reply, "is at present an independent practitioner. He accepted, on my advice, a whole-time appointment at the 'Griffin' Life Assurance Office. But he drops in from time to time to lend me a hand. I will tell him you asked after him. And let me tender you my very warmest thanks for your invaluable help to-day."

"Tut, tut," said the professor, "you need not thank me. I am an interested party. If Hollis doesn't recover his gems, the national collection is going to lose a valuable bequest. Bear that in mind as an additional spur to your endeavours. Good-bye, and good luck!"

With a hearty handshake and a valedictory smile, Professor Eccles let himself out and went his way, apparently in a deeply thoughtful frame of mind, as Thorndyke judged by observing his receding figure from the window.
THE profound cogitations of Professor Eccles set up in the mind of Thorndyke a sort of induced psychic current. As he turned from the window and began to occupy himself in sorting his material preparatory to examining it, his thoughts were busy with his late visitor. The professor had been about to say something and had suddenly thought better of it. Now, what could it have been that he was about to say? And why had he not said it? And what was the meaning of that strangely intent look that he had bestowed on Thorndyke, and that rather odd expression that his face had borne? And, finally, what were those 'possibilities' at which he had hinted?

These were the questions that Thorndyke asked himself as he carried out, quietly and methodically, the preliminaries to his later investigations; with the further questions: Did the professor know anything that bore on the mystery? and if so, what was it that he knew? He evidently had no knowledge either of Woodstock or of Osmond, but he was fairly well acquainted with Hollis. It was manifest that he rejected utterly the alleged robbery from the strong-room; which implied a conviction that the exchange of stones had been made either before the boxes were handed to Woodstock or after they had been received back from him.

It was a perfectly natural and reasonable belief. Mr. Penfield had been of the same opinion. But Mr. Penfield had no special knowledge of the matter. His opinion had been based exclusively on the integrity of the seals. Was this the professor's case, too? Or was he in possession of some significant facts which he had not disclosed? His manner rather suggested that he was. Perhaps it might be expedient, later, to sound him cautiously. But this would depend on the amount and kind of information that was yielded by other sources.

By the time he reached this conclusion the sorting process was completed. The six boxes with their contents replaced were set out in order, the contents put together as well as was possible, and the seals from the wrapping of each box put into a separate envelope on which the number and description was written. A supply of white paper was laid on the table together with a number of new paper bags, and a little simple microscope which consisted of a watchmaker's compound eye-glass mounted on a small wooden stand. Thorndyke ran his eye over the collection to see that everything was in order; then, dismissing the professor from his mind, he drew a chair up to the table and fell to work.

He began with the seals. Opening one of the envelopes, he took out the four seals—including that on the knot, which he had cut off—and laying them out on the table, examined them quickly, one after the other. Then he picked up one of them, laid it on a card and placed the card on the stage of the magnifier, through which he made a more prolonged examination, turning the card from time to time to alter the incidence of the light, and jotting down on a note-block a few brief memoranda. The same procedure was followed with the other three seals, and when they had all been examined they were returned to their envelope, the top sheet of the note-block was detached and put in with them, the envelope was put aside and a fresh one opened. Finally he came to the envelope which contained the two impressions that he had, himself, taken from Hollis's seal, but these were not subjected to the minute scrutiny that the others had received. They were merely laid on the card, slipped under the magnifier, and after a single, brief glance, returned to their envelope and put aside. Next, the seals in the recesses by the keyholes of the boxes were scrutinized, the eyeglass being swung clear of its stand for the purpose, and when this had been done, the fresh set of notes was detached and slipped into one of the envelopes.

But this did not conclude the examination. Apparently there was some further point to be elucidated. Rising from his chair, Thorndyke fetched from a cabinet a microscope of the kind used for examining documents—a heavy-based instrument with a long, pivoted arm and a bull's-eye condenser. With this he re-examined the seals in succession, beginning with the two impressions that he had, himself, taken; and it might have been noticed that this examination concerned itself exclusively with a particular spot on the seal—a portion of the background just in front of the chariot and above the back of the near horse.

He had just finished and was replacing the microscope in the cabinet when the door opened silently and a small, clerical-looking man entered the room and regarded him benevolently.

"I have laid a cold lunch, sir, in the small room upstairs," he announced, "and I have put everything ready in your laboratory. Can I help you to carry anything up?" As he spoke, he ran an obviously inquisitive eye over the row of boxes and the numbered envelopes.

"Thank you, Polton," Thorndyke replied. "I think we will take these things up out of harm's way and I will just look them over before lunch. But meanwhile there is a small job that you might get on with. I have here a collection of seals of which I want enlarged photographs made—four diameters magnification and each set on a separate negative and numbered similarly to the envelopes."

He exhibited the collection to his trusty coadjutor with a few words of explanation, when Polton tenderly gathered together the seven envelopes, and master and man betook themselves to the upper regions, each laden with a consignment of Mr. Hollis's boxes, full and empty.

The laboratory of which Polton had spoken was a smallish room which Thorndyke reserved for his own use, and which was on the same floor as the large laboratory and the workshop over which Polton presided. Its principal features were a long work-bench, covered with polished linoleum and at present occupied by a microscope and a tray of slides, needles, forceps, and other accessories, a side-table, a cupboard, and several sets of shelves.
"Is there anything more, sir?" Polton asked when the boxes had been stacked on the side-table. He looked at them wistfully as he spoke, but accepted with resignation the polite negative and stole out, shutting the door silently behind him. As soon as he had gone, Thorndyke fell to work with a rapid but unhurried method suggestive of a fixed purpose and a considered plan. He began by putting on a pair of thin rubber gloves. Then, spreading on the bench a sheet of white demy paper such as chemists use for wrapping bottles, he took one of the boxes, detached its wrapping paper, opened the box, and taking out the jewels and the pads of tissue paper, deposited the former at one end of the bench and the latter at the other, together with the empty box. First he dealt with the pads of tissue paper, one of which he placed on the sheet of white paper, and having opened it out and smoothed it with an ivory paper-knife, examined it closely on both sides with the aid of a reading glass. Then he took from a drawer a large tuning-fork, and holding the packing paper vertically over the middle of the sheet on the bench, he struck the tuning-fork sharply, and while it was vibrating, lightly applied its tip to the centre of the suspended paper, causing it to hum like a gigantic bumble-bee and to vibrate visibly at its edges. Having repeated this proceeding two or three times, he laid the paper aside and with the reading glass inspected the sheet of demy, on which a quite considerable number of minute specks of dust were now to be seen. This procedure he repeated with the other pads of tissue paper from the box, and as he worked, the sheet of white paper on the bench became more and more conspicuously sprinkled with particles of dust until, by the time all the pads had been treated, a quite appreciable quantity of dust had accumulated. Finally, Thorndyke took the box itself and, having opened it, placed its bottom on the sheet of paper and with a small mallet tapped it lightly but sharply all over the bottom and sides. When he lifted it from the paper, the further contribution of dust could be plainly seen in a speckling of the surface corresponding to the shape of the box.

For some moments Thorndyke stood by the bench looking down on this powdering of grey that occupied the middle of the sheet of white paper. Some of the particles, such as vegetable fibres, were easily recognizable by the unaided eye; and there were two hairs, evidently moustache hairs, both quite short and of a tawny brown colour. But he made no detailed examination of the deposit. Taking from the cupboard a largish flat pill-box, he wrote on its lid the number of the box, and then, having lightly folded the sheet of paper, carefully assembled the dust into a tiny heap in the middle and transferred it to the pill-box, applying the tuning-fork to the sheet to propel the last few grains to their destination. Then, having put the box aside and deposited the sheets of tissue paper—notely folded—in a numbered envelope, he spread a fresh sheet of demy on the bench, and taking up another box from the side-table, subjected it to similar treatment; and so, carefully and methodically, he dealt with the entire collection of boxes, never pausing for more than a rapid glance at the sprinkling of dust that each one yielded.

He was just shooting the 'catch' from the last package into the pill-box when a quick step was audible on the stairs, and after a short interval Polton let himself in silently.

"Here's Dr. Jervis, sir," said he, "and he says he hasn't had lunch yet. It is past three o'clock, sir."

"A very delicate hint, Polton," said Thorndyke. "I will join him immediately—but here he is, guided by instinct at the very psychological moment."

As he spoke, Dr. Jervis entered the room and looked about him inquisitively. From the row of pill-boxes his glance travelled to the little heaps of jewellery, each on a numbered sheet of paper.

"This is a quaint collection, Thorndyke," said he, stooping to inspect the jewels. "What is the meaning of it? I trust that my learned senior has not, at last, succumbed to temptation; but it is a suspicious looking lot."

"It does look a little like a fence's stock-in-trade or the product of a super-burglary," Thorndyke admitted. "However, I think Polton will be able to reassure you, when he has looked over the swag. But let us go and feed; and I will give you an outline sketch of the case in the intervals of mastication. It is quite a curious problem."

"And I take it," said Jervis, "that those pill-boxes contain the solution. There is a necromantic look about them that I seem to recognize. You must tell me about them when you have propounded the problem." He followed Thorndyke into the little breakfast-room, and when they had taken their seats at the table and fairly embarked on their immediate business, the story of the gem robbery was allowed to transpire gradually. Jervis followed the narrative with close attention and an occasional chuckle of amusement.

"It is an odd problem," he commented when the whole story had been told. "There doesn't seem to be any doubt as to who committed the robbery; and yet if you were to put this man Osmond into the dock, although the jury would be convinced to a man of his guilt, they would have to acquit him. I wonder what the deuce made him bolt."

"Yes," said Thorndyke, "that is what I have been asking myself. He may be a nervous, panicke man, but that does not look like the explanation. The suggestion is rather that he knew of some highly incriminating fact which he expected to come to light, but which has not come to light. As it is, the only incriminating fact is his own disappearance, which is evidentially worthless by itself."

"Perfectly. And you are now searching for corroborative facts in the dust from those boxes. It doesn't look a very hopeful quest."

"It doesn't," Thorndyke agreed. "But still, circumstantial evidence gains weight very rapidly. A grain of positive evidence would give quite a new importance to the disappearance. For instance, no less than seven of those boxes have yielded moustache hairs, all apparently from the same person—a fair man with a rather closely cropped moustache of a tawny colour. Now, if it should turn out that Osmond has a moustache of that kind and that no other person connected with those
boxes has a moustache of precisely that character, this would be a really important item of evidence, especially coupled with the disappearance.

"It would, indeed; and even the number might be illuminating. I mean that, although moustache hairs are shed pretty freely, one would not have expected to find so many. But if the man had the not uncommon habit of stroking or rubbing his moustache, that would account for the number that had got detached."

Thorndyke nodded approvingly. "Quite a good point, Jervis. I will make a note of it for verification. And now, as we seem to have finished, shall we take a look at one or two of the samples."

"Exactly what I was going to propose," replied Jervis; and as they rose and repaired to the small laboratory, he added: "It's quite like old times to be pursuing a mysterious unknown quantity with you. I sometimes feel like chucking the insurance job and coming back."

"It is better to come back occasionally and keep the insurance job," Thorndyke rejoined as he placed two microscopes on the bench facing the window and drew up a couple of chairs. "You had better note the number of each box that you examine, though it is probably of no consequence."

He took up the collection of pill-boxes, and having placed them between the two microscopes, sat down, and the two friends then fell to work, each carefully tipping the contents of a box on to a large glass slip and laying the latter on the stage of the microscope.

For some time they worked on in silence, each jotting down on a note-block brief comments on the specimens examined. When about half of the boxes had been dealt with—and their contents very carefully returned to them—Jervis leaned back in his chair and looked thoughtfully at his colleague.

"This is very commonplace, uncharacteristic dust in most respects," said he, "but there is one queer feature in it that I don't quite make out. I have found in every specimen a number of irregularly oval bodies, some of them with pointed ends. They are about a hundredth of an inch long by a little more than a two hundredth wide; a dull pink in colour and apparently of a granular homogeneous substance. I took them at first for insect eggs, but they are evidently not, as they have no skin or shell. I don't remember having seen anything exactly like them before. Have you found any of them?"

"Yes. Like you, I have found some in every box."

"And what do you make of them? Do you recognize them?"

"Yes," replied Thorndyke. "They are the castings of a wood-boring beetle; particles of that fine dust that you see in the worm-holes of worm-eaten wood. Quite an interesting find."

"Quite; unless they come from the boxes that the jewels were packed in."

"I don't think they do. Those boxes are white wood, whereas these castings are from a red wood. But we may as well make sure."

He rose and took up the empty boxes one by one, turning each one over and examining it closely on all sides.

"You see, Jervis," he said as he laid down the last of them, "there is not a trace of a worm-hole in any of them. No, that worm-dust came from an outside source."

"But," exclaimed Jervis, "it is very extraordinary. Don't you think so? I mean," he continued in response to an inquiring glance from his colleague, "that the quantity is so astonishing. Just think of it. In every one of these boxes we have found an appreciable number of these castings—quite a large quantity in the aggregate. But the amount of dust that will fall from a piece of worm-eaten furniture must be infinitesimal."

"I would hardly agree to that, Jervis. A really badly wormed piece—say an old walnut chair or armoire—may, in the course of time, shed a surprisingly large amount of dust. But, nevertheless, my learned friend has, with his usual perspicacity, laid his finger on the point that is of real evidential importance—the remarkable quantity of this dust and its more or less even distribution among all these boxes. And now you realize the truth of what I was saying just now as to the cumulative quality of circumstantial evidence. Here we have a number of boxes which have undoubtedly been tampered with by some person. That person is believed to be the man Osmond on the ground that he has absconded. But his disappearance, by itself, furnishes no evidence of his guilt. It merely offers a suggestion. He may have gone away for some entirely different reason."

"Then we find in these boxes certain moustache hairs. If it should turn out that Osmond has a moustache composed of similar hairs, that fact alone would not implicate him, since there are thousands of other men with similar moustaches. But taken in conjunction with the disappearance, the similarity of the hairs would constitute an item of positive evidence."

"Then we find some dust derived from worm-eaten wood. Its presence in these boxes, its character, and its abundance offer certain suggestions as to the kind of wood, the nature of the wooden object, and the circumstances attending its deposition in the boxes. Now, if it should be possible to ascertain the existence of a wooden object of the kind suggested and associated with the suggested circumstances, and if that object were the property of, or definitely associated with, the man Osmond, that fact, together with the hairs and the disappearance, would form a really weighty mass of evidence against him."

"Yes, I see that," said Jervis; "but what I don't see is how you arrive at your inferences as to the object from which the
dust was derived."

"It is a question of probabilities," replied Thorndyke. "First, as to the kind of wood. It is a red wood. It is pretty certainly not mahogany, as it is too light in colour and mahogany is very little liable to 'the worm.' But the abundance of dust suggests one of those woods which are specially liable to be worm eaten. Of these the fruit woods—walnut, cherry, apple, and pear—are the most extreme cases, cherry being, perhaps, the worst of all and therefore usually avoided by the cabinet-maker. But this dust is obviously not walnut. It is the wrong colour. But it might be either cherry, apple, or pear, and the probabilities are rather in favour of cherry; though, of course, it might be some other relatively soft and sappy red wood."

"But how do you infer the nature of the object?"

"Again, by the presence of the dust in these boxes, by the properties of that dust and the large quantity of it. Consider the case of ordinary room dust. You find it on all sorts of surfaces, even high up on the walls or on the ceiling. There is no mystery as to how it gets there. It consists of minute particles, mostly of fibres from textiles, so small and light that they float freely in the air. But this wood consists of relatively large and heavy bodies—over a hundredth of an inch long. From the worm-holes it will fall to the floor; and there it will remain even when the floor is being swept. It cannot rise in the air and become deposited like ordinary dust, and it must therefore have made its way into these boxes in some other manner."

"Yes, I realize that; but still I don't see how that fact throws any light on the nature of the wooden object."

"It is merely a suggestion," replied Thorndyke; "and the inference may be quite wrong. But it is a perfectly obvious one. Come now, Jervis, don't let your intellectual joints get stiff. Keep them lissom by exercise. Consider the problem of this dust. How did it get into these boxes and why is there so much of it? If you reason out the probabilities, you must inevitably reach a conclusion as to the nature of the wooden object. That conclusion may turn out to be wrong; but it will be logically justifiable."

"Well, that is all that matters," Jervis retorted with a sour smile, as he rose and glanced at his watch. "The mere fact of its being wrong we should ignore as an irrelevant triviality; just as the French surgeon, undisturbed by the death of the patient, proceeded with his operation and finally brought it to a brilliantly successful conclusion. I will practise your logical dumbbell exercise, and if I reach no conclusion after all I shall still be comforted by the mental vision of my learned senior scouring the country in search of a hypothetical worm-eaten chest of drawers."

Thorndyke chuckled softly. "My learned friend is pleased to be ironical. But nevertheless his unerring judgement leads him to a perfectly correct forecast of my proceedings. The next stage of the inquiry will consist in tracing this dust to its sources, and the goal of my endeavours will be the discovery and identification of this wooden object. If I succeed in that, there will be, I imagine, very little more left to discover."

"No," Jervis agreed, "especially if the owner of the antique should happen to be the elusive Mr. Osmond. So I wish you success in your quest, and only hope it may not resemble too closely that of the legendary blind man, searching in a dark room for a black hat—that isn't there."

With this parting shot and a defiant grin, Jervis took his departure, leaving Thorndyke to complete the examination of the remaining material.
XV. — MR. WAMPOLE IS HIGHLY AMUSED

ON a certain Saturday afternoon at a few minutes to three the door of Mr. Woodstock's office in High Street, Burchester, opened somewhat abruptly and disclosed the figures of the solicitor himself and his chief clerk.

"Confounded nuisance all this fuss and foolery," growled the former, pulling out his watch and casting an impatient glance up the street. "I hope he is not going to keep us waiting."

"He is not due till three," Hepburn remarked, soothingly; and then, stepping out and peering up the nearly empty street, he added: "Perhaps that may be—" that tall man with the little clerical-looking person."

"If it is, he seems to be bringing his luggage with him," said Mr. Woodstock, regarding the pair, and especially the suit-cases that they carried, with evident disfavour; "but you are right. They are coming here."

He put away his watch, and as the two men crossed the road, he assumed an expression of polite hostility.

"Dr. Thorndyke?" he inquired as the new-comers halted opposite the doorway; and having received confirmation of his surmise, he continued: "I am Mr. Woodstock, and this is my colleague, Mr. Hepburn. May I take it that this gentleman is concerned in our present business?" As he spoke he fixed a truculent blue eye on Thorndyke's companion, who crinkled apologetically.

"This is Mr. Polton, my laboratory assistant," Thorndyke explained, "who has come with me to give me any help that I may need."

"Indeed," said Woodstock, glancing inquisitively at the large suit-case which Polton carried. "Help? I gathered from Mr. Penfield's letter that you wished to inspect the office, and I must confess that I found myself utterly unable to imagine why. May I ask what you expect to learn from an inspection of the premises?"

"That," replied Thorndyke, "is a rather difficult question to answer. But as all my information as to what has occurred here is second-or third-hand, I thought it best to see the place myself and make a few inquiries on the spot. That is my routine practice."

"Ah, I see," said Woodstock. "Your visit is just a matter of form, a demonstration of activity. Well, I am sorry I can't be present at the ceremony. My colleague and I have an engagement elsewhere; but my office-keeper, Mr. Wampole, will be able to tell you anything that you may wish to know and show you all there is to see excepting the strong-room. If you want to see that, as I suppose you do, I had better show it to you now, as I must take the key away with me."

He led the way along the narrow hall, half-way down which he opened a door inscribed 'Clerks' Office', and entered a large room, now unoccupied save by an elderly man who sat at a table with the parts of a dismembered electric bell spread out before him. Through this Mr. Woodstock passed into a somewhat smaller room furnished with a large writing-table, one or two nests of deed-boxes, and a set of book-shelves. Nearly opposite the table was the massive door of the strong-room, standing wide open with the key in the lock.

"This is my private office," said Mr. Woodstock, "and here is the strong-room. Perhaps you would like to step inside. I am rather proud of this room. You don't often see one of this size. And it is absolutely fire-proof; thick steel lining, concrete outside that, and then brick. It is practically indestructible. Those confounded boxes occupied that long upper shelf."

Thorndyke did not appear to be specially interested in the strong-room. He walked in, looked round at the steel walls with their ranks of steel shelves, loaded with bundles of documents, and then walked out.

"Yes," he said, "it is a fine room, as strong and secure as one could wish; though, of course, its security has no bearing on our case, since it must have been entered either with its own key or a duplicate. May I look at the key?"

Mr. Woodstock withdrew it from the lock and handed it to him without comment, watching him with undisguised impatience as he turned it over and examined its blade.

"Not a difficult type of key to duplicate," he remarked as he handed it back, "though these wardless pin-keys are more subtle than they look."

"I suppose they are," Woodstock assented indifferently. "But really, these investigations appear to me rather pointless, seeing that the identity of the thief is known. And now I must be off; but first let me introduce you to my deputy, Mr. Wampole."

He led the way back to the clerks' office, where his subordinate was busily engaged in assembling the parts of the bell.

"This is Dr. Thorndyke, Wampole, who has come with his assistant, Mr.—er—Bolton, to inspect the premises and make a few inquiries. You can show him anything that he wants to see and give him all the assistance that you can in the way of answering questions. And," concluded Mr. Woodstock, shaking hands stiffly with Thorndyke, "I wish you a successful issue to your labours."

As Mr. Woodstock and his colleague departed, closing the outer door after them, Mr. Wampole laid down his screwdriver and looked at Thorndyke with a slightly puzzled expression.

"I don't quite understand, sir, what you want to do," said he, "or what sort of inspection you want to make; but I am
entirely at your service, if you will kindly instruct me. What would you like me to show you first?"

"I don’t think we need interrupt your work just at present, Mr. Wampole. The first thing to be done is to make a rough plan of the premises, and while my assistant is doing that, perhaps I might ask you a few questions if it will not distract you too much."

"It will not distract me at all," Mr. Wampole replied, picking up his screw-driver. "I am accustomed to doing odd jobs about the office—I am the handy man of the establishment—and I am not easily put out of my stride."

Evidently he was not; for even as he was speaking his fingers were busy in a neat, purposeful way that showed clearly that his attention was not wandering from his task. Thorndyke watched him curiously, not quite able to ‘place’ him. His hands were the skilful, capable hands of a mechanic, and this agreed with Woodstock’s description of him and his own. But his speech was that of a passably educated man and his manner was quite dignified and self-possessed.

"By the way," said Thorndyke, "Mr. Woodstock referred to you as the office-keeper. Does that mean that you are the custodian of the premises?"

"Nominally," replied Wampole. "I am a lawyer by profession; but when I first came here, some twenty years ago, I came as a caretaker and used to live upstairs. But for many years past the upstairs rooms have been used for storage—obsolete books, documents, and all sorts of accumulations. Nobody lives in the house now. We lock the place up when we go away at night. As for me, I am, as I said, the handy man of the establishment. I do whatever comes along—copy letters, engross leases, keep an eye on the state of the premises, and so on."

"I see. Then you probably know as much of the affairs of this office as anybody."

"Probably, sir. I am the oldest member of the staff, and I am usually the first to arrive in the morning and the last to leave at night. I expect I can tell you anything that you want to know."

"Then I will ask you one or two questions, if I may. You probably know that my visit here is connected with the robbery of Mr. Hollis’s gems?"

"The alleged robbery," Mr. Wampole corrected. "Yes, sir. Mr. Woodstock told me that."

"You appear to be somewhat doubtful about the robbery."

"I am not doubtful at all," Wampole replied in a tone of great decision. "I am convinced that the whole thing is a mare’s nest. The gems may have been stolen. I suppose they were as Mr. Hollis says they were. But they weren’t stolen from here."

"You put complete trust in the strong-room?"

"Oh no, I don’t, sir. This is a solicitor’s strong-room, not a banker’s. It is secure against fire, not against robbery. It was designed for the custody of things such as documents, of great value to their owners but of no value to a thief. It was no proper receptacle for jewels. They should have gone to a bank."

"Do I understand, then, that unauthorized persons might have obtained access to the strong-room?"

"They might, during business hours. Mr. Woodstock unlocks it when he arrives and it is usually open all day; or if it is shut, the key is left hanging on the wall. But it has never been taken seriously as a bank strong-room is. Mr. Hepburn and Mr. Osmond kept their cricket-bags and other things in it, and we have all been in the habit of putting things in there if we were leaving them here over-night."

"Then, really, any member of the staff had the opportunity to make away with Mr. Hollis’s property?"

"I wouldn’t put it as strongly as that," replied Wampole, with somewhat belated caution. "Any of us could have gone into the strong-room; but not without being seen by some of the others. Still, one must admit that a robbery might have been possible; the point is that it didn’t happen. I checked those boxes when I helped to put them in, and I checked them when we took them out. They were all there in their original wrappings with Mr. Hollis’s handwriting on them and all the seals intact. It is nonsense to talk of a robbery in the face of those facts."

"And you attach no significance to Mr. Osmond’s disappearance?"

"No, sir. He was a bachelor and could go when and where he pleased. It was odd of him, I admit, but he sometimes did odd things; a hasty, impulsive gentleman, quick to jump at conclusions and make decisions and quick to act. Not a discreet gentleman at all; rather an unreasonable gentleman, perhaps, but I should say highly scrupulous. I can’t imagine him committing a theft."

"Should you describe him as a nervous or timid man?"

Mr. Wampole emitted a sound as if he had clock work in his inside and was about to strike. "I never met a less nervous man," he replied with emphasis. "No, sir. Bold to rashness would be my description of Mr. John Osmond. A buccaneering type of man. A yachtsman, a boxer, a wrestler, a footballer, and a cricketer. A regular hard nut, sir. He should never have been in an office. He ought to have been a sailor, an explorer, or a big-game hunter."

"What was he like to look at?"

"Just what you would expect—a big, lean, square-built man, hatchet-faced, Roman-nosed, with blue eyes, light-brown hair, and a close-cropped beard and moustache. Looked like a naval officer."
"Do you happen to know if his residence has been examined?"

"Mr. Woodstock and the Chief Constable searched his rooms, but of course they didn't find anything. He had only two small rooms, as he took his meals and spent a good deal of his time with Mr. Hepburn, his brother-in-law. He seemed very fond of his sister and her two little boys."

"Would it be possible for me to see those rooms?"

"I don't see why not, sir. They are locked up now, but the keys are here and the rooms are only a few doors down the street."

Here occurred a slight interruption, for Mr. Wampole, having completed his operations on the bell, now connected it with the battery—which had also been under repair—when it emitted a loud and cheerful peal. At the same moment, as if summoned by the sound, Polton entered holding a small drawing-board on which was a neatly executed plan of the premises.

"Dear me, sir!" exclaimed Mr. Wampole, casting an astonished glance at the plan. "You are very thorough in your methods. I see you have even put in the furniture."

"Yes," Thorndyke agreed, with a faint smile; "we must needs be thorough even if we reach no result."

Mr. Wampole regarded him with a sly smile. "Very true, sir," he chuckled—"very true, indeed. A bill of costs needs something to explain the total. But, God bless us! what is this?"

"This" was, in effect, a diminutive vacuum cleaner, fitted with a little revolving brush and driven by means of a large dry battery, which Polton was at the moment disinterring from his suit-case. Thorndyke briefly explained the nature of the apparatus while Mr. Wampole stared at it with an expression of stupefaction.

"But why have you brought it here, sir?" he exclaimed. "The premises would certainly be the better for a thorough cleaning, but surely—"

"Oh, we are not going to 'vacuum clean' you," Thorndyke reassured him. "We are going to take samples of dust from the different parts of the premises."

"Are you, indeed, sir? And, if I may take the liberty of asking, what do you propose to do with them?"

"I shall examine them carefully when I get home," Thorndyke replied, "and I may then possibly be able to judge whether the robbery took place here or elsewhere."

As Thorndyke furnished this explanation, Mr. Wampole stood gazing at him as if petrified. Once he opened his mouth, but shut it again tightly as if not trusting himself to speak. At length he rejoined: "Wonderful! wonderful!" and then, after an interval, he continued meditatively: "I seem to have read somewhere of a wise woman of the East who was able, by merely examining a hair from the beard of a man who had fallen downstairs, to tell exactly how many stairs he had fallen down. But I never imagined that it was actually possible."

"It does sound incredible," Thorndyke admitted, gravely. "She must have had remarkable powers of deduction. And now, if Mr. Polton is ready, we will begin our perambulation. Which was Mr. Osmond's office?"

"I will show you," replied Mr. Wampole, recovering from his trance of astonishment. He led the way out into the hall and thence into a smallish room in which were writing-table and a large, old-fashioned, flap-top desk.

"This table," he explained, "is Mr. Hepburn's. The desk was used by Mr. Osmond and his belongings are still in it. That second door opens into Mr. Woodstock's office."

"Is it usually kept open or closed?" Thorndyke asked.

"It is nearly always open; and as it is, as you see"—here he threw it open—"exactly opposite the door of the strong-room, no one could go in there unobserved unless Mr. Woodstock, Mr. Hepburn, and Mr. Osmond had all been out at the same time."

Thorndyke made a note of this statement and then asked: "Would it be permissible to look inside Mr. Osmond's desk? Or is it locked?"

"I don't think it is locked. No, it is not," he added, demonstrating the fact by raising the lid; "and, as you see, there is nothing very secret inside."

The contents, in fact, consisted of a tobacco-tin, a couple of briar pipes, a ball of string, a pair of gloves, a clothes-brush, a pair of much-worn hair-brushes, and a number of loose letters and bills. These last Thorndyke gathered together and laid aside without examination, and then proceeded methodically to inspect each of the other objects in turn, while Mr. Wampole watched him with the faintest shadow of a smile.

"He seems to have had a pretty good set of teeth and a fairly strong jaw," Thorndyke remarked, balancing a massive pipe in his fingers and glancing at the deep tooth-marks on the mouth-piece, "which supports your statement as to his physique."

He peered into the tobacco-tin, smelt the tobacco, inspected the gloves closely, especially at their palmar surfaces, and tried them on; examined the clothes brush, first with the naked eye and then with the aid of his pocket-lens, and, holding it
inside the desk, stroked its hair backwards and forwards, looking closely to see if any dust fell from it. Finally, he took up the hair-brushes one at a time and, having examined them in the same minute fashion, produced from his pocket a pair of fine forceps and a seed-envelope. With the forceps he daintily picked out from the brushes a number of hairs which he laid on a sheet of paper, eventually transferring the collection to the little envelope, on which he wrote: "Hairs from John Osmond's hair-brushes."

"You don't take anything for granted, sir," remarked Mr. Wampole, who had been watching this proceeding with concentrated interest (perhaps he was again reminded of the wise woman of the East).

"No," Thorndyke agreed. "Your description was hearsay testimony, whereas these hairs could be produced in Court and sworn to by me."

"So they could, sir; though, as it is not disputed that Mr. Osmond has been in this office, I don't quite see what they could prove."

"Neither do I," rejoined Thorndyke. "I was merely laying down the principle."

Meanwhile, Polton had been silently carrying out his part of the programme, not unobserved by Mr. Wampole; and a pale patch about a foot square, between Mr. Hepburn's chair and the front of the table, where the pattern of the grimy carpet had miraculously reappeared, marked the site of his operations. Tenderly removing the little silken bag, now bulging with its load of dust, he slipped it into a numbered envelope and wrote the number on the spot on the plan to which it corresponded.

Presently a similar patch appeared on the carpet in front of Osmond's desk, and when the sample had been disposed of and the spot on the plan marked, Polton cast a wistful glance at the open desk.

"Wouldn't it be as well, sir, to take a specimen from the inside?" he asked.

"Perhaps it would," Thorndyke replied. "It should give us what we may call a 'pure culture.'" He rapidly emptied the desk of its contents, when Polton introduced the nozzle of his apparatus and drew it slowly over every part of the interior. When this operation was completed, including the disposal of the specimen and the marking of the plan, the party moved into Mr. Woodstock's office, and from thence back into the clerks' office.

"I find this investigation intensely interesting," said Mr. Wampole, rubbing his hands gleefully. "It seems to combine the attractions of a religious ceremony and a parlour game. I am enjoying it exceedingly. You will like to have the names of the clerks who sit at those desks, I presume."

"If you please," replied Thorndyke.

"And, of course, you will wish to take samples from the insides of the desks. You certainly ought to. The informal lunches which the occupants consume during the forenoon will have left traces which should be most illuminating. And the desks are not locked, as there are no keys."

Mr. Wampole's advice produced on Polton's countenance a smile of most extraordinary crinkliness, but Thorndyke accepted it with unmoved gravity and it was duly acted upon. Each of the desks was opened and emptied of its contents—constructive enough as to the character and personal habits of the tenant—and cleared of its accumulation of crumbs, tobacco-ash, and miscellaneous dirt, the 'catch' forming a specimen supplementary to those obtained from the floor. At length, when they had made the round of the office, leaving in their wake a succession of clean squares on the matting which covered the floor, Mr. Wampole halted before an old-fashioned high desk which stood in a corner in company with a high office-stool.

"This is my desk," said he. "I presume that you are going to take a little souvenir from it?"

"Well," replied Thorndyke, "we may as well complete the series. We operated on Mr. Hollis's premises this morning."

"Did you indeed, sir! You went there first; and very proper too. I am sure Mr. Hollis was very gratified."

"If he was," Thorndyke replied with a smile, "he didn't make it obtrusively apparent. May I compliment you on your desk? You keep it in apple-pie order."

"I try to show the juniors an example," replied Mr. Wampole, throwing back the lid of the desk and looking complacently at the neatly stowed contents. "It is a miscellaneous collection," he added as he proceeded to transfer his treasures from the desk to a cleared space on the table.

It certainly was. There were a few tools—pliers, hack-saw, hammer, screw-driver, and a couple of gimlets—a loosely folded linen apron, one or two battery terminals and a coil of insulated wire, a stamp-album, a cardboard tray full of military buttons, cap-badges, and old civilian coat buttons, and a smaller tray containing one or two old copper and silver coins.

"I see you are a stamp collector," remarked Thorndyke, opening the album and casting a glance of lukewarm interest over its variegated pages.

"Yes," was the reply, "in a small way. It is a poor man's hobby, unless one seeks to acquire costly rarities, which I do not. As a matter of fact, I seldom buy specimens at all. This album has been filled principally from our foreign correspondence. And the same is true of the coins. I don't regularly collect them; I just keep any odd specimens that come my way."
"And the buttons? You have a better opportunity there, for you have practically no competitors. And yet it seems to me that they are of more interest than the things that the conventional collectors seek so eagerly."

"I entirely agree with you, sir," Mr. Wampole replied, warmly. "It is the common things that are best worth collecting—the things that are common now and will be rare in a few years' time. But the collector who has no imagination neglects things until they have become rare and precious. Then he buys at a high price what he could have got a few years previously for nothing. Look at these old gilt coat-buttons. I got them from an old-established tailor who was clearing out his obsolete stock. Unfortunately, he had thrown away most of them and nearly all the steel button-dies. I just managed to rescue these few and one or two dies, which I have at home. They are of no value now, but when the collectors discover the interest of old buttons, they will be worth their weight in gold. I am collecting all the buttons I can get hold of."

"I think you are wise, from a collector's point of view. By the way, did you ever meet with any of those leather-bound sample wallets that the old button-makers used to supply to tailors?"

"Never," replied Mr. Wampole. "I have never even heard of them."

"I have seen one or two," said Thorndyke, "and each was a collection in itself, for it contained some two or three hundred buttons, fixed in sheets of mill-board, forming a sort of album; and, of course, every button was different from every other."

Mr. Wampole's eyes sparkled. "What an opportunity you had, sir!" he exclaimed. "But probably you are not a collector. It was a pity, though, for, as you say, one of those wallets was a museum in itself. If you should ever chance to meet with another, would it be too great a liberty for me to beg an option for me, at a price within my slender means?"

"It is no liberty at all," Thorndyke replied. "It is not likely that I shall ever come across one again, but if I should, I will certainly secure it for you."

"That is most kind of you, sir," exclaimed Mr. Wampole. "And now, as Mr. Polton seems to have completed the cleansing of my desk—the first that it has had, I am afraid, for a year or two—we may continue our exploration. Did you wish to examine the waiting-room?"

"I think not. I have just looked into it, but its associations are too ambiguous for the dust to be of any interest. But I should like to glance at the rooms upstairs."

To the upstairs rooms they accordingly proceeded, but the inspection was little more than a formality. They walked slowly through each room, awakening the echoes as they trod the bare floors, and as they went, Thorndyke's eye travelled searchingly over the shelves and rough tables, stacked with documents and obsolete account-books, and the few rickety Windsor chairs. There was certainly an abundance of dust, as Mr. Wampole pointed out, but it did not appear to be of the brand in which Thorndyke was interested.

"Well," said Mr. Wampole, as they descended to the ground-floor, "you have now seen the whole of our premises. I think you said that you would like to inspect Mr. Osmond's rooms. If you will wait a few moments, I will get the keys."

He disappeared into the principal's office, and meanwhile Polton rapidly packed his apparatus in the suit case, so that by the time Mr. Wampole reappeared, he was ready to start.

"Mr. Osmond's rooms," said Mr. Wampole, as they set forth, "are over a bookseller's shop. This is the place. If you will wait for a moment at the private door, I will notify the landlord of our visit." He entered the shop and after a short interval emerged briskly and stepped round to the side-door, into which he inserted a latch-key. He led the way along the narrow hall, past a partially open door, in the opening of which a portion of a human face was visible, to the staircase, up which the little procession advanced until the second-floor landing was reached. Here Mr. Wampole halted and, selecting a key from the small bunch, unlocked and opened a door, and preceded his visitors into the room.

"It is just as well that you came to-day," he remarked, "for I understand that Mrs. Hepburn is going to take charge of these rooms. A day or two later and she would have been beforehand with you in the matter of dust. As it is, you ought to get quite a good haul."

"Quite," Thorndyke agreed. "There is plenty of dust; but in spite of that, the place has a very neat, orderly appearance. Do you happen to know whether the rooms have been tidied up since Mr. Osmond left?"

"They are just as he left them," was the reply, "excepting that the Chief Constable and Mr. Woodstock came and looked over them. But I don't think they disturbed them to any extent. There isn't much to disturb, as you see."

Mr. Wampole was right. The furnishing of the room did not go beyond the barest necessities, and when Thorndyke opened the door of communication and looked into the bedroom, it was seen to be characterized by a like austere simplicity. Whatever might be the moral short-comings of the vanished tenant, softness or effeminate luxuriousness did not appear to be among them.

As his assistant refixed the 'extractor', Thorndyke stood thoughtfully surveying the room, trying to assess the personality of its late occupant by the light of his belongings. And those belongings and the room which held them were highly characteristic. The late tenant was clearly an active man, a man whose interests lay out-of-doors; an orderly man, too, with something of a sailor's tidiness. He had the sailor's knack of keeping the floor clear by slinging things aloft out of the way. Not only small articles such as rules, dividers, marlinspike, and sheath-knife, but a gun-case, fishing-rods, cricket-bats, and a bulky roll of charts were disposed of on the walls by means of picture-hooks and properly-made slings—the height of
which gave a clue to the occupant’s stature and length of arm. And the nautical flavour was accentuated by the contents of a set of rough shelves in a recess, which included a boat compass, a nautical almanack, a volume of sailing directions, and a manual of naval architecture. The only touch of ornament was given by a set of four photographs in silver frames, which occupied the mantelpiece in company with a pipe-rack, a tobacco-jar, an ash-bowl, and a box of matches.

Thorndyke stepped across to the fireplace to look at them more closely. They were portraits of five persons: a grave-looking, elderly clergyman; a woman of about the same age with a strong, alert, resolute face and markedly aquiline features; and a younger woman, recognizably like the clergyman; and two boys of about seven and eight, photographed together.

"Those," said Mr. Wampole, indicating the older persons, "are Mr. Osmond's parents, both, I regret to say, deceased. The younger lady is Mrs. Hepburn, Mr. Osmond's sister, and those little boys are her sons. Mr. Osmond was very devoted to them, as I believe they were to him."

Thorndyke nodded. "They are fine little fellows," he remarked. "Indeed it is a good-looking family. I gather from your description that Mr. Osmond must have taken rather strongly after his mother."

"You are quite right, sir," replied Mr. Wampole. "From that portrait of his mother you would recognize Mr. Osmond without the slightest difficulty. The likeness is quite remarkable."

Thorndyke nodded again as he considered long and earnestly the striking face that looked out of the frame so keenly under its bold, straight brows. Strength, courage, determination, were written in every line of it; and as he stood with his eyes bent upon those of the portrait and thought of this woman's son—of the mean, avaricious crime, so slyly and craftily carried out, of the hasty, pusillanimous flight, unjustified by any hint of danger—he was sensible of a discrepancy between personality and conduct to which his experience furnished no parallel. A vast amount of nonsense has been talked and believed on the subject of physiognomy; but within this body of error there lies a soul of truth. 'Character reading' in the Lavater manner is largely pure quackery; but there is a certain general congruity between a man's essential character and his bodily 'make-up', including his facial type. Here, however, was a profound incongruity. Thorndyke found it difficult to identify the sly, cowardly knave whom he was seeking with the actual man who appeared to be coming into view.

But his doubts did not affect his actions. He had come here to collect evidence; and that purpose he proceeded to execute with a perfectly open mind. He pointed out to Polton the most likely spots to work for characteristic dust; he examined minutely every piece of furniture and woodwork in both the rooms; he made careful notes of every fact observed by himself or communicated by Wampole that could throw any light on the habits or occupations of the absent man. Even the secretly-amused onlooker was impressed by the thoroughness of the investigation, for, as Polton finally packed his apparatus, he remarked: "Well, sir, I have told you what I think—that you are following a will-o'-the-wisp. But if you fail to run him to earth, it certainly won't be for lack of painstaking effort. You deserve to succeed."

Thorndyke thanked him for the compliment and retired slowly down the stairs while the rooms were being locked up. They called in at the office to collect Thorndyke's green canvas-covered case and then made their adieux.

"I must thank you most warmly, Mr. Wampole," said Thorndyke, "for the kind interest that you have taken in our investigations. You have given us every possible help."

Mr. Wampole bowed. "It is very good of you to say so. But it has really been a great pleasure and a most novel and interesting experience." He held the door open for them to pass out, and as they were crossing the threshold he added: "You won't forget about that button-wallet, sir, if the opportunity should arrive."

"I certainly will not," was the reply. "I will secure an option—or better still, the wallet itself and send it to you. By the way, should it be sent here or to your private address?"

Mr. Wampole reflected for a few moments. Then he drew from his pocket a much-worn letter-case from which he extracted a printed visiting-card.

"I think, sir, it would be best to send it to my private address. One doesn't want it opened by the wrong hands. This is my address; and let me thank you in advance, even if only for the kind intention. Good evening, sir. Good evening, Mr. Polton. I trust that your little dusty souvenirs will prove highly illuminating."

He stood on the threshold and gravely watched his two visitors as they retired down the street. At length, when they turned a corner, he re-entered, shutting and locking the outer door. Then in an instant his gravity relaxed, and flinging himself into a chair, he roused the echoes with peal after peal of joyful laughter.
"This seems highly irregular," said Mr. Penfield, settling himself comfortably in the easy-chair and smilingly regarding a small table on which were a decanter and glasses. "I don't treat my professional visitors in this hospitable fashion. And you don't even ask what has brought me here."

"No," replied Thorndyke, as he filled a couple of glasses; "I accept the gifts of Fortune and ask no questions."

Mr. Penfield bowed. "You were good enough to say that I might call out of business hours, which is a great convenience, so here I am, with a twofold purpose; first, to seek information from you; and second to give you certain news of my own. Perhaps I may take them in that order and begin by asking one or two questions?"

"Do so, by all means," replied Thorndyke.

"I have heard," pursued Mr. Penfield, "from our friends Hollis and Woodstock, and perhaps you will not be surprised to learn that you have made yourself somewhat unpopular with them. They have even applied disrespectful epithets to you."

"Such as mountebank, impostor, quack, and so forth," suggested Thorndyke.

Mr. Penfield chuckled as he sipped his wine. "Your insight is remarkable," said he. "You have quoted the very words. They complain that, after making a serious appointment with them and occupying their time, you merely asked a number of foolish and irrelevant questions, and then proceeded to sweep the floor. Is that an exaggeration, or did you really sweep the floor?"

"I collected a few samples of dust from the floor and elsewhere."

Mr. Penfield consumed a luxurious pinch of snuff and regarded Thorndyke with delighted amusement.

"Did you indeed? Well, I am not surprised at their attitude. But a year or so ago it would have been my own. It must have looked like sheer wizardry. But tell me, have your investigations and floor-sweepings yielded any tangible facts?"

"Yes," replied Thorndyke, "they have; and those facts I will lay before you on the strict understanding that you communicate them to nobody. As to certain further inferences of a more speculative character, I should prefer to make no statement at present. They may be entirely erroneous."

"Exactly, exactly. Let us keep scrupulously to definite facts which are susceptible of proof. Now, what have you discovered?"

"My positive results amount to this: in the first place I have ascertained beyond the possibility of any reasonable doubt that those boxes had been opened by some person other than Mr. Hollis. In the second place it is virtually certain that the person who opened them was in some way connected with Mr. Woodstock's office."

"Do you say that the boxes were actually opened in his office?"

"No. The evidence goes to prove that they were taken from the office and opened elsewhere."

"But surely they would have been missed from the strong-room?"

"That, I think was provided for. I infer that only one box was taken at a time and that its place was filled by a dummy."

"Astonishing!" exclaimed Mr. Penfield. "It seems incredible that you should have been able to discover this—or, indeed, that it should be true. The seals seem to me to offer an insuperable difficulty."

"On the contrary," replied Thorndyke, "it was the seals that furnished the evidence. They were manifest forgeries."

"Were they really! The robber had actually had a counterfeit seal engraved?"

"No. The false seal was not engraved. It was an electrotype made from one of the wax impressions; a much simpler and easier proceeding, and one that the robber could carry out himself and so avoid the danger of employing a seal engraver."

"No doubt it would be the safer plan, and probably you are right in assuming that he adopted it; but—"

"I am not assuming," said Thorndyke. "There is direct evidence that the seal used to make the false impressions was an electrotype."

"Now, what would be the nature of that evidence—or is it, perhaps, too technical for an ignorant person like me to follow?"

"There is nothing very technical about it," replied Thorndyke. "You know how an electrotype is made? Well, to put it briefly, the process would be this: one of the wax impressions from a box would be carefully coated with black lead or some other conducting material and attached to one of the terminals of an electric battery; and to the other terminal a piece of copper would be attached. The black-leaded wax impression and the piece of copper would be suspended from the wires of the battery, close together but not touching, in a solution of sulphate of copper. Then, as the electric current passed, the copper would dissolve in the solution and a film of metallic copper would become deposited on the black-leaded wax and would gradually thicken until it became a solid shell of copper. When this shell was picked off the wax it would be, in effect, a copper seal which would give impressions on wax just like the original seal. Is that clear?"
"Perfectly. But what is the evidence that this was actually done?"

"It is really very simple," replied Thorndyke. "Let us consider what would happen in the two alternative cases. Take first that of the seal engraver. He has handed to him one or more of the wax impressions from the boxes and is asked to engrave a seal which shall be an exact copy of the seal which made the impressions. What does he do? If the wax impression were absolutely perfect, he would simply copy it in intaglio. But a seal impression never is perfect unless it is made with quite extraordinary care. But the wax impressions on the boxes were just ordinary impressions, hastily made with no attempt at precision, and almost certainly not a perfect one among them. The engraver, then, would not rigorously copy a particular impression, but, eliminating its individual and accidental imperfections, he would aim at producing a seal which should be a faithful copy of the original seal, without any imperfections at all.

"Now take the case of the electrotype. This is a mechanical reproduction of a particular impression. Whatever accidental marks or imperfections there may be in that impression will be faithfully reproduced. In short, an engraved seal would be a copy of the original seal; an electrotype would be a copy of a particular impression of that seal."

Mr. Penfield nodded approvingly. "An excellent point and very clearly argued. But what is its bearing on the case?"

"It is this: since an electrotype seal is a mechanical copy of a particular wax impression, including any accidental marks or imperfections in it, it follows that every impression made on wax with such a seal will exhibit the accidental marks or imperfections of the original wax impression, in addition to any defects of its own. So that, if a series of such impressions were examined, although each would probably have its own distinctive peculiarities, yet all of them would be found to agree in displaying the accidental marks or imperfections of the original impression."

"Yes, I see that," said Mr. Penfield with a slightly interrogative inflexion.

"Well, that is what I have found in the series of seal-impressions from Mr. Hollis's boxes. They are of all degrees of badness, but in every one of the series two particular defects occur; which, as the series consists of over thirty impressions, is utterly outside the limits of probability."

"Might those imperfections not have been in the seal itself?"

"No. I took, with the most elaborate care, two impressions from the original seal, and those impressions are, I think, as perfect as is possible. At any rate, they are free from these, or any other visible defects. I will show them to you."

He took from a drawer a portfolio and an envelope. From the latter he produced one of the two impressions that he had made with Mr. Hollis's seal and from the former a half-plate photograph.

"Here," he said, handing them to Mr. Penfield, "is one of the seal impressions taken by me, and here is a magnified photograph of it. You can see that every part of the design is perfectly clear and distinct and the background quite free from indentations. Keep that photograph for comparison with these others, which show a series of thirty-two impressions from the boxes, magnified four diameters. In every one of them you will find two defects. First the projecting fore-legs of the left-hand horse are blurred and faint; second, there is, just in front of the chariot and above the back of the near horse, a minute pit in the back ground. It is hardly visible to the naked eye in the wax impressions, but the photographs show it plainly. It was probably produced by a tiny bubble of air between the seal and the wax.

"Now, neither of these defects is to be seen in Mr. Hollis's seal. Either of them might have occurred accidentally in one or two impressions. But since they both occur in every case, whether the impressions are relatively good or bad, it is practically certain that they existed in the matrix or seal with which the impressions were made. And this conclusion is confirmed by the fact that, in some cases, the defect in the horse's fore legs is inconsistent with other defects in the same impression."

"How inconsistent?" Mr. Penfield demanded.

"I mean that the faint impression of the horse's legs is due to insufficient pressure of the left side of the seal; the seal has not been put down quite vertically. But here—in number 23, for instance—the impression of the charioteer and driver on the right-hand side is quite faint and shallow. In that case, the left-hand side of the impression should have been deep and distinct. But both sides are faint, whereas the middle is deep."

"Might not the seal have been rocked from side to side?"

"No, that would not explain the appearances; for if the seal were rocked from side to side, both sides would be deep, though the middle might be shallow. It is impossible to imagine any kind of pressure which would give an impression shallow on both sides and deep in the middle. The only possible explanation is that the matrix, itself, was shallow on one side."

Mr. Penfield reflected, helping his cogitations with a pinch of snuff.

"Yes," he agreed. "Incredible as the thing appears, I think you have made out your case. But doesn't it strike you as rather odd that this ingenious rascal should not have taken more care to secure a good impression from which to make his false seal?"

"I imagine that he had no choice," replied Thorndyke. "On each box were six seals; three on the paper wrapping, two in the recesses by the keyhole, and one on the knot of the string. Now, as the paper had to be preserved, the seals could not be torn or cut from that. It would be impossible to get them out of the recesses. There remained only the seals on the knots.
These were, of course, much the least perfect, though the string was little more than thread and the knots quite small. But they were the only ones that it was possible to remove, and our friend was lucky to have got as good an impression as he did.

Mr. Penfield nodded. "Yes," said he, "you have an answer to every objection. By the way, if the paper had to be preserved so carefully, how do you suppose he got the parcels open? He would have had to break the seals."

"I think not. I assume that he melted the seals by holding a hot iron close to them and then gently opened the packets while the wax was soft."

Mr. Penfield chuckled. "Yes," he admitted, "it is all very complete and consistent. And now to go on to the next point. You say that there is evidence that these boxes were opened by some person other than Hollis himself; a person connected in some way with Woodstock's office. Further that they were opened, not in the office itself, but in some other place to which they had been taken. I should like to hear of that evidence; especially if it should happen to be connected with those mysterious floor-sweepings."

"As a matter of fact, it is," Thorndyke replied, with a smile. "But the floor-sweeping was not the first stage. The investigation began with Mr. Hollis's boxes, from which I extracted every particle of dust that I could obtain; and this dust I examined minutely and exhaustively. The results were unexpectedly illuminating. For instance, from every one of the untouched boxes I obtained one or more moustache hairs."

"Really! But isn't that very remarkable?"

"Perhaps it is. But moustache hairs are shed very freely. If you look at the dust from a desk used by a man with a moustache, you will usually see in it quite a number of moustache hairs."

"I have not noticed that," said Mr. Penfield, "having no moustache myself. And what else did you obtain by your curious researches?"

"The other result was really very remarkable indeed. From every one of the boxes I obtained particles—in some cases only one or two, in others quite a number—of the very characteristic dust which is shed by worm-eaten furniture."

"Dear me!" exclaimed Mr. Penfield. "And you were actually able to identify it! Astonishing! Now, I suppose—you must excuse me," he interpolated with an apologetic smile, "but I am walking in an enchanted land and am ready to expect and believe in any marvels—I suppose you were not able to infer the character of the piece of furniture?

"Not with anything approaching certainty," replied Thorndyke. "I formed certain opinions; but they are necessarily speculative, and we are dealing with evidence."

"Quite so, quite so," said Mr. Penfield. "Let us avoid speculation. But I now begin to see the inwardness of the floor-sweeping. You were tracing this mysterious dust to its place of origin."

"Exactly. And, naturally, I began with Mr. Hollis's premises—though the forgery of the seals seemed to put him outside the field of inquiry."

"Yes; he would hardly have needed to forge his own seal."

"No. But I examined his premises thoroughly, with an entirely negative result. There was no one on them with a moustache of any kind; the dust from his floors showed not a particle of the wood-dust, and I could find no piece of furniture in his house which could have yielded such dust."

"I then proceeded to Woodstock's office, and there I obtained abundant samples both of hairs and wood-dust. I found Osmond's hair-brushes in his desk, and from them obtained a number of moustache hairs which, on careful comparison, appear to be identically similar to those found in the boxes."

"Ha!" exclaimed Mr. Penfield in what sounded like a tone of disapproval. "And as to the wood-dust?"

"I obtained traces of it from every part of the floor. But it was very unequally distributed; so unequally as to associate it quite distinctly with a particular individual. I obtained abundant traces of it from the floor round that individual's desk, and even more from the inside of the desk; whereas, from the interiors of the other desks I recovered hardly a particle."

"You refer to a particular individual. Do you mean John Osmond?"

"No," replied Thorndyke. "Osmond's desk contained no wood-dust."

"Ha!" exclaimed Mr. Penfield in what sounded very like a tone of satisfaction.

"As to the individual referred to," said Thorndyke, "I think that, for the present, it might be better—"

"Certainly," Mr. Penfield interrupted emphatically, "certainly. It will be much better to mention no names. After all, it is but a coincidence, though undoubtedly a striking one. But we must keep an open mind."

"That is what I feel," said Thorndyke. "It is an impressive fact, but there is the possibility of some fallacy. Nevertheless it is the most promising clue that offers, and I shall endeavour to follow it up."

"Undoubtedly," Mr. Penfield agreed, warmly. "It indicates a new line of inquiry adapted to your peculiar gifts, though to me I must confess it only adds a new complication to this mystery. And I do really find this a most perplexing case. Perhaps you do not?"
"I do, indeed," replied Thorndyke. "It bristles with contradictions and inconsistencies. Take the case against Osmond. On the one hand it is in the highest degree convincing. The robberies coincide in time with his presence in the office. His disappearance coincides with the discovery of the robbery; and then in the rifled boxes we find a number of hairs from his moustache."

"Can you prove that they are actually his?" Mr. Penfield asked.

"No," Thorndyke replied. "But I have not the slightest doubt that they are, and I think they would be accepted by a jury—in conjunction with the other circumstances—as good evidence. These facts seem to point quite clearly to his guilt. On the other hand, the wood-dust is not connected with him at all. None was found in his desk or near it; and when I examined his rooms—which by a fortunate chance I was able to do—I not only found no trace whatever of wood-dust, but from the appearance of the place I was convinced that the boxes had not been opened there. And furthermore, so far as I could ascertain, the man's personality was singularly out of character with a subtle, cunning, avaricious crime of this type; not that I would lay great stress on that point."

"No," agreed Mr. Penfield; "the information is too scanty. But tell me: you inferred that the boxes were not opened in Woodstock's office, but were taken away and opened in some other place. How did you arrive at that?"

"By means of the wood-dust. The place in which those boxes were opened and refilled must have contained some worm-eaten wooden object which yielded that very distinctive dust, and yielded it in large quantities. But there was no such object on Woodstock's premises. I searched the house from top to bottom and could not find a single piece of worm-eaten wood work."

"And may I inquire—mind, I am not asking for details—but may I inquire whether you have any idea as to the whereabouts of that piece of furniture?"

"I have a suspicion," replied Thorndyke. "But there is my dilemma. I have a strong suspicion as to the place where it might be found; but, unfortunately, that place is not accessible for exploration. So, at present, I am unable either to confirm or disprove my theory."

"But supposing you were able to ascertain definitely that the piece of furniture is where you believe it to be? What then?"

"In that case," Thorndyke replied, "provided that this worm-eaten object turned out to be the kind of object that I believe it to be, I should be disposed to apply for a search-warrant."

"To search for what?" demanded Mr. Penfield.

"The stolen property—and certain other things."

"But surely the stolen property has been disposed of long ago."

"I think," replied Thorndyke, "that there are reasons for believing that it has not. But I would rather not go into that question at present."

"No," said Mr. Penfield. "We agreed to avoid speculative questions. And now, as I think I have exhausted your supply of information, it is my turn to contribute. I have a rather startling piece of news to communicate. John Osmond is dead."

Thorndyke regarded Mr. Penfield with raised eyebrows. "Have you heard any particulars?" he asked.

"Woodstock sent me a copy of the police report, of which I will send you a duplicate if you would like one. Briefly, it amounts to this: Osmond was traced to Bristol, and it was suspected that he had embarked on a ship which traded from that port to the west coast of Africa. That ship was seen, some weeks later, at anchor off the coast at a considerable distance from her usual trading-ground, and on her arrival at her station—a place called Half-Jack on the Grain Coast—was boarded by an inspector of constabulary who had been sent up from the Gold Coast to make inquiries. To him the captain admitted that he had landed a passenger from Bristol at a place called Adaffia in the Bight of Benin. The passenger was a man named Walker whose description agreed completely with that of Osmond. Thereupon, the inspector returned to Accra to report; and from thence was sent down to Adaffia with an armed party to find the man and arrest him."

"But he was too late. He arrived only in time to find a trader named Larkom setting up a wooden cross over the grave. Walker had died early that morning or the night before."

"Is it quite clear that this man was really John Osmond?"

"Quite," replied Mr. Penfield. "Larkom had just painted the name John Osmond on the cross. It appeared that Osmond, when he realized that he was dying, had disclosed his real name and asked to have it written above his grave—naturally enough. One doesn't want to be buried under an assumed name."

"No," Thorndyke agreed. "The grave is a sufficiently secure sanctuary. Does the report say what was the cause of death?"

"Yes, though it doesn't seem very material. He is stated to have died from blackwater fever—whatever that may be."

"It is a peculiarly malignant type of malaria," Thorndyke explained; and he added after a pause: "Well, 'the White Man's Grave' is a pestillential region, but poor Osmond certainly wasted no time in dying. How does his death affect our inquiry?"

Mr. Penfield took snuff viciously. "Woodstock's view is—I can hardly speak of it with patience—that as the thief is dead, the inquiry comes automatically to an end."
"And Hollis, I take it, does not agree?"
"Indeed he does not. He wants his property traced and recovered."

"And do I understand that you instruct me to proceed with my investigations?"
"Most certainly; especially in view of what you have told me."

"I am glad of that," said Thorndyke. 'I dislike exceedingly leaving an inquiry uncompleted. In fact, I should have completed the case for my own satisfaction and as a matter of public policy. For if Osmond stole these gems, the fact ought to be proved lest any other person should be suspected; and if he did not, his character ought to be cleared as a matter of common justice."

"That is exactly my own feeling," said Mr. Penfield. "And then, of course, there is the property. That ought to be recovered if possible, especially if, as you seem to think, it is still intact. And now," he added, draining his glass and rising, "it is time for me to depart. I have to thank you for a most interesting and pleasant evening."

As Thorndyke stood on the landing looking down upon his retreating guest, he was dimly aware of a presence on the stair above; and when he turned to re-enter his chambers, the presence materialized into the form of Polton. With silent and stealthy tread the 'familiar spirit' stole down the stairs and followed his principal into the room, where, having closed both doors with a secret and portentous air, he advanced to the table.

"What have you got under your arm, Polton?" Thorndyke asked.

By way of reply, Polton regarded his employer with a smile of the most extraordinary crinkliness and began very deliberately to untie the string of a small parcel. From the latter he at length disengaged a kind of leathern wallet marked in gold lettering with what appeared to be a tradesman's name and address. This he bore, slowly and ceremoniously, to the table, where with a sudden movement he unrolled it, displaying a glittering constellation of metal buttons.

"Well done, Polton!" Thorndyke exclaimed. "What a man you are! Now, where might you have unearthed this relic?"

"I discovered it, sir," replied Polton, blushing with pleasure like a dried apricot, "in a little, old-fashioned tailor's trimming-shop in one of the courts off Carnaby Street. It is quite a well preserved specimen, sir."

"Yes, it is in wonderful condition, considering its age. Mr. Wampole will be delighted with it. He will be set up with buttons for life. I think, Polton, it would add to his pleasure if you were to run down and make the presentation in person. Don't you?"

Polton's features crinkled to the point of obliteration. "I do, indeed, sir," he replied. "At his private residence, I think, sir."

"Certainly; at his private residence. And we shall have to find out at what time he usually returns from the office."

"We shall, sir," Polton agreed; and thereupon proceeded to crinkle to a perfectly alarming extent.
XVII. — THE LAPIDARY

IN a small street hard by Clerkenwell Green is a small shop of antique and mouldy aspect, the modest window of which is so obscured by a coat of paint on the inside as to leave the unaided observer to speculate in vain as to the kind of wares concealed within. A clue to the mystery is, however, furnished by an inscription in faded gilt lettering on the fascia above, which sets forth that the tenant’s name is Lambert and that his vocation is that of a lapidary and dealer in precious stones.

On a certain afternoon a few days after his interview with Mr. Penfield, Dr. John Thorndyke might have been seen to turn into the small street with a brisk, decisive air suggestive of familiarity with the neighbourhood and a definite purpose; and the latter suggestion would have been confirmed when, having arrived at the shop, he pushed open the door and entered. A faded, elderly man confronted him across the counter and inquired what might be his pleasure.

"I have called," said Thorndyke, "to make some inquiries concerning artificial stones."

"Did you want them for theatrical purposes?"

"No. Those are usually cast or moulded, aren't they?"

"Sometimes. Not as a rule. Can't get much sparkle out of moulded glass, you know. But what was the class of goods you were wanting?"

"I wanted a set of imitation gems made to given shapes and dimensions to form a collection such as might be suitable for purposes of instruction in a technical school."

"Would the shapes and dimensions have to be exact?"

"Yes, quite exact. They are intended to be copies of existing specimens and the settings are already made."

Thorndyke's answer seemed to occasion some surprise, for the man to whom he made it reflected profoundly for a few moments and then looked round at a younger man who was sorting samples from the stock at a side-bench.

"Odd, isn't it, Fred?" said the former.

"What is odd?" inquired Thorndyke.

"Why, you see, sir, we had someone come in only a few days ago making the very same inquiry. You remember him, Fred?"

"Yes, I remember him, Mr. Lambert. Crinkly-faced little blighter."

"That's the man," said Mr. Lambert. "I rather wondered at the time what his game was. Seemed to know a lot about the trade, too; but you have to mind what you are about making strass facsimiles."

"Of course you have," Thorndyke agreed, "especially when you are dealing with these crinkly-faced people."

"Exactly," said Mr. Lambert, "But, of course, sir, in your case we know where we are."

"It is very good of you to say so," rejoined Thorndyke. "But I gather that you are not often asked to make sets of facsimile imitations."

"No, not sets. Occasionally we get an order from a jeweller to duplicate the stones of a diamond necklace or tiara to be used while the original is in pawn, or for safety in a crowd. But not a collection such as you are speaking of. In fact, during all the thirty-five years that I have been in business, I have only had one order of the kind. That was between four and five years ago. A gentleman named Scofield wanted a set to offer to some local museum, and he wanted them to be copies of stones in various public collections. He got the shapes and dimensions from the catalogues——so I understood."

"Did you execute the order?"

"Yes; and quite a big order it was."

"I wonder," said Thorndyke, "whether he happened to have selected any of the stones that are in my list. Mine are mostly from the Hollis collection. But I suppose you don't keep records of the work you do?"

"I expect all the particulars are in the order book. We can soon see."

He went over to a shelf on which was ranged a row of books of all ages, and running his hand along, presently drew out a leather volume which he laid on the counter and opened.

"Ah! Here we are," said he, after a brief search. "Mr. Scofield. Perhaps you would like to glance over his list. You see there are quite a lot of them."

He pushed the book across to Thorndyke, who had already produced a note-book from his pocket, the entries in which he now proceeded to compare with those in Mr. Scofield's list. Mr. Lambert watched him with close interest as he placed his finger on one after another of the entries in the book, and presently remarked:

"You seem to be finding some duplicates of your own lot."

"It is most remarkable," said Thorndyke "—and yet perhaps it isn't—but his selection coincides with mine in over a dozen
instances. May I tick them off with a pencil?"

"Do, by all means," said Lambert. "Then I can copy them out afterwards—that is, if you want me to get the duplicates cut."

"I do, certainly. I will mark off those that I want, and, when you have cut those, I will give you a further list. And I may add that I should like you to use the best-quality strass that you can get. I want them to be as much like real stones as possible."

"I should do that in any case for good cut work," said Lambert; and he added: "I suppose there is no special hurry for these stones?"

"None at all," replied Thorndyke. "If you will send me a card to this address when they are ready, I will call for them. Or, perhaps, if I pay for them now you could send them to me."

The latter alternative was adopted, and while the prices were being reckoned up and the bill was being made out, Thorndyke occupied himself in making, in shorthand, a copy of the list in the order book. He had finished and put away his note-book by the time the account was ready; when, having laid a visiting-card on the counter, he paid his score and began to put on his gloves.

"By the way," said he, "your customer would not happen to be Mr. Scofield of the Middle Temple, I suppose?"

"I really couldn't say, sir," replied Lambert. "He never gave any address. But I had an idea that he came up from the country. He used to give his orders and then he would call, at longish intervals, and take away as many of the stones as were ready. He was a middle-aged man, a bit on the shady side; tallish, clean-shaved, iron-grey hair, and not too much of it."

"Ah, then I don't think that would be the same Mr. Scofield. It is not a very uncommon name. Good-afternoon."

With this Thorndyke took up his stick and, emerging from the shop, set a course southward for the Temple, walking quickly, as was his wont, with a long, swinging stride, and turning over in his mind the bearings of what he had just learned. In reality he had not learned much. Still, he had added one or two small items to his stock of facts, and in circumstantial evidence every added fact gives additional weight to all the others. He sorted out his new acquirements and considered each in turn.

In the first place, it was clear that Mr. Scofield's collection was a facsimile of the missing part of Hollis's. The list in Lambert's book was identical with the one in his own pocket-book; which, in its turn, was a list of the forgeries. The discovery of the maker of the forgeries (a result of extensive preliminary scouting on the part of Polton) was of little importance at the moment, though it might be of great value in the future. For, since the forgeries existed, it was obvious that someone must have made them. Much more to the point was the identity of the person for whom they were made. Whoever 'Mr. Scofield' might have been, he certainly was not John Osmond. And this set Thorndyke once more puzzling over the really perplexing feature of this curious case. Why had Osmond absconded? That he had really done so, Thorndyke had no doubt, though he would have challenged the use of the word by anyone else. But why? There had been nothing to implicate him in any way. Beyond the hairs in the boxes—of which he could not have known and which were not at all conclusive—there was nothing to implicate him now but his own flight. All the other evidence seemed to point away from him. Yet he had absconded.

Thorndyke put to himself the various possibilities and argued them one at a time. There were three imaginable hypotheses. First, that Osmond had committed the robbery alone and unassisted; second, that he had been an accessory or worked with a confederate; third, that he had had no connection with the robbery at all.

The first hypothesis could be excluded at once, for Mr. Scofield must have been, at least, an accessory; and Mr. Scofield was not John Osmond. The second was much more plausible. It not only agreed with the known facts, but might even furnish some sort of explanation of the much. Thus, supposing Osmond to have planned and executed the robbery with the aid of a confederate in the expectation that, even if discovered, it would never be traced to the office, might it not have been that, when, unexpectedly, it was so traced, Osmond had decided to take the onus on himself, and by absconding, divert suspicion from his accomplice? The thing was quite conceivable. It was entirely in agreement with Osmond's character as pictured by Mr. Wampole; that of a rash, impulsive, rather unreasonable man. And if it were further assumed that there had been known to him some incriminating fact which he had expected to leak out, but which had not leaked out, then the whole set of facts, including the flight, would appear fairly consistent.

Nevertheless, consistent as the explanation might be, Thorndyke did not find it convincing. The aspect of Osmond's rooms, with their suggestion of hardy simplicity and a robust asceticism, still lingered in his memory. Nor had he forgotten the impressive face of the gentlewoman whose portrait he had looked on with such deep interest in those rooms. These were, perhaps, but mere impressions, of no evidential weight; but yet they refused to be lightly dismissed.

As to the third hypothesis, that Osmond had not been concerned in the robbery at all, it would have been quite acceptable but for the irreconcilable fact of the flight. That seemed, beyond any question, to connect him with the crime. Of course it was conceivable that he might have some other reason for his flight. But no such reason had been suggested; whereas the circumstances in which he had elected to disappear—at the exact moment when the crime had been traced to the office—made it idle to look for any other explanation. And so, once more, Thorndyke found himself involved in a tangle of contradictions from which he could see no means of escape.
The end of his train of thought coincided with his arrival at the entry to his chambers. Ascending the stairs, he became aware of a light above as from an open door; and a turn of the staircase showed him that door—his own—framing a small, restless figure.

"Why, Polton," he exclaimed, "you are early, aren't you? I didn't expect you for another hour or two."

"Yes, sir," replied Polton, "I got away early. But I've seen it, sir. And you were perfectly right—absolutely right. It is a sparrowhawk, stuck in a little log of cherry wood. Exactly as you said."

"I didn't say a sparrowhawk," Thorndyke objected.

"You said, sir, that it was a stake or a bec iron or some kind of small anvil, and a sparrowhawk is a kind of small anvil."

"Very well, Polton," Thorndyke conceded. "But tell me how you managed it and why you are home so early."

"Well, sir, you see," Polton explained, fidgeting about the room as if he were afflicted with St. Vitus's dance, "it came off much easier than I had expected. I got to his house a good hour too soon. His housekeeper opened the door and wanted me to call again. But I said I had come down from London and would like to wait. And then I told her about the buttons and explained how valuable they were and asked her if she would like to see them; and she said she would. So she took me upstairs to his sitting-room and there I undid the parcel and showed her the buttons.

"Then I got talking to her about the rooms; remarked what a nice place Mr. Wampole had got and how beautifully it was kept."

"Really, Polton!" Thorndyke chuckled, "I had no idea you were such a humbug."

"No more had I, sir," replied Polton, with a complacent crinkle. "But, you see, it was a case of necessity; and besides, the room was wonderfully neat and tidy. Well, I got her talking about the house, and very proud she seemed to be of it. So I asked her all the questions I could think of: whether she had a good kitchen and whether there was pipe water or a pump in the scullery, and so on. And she got so interested and pleased with herself that presently she offered to let me see over the house if I liked, and of course, I said that there was nothing in the world that I should like better. So she took me down and showed me the kitchen and the scullery and her own little sitting-room and a couple of big cupboards for linen and stores, and it was all as neat and clean as a new pin. Then we went upstairs again, and as we passed a door on the landing she said, 'That's a little room that Mr. Wampole does his tinkering in.' "

"'Ah!' says I, 'but I'll warrant that room isn't quite so neat and tidy. I do a bit of tinkering myself and I know what a workroom looks like.'

"'Oh, it isn't so bad,' says she. 'Mr. Wampole is a very orderly man. You shall see for yourself, if it isn't locked. He usually locks it when he has a job in hand.'

"Well, it wasn't locked; so she opened the door and in we went; and the very moment I put my head inside, I saw it—on the table that he used for a bench. It was set in a little upright log, such as you get from the trimmings of fruit trees. And, my word! it was fairly riddled.—like a sponge—and where it stood on the bench there was a regular ring of powder round it."

"That's a rare old block that his anvil is set in," says I, going across to look at it.

"'Not so old as you'd think,' says she. 'He got it about five years ago, when we had the cherry tree lopped. You can see the tree in the garden from this window.'

"She went over to the window and I followed her; and as I passed the bench I picked up a pinch of the dust between my finger and thumb and put my hand in my pocket, where I had a pill-box that I had brought in case I should get a chance to collect a sample. As we were looking out of the window, I managed to work the lid off the pill-box and drop the pinch of dust in and slip the lid on again. Then I was happy; and as I had done all that I came to do, I thought I would rather like to clear off."

"Why?" asked Thorndyke.

"Well, sir," said Polton in a slightly apologetic tone, "the fact is that I wasn't very anxious to meet Mr. Wampole. It wouldn't have been quite pleasant, under the circumstances, to present those buttons and have him thanking me and shaking my hand. I should have felt rather like Pontius Pilate."

"Why Pontius Pilate?" asked Thorndyke.

"Wasn't he the chap—or was it Judas Iscariot? At any rate, I had a sudden feeling that I didn't want to hand him those buttons. So I looked up my time table and discovered that I couldn't wait to see him. 'But, however,' I said, 'it doesn't matter. I can leave the buttons with you to give him; and I will leave my card, too, so that he can send me a line if he wants to.' So with that I gave her the roll of buttons and nipped off to the station, just in time to catch the earlier train to town. I hope I didn't do wrong, sir."

"Not at all," Thorndyke replied heartily. "I quite understand your feeling on the matter; in fact, I think I should have done the same. Shall we look at that pill-box? I didn't expect such good fortune as to get a specimen."

Polton produced the little box, and having opened it to make sure that the contents were intact, handed it to Thorndyke, who forthwith made a preliminary inspection of the dust with the aid of his lens.

"Yes," he reported, "it is evidently the same dust as was in the other samples, so that aspect of the case is complete. I
must compliment you, Polton, on the masterly way in which you carried out your really difficult and delicate mission. You have made a brilliant success of it. And you have been equally successful in another direction. I have just come from Lambert's, where I had a very instructive interview. You were perfectly correct. It was Lambert who cut those dummy stones."

"I felt sure it must be," said Polton, "when I had been round to those other lapidaries. He seems to be the only one who specializes in cutting strass gems. But did you find out who the customer was, sir?"

"I found out who he was not," replied Thorndyke, "and that was as far as it seemed wise to go. The rest of the inquiry—the actual identification—will be better carried out by the police. I think, if we give Mr. Lambert's address, with certain other particulars, to Mr. Superintendent Miller, we can safely leave him to do what is necessary."
XVIII. — THE END OF THE CLUE

It was nearing the hour of six in the evening when five men made their appearance on the stretch of pavement on which Mr. Woodstock's office door opened. They did not, however, arrive in a solid body, but in two groups—of two and three, respectively—which held no mutual communication, but kept within easy distance of one another. The larger group consisted of Dr. Thorndyke, Mr. Lambert, the lapidary, and a tall, powerful man of distinctly military appearance and bearing; the smaller group consisted of a uniformed inspector of the local police and Mr. Lambert's assistant "Fred."

"I hope our friends are punctual in coming out," Thorndyke remarked as he stood with his two companions ostensibly inspecting the stock in a bookseller's window. "If we have to wait about long, we are likely to attract notice. Even a bookseller's window won't explain our presence indefinitely."

"No," the tall man agreed. "But there is a good deal of traffic in this street to cover us up and prevent us from being too conspicuous. All I hope is that he will take things quietly—that is, if he is the right man. You are sure you would know him again, Mr. Lambert?"

"Perfectly sure, Superintendent," was the confident reply. "I remember him quite well. I have a good memory for faces, and so has my man, Fred. But I tell you frankly that neither of us relishes this job."

"I sympathize with you, Mr. Lambert," said Thorndyke. "I don't relish it myself. We are both martyrs to duty. Ah! Here is somebody coming out. That is Mr. Woodstock. I mustn't let him see me."

He turned to the shop-window, presenting his back to the street, and the solicitor walked quickly past without noticing him. A few moments later Mr. Hepburn emerged and walked away in the opposite direction, furtively observed by Fred, who, with his companion, occupied a position on the farther side of the office door. He was followed after a short interval by two young men, apparently clerks, who walked away together up the street and were narrowly inspected by Fred as they passed. Close on their heels came an older man, who emerged with an air of business and, turning towards the three watchers, approached at a brisk walk.

"That the man, Mr. Lambert?" the superintendent asked in a low, eager tone, as the new-comer drew near.

"No," was the reply. "Not a bit like him."

Two more men came out, at both of whom Mr. Lambert shook his head. Then came a youth of about eighteen, and after his emergence an interval of several minutes, during which no one else appeared.

"That can't be the lot," said the superintendent, with a glance of anxious inquiry at Thorndyke.

"It isn't unless some of them are absent," the latter replied. "That would be rather a disaster."

"It would, indeed," the superintendent replied. "What do you say, Doctor, to going in—that is, if the door isn't locked?"

"Not yet, Miller," Thorndyke replied. "Of course we can't wait indefinitely, but, if possible—Ah! here is someone else."

As he spoke, an elderly man came out and stood for a few moments looking up and down the street. Then he turned and very deliberately locked the door behind him.

"That's the man!" Lambert exclaimed. "That is Mr. Scofield."

"You are quite sure?" demanded Miller.

"Positive," was the reply. "I recognized him instantly"; and in confirmation, Fred was signalling with a succession of emphatic nods.

Superintendent Miller cast an interrogative glance at Thorndyke. "Your man, too?" he asked.

"Yes," replied Thorndyke. "Mr. Wampole."

The unconscious subject of these observations, having locked the door, slowly pocketed the key and began to walk at a leisurely pace and with a thoughtful air towards the three observers, closely followed by Fred and the inspector. Suddenly he became aware of Thorndyke; and the beginnings of a smile of recognition had appeared on his face when he caught sight of Mr. Lambert. Instantly, the smile froze; and as Superintendent Miller bore down on him with evident purpose, he halted irresolutely and cast a quick glance behind him. At the sight of Fred—whom he evidently recognized at once—and the inspector, his bewilderment changed to sheer panic, and he darted out into the road close behind a large covered van that was drawn up at the kerb.

"Look out!" roared Miller, as Wampole passed the rear of the van; but the only effect of the warning was to cause the fugitive to cast a terrified glance backward over his shoulder as he ran. And then, in an instant, came the catastrophe. An empty lorry was coming up the street at a brisk trot, but its approach had been hidden from Wampole by the van. As the unfortunate man ran out from behind the latter, still looking back, he charged straight in front of the horses. The driver uttered a yell of dismay and tugged at the reins; but the affair was over in a moment. The pole of the lorry struck Wampole at the side of the neck with the force of a battering-ram and flung him violently down on the road, where he lay motionless as the ponderous vehicle swerved past within an inch of his head.

A number of bystanders immediately gathered round, and the carman, having pulled up the lorry, climbed down from
his high perch and came hurrying, white-faced and breathless, across the road. Through the gathering crowd the inspector made his way and piloted Thorndyke to the fatal spot.

"Looks a pretty bad case, sir," said he, casting a perturbed eye down at the motionless form, which lay where it had fallen. "Will you just have a glance at him?"

Thorndyke stooped over the prostrate figure and made a brief—a very brief—inspection. Then he stood up and announced curtly: "He is dead. The blow dislocated his neck."

"Ha!" the inspector exclaimed, "I was afraid he was—though perhaps it is all for the best. At any rate, we've done with him now."

"I haven't," said Miller. "I've got a search warrant; and I shall want his keys. We will come along with you to the mortuary. Can't very well get them here."

At this moment the carman presented himself, wiping his pale face with a large red handkerchief.

"Shockin' affair, this, Inspector," he said, huskily. "Pore old chap. I couldn't do no more than what I done. You could see that for yourself. He was down almost as soon as I see 'im."

"Yes," the inspector agreed, "he ran straight at the pole. It was no fault of yours. At least, that's my opinion," he added with official caution. "Just help me and the constable here to lift the body on to your lorry and then he will show you the way to the mortuary. You understand, Borman," he continued, addressing the constable. "You are to take the body to the mortuary, and wait there with the lorry until I come. I shall be there in a minute or two."

The constable saluted, and the inspector, having made a note of the carman's name and address, stood by while the ghastly passenger was lifted up on to the rough floor. Then, as the lorry moved off, he turned to Miller and remarked:

"Your friend Mr. Lambert looks rather poorly, Superintendent. It has been a bit of a shock for him. Hadn't you better take him somewhere and give him a little pick-me-up? We shall want him and his assistant at the mortuary, you know, for a regular identification."

"Yes," agreed Miller, glancing sympathetically at the white-faced, shaking lapidary, "he does look pretty bad, poor old chap. Thinks it's all his doing, I expect. Well, you show us the way to a suitable place."

"The Blue Lion Hotel is just round the corner," said the inspector, "and it is on our way."

To the Blue Lion he accordingly led the way, while Thorndyke followed, assisting and trying to comfort the shaken and self-reproachful Lambert. From the hotel they proceeded to the mortuary, where Lambert having, almost with tears, identified the body of 'Mr. Scofield', and the dead man's keys having been handed to Superintendent Miller, the latter departed with Thorndyke, leaving the inspector to conduct the carman to the police-station.

"You seem to be pretty confident," said Miller as they set forth, guided by Polton's written directions, "that the stuff is still there."

"Not confident, Miller," was the reply, "but I think it is there. At any rate, it is worth while to make the search. There may be other things to see besides the stones."

"Ah!" Miller agreed doubtfully. "Well, I hope you are right."

They walked on for some five minutes when Thorndyke, having again referred to his notes, halted before a pleasant little house in a quiet street on the outskirts of the town, and entering the front garden, knocked at the door. It was opened by a motherly-looking, middle-aged woman to whom Miller briefly but courteously explained his business and exhibited his warrant.

"Good gracious!" she exclaimed. "What on earth makes you think the missing property is here?"

"I can't go into particulars," replied Miller. "Here is the search-warrant."

"Yes, I see. But couldn't you wait until Mr. Wampole comes home? He is due now, and his tea is waiting for him in his sitting-room."

Miller cleared his throat. Then, hesitatingly and with manifest discomfort, he broke the dreadful news.

The poor woman was thunderstruck. For a few moments she seemed unable to grasp the significance of what Miller was telling her; then, when the horrid reality burst upon her, she turned away quickly, flinging out her hand towards the staircase, ran into her room, and shut the door.

The two investigators ascended the stairs in silence with an unconsciously stealthy tread. On the landing they paused, and as he softly opened the three doors and peered into the respective apartments, Miller remarked in an undertone: "Rather gruesome, Doctor, isn't it? I feel like a tomb-robber. Which one shall we go in first?"

"This one on the left seems to be the workshop," replied Thorndyke. "Perhaps we had better take that first, though it isn't likely that the gems are in there."

They entered the workshop, and Thorndyke looked about it with keen interest. On a small table, fitted with a metal-worker's bench-vice, stood the "sparrow-hawk," like a diminutive smith's anvil, in its worm-eaten block, surrounded by a ring of pinkish-yellow dust. A Windsor chair, polished by years of use, was evidently the one on which the workman had
been accustomed to sit at his bench; and close inspection showed a powdering of the pink dust on the rails and other protected parts. On the right-hand side of the room was a small woodworker's bench, and on the wall above it a rack filled with chisels and other small tools. There was a tool cabinet ingeniously made from grocer's boxes, and a set of shelves on which the glue-pot and various jars and small appliances were stowed out of the way.

"Seems to have been a pretty handy man," remarked Miller, pulling out one of the drawers of the cabinet and disclosing a set of files.

"Yes," Thorndyke agreed; "he appears to have been quite a workman. It is all very neat and orderly. This is rather interesting," he added, reaching down from the shelf a box containing two earthen ware cells filled with a blue liquid, and a wide jar with similar contents.

"Electric battery, isn't it?" said Miller. "What is the point of interest about it?"

"It is a two-cell Daniell's battery," replied Thorndyke, "the form of battery most commonly used for making small electrotypes. And in evidence that it was used for that purpose, here is the jar filled with copper sulphate solution, forming the tank, with the copper electrode in position. Moreover, I see on the shelf what look like some gutta-percha moulds." He reached one down and examined it. "Yes," he continued, "this is a squeeze from a coin. Apparently he had been making electrotypes of coins; probably some that had been lent to him."

"Well," said Miller, "what about it?"

"The point is that whoever stole those gems made an electrotypes copy of Hollis's seal. We now have evidence that Wampole was able to make electrotypes and did actually make them."

"It would be more to the point if we could find the gems themselves," rejoined Miller.

"Yes, that is undoubtedly true," Thorndyke admitted; "and as we are not likely to find them here, perhaps we had better examine the sitting-room. That is much the most probable place."

"I don't quite see why," said Miller. "But I expect you do," and with this he followed Thorndyke across the landing to the adjoining room.

"Good Lord!" he exclaimed, stopping to gaze at the neatly-arranged tea-service on the table, "just look at this! Uncanny, isn't it? Teapot under the cosy—quite hot still. And what's under this cover? Crumpets, by gum! And him lying there in the mortuary! Fairly gives one the creeps. Don't you feel a bit like a ghoul, Doctor?"

"I might, perhaps," Thorndyke replied, dryly, "if there had been no such person as John Osmond."

"True," said Miller. "He did do the dirty on Osmond, and that's the fact—unless Osmond was in it, too. Looks rather as if he was; but you don't seem to think so."

"As a mere guess, I do not; but it is a puzzling case in some respects."

He stood for a while looking about the room, letting his eye travel slowly along the papered walls as if in search of a possible hiding-place. From the general survey he proceeded to the consideration of details, turning the door-key—which was on the inside and turned smoothly and silently—and examining and trying a solid-looking brass bolt.

"You notice, Miller," he said, "that he seems to have been in the habit of locking and bolting himself in; and that the bolt has been fixed on comparatively recently. That is somewhat significant."

"It seems to suggest that the swag was hidden here at one time, if it isn't here now. I suppose we may as well look through these cabinets, just as a matter of form, for he won't have hidden the stuff in them."

He produced the dead man's bunch of keys, and having unlocked the hinged batten which secured the drawers of one, pulled out the top drawer.

"Coins," he announced; "silver coins. No! By jingo, they're copper, plated, and no backs to them. Just look at that!"

"Yes," said Thorndyke, taking the specimen from him, "a silver-faced copper electro, taken, no doubt, from a borrowed coin. Not a bad way of forming a collection. Probably, if he had been skillful enough to join the two faces and make a complete coin, it would have been the original owner who would have had the electrotype, and Wampole would have kept the genuine coin. While you are going through the cabinets, I think I will explore those two cupboards. They seem to me to have possibilities."

The cupboards in question filled the recesses on either side of the fireplace. Each cupboard was built in two stages—a lower about three feet in height, and an upper extending nearly to the ceiling. Thorndyke began with the right-hand one, throwing open both its pairs of folding doors, after unlocking them with the keys, handed to him by Miller. Then he cleared the shelves of their contents—principally stamp albums and back numbers of The Connoisseur—until the cupboard was completely empty, when he proceeded to a systematic survey of the interior, rapping with his knuckles on every part of the back and sides and testing each shelf by a vigorous pull. Standing on a chair, he inspected the top and ascertained, by feeling it simultaneously from above and below, that it consisted of only a single board.

Having thoroughly explored the upper stage with no result, he next attacked the lower story, rapping at the back, sides, and floor and pulling at the solitary shelf, which was as immovable as the others. Then he tested the ceiling or top by feeling it with one hand while the other was placed on the floor of the upper story.
Meanwhile, Miller, who had been systematically examining the row of home-made cabinets, shut the last of the multitudinous drawers and stood up.

"Well," he announced, "I've been right through the lot, Doctor, and there's nothing in any of them—nothing, I mean, but trash. This last one is full of buttons—brass buttons, if you'll believe it. How are you getting on? Had any luck?"

"Nothing definite, so far," replied Thorndyke, who was, at the moment, taking a measurement of the height of the lower story with a tape-measure; "but there is something here that wants explaining. The internal height of the lower part of this cupboard is two feet ten inches; but the height from the floor of the lower part to the floor of the top part is three feet one inch. So there seems to be a space of three inches, less the thickness of two boards, between the ceiling of the lower part and the floor of the top part. That is not a normal state of affairs."

"No, by jingo!" exclaimed the superintendent. "Ordinarily, the floor of the top part would be the ceiling of the bottom part. Carpenters don't waste wood like that. Either the floor or the ceiling is false. Let us see if we can get a move on the floor. That is the most likely, as it would be the lid of the space between the two."

He passed his hands over the board, feeling for a yielding spot, and craned in, searching for some indication of a joint, as he made heavy pressure on the edges and corners. But the floor showed no sign whatever of a tendency to move. He was about to transfer his attention to the ceiling underneath when Thorndyke stopped him.

"Wait," said he. "Here is another abnormal feature. This moulding along the front of the door is fastened on with three screws. They have been painted over with the rest of the moulding, but you can make out the slots quite plainly."

"Well?" queried Miller.

"Carpenters don't fix mouldings on with screws. They use nails and punch them in with a 'nail-set' and stop the holes with putty. Moreover, if you look closely at these screw-heads, you can see that they have been turned at some time since the moulding was painted."

As the superintendent stooped to verify this observation, Thorndyke produced from his pocket a small leather pouch of portable tools from which he took a screw-bit and the universal handle. Having fitted them together, he inserted the screw-driver into the slot of the middle screw and gave a turn.

"Ah!" said he. "This screw has been greased. Do you see how easily it turns?"

He rotated the tool rapidly, and as the screw emerged he picked it out and exhibited it to Miller.

"Not a trace of rust, you see, although the paint is some years old."

He laid it down and turned to the left-hand screw, which he extracted with similar ease. As he drew it out of its hole, the moulding became visibly loose, though still supported by the mitre; but when the last screw was extracted, the length of moulding came away in his hand, showing the free front edge of the floor, or bottom-board. This Thorndyke grasped with both hands and gave a steady pull, when the board slid forward easily, revealing a cavity about two inches deep.

"My eye!" exclaimed Miller, as Thorndyke drew the board right out. "This puts the lid on it—or rather takes the lid off."

He stood for a moment gazing ecstatically into the cavity, and especially at a collection of small, flat boxes that were neatly packed into it; then he grabbed up one of the boxes, and sliding back the hooked catch, raised the lid.

The expression of half-amused astonishment with which he viewed the open box was not entirely unjustified. As the receptacle for a robber's hoard, it was, to say the least, unconventional. The interior of the box was divided by partitions into a number of little square cells; and in each cell, reposing in a nest of black or white velvet according to its colour, was an unmounted gem.

The superintendent drew a deep breath. "Well," he exclaimed, "this knocks anything I've ever come across. Looks as if he never meant to sell the stuff at all. Just meant to keep it to gloat over. Is this what you had expected to find, Doctor? I believe it is, from what you said."

"Yes," Thorndyke replied. "This agrees exactly with my theory of the robbery. I never supposed that he had stolen the gems for the purpose of selling them."

"Didn't you?" said Miller. "Now, I wonder why."

"My dear Miller," Thorndyke answered, with a smile, "the answer is before you in those cabinets which you have just examined. The man was a human magpie. He had a passion for acquiring and accumulating. He was the born, inveterate collector. Now, your half-baked collector will sell his treasures at a sufficient profit; but the real, thoroughbred collector, when once he has got hold, will never let go."

"Well," said Miller, who had been meanwhile lifting out the boxes and verifying their contents with a supercilious glance into each, "what is one man's meat is another man's poison. I can't see myself hoarding up expensive trash like this when I could swap it for good money."

"Nor I," said Thorndyke. "We both lack the acquisitive instinct. By the way, Miller, I think you will agree with me that all the circumstances point to Wampole's having done this single-handed?"

"Undoubtedly," was the reply. "This is a 'one-man show,' if ever there was one."
"And, consequently, that this 'find' puts Osmond definitely out of the picture?"

"Yes," Miller agreed; "I think there is no denying that."

"Then you will also agree that, although we might wish it otherwise, the whole of the circumstances connected with this robbery must be made public. That is necessary as a measure of common justice to the memory of Osmond. He was publicly accused and he must be publicly exonerated."

"You are quite right, Doctor," Miller admitted, regretfully; "though it seems a pity, as the poor devil is dead and we've got the swag back. But, as you say, justice is justice. The innocent man ought to be cleared."

He took out the last remaining box, and having opened it and looked in, handed it to Thorndyke and cast a final glance into the cavity.

"Hallo!" he exclaimed, reaching into the back of the space, "here's something wrapped in paper—a key, by Jove!"

"Ah," said Thorndyke, taking it from him and inspecting it curiously, "the key of the strong-room. I recognize it. Quite a well-made key, too. I think we ought to hand that to Woodstock at once; and perhaps it would be as well to hand him the gems, too, and get his receipt for them. We don't want property of this value—something like a hundred thousand pounds—on our hands any longer than we can help. What do you say?"

"I say let us get rid of them at once if we can. But we must seal the boxes before we hand them over. And we must seal up these rooms until the property has been checked by Hollis. Let us put the books back in the cupboard and then, perhaps, you might go and find Woodstock while I keep guard on the treasure-trove."

They fell to repacking the cupboard with the albums and magazines which they had taken out; and had nearly finished when they became aware of voices below and then of hurried footsteps on the stairs. A few moments later the door was flung open and Mr. Woodstock and Mr. Hepburn strode into the room.

"May I ask," the former demanded, glaring at Miller, "who the deuce you are and what is the meaning of this indecent invasion? The housekeeper tells me that you profess to have come here to search for missing property. What property are you searching for, and what is your authority?"

The superintendent quietly explained who he was and exhibited his warrant.

"Ha!" exclaimed Woodstock, with a withering glance at Thorndyke. "And I suppose you are making this ridiculous search at the suggestion of this gentleman?"

"You are quite correct, sir," replied Miller. "The warrant was issued on information supplied by Dr. Thorndyke."

"Ha!" was the contemptuous comment. "You obtained a warrant to search the private residence of a man of irreproachable character who has been in my employ for something like a score of years! Well, have you made your search? And if so, what have you found?"

"We have completed the search," replied Miller, "and we have found what we believe to be the whole of the stolen property, and this key, which I understand is the key of your strong-room."

As the superintendent made this statement, in studiously matter-of-fact tones, Mr. Woodstock's jaw fell and his eyes opened until he appeared the very picture of astonishment. Nor was his colleague, Mr. Hepburn, less amazed; and for a space of several seconds the two solicitors stood speechless looking from one another to the wooden-faced but secretly amused detective officer. Then Woodstock recovered somewhat and began to show signs of incredulity. But there was the key and there were the boxes; and it needed only a glance at the contents of the latter to put the matter beyond all question. Even Woodstock could not reject the evidence of his eyesight.

"But," he said with a puzzled air and with new born civility, "what I cannot understand is how you came to connect Wampole with the robbery. Where did you obtain the evidence of his guilt?"

"I obtained it," Thorndyke replied, "from the dust which I collected from your office floor."

Mr. Woodstock frowned impatiently and shook his head. "I am afraid," he said, coldly, "you are speaking a language that I don't understand. But no doubt you are right to keep your own counsel. What do you propose to do with this property?"

"We had proposed to hand it to you to hold pending the formal identification of the gems by Mr. Hollis."

"Very well," said Woodstock; "but I shall want you to seal the boxes before I put them in my strong-room. I can't accept any responsibility as to the nature of the contents."

"They shall be sealed with my seal and the superintendent's," Thorndyke replied, with a faint smile; "and we will hope that the seals will give more security than they did last time."

This understanding having been arrived at, the boxes were gathered up and distributed among the party for conveyance to the office; and after a short halt on the landing while Miller locked the doors and sealed the keyholes, they went down the stairs, at the foot of which the tearful housekeeper was waiting. To her Mr. Woodstock gave a brief and somewhat obscure explanation of the proceedings and the sealed doors, and then the party set forth for the office, the two solicitors leading and conversing in low tones as they went.

Arrived at their destination, the formalities were soon disposed of. Each box was tied up with red tape, sealed on the
knot and on the opening of the lid. Then, when they had all been conveyed into the strong-room and locked in, Mr. Woodstock wrote out a receipt for "eight boxes, containing real or artificial precious stones, said to be the property of James Hollis, Esq., and sealed with the seals of Dr. Thorndyke and Superintendent Miller of the C.I.D.," and handed it to the latter officer.

"Of course," he said, "I shall communicate with Mr. Hollis at once and ask him to remove these things from my custody. Probably he will write to you concerning them; but, in any case, I shall wash my hands of them when I get his receipt—and I shall take very good care that nobody ever saddles me with portable property of this kind again."

"A very wise resolution," said Thorndyke. "Perhaps you might point out to Mr. Hollis that the boxes ought to be opened in the presence of witnesses, one of whom, at least, should be an expert judge of precious stones. I shall write to him tonight, before I leave the town, to the same effect. We all want the restitution to be definitely proved and acknowledged."

"That is perfectly true," Woodstock admitted; "and perhaps I had better make it a condition on which I allow him to take possession of the boxes."

The business being now concluded, Thorndyke and the superintendent prepared to take their departure. As they were turning away, Mr. Hepburn addressed Thorndyke for the first time.

"May I ask," he said, hesitatingly and with an air of some embarrassment, "whether the—er—the dust from our office floor or—er—any other observations of yours which led you to this surprising discovery seemed to suggest the existence of any confederate?"

"No," Thorndyke replied, decisively. "All the evidence goes to show, very conclusively, that Wampole carried out this robbery single-handed. Of that I, personally, have no doubt; and I think the superintendent agrees with me."

"Undoubtedly," Miller assented. "I, too, am perfectly convinced that our late lamented friend played a lone hand. You are thinking of John Osmond?"

"Yes," Hepburn admitted, with a frown of perplexity. "I am. I am wondering what on earth can have induced him to go off in that extraordinary manner and at that particular time."

"So am I," said Thorndyke.

"Well, I'm afraid we shall never learn now," said Woodstock.

"Apparently not," Thorndyke agreed; "and yet—who knows?"
XIX. — THORNDYKE CONNECTS THE LINKS

EARLY in the afternoon—at forty minutes past twelve, to be exact—of a sunny day in late spring, a tall, hatchet-faced man, accompanied by a small, sprightly lady, strolled at a leisurely pace through Pump Court and presently emerged into the cloisters, where he and his companion halted and looked about them.

"What a lovely old place it is!" the latter exclaimed, letting her eyes travel appreciatively from the porch of the Temple Church to the façade of Lamb Buildings. "Wouldn't you like to live here, Jack?"

"I should," he replied. "It is delightful to look at whichever way you turn; and there is such a delicious atmosphere of peace and quiet."

She laughed merrily. "Peace and quiet!" she repeated. "Peace, perfect peace. That has always been the desire of your heart, hasn't it? Oh, you old hum bug! Before you had been here a month you would be howling for the sea and someone to fight." Here her glance lighted on the little wig shop, tucked away in its shady corner, and she drew him eagerly towards it. "Let us have a look at these wigs," said she. "I love wigs. It is a pity they have gone out of fashion for general use. They were such a let-off for bald-headed men. Which one do you like best, Jack? I rather fancy that big one—full-bottomed, I think, is its proper description. It would suit you to a T. It looks a little vacant with no face inside it, but it would have a grand appearance with your old nose sticking out in front. You'd look like the Great Sphinx before they knocked his nose off. Don't you think you'd look rather well in it?"

"I don't know that I am particularly keen on wigs," he replied. "Unless they are on the green," she suggested with a roguish smile.

He smiled at her in return, with a surprising softening of the rather rugged face, and then glanced at his watch. "We mustn't loiter here staring at these ridiculous wigs," said he; "or we shall be late. Come along, you little babblter."

"Aye, aye, sir," she responded; "come along, it is," and they resumed their leisurely progress eastward across the court.

"I wonder," he said, reflectively, "what sort of fellow Thorndyke is. Moderately human, I hope, because I want him to understand what I feel about all that he has done for us."

"I shall want to kiss him," said she.

"You had better not," he said, threateningly. "Still, short of that, I shall look to you to let him know how grateful, beyond all words, we are to him."

"You can trust me, Jack, darling," she replied, "to make it as clear as I can. When I think of it, I feel like crying. We owe him everything. He is our fairy-godmother."

"I don't think, Betty, dear," said Osmond with a faint grin, "that I should put it to him in exactly those words."

"I wasn't going to, you old guffin!" she exclaimed, indignantly. "But it is what I feel. He is a magician. A touch of his magic wand changed us in a moment from a pair of miserable, hopeless wretches into the pet children of Fortune, rich in everything we desired, and with the whole world of happiness at our feet. Oh, the wonder of it! Just think, darling! While you, with that ridiculous bee in your silly old bonnet, were doing everything that you could to make yourself—and me—miserable for life, here was this dry old lawyer, whose very existence we were unaware of, quietly, methodically working away to dig us out of our own entanglements. We can never even thank him properly."

"No. That's a fact," Osmond agreed. "And, in spite of Penfield's explanations, I can't in the least understand how he did it."

"Mr. Penfield admits that he has only a glimmering of an idea himself; but as he has promised to extract a full explanation to-day, we can afford to bottle up our curiosity a little longer. This seems to be the house; yes, here we are: '1st Pair, Dr. John Thorndyke.'"

She tripped up the stairs, followed by Osmond, and on the landing was confronted by the open 'oak' and a closed inner door, adorned by a small but brilliantly burnished brass knocker.

"What a dinkie little knocker!" she exclaimed; and forthwith executed upon it a most impressive flourish. Almost instantly the door was opened by a tall, dignified man who greeted the visitors with a smile of quiet geniality.

"I have no need to ask who you are," he said, as, having saluted the lady, he shook hands with Osmond. "Your resemblance to your mother is quite remarkable."

"Yes," replied Osmond, a little mystified, nevertheless. "I was always considered to be very like her. I should like to think that the likeness is not only a superficial one."

Here he became aware of Mr. Penfield, who had risen from an arm-chair and was advancing, snuff-box in hand, to greet them.

"It is very delightful to meet you both in these chambers," said he, with an old bow. "A most interesting and significant meeting. Your husband's name has often been spoken here, Mrs. Osmond, in the days when he was, to us, a mere abstraction of mystery."
"I've no doubt it has," said Betty, regarding the old lawyer with a mischievous smile, "and I don't suppose it was spoken of in very complimentary terms. But we are both absolutely bursting with gratitude and we don't know how to put our feelings into words."

"There is no occasion for gratitude." said Thorndyke. "It has been a mutual change of benefits. Your husband has provided us with a problem of the most thrilling interest, which we have had the satisfaction of solving, with the added pleasure of being of some service to you. We are really your debtors."

"Very kind of you to put it in that way," said Osmond, with a faint grin. "I seem to have played a sort of Falstaffian part. My deficiency of wit has been the occasion of wit in others."

"Well, Mr. Osmond," Thorndyke rejoined, with an appreciative side-glance at the smiling Betty, "you seem to have had wit enough to bring your affairs to a very happy conclusion. But let us draw up to the table. I understand that there are to be mutual explanations presently, so we had better fortify ourselves with nourishment."

He pressed an electric bell, and, as his guests took their places at the table, the door opened silently and Polton entered with demure gravity to post himself behind Thorndyke's chair and generally to supervise the proceedings.

Conversation was at first somewhat spasmodic and covered a good deal of mutual and curious inspection. Betty was frankly interested in her surroundings, in the homely simplicity of this queer bachelor household, in which everything seemed to be done so quietly, so smoothly, and so efficiently. But especially was she interested in her host. Of his great intellect and learning she had been readily enough convinced by Mr. Penfield's enthusiastic accounts of him; but his personality, his distinguished appearance, and his genial, pleasant manners were quite beyond her expectations. It was a pleasure to her to look at him and to reflect that the affectionate gratitude that she must have felt for him, whatever he had been like, had at least been worthily bestowed.

"My husband and I were speaking as we came along," she said, "of the revolution in our prospects that you created, in an instant, as it seemed, in the twinkling of an eye. One moment our affairs were at a perfectly hopeless deadlock; the next, all our difficulties were smoothed out, the tangle was unravelled, and an assured and happy future lay before us. It looked like nothing short of magic; for, you see, John had done everything that he possibly could to convince all the world that he was guilty."

"Yes," said Thorndyke, "that is how it appeared; and that is one of the mysteries which has to be cleared up presently."

"It shall be," Osmond promised, "if utterly idiotic, wrong-headed conduct can be made intelligible to reasonable men. But still, I agree with my wife. There is something quite uncanny in the way in which you unravelled this extraordinary tangle. I am a lawyer myself—a pretty poor lawyer, I admit—and I have heard Mr. Penfield's account of the investigation, but even that has not enlightened me."

"For a very good reason," said Mr. Penfield. "I am not enlightened myself. I am, I believe, in possession of most of the material facts. But I have not the special knowledge that is necessary to interpret them. I am still unable to trace the connection between the evidence and the conclusion. Dr. Thorndyke's methods are, to me, a source of endless wonder."

"And yet," said Thorndyke, "they are perfectly normal and simple. They differ from the methods of an orthodox lawyer merely in this: that whereas the issues that I have to try are usually legal issues, the means which I employ are those proper to scientific research."

"But surely," Betty interposed, "the purposes of legal and scientific research are essentially the same. Both aim at arrive at the truth."

"Certainly," he replied. "The purposes are identical. But the procedure is totally different. In legal practice the issues have to be decided by persons who have no first-hand knowledge of the facts—by the judge and jury. To them the facts are furnished by other persons—the witnesses—who have such first-hand knowledge and who are sworn to give it truly and completely. And on such sworn testimony the judges form their decision. The verdict has to be 'according to the evidence,' and its truth is necessarily subject to the truth of the testimony and the competence of the witnesses."

"But in scientific research there is no such division of function. The investigator is at once judge, jury, and witness. His knowledge is first-hand, and hence he knows the exact value of his evidence. He can hold a suspended judgment. He can form alternative opinions and act upon both alternatives. He can construct hypotheses and try them out. He is hampered by no rules but those of his own making. Above all, he is able to interrogate things as well as persons."

"Yes," agreed Mr. Penfield, "that is what has impressed me. You are independent of witnesses. Instead of having to seek somebody who may give evidence in respect of certain facts, you obtain the facts yourself and become your own witness. No doubt this will become evident in your exposition of this case, to which I—and our friends too, I am sure—are looking forward with eager interest."

"You are paying me a great compliment," said Thorndyke; "and as I hear Polton approaching with the coffee, I need not keep you waiting any longer. By the way, how much may I assume that our friends know?"

"They know all that I know," replied Mr. Penfield. "We have had a long talk and I have told them everything I have learned and that you have told me."

"Then I shall assume that they have all the main facts, and they must stop me if I assume too much." He paused while Polton poured out the coffee and partially disencumbered the table. Then as his familiar retired, he continued: "I think that
the clearest and most interesting way for me to present the case will be by recounting the investigation as it actually occurred, giving the facts observed and the inferences from them in their actual order of occurrence."

"That will certainly be the easiest plan for us to follow," said Osmond, "if it will not be too wearisome for you."

"On the contrary," replied Thorndyke, "it will be quite interesting to me to reconstitute the case as a whole; and the best way will be to treat it in the successive stages into which the inquiry naturally fell. I will begin with the information which was given to me when the case was placed in my hands.

"A number of sealed boxes had been deposited by Mr. Hollis in the custody of Mr. Woodstock, who placed them in his strong-room. These boxes were stated by Hollis to contain a number of valuable gems, but the nature of the contents was actually known only to Hollis, who had packed the boxes himself. After an interval the boxes were returned to Hollis; and it was agreed by all the parties, including Hollis, that all the seals were then intact. Nevertheless, on opening the boxes, Hollis found that most of the gems had been abstracted and replaced by counterfeits. Thereupon he declared that a robbery had been committed while the boxes were reposing in the strong room; and this view was, strange to say, accepted by Mr. Woodstock.

"Now, it was perfectly obvious that these statements of alleged fact were mutually irreconcilable. They could not possibly be all true. The question was, Which of them was untrue? If the stones were in the boxes when they were handed to Woodstock and were not there when he returned them to Hollis, then the boxes must have been opened in the interval. But in that case the seals must have been broken. On the other hand, if the seals were really intact, the boxes could not have been opened while they were in Woodstock's custody. Woodstock's position—which was also that of Hollis—was a manifest absurdity. What they alleged to have happened was a physical impossibility.

"So far, however, the legal position was quite simple, if Woodstock had accepted it. The seals were admitted to be intact. Therefore no robbery could have occurred in Woodstock's office. But Woodstock accepted the impossible; and thereupon a certain Mr. John Osmond proceeded very deliberately to tip the fat into the fire."

"Yes, didn't he?" agreed Betty with a delighted gurgle. "You were an old guffin, Jack! Still, it was all for the best, wasn't it?"

"It was, indeed," assented Osmond. "Best stroke of work I ever did. You see, I knew that there is a Providence that watches over fools. But we mustn't interrupt the exposition."

"Well," continued Thorndyke, "the disappearance of Mr. Osmond settled the matter so far as Mr. Woodstock was concerned. He swore an information forthwith, and must have grossly misled the police, for they immediately obtained a warrant, which they certainly would not have done if they had known the real facts. Then Woodstock, distrusting his own abilities—very justly, but too late—consulted Mr. Penfield. But Mr. Penfield took the perfectly sound legal view of the case. The seals were admittedly unbroken. Therefore the boxes had been returned intact and there had been no robbery in the office. But if there had been no robbery, the disappearance of Osmond had no bearing on the case. Of course, neither Woodstock nor Hollis would agree to this view, and Mr. Penfield then recommended that the case should be put in my hands.

"Now it was obvious that the whole case turned on the seals. They had been accepted as intact—without any kind of inquiry or examination. But were they really intact? If they were, the case was against Hollis; and I could see that my friend Professor Eccles suspected him of having engineered a sham robbery to evade a bequest to the nation. But this seemed to me a wild and unfair suspicion, and for my own part I strongly suspected the seals. Accordingly, I examined a whole series of them, minutely and exhaustively, with the result that they proved to be impressions, not of the matrix in Mr. Hollis's ring, but of an electrotype matrix made from a wax impression.

"This new fact brought the inquiry to the next stage. It proved that the boxes had been opened and that they had been opened in Woodstock's office. For when they came there they were sealed with Hollis's seal, but when they left the office they were sealed with the forged seal. Things began to look rather black as regards Osmond; but, although I was retained ostensibly to work up a case against him, I kept an open mind and proceeded with the investigation as if he did not exist.

"The second stage, then, started with the establishment of these facts: a robbery had really occurred; it had occurred in Woodstock's office; and, since the boxes had been kept in the strong-room, it was from thence that they had been abstracted. The next question was, By whom had the robbery been committed? Now, since the property had been taken from the strong-room, and since the strong-room had not been broken into, it followed that the thief must have had, or obtained, access to it. Now, there were three persons who had easy access to it: Woodstock who possessed the key, Hepburn and Osmond, both of whom occasionally had the key in their custody: There might be others, but if so, they were at present unknown to me. But of the three who were known, one, Osmond, had apparently absconded as soon as the robbery was discovered and connected with the office. Moreover, the commencement of the robberies apparently coincided in time with the date on which he joined the staff.

"Evidently, then, everything that was known pointed to Osmond as the delinquent. But there was no positive case against him, and I decided to proceed as if nothing at all were known and seek for fresh data. And my first proceeding was to make an exhaustive examination of the boxes, the wrapping-paper, and the inside packing. As to the paper, I may say that I developed up a large number of finger-prints—on the outside surface only—I never examined, as the occasion did not arise. The investigation really concerned itself with the dust from the insides of the boxes and from the packing material. Of this I collected every particle that I could extract and put it aside in pill-boxes numbered in accordance with the boxes.
from which it was obtained. When I came to examine systematically the contents of the pill-boxes, I made two very curious discoveries.

"First, every pill-box—representing, you will remember, one of the gem-boxes—contained one or more hairs; usually one only and never more than three. They were all alike. Each was a hair from a moustache of a light-brown colour and cut quite short, and there could be no doubt that they were all from the same individual. Consequently they could not be chance hairs which had blown in accidentally. The gem-boxes had been packed at various times, and hence the uniformity of the hairs connected them definitely with the person who packed the boxes. In short, it seemed at first sight practically certain that they were the hairs of the actual robber; in which case we could say that the robber was a man with a short light-brown moustache.

"But when I came to reflect on the facts observed I was struck by their singularity. Moustache hairs are shed very freely, but they do not drop out at regular intervals. One, two, or more hairs in any one box would not have been surprising. A man who was in the habit of pulling at or stroking his moustache might dislodge two or three at once. The surprising thing was the regularity with which these hairs occurred; one, and usually only one, in each box, and no complete box in which there was none. It was totally opposed to the laws of probability.

"The point was highly significant. Anyone can recognize a hair. Most men can recognize a moustache hair. A detective certainly could. If these boxes had been opened by the police, as Hollis had originally intended, these hairs would almost certainly have been seen and eagerly fastened on as giving what would amount to a description of the thief. They would have been put in evidence at the trial and would have been perfectly convincing to the jury.

"The more I reflected on the matter the more did I suspect those hairs. If one assumed that they had been planted deliberately, say by a clean-shaved or dark-haired criminal, their regular occurrence in every box would be quite understandable. It would be a necessary precaution against their being overlooked. Otherwise it was unaccountable. Still, the fact of their presence had to be noted and the individual from whom they came identified, if possible.

"The second discovery that I made was, perhaps, even more odd. In every one of the boxes I found particles of the fine dust which falls out of the holes in worm-eaten wood; sometimes only a few grains, sometimes quite a large number of grains, and in the aggregate a really considerable quantity."

"But how astonishing," exclaimed Betty, "that you should be able to tell at once that these tiny grains came from worm-eaten wood."

"I make it my business," he replied, "to be able to recognize the microscopical appearances of the different forms of dust. But your remark indicates a very significant point. I imagine that there will be very few persons in the world who could identify these particles in a collection of miscellaneous dust. And therein lay the value of this discovery; for if the significance of the hairs was open to doubt, that of the wood certainly was not. There was no question of its having been purposely planted. It had certainly found its way into the boxes accidentally, and the person who had unconsciously introduced it was pretty certainly unaware of its presence. It was undoubtedly a genuine clue.

"The discovery of this characteristic dust raised several questions. In the first place, how came it into the boxes? Dust from worm-eaten furniture falls on the floor and remains there. It is too coarse and heavy to float in the air like the finer kinds of dust. In a room in which there is worm-eaten furniture, you will find the particles of dust all over the floor; but you will not find any on the tables or chair-rails or mantelpiece. But these boxes must have stood on a table or bench when they were being packed and when the dust got into them. Then the dust must have been on the table or bench. But how could it have got there? It was possible that the bench, itself, might have been worm-eaten. But that was not a probable explanation, for the dust tends to fall, not to rise. It would have fallen, for the most part, from the under surface on to the floor. The most likely explanation emerged from a consideration of the next question; which was, how could one account for the large quantity that was found?

"The quantity was extraordinarily large. From the whole set of boxes we collected something approaching a quarter of a thimbleful; which seems an enormous amount if you consider that it must all have got into the boxes during the short time that they were open for packing. What could be the explanation?

"There were two factors which had to be considered: the nature of the wood and the nature of the object which had been fashioned from it; and both were important for purposes of identification. Let us consider the first factor—material. Now, these wood-boring insects do not bore through wood as the bookworm bores through paper, to get at something else. They actually feed upon the wood. Naturally, then, they tend to select the kind of wood which contains the most nourishment and which, incidentally, is usually the softest. But of all woods those of the fruit trees are richest in gum and sap and are most subject to the attacks of the worm. Walnut, pear, apple, plum, and cherry all have this drawback, and of these cherry is so inveterately ‘wormy’ that it has usually been shunned by the cabinet-maker. Now, the quantity of the wood-dust pointed to some excessively worm-eaten object and suggested one of the fruit woods as the probable material, and the balance of probability was in favour of cherry; and this was supported by the pinkish colour of the dust. But, of course, this inference was purely hypothetical. It represented the general probabilities and nothing more.

"And now we come to the second factor. What was the nature of this wooden object? A piece of ordinary furniture we could dismiss for two reasons: first, the dust from such a piece will ordinarily fall upon the floor, from whence it could hardly have got into the boxes; and, second, no matter how badly wormed a piece of furniture may be, the quantity of dust which falls from it is relatively small and accumulates quite slowly, being practically confined to that which is pushed out of
the holes by the movements of the insects within. This process would not account for the great quantity indicated by these samples of ours. My feeling was that this worm-eaten object was an appliance of some sort, subject to frequent and violent disturbance. Let us take an imaginary case as an illustration. Let us imagine a mallet with an excessively worm-eaten head. Whenever that mallet is used, the shock of the impact will send a shower of wood-dust flying out on the bench, where it will rapidly accumulate.

"But, of course, this object of ours could not be a mallet for the reason that mallets are always made of hard wood; and jewellers' mallets are usually made of box-wood, lignum vitae or horn, none of which is subject to 'the worm'. Thinking over the various appliances used by jewelers—since it was with a jeweller we were dealing—I suddenly bethought me of one which seemed to fulfill the conditions exactly. Jewellers and goldsmiths, as you probably know, use a variety of miniature anvils, known as stakes, bec irons, sparrowhawks, etc. Now, these little anvils are usually stuck in a block of wood, just as a smith's anvil is planted on a tree-trunk. These blocks are not usually hard wood; indeed, soft wood is preferable as it absorbs the shock better. A favourite plan is to get a little log of wood and set the spike of the stake or sparrow-hawk in a hole bored in the end grain; and the most abundant source of these little logs—at least in the country—is the pile of trimmings from old fruit trees. Such a log would tend very soon to become worm-eaten; and if it did, every time it was used a ring of wood-dust would form around its base and would soon spread all over the bench, sticking to everything on it and straying on to the hands, arms, and clothing of the workman.

"This inference, you will observe, was, like the previous one, purely hypothetical. But it agreed perfectly with the observed facts and accounted for them in a reasonable way; and as I could think of no other that did, I adopted it with the necessary reservations. But, in fact, the correctness or incorrectness of this hypothesis was at present of no great importance. Apart from any question as to its exact origin, the wood-dust was an invaluable clue. We now knew that the unknown robber was a person whose clothing was more or less impregnated with wood-dust; that any places that he had frequented would yield traces of wood-dust from the floors, and that the place where the boxes had been packed abounded in wood-dust and contained a badly worm-eaten wooden object of some kind.

"The next proceeding was obvious. It was to find the places which had been frequented by that unknown person, to seek for the worm-eaten object, and, if possible, to identify the individual who appeared to be connected with it. The suspected places were two: Mr. Hollis's house and Mr. Woodstock's office. I did not, myself, suspect Hollis; but nevertheless I determined to examine his house as narrowly as the other. Accordingly I asked Mr. Penfield to obtain facilities for me to visit both places to make inquiries on the spot; which he did.

"Perhaps, before I describe that voyage of exploration, it may be as well to pause and consider what knowledge I now possessed and what I was going to look for. There was the wood-dust, of course. That was the visible trail that I hoped to pick up. But there were other matters. I knew that there was a man, in some way connected with the robbery, who had a short, fair moustache. I had to find out who he was. Also if there was any source from which some other person might collect specimen hairs from that moustache—a hair-brush, for instance—and if such source existed, who had access to it.

"Then there was the personality of the thief. One knew a good deal about him by this time. He was an ingenious man; a fairly good workman, at any rate, with metal-worker's tools, but not a skilled jeweller. He must have been able to make a key from a wax squeeze—unless he were Woodstock himself, which he pretty certainly was not; for none of the others had sufficiently free access to the strong-room to do what had been done. Then he must have had at least a simple working knowledge of electric batteries, since we could be fairly certain that he made the electrotypes himself; he would never have run the risk of putting the forgery out to the trade. He was clearly a secretive, self-contained man. The only fallacy that I had to guard against was the possibility of a confederate outside the office, who might have done the actual work; but this possibility seemed to be negatived by the whole character of the robbery and especially by one very odd feature in it, which was this: Professor Eccles had noticed with surprise that many of the stones which were taken were of quite trifling intrinsic value, so trifling that, if they had been sold, they would hardly have realized enough to pay the cost of replacing them with the specially-made counterfeits. Indeed, in one case, at least, the thief must have lost money on the transaction, for he had taken a fine moonstone and replaced it with an inferior one of the same dimensions. But the value of the original was only about ten shillings, and he must have spent more than that on the replacement. The professor was greatly puzzled by this, having assumed, of course, that the gems were stolen to sell. But to me, this rather anomalous feature of the robbery offered a very curious suggestion; which was that no sale of the booty had ever been contemplated. It looked like a collector's robbery; and if there had been a collector in any way connected with the parties, I should have given him my very close attention. But, so far as I knew, there was none. Nevertheless, this peculiarity of the robbery had to be borne in mind when I came to make my investigations on the spot.

"Let me now briefly describe those investigations. Their main object was to ascertain whether there were any traces of wood-dust in the premises of either Hollis or Woodstock, and the method was this: in each case, a rough ground-plan of the premises was made; then small areas of the floors were cleaned thoroughly with a specially constructed vacuum cleaner and the dust from each area put into an envelope marked with a number, which number was also marked in the plan on the spot from which the dust had been collected. The collection was carried out by my laboratory assistant, Mr. Polton, whom you have seen, leaving me free to make inquiries and to inspect the premises. Of course, the samples of dust had to be brought home to be examined in the laboratory, so we were hampered by the circumstance that we did not know at the time whether any wood-dust had or had not been obtained. But this proved to be of no importance.

"We operated first at Mr. Hollis's house, regardless of his scornful protests. Then we went on to Mr. Woodstock's office; and there I had a rather remarkable experiences. As I entered with Mr. Woodstock, I saw an elderly man engaged in
repairing an electric bell; and a glance at his hands and the way in which he manipulated his tools showed the unmistakable facility and handiness of the skilled workman. It was a little startling; for here were two of the characteristics of the unknown person I was endeavouring to identify. This man had evident skill in the use of metal-worker's tools and he clearly knew a good deal about electric batteries. And when I learned that this Mr. Wampole was the office-keeper and that he evidently had a key of the premises, I was still further impressed. I began to revise my opinion as to there being no confederate; for the fact remained that Osmond had absconded and that his disappearance—until it was otherwise explained—undeniably connected him with the robbery. I began to think it possible that there had been a partnership and that he had been used as a cat's paw. Meanwhile, I had to find out as much as I could about him, and to this end I sat down by Wampole, as he worked at refitting the batteries, and questioned him on the subject of Osmond's appearance, habits, temperament, and circumstances. It is only fair to him to say that he scouted the idea of Osmond's having committed the robbery and gave excellent reasons for rejecting it. On the other hand, his description of Osmond made it clear that the hairs which I had found in the boxes were Osmond's hairs; and when I expressed a wish to inspect Osmond's desk, he took me to it readily enough, and as it was unlocked, he threw up the lid and showed me the interior. The most interesting thing in it, from my point of view, was a pair of hair-brushes; from which I was able to extract several moustache hairs which appeared—and subsequently turned out to be—identically similar to those found in the boxes.

"The examination of Osmond's desk suggested a similar examination of all the other desks in the office, finishing up with that belonging to Mr. Wampole. And it was in examining that desk that I did really receive somewhat of a shock. For when we came to turn out its contents, I found that these included, in addition to a number of metal-worker's tools, a workman's linen apron and some battery terminals and insulated wire, a stamp-album, a tray of military buttons and badges and old civilian buttons, and another tray of old coins.

"The coincidence was too striking to be ignored. Here was a man who had free access to these premises night and day, and who corresponded in every particular with the unknown robber. We had already seen that he had the skill and special knowledge that were postulated; now this stamp-album, these buttons, badges, and coins, wrote him down an inveterate collector. If I had looked on Mr. Wampole with interest before, I now regarded him with very definite suspicion. Whatever significance the hairs had seemed to have was now entirely against him; for there were the brushes, easily available, and he knew it.

"I must confess that I was greatly puzzled. Every new fact that I observed seemed more and more to confuse the issues. With the exception of the hairs—which were, at least, doubtful evidence—I had found nothing whatever to incriminate Osmond; whereas Wampole presented a highly suspicious appearance. But Osmond had absconded; which seemed to put Wampole outside the inquiry, excepting as a confederate. And when I went with Wampole to Osmond's rooms, my inspection of them only left me more puzzled; for the personality that they reflected was the very opposite of that indicated by the nature and method of the robbery. Instead of the avarice and cunning that characterized the robber, the qualities suggested were those of a hardy, adventurous, open-air man, simple to austerity in his tastes and concerned with any thing rather than wealth and worldly possessions. The very photographs on the mantelpiece proclaimed the incongruity, especially that of his mother, whom Wampole informed me he strongly resembled; which showed the face of a dignified, strong, resolute, courageous looking lady, whose son I found it hard to picture, first as a thief, and then as a panicky fugitive. Yet the fact remained that Osmond had absconded.

"However, when we got home and proceeded to question the samples of dust in the laboratory, they gave an answer that was unmistakable. The results were roughly thus: the samples from Hollis's house contained no wood-dust; those from Osmond's rooms contained none; that from the inside of his desk contained none and that from his office floor barely a trace. Those from the floor of the clerks' office yielded a very small quantity, but that from the floor by Wampole's desk contained quite a large amount, while the dust extracted from the interior of his desk was full of the castings—derived, no doubt, to a large extent from the apron which he had kept in it. So the murder was out. The man who had packed those boxes was Mr. Wampole, and the hairs which I found in them had come from Osmond's brushes.

"One thing only remained to be done: the final verification. The wood-dust had to be traced to its ultimate source in Wampole's lair. This invaluable service was carried out by my assistant, Polton, who, with extraordinary tact and skill, contrived to get a glimpse into the workshop during Wampole's absence; and when he peeped in, the first object that met his eye was a sparrowhawk, planted in a little log of cherry-wood that was absolutely riddled by the worm. That concluded the inquiry so far as I was concerned, though some further work had to be done to enable the police to act. But no doubt Mr. Penfield has told you about the lapidary and the police raid which resulted in Wampole's death and the discovery of the gems in his possession."

"Yes," Osmond replied, "I think we have had full details of the final stages. Indeed, Mr. Penfield had given us most of the facts that you have mentioned, but neither he nor we were able to connect them completely. It seemed to us as if you had made one or two very fortunate guesses; but now that I have heard your reasoned exposition I can see that there was no element of guessing at all."

"Exactly," agreed Mr. Penfield; "every stage of the argument rests securely on the preceding stages. I am beginning to suspect that we lawyers habitually underestimate the man of science."

"Yes," said Osmond, "I am afraid that is so. It is pretty certain that no lawyer could have solved this mystery."

"I have to remind you," Thorndyke remarked, "that the man of science was not able to solve it. He was able only to solve a part of it. The thief was identified and the stolen property traced to its hiding-place. But one question remained and still
remains unanswered. Why did John Osmond disappear?"

Osmond and Betty both smiled, and the latter asked: "Did you never form any guess on the subject?"

"Oh, yes," replied Thorndyke, "I made plenty of guesses. But that was mere speculation which led to nothing. It occurred to me, for instance, that he was perhaps drawing a red-herring across the trail—that he was shielding the real criminal. But I could find no support for the idea. I could see no reason why he should shield Wampole—unless he was a confederate, which I did not believe. If the criminal had been Hepburn, it would have been at least imaginable. But there was never the shadow of a suspicion in regard to Hepburn. No, I never had even a hypothesis; and I haven’t now."

"I am not surprised," said Osmond, with a slightly sheepish grin. "It was beyond even your powers to conceive the possible actions of an impulsive fool who has mistaken the facts. However, as I have put you to the trouble of trying to account for my unaccountable conduct, it is only fair that I should make it clear, if I can; even though I know that when I have finished, your opinion of me will be like Bumble’s opinion of the Law—that I am ‘a ass and a idiot.’"

"I hardly think that very likely,” said Thorndyke, turning a twinkling eye on Betty. "As I said just now, you seem to have brought a most unpromising affair to an extraordinarily satisfactory conclusion which is not at all suggestive of ‘a ass and a idiot.’"

"But," objected Osmond, "the satisfactory conclusion which you are putting to my credit is entirely your own work. I set up the obstacles; you knocked them down. However, we need not argue the point in advance. I will tell you the story and you shall judge for yourself."
XX. — OSMOND'S MOTIVE

"IN order to make my position clear," Osmond began, "it is necessary for me to say certain things to you, my best and kindest of friends, which I should not confide to any other human creature. I shall have to confess to thoughts and suspicions which were probably quite unjust and unreasonable and which are now uttered subject to the seal of the confession."

The two lawyers bowed gravely in acknowledgement, and Osmond continued: "I was introduced to Mr. Woodstock, as you know, by my brother-in-law, Mr. Hepburn; and I may say that I accepted the post chiefly that I might be near my sister. She and I had always been very devoted to one another, and from the time when I left Oxford up to the date of her marriage we had lived under one roof; and that was how she came to make the acquaintance of Hepburn.

"I did not encourage the intimacy, but neither could I hinder it. She was of a responsible age and she knew her own mind. The end of it was that, after an engagement lasting a few months, they were married, and there was nothing more to be said. But I was rather troubled about it. I had known Hepburn nearly all my life. We had been at school together and the greater part of our time at Oxford, where we belonged to the same college, Merton. Through all those years we were on the footing of intimate friends—rather oddly, for we were very different in temperament and tastes, and, indeed, had very little in common—and we knew one another extremely well. I don't know what Hepburn thought of me, but I must confess that I never had much of an opinion of him. He was a clever man; rather too clever, to my taste. An excellent manager, very much on the spot, and in fact decidedly cunning; fearfully keen on the main chance, fond of money and ambitious to be rich, and none too scrupulous in his ideas. At school he was one of those boys who contrive to increase their pocket-money by all sorts of mysterious little deals, and the same tendency showed up at Oxford. I didn't like his ways at all. I always had the feeling that, if he should ever be tempted by an opportunity to make a haul by illegitimate means, he might be led by his acquisitiveness to do something shady.

"However, his morals were not in my custody and were none of my business until he began to visit us at my rooms, where I was living with my sister. Then I gave her a few words of warning; but they took no effect. He made himself acceptable to her, and, as I have said, they became engaged and eventually, when Hepburn took up his job with Woodstock, married. For a year or two I saw little of them—I was articled to a solicitor in London; but when I was fully qualified Hepburn, at my sister's suggestion, offered to speak to Woodstock on my behalf, and the result was that I entered the office, as you have heard.

"And now I come to the particular transaction. Woodstock's office was, as you know, conducted in a rather happy-go-lucky fashion, especially as regards the strong-room. The key hung on the wall practically all day. Usually, Woodstock took it away with him at night; but quite frequently, when Woodstock was away for a night, it would be left in Hepburn's charge. Occasionally it was left with me; and on one occasion, at least, Wampole had charge of it for a night. And each of us four, Woodstock, Hepburn, Wampole, and myself, had a key of the outer door and could enter the premises whenever we pleased. You will remember, too, that the house was empty, out of office hours. There was no caretaker.

"Now, one night when I had been out on the river and got home rather late, I found that I had run out of tobacco. The shops were all shut, but I remembered that there was a nearly full tin in my desk at the office, so I run round there to fill my pouch. I am always rather quiet in my movements, and perhaps, as it was late, I may have moved, instinctively, more silently than usual. Moreover, I still wore my rubber-soled boating-shoes. Well, I let myself in with my key and entered the office, leaving the outer door ajar. As I came in through the clerks' office I could see through the open doorway that there was a light in Woodstock's office and that the door of the strong-room was open. A good deal surprised at this, I stopped and listened. There were sounds of someone moving about in the strong-room, and I was on the point of going in to see who it was when Hepburn came out with one of Hollis's boxes in his hand. And at that moment the outer door blew-to with a bang.

"At the sound of the closing door Hepburn started and whisked round to re-enter the strong-room. Then he saw me standing in the dark office, and I shall never forget his look of terror. He turned as white as a ghost and nearly dropped the box. Of course I sang out to let him know who I was and apologized for giving him such a start, but it was a minute or two before he recovered himself, and when he did he was decidedly huffy with me for creeping in so silently. His explanation of the affair was quite simple. He had been up to London with Woodstock, who had stayed in town for the night and had sent him down with a consignment of valuable securities which the firm were taking charge of. Not liking to have them in his personal possession, he had come on to the office to deposit them in the strong-room; and then, while he was there, he had taken the opportunity of checking Hollis's boxes, which he informed me he was in the habit of doing periodically and usually after office hours.

"The explanation was, as I have said, quite simple; indeed, no explanation seemed to be called for. There was nothing in the least abnormal about the affair. When I had once more apologized for the fright that I had given him, I filled my pouch and we went away together, and I dismissed the matter from my mind.

"I don't suppose I should ever have given the incident another thought if nothing had occurred to remind me of it. The months went by and it seemed to have passed completely out of my memory. Then Hollis dropped his bomb-shell into the office. Some one among us, he declared, had secretly opened his boxes and stolen his gems; and until that somebody was identified, we were all more or less under suspicion.
"Of course, Hepburn scouted the idea of there having been any robbery at all, and so did Wampole. They both pointed to the unbroken seals and declared that the thing was a physical impossibility; and I should have been disposed to take the same view, in spite of the strong evidence of the missing emerald. But as soon as I heard the charge, that scene in the office came back to me in a flash; and now, somehow, it did not look by any means so natural and simple as it had at the time. I recalled Hepburn's terrified stare at me; his pale face and trembling hands. Of course, my sudden appearance must have been startling enough to upset anyone's nerves; but it now seemed to me that his fright had been out of all proportion to the cause.

"Then, when I came to think it over, the whole affair seemed very characteristic of Hepburn; of his greed for money, his slyness, his cunning, calculating ways. The property which had been stolen was of great value, and I did not doubt that Hepburn would have annexed it without a qualm if he could have done so with complete safety. But it had been done so skilfully that the risk had been almost entirely eliminated. It was a very clever robbery. But for the merest chance the things would have gone back to Hollis's cabinet unchallenged; and when they had been there a week or two the issues would have become hopelessly confused. It would have been impossible to say when or where the robbery had been committed. The whole affair had been most cunningly planned and neatly carried out. I felt that, if Hepburn had been the robber, that was just the way in which he would have done it.

"Moreover, the robbery—if there had really been one, as I had no doubt there had—seemed to lie between three, or at the most, four of us: those who had easy access to the strong-room. But of these Woodstock was out of the question, Wampole had practically no access to the strong-room and was an old and trusted servant of irreproachable character, and as I was out of it, there remained only Hepburn. Whichever way I thought of the affair, everything seemed to point to him, and whenever I thought of it the vision came back to me of that scared figure standing by the the strong-room door with the box of gems in his hand.

"But I need not go into any further detail. The bald fact is that it appeared to me beyond a doubt that Hepburn was the thief, and the only question was, what was to be done. The fat was in the fire. The police would be called in. The stolen property would be traced and the crime pretty certainly brought home to Hepburn. That was how I forecast the probable course of events.

"Now, if Hepburn had been a single man it would have been no affair of mine. But he was my sister's husband and the father of my two little nephews, who had been to me like my own children. If Hepburn had been convicted of this crime, my sister's life would have been absolutely wrecked. It would have broken her heart; and as for the two little boys, their future would have been utterly and irrevocably damned. I couldn't bear to think of it. But was there any way out? It seemed to me that there was. I was a bachelor with no home-ties but my sister and the kiddies. I had always had a desire to travel and see the world. Well, now was the time. If I cleared off to some out-of-the-way region, the dangerous inquiries at the office would stop at once and the whole hue-and-cry would be transferred to me. So I decided to go. And the place that I selected as my destination was Adaffia, where I knew that an old friend of Hepburn's had settled as a trader.

"But I thought I would take Hepburn into my confidence and give him a chance of doing the same by me, only I am afraid I rather muddled the business. The fact is that, when it came to the point, I was a little shy of telling him exactly what was in my mind. It is a delicate business, telling a man that you have discovered him to be a thief. So I hummed and hawed and approached the subject gradually by remarking that it looked as if there would be wigs on the green presently. But that cat didn't jump. Hepburn declined to admit that any robbery had occurred in the office. However, I persisted that we should presently have the police buzzing about the office and that then the position would become mighty uncomfortable for some of us. Still, he professed to be—and, of course, was—quite unconcerned; but when I went on to suggest that if I took a little holiday the state of affairs at the office would be made more comfortable for everybody, he stared at me in astonishment, as well he might. Of course, I could think of nothing but what I had seen that night when I caught him coming out of the strong-room, and I took it for granted that he realized what was in my mind, so that his astonishment didn't surprise me.

"'Wouldn't it look a bit queer if you went away just now?' he asked.

"'That is just the point,' I replied. 'I'll hop off, they will leave the office alone and there will be no more trouble.'

"He seemed a good deal puzzled, but he didn't raise any objections; and of course he did not make any confidences, which again did not very much surprise me. He was the very soul of caution and secretiveness.

"'Where did you think of going for your holiday?' he asked.

"I told him that I thought of running over to Adaffia to call on Larkom, the trader there, and suggested that he should send Larkom a letter introducing me. He didn't much like writing that letter, and he liked it less when I mentioned that I proposed to travel under the name of Walker. However, Larkom was an old friend whom he knew that he could trust, so, in the end, he agreed to write the letter. And that settled the affair. In due course I went off in the comfortable belief that he understood the position exactly, leaving him considerably surprised but quite confident that he knew all about the robbery. It was a very pretty comedy of errors; but it would have become a tragedy but for your wonderful insight and for the strange chance that the results of your investigations should have found their way into the newspapers. That is to say, if it was a chance."

"It was not a chance," said Mr. Penfield. "As a matter of fact, Dr. Thordnyke wrote out the account himself and broadcast it to all the papers, including those of the United States."
"Why did you do that?" Betty inquired, with a glance of intense curiosity at Thorndyke.

"For two reasons," the latter replied: "one obvious, the other less so. In the first place, Osmond had been publicly accused, and as there had been no trial, there had been no public withdrawal of the accusation. But he was a man of honourable antecedents and irreproachable character. Common justice demanded that his innocence should be proclaimed at least as widely as had been the presumption of his guilt. Even if he were dead, it was necessary that his memory should be cleared of all reproach. But, in the second place, it was not at all clear to me that he was dead."

"The deuce it wasn't!" exclaimed Osmond. "I thought I had settled that question beyond any possible doubt. But you were not satisfied?"

"No. The report which reached me was singularly unconvincing, and there were certain actual discrepancies. Take first the general appearance of the alleged occurrences; here is a man, a fugitive from justice, whose purpose is to disappear. He landed at Adaffia and in the course of a week or two is reported to have died. Now, West Africa is a very unhealthy place, but people don't usually drop down dead as soon as they arrive there. On the contrary. The mortality among new-comers is quite small. Death is most commonly due to the cumulative effects of repeated attacks of malaria and does not ordinarily occur during the first year of residence. Osmond's death under the circumstances alleged was not in agreement with ordinary probabilities.

"Then the fact of death was not certified or corroborated. The officer who reported it had not seen the body; he had only seen the grave. But to a man of my profession, the uncorroborated grave of a man who is admittedly trying to escape from the police is an object of deep suspicion. The possibility of a sham burial was obvious. This man, on leaving his home, had made a bee-line for Adaffia, an insignificant village on the African coast the existence of which was unknown to the immense majority of persons, including myself. How came he to know of Adaffia? and why did he select it as a hiding-place? The obvious answer suggested was that he had a friend there. But as there was only one white man in the place—who must have been that friend—a sham death and burial would have been perfectly easy and a most natural expedient.

"Then there was the discrepancy. Osmond was reported to have died of blackwater fever. Now, this was almost an impossibility. Blackwater fever is not a disease which attacks new-comers. It lies in wait for the broken-down coaster whose health has been sapped by long-standing chronic malaria. In the immense majority of cases it occurs during, or after the third year of residence. I have found no record of a single case in which the patient was a new-comer to the coast. It was this discrepancy that immediately aroused my suspicions; and as soon as I came to consider the circumstances at large, the other improbabilities came into view. The conclusion that I arrived at was that there was a considerable probability that the trader, Larkom, had carried out a sham burial; or, if it had really been a case of blackwater fever at Adaffia, the victim was Larkom himself, and that a false name had been put on the grave; in which case the man whom the officer saw must have been Osmond. You will note the suspicious fact that the name on the grave was 'John Osmond'—not 'Walker.' That impressed me very strongly. It met the necessities of the fugitive so very perfectly."

Osmond chuckled softly. "It seems to me, Dr. Thorndyke," said he, "that you and I represent the two opposite extremes. You take nothing for granted. You accept no statement at its face value. You weigh, measure, and verify every item of evidence put to you. Whereas I—well, I wonder what you think of me. I shan't be hurt if you speak your mind bluntly."

"There is nothing in my mind," said Thorndyke, "by which you need be hurt. It would, of course, be insincere to pretend that you did not display very bad judgement in taking so momentous a course of action on a mere, unconfirmed suspicion. But perhaps there are qualities even more valuable than worldly wisdom, and certainly more endearing; such as chivalry, generosity and self-forgetfulness. I can only say that what you have told us as to your motives has made my little service to you a great pleasure to me; it has turned a mere technical success into a source of abiding satisfaction—even though you did seek to defeat the ends of justice."

"It is nice of you to say that, Dr. Thorndyke," Betty exclaimed with brimming eyes. "After all, it is better to be generous than discreet—at least, I think so; and I don't mind admitting that I am proud to be the wife of a man who could cheerfully give up everything for the good of his kinsfolk."

"I think," said Mr. Penfield, tapping his snuff-box by way of emphasis, "you have very good reason to be proud of one another."

"Thank you, Mr. Penfield," she replied, smilingly. "And that brings me to what really was the object of our visit to-day. Only, here I am in rather a difficulty. I am commissioned to give thanks for all that has been done for us, and I really don't know how to express one-half of what we feel."

"Is there any need?" said Thorndyke. "Mr. Penfield and I already understand that you enormously overestimate your indebtedness to us. Isn't that enough?"

"Well, then," said Betty, "I will just say this. But for you, Jack and I could never have been married. It was really you who gave us to one another. We wish to say that we are extremely pleased with your gift and we are very much obliged."

THE END
I. — THE MAGIC CASKET

It was in the near neighbourhood of King’s Road, Chelsea, that chance, aided by Thorndyke’s sharp and observant eyes, introduced us to the dramatic story of the Magic Casket. Not that there was anything strikingly dramatic in the opening phase of the affair, nor even in the story of the casket itself. It was Thorndyke who added the dramatic touch, and most of the magic, too; and I record the affair principally as an illustration of his extraordinary capacity for producing odd items of out-of-the-way knowledge and instantly applying them in the most unexpected manner.

Eight o’clock had struck on a misty November night when we turned out of the main road, and, leaving behind the glare of the shop windows, plunged into the maze of dark and narrow streets to the north. The abrupt change impressed us both, and Thorndyke proceeded to moralise on it in his pleasant, reflective fashion.

“London is an inexhaustible place,” he mused. “Its variety is infinite. A minute ago we walked in a glare of light, jostled by a multitude. And now look at this little street. It is as dim as a tunnel, and we have got it absolutely to ourselves. Anything might happen in a place like this.”

Suddenly he stopped. We were, at the moment, passing a small church or chapel, the west door of which was enclosed in
an open porch; and as my observant friend stepped into the latter and stooped, I perceived in the deep shadow against the wall, the object which had evidently caught his eye.

“What is it?” I asked, following him in.

“It is a handbag,” he replied; “and the question is, what is it doing here?”

He tried the church door, which was obviously locked, and coming out, looked at the windows.

“There are no lights in the church.” said he; “the place is locked up, and there is nobody in sight. Apparently the bag is derelict. Shall we have a look at it?”

Without waiting for an answer, he picked it up and brought it out into the mitigated darkness of the street, where we proceeded to inspect it. But at the first glance it told its own tale; for it had evidently been locked, and it bore unmistakable traces of having been forced open.

“It isn’t empty,” said Thorndyke. “I think we had better see what is in it. Just catch hold while I get a light.”

He handed me the bag while he felt in his pocket for the tiny electric lamp which he made a habit of carrying, and an excellent habit it is. I held the mouth of the bag open while he illuminated the interior, which we then saw to be occupied by several objects neatly wrapped in brown paper. One of these Thorndyke lifted out, and untying the string and removing the paper, displayed a Chinese stoneware jar. Attached to it was a label, bearing the stamp of the Victoria and Albert Museum, on which was written:

“MISS MABEL BONNET,
168 WILLOW WALK,
FULHAM ROAD, W.”

“That tells us all that we want to know,” said Thorndyke, re-wrapping the jar and tenderly replacing it in the bag. “We can’t do wrong in delivering the things to their owner, especially as the bag itself is evidently her property, too,” and he pointed to the gilt initials, “M. B.,” stamped on the morocco.

It took us but a few minutes to reach the Fulham Road, but we then had to walk nearly a mile along that thoroughfare before we arrived at Willow Walk—to which an obliging shopkeeper had directed us—and, naturally, No. 168 was at the farther end.

As we turned into the quiet street we almost collided with two men, who were walking at a rapid pace, but both looking back over their shoulders. I noticed that they were both Japanese—well-dressed, gentlemanly-looking men—but I gave them little attention, being interested, rather, in what they were looking at. This was a taxicab which was dimly visible by the light of a street lamp at the farther end of the “Walk,” and from which four persons had just alighted. Two of these had hurried ahead to knock at a door, while the other two walked very slowly across the pavement and up the steps to the threshold. Almost immediately the door was opened; two of the shadowy figures entered, and the other two returned slowly to the cab and as we came nearer, I could see that these latter were policemen in uniform. I had just time to note this fact when they both got into the cab and were forthwith spirited away.

“Looks like a street accident of some kind,” I remarked; and then, as I glanced at the number of the house we were passing, I added: “Now, I wonder if that house happens to be—yes, by Jove! it is. It is 168! Things have been happening, and this bag of ours is one of the dramatis personae.”

The response to our knock was by no means prompt. I was, in fact, in the act of raising my hand to the knocker to repeat the summons when the door opened and revealed an elderly servant-maid, who regarded us inquiringly, and, as I thought, with something approaching alarm.

“Does Miss Mabel Bonney live here?” Thorndyke asked.

“Yes, sir,” was the reply; “but I am afraid you can’t see her just now, unless it is something urgent. She is rather upset, and particularly engaged at present.”

“There is no occasion whatever to disturb her,” said Thorndyke. “We have merely called to restore this bag, which seemed to have been lost,” and with this he held it out towards her. She grasped it eagerly with a cry of surprise, and as the mouth fell open, she peered into it.

“Why,” she exclaimed, “they don’t seem to have taken anything, after all. Where did you find it, sir?”

“In the porch of a church in Spelton Street,” Thorndyke replied, and was turning away when the servant said earnestly: “Would you kindly give me your name and address, sir? Miss Bonney will wish to write and thank you.”

“There is really no need,” said he; but she interrupted anxiously: “If you would be so kind, sir. Miss Bonney will be so vexed if she is unable to thank you; and besides, she may want to ask you some questions about it.”

“That is true,” said Thorndyke (who was restrained only by good manners from asking one or two questions, himself). He produced his card-case, and having handed one of his cards to the maid, wished her “good-evening” and retired.

“That bag had evidently been pinched,” I remarked, as we walked back towards the Fulham Road.
“Evidently,” he agreed, and was about to enlarge on the matter when our attention was attracted to a taxi, which was approaching from the direction of the main road. A man’s head was thrust out of the window, and as the vehicle passed a street lamp, I observed that the head appertained to an elderly gentleman with very white hair and a very fresh face.

“Did you see who that was?” Thorndyke asked.

“It looked like old Brodribb,” I replied.

“It did; very much. I wonder where he is off to.”

He turned and followed, with a speculative eye, the receding taxi, which presently swept alongside the kerb and stopped, apparently opposite the house from where we had just come. As the vehicle came to rest, the door flew open and the passenger shot out like an elderly, but agile, Jack-in-the-box, and bounced up the steps.

“That is Brodribb’s knock, sure enough,” said I, as the old-fashioned flourish reverberated up the quiet street. “I have heard it too often on our own knocker to mistake it. But we had better not let him see us watching him.”

As we went once more on our way, I took a sly glance, now and again, at my friend, noting with a certain malicious enjoyment his profoundly cogitative air. I knew quite well what was happening in his mind for his mind reacted to observed facts in an invariable manner. And here was a group of related facts: the bag, stolen, but deposited intact; the museum label; the injured or sick person—probably Miss Bonney, herself—brought home under police escort; and the arrival, post-haste, of the old lawyer; a significant group of facts. And there was Thorndyke, under my amused and attentive observation, fitting them together in various combinations to see what general conclusion emerged. Apparently my own mental state was equally clear to him, for he remarked, presently, as if response to an unspoken comment: “Well, I expect we shall know all about it before many days have passed if Brodribb sees my card, as he most probably will. Here comes an omnibus that will suit us. Shall we hop on?”

He stood at the kerb and raised his stick; and as the accommodation on the omnibus was such that our seats were separated, there was no opportunity to pursue the subject further, even if there had been anything to discuss.

But Thorndyke’s prediction was justified sooner than I had expected. For we had not long finished our supper, and had not yet closed the “oak,” when there was heard a mighty flourish on the knocker of our inner door.

“Brodribb, by Jingo!” I exclaimed, and hurried across the room to let him in.

“No, Jervis,” he said as I invited him to enter, “I am not coming in. Don’t want to disturb you at this time of night. I’ve just called to make an appointment for to-morrow with a client.”

“Is the client’s name Bonney?” I asked.

He started and gazed at me in astonishment. “Gad, Jervis!” he exclaimed, “you are getting as bad as Thorndyke. How the deuce did you know that she was my client?”

“Never mind how I know. It is our business to know everything in these chambers. But if your appointment concerns Miss Mabel Bonney, for the Lord’s sake come in and give Thorndyke a chance of a night’s rest. At present, he is on broken bottles, as Mr. Bumble would express it.”

On this persuasion, Mr. Brodribb entered, nothing loath—very much the reverse, in fact—and having bestowed a jovial greeting on Thorndyke, glanced approvingly round the room.

“Ha!” said he, “you look very cosy. If you are really sure I am not—”

I cut him short by propelling him gently towards the fire, beside which I deposited him in an easy chair, while Thorndyke pressed the electric bell which rang up in the laboratory.

“Well,” said Brodribb, spreading himself out comfortably before the fire like a handsome old Tom-cat, “if you are going to let me give you a few particulars—but perhaps you would rather that I should not talk shop?”

“Now you know perfectly well, Brodribb,” said Thorndyke, “that ‘shop’ is the breath of life to us all. Let us have those particulars.”

Brodribb sighed contentedly and placed his toes on the fender (and at this moment the door opened softly and Polton looked into the room. He took a single, understanding glance at our visitor, and withdrew, shutting the door without a sound).

“I am glad,” pursued Brodribb, “to have this opportunity of a preliminary chat, because there are certain things that one can say better when the client is not present; and I am deeply interested in Bonney’s affairs. The crisis in those affairs which has brought me here is of quite recent date—in fact, it dates from this evening. But I know your partiality for having events related in their proper sequence, so I will leave today’s happenings for the moment and tell you the story—the whole of which is material to the case—from the beginning.”

Here there was a slight interruption, due to Polton’s noiseless entry with a tray on which was a decanter, a biscuit box, and three port glasses. This he deposited, on a small table, which he placed within convenient reach of our guest. Then, with a glance of altruistic satisfaction at our old friend, he stole out like a benevolent ghost.

“Dear, dear!” exclaimed Brodribb, beaming on the decanter, “this is really too bad. You ought not to indulge me in this way.”
“My dear Brodribb,” replied Thorndyke, “you are a benefactor to us. You give us a pretext for taking a glass of port. We can’t drink alone, you know.”

“I should, if I had a cellar like yours,” chuckled Brodribb, sniffing ecstatically at his glass. He took a sip, with his eyes closed, savoured it solemnly, shook his head, and set the glass down on the table.

“To return to our case,” he resumed; “Miss Bonney is the daughter of a solicitor, Harold Bonney—you may remember him. He had offices in Bedford Row; and there, one morning, a client came to him and asked him to take care of some property while he, the said client, ran over to Paris, where he had some urgent business. The property in question was a collection of pearls of most unusual size and value, forming a great necklace, which had been unstrung for the sake of portability. It is not clear where they came from, but as the transaction occurred soon after the Russian Revolution, we may make a guess. At any rate, there they were, packed loosely in a leather bag, the string of which was sealed with the owner’s seal.

“Bonney seems to have been rather casual about the affair. He gave the client a receipt for the bag, stating the nature of the contents, which he had not seen, and deposited it, in the client’s presence, in the safe in his private office. Perhaps he intended to take it to the bank or transfer it to his strong-room, but it is evident that he did neither; for his managing clerk, who kept the second key of the strong-room—without which the room could not be opened—knew nothing of the transaction. When he went home at about seven o’clock, he left Bonney hard at work in his office, and there is no doubt that the pearls were still in the safe.

“That night, at about a quarter to nine, it happened that a couple of C.I.D. officers were walking up Bedford Row when they saw three men come out of one of the houses. Two of them turned up towards Theobald’s Road, but the third came south, towards them. As he passed them, they both recognised him as a Japanese named Uyenishi, who was believed to be a member of a cosmopolitan gang and whom the police were keeping under observation. Naturally, their suspicions were aroused. The first two men had hurried round the corner and were out of sight; and when they turned to look after Uyenishi, he had mended his pace considerably and was looking back at them. Thereupon one of the officers, named Barker, decided to follow the Jap, while the other, Holt, reconnoitred the premises.

“Now, as soon as Barker turned, the Japanese broke into a run. It was just such a night as this dark and, slightly foggy. In order to keep his man in sight, he had to run, too; and he found that he had a sprinter to deal with. From the bottom of Bedford Row, Uyenishi darted across and shot down Hand Court like a lamp-lighter. Barker followed, but at the Holborn end his man was nowhere to be seen. However, he presently learned from a man at a shop door that the fugitive had run past and turned up Brownlow Street, so off he went again in pursuit. But when he got to the top of the street, back in Bedford Row, he was done. There was no sign of the man, and no one about from whom he could make inquiries. All he could do was to cross the road and walk up Bedford Row to see if Holt had made any discoveries.

“As he was trying to identify the house, his colleague came out on to the doorstep and beckoned him in and this was the story that he told. He had recognised the house by the big lamp-standard; and as the place was all dark, he had gone into the entry and tried the office door. Finding it unlocked, he had entered the clerks’ office, lit the gas, and tried the door of the private office, but found it locked. He knocked at it, but getting no answer, had a good look round the clerk’s office; and there, presently, on the floor in a dark corner, he found a key. This he tried in the door of the private office, and finding that it fitted, turned it and opened the door. As he did so, the light from the outer office fell on the body of a man lying on the floor just inside.

“A moment’s inspection showed that the man had been murdered—first knocked on the head and then finished with a knife. Examination of the pockets showed that the dead man was Harold Bonney, and also that no robbery from the person seemed to have been committed. Nor was there any sign of any other kind of robbery. Nothing seemed to have been disturbed, and the safe had not been broken into, though that was not very conclusive, as the safe key was in the dead man’s pocket. However, a murder had been committed, and obviously Uyenishi was either the murderer or an accessory; so Holt had, at once, rung up Scotland Yard on the office telephone, giving all the particulars.

“I may say at once that Uyenishi disappeared completely and at once. He never went to his lodgings at Limehouse, for the police were there before he could have arrived. A lively hue and cry was kept up. Photographs of the wanted man were posted outside every police-station, and a watch was set at all the ports. But he was never found. He must have got away at once on some outward-bound tramp from the Thames. And there we will leave him for the moment.

“At first it was thought that nothing had been stolen, since the managing clerk could not discover that anything was missing. But a few days later the client returned from Paris, and presenting his receipt, asked for his pearls. But the pearls had vanished. Clearly they had been the object of the crime. The robbers must have known about them and traced them to the office. Of course the safe had been opened with its own key, which was then replaced in the dead man’s pocket.

“Now, I was poor Bonney’s executor, and in that capacity I denied his liability in respect of the pearls on the ground that he was a gratuitous bailee—the being no evidence that any consideration had been demanded—and that being murdered cannot be construed as negligence. But Miss Mabel, who was practically the sole legatee, insisted on accepting liability. She said that the pearls could have been secured in the bank or the strong-room, and that she was morally, if not legally, liable for their loss; and she insisted on handing to the owner the full amount at which he valued them. It was a wildly foolish proceeding, for he would certainly have accepted half the sum. But still I take my hat off to a person—a man or woman—who can accept poverty in preference to a broken covenant; and here Brodribb, being in fact that sort of person himself, had to be consoled with a replenished glass.
“And mind you,” he resumed, “when I speak of poverty, I wish to be taken literally. The estimated value of those pearls was fifty thousand pounds—if you can imagine anyone out of Bedlam giving such a sum for a parcel of trash like that; and when poor Mabel Bonney had paid it, she was left with the prospect of having to spread her butter mighty thin for the rest of her life. As a matter of fact, she had to sell one after another of her little treasures to pay just her current expenses, and I’m hanged if I can see how she is going to carry on when she has sold the last of them. But there, I mustn’t take up your time with her private troubles. Let us return to our muttons.

"First, as to the pearls They were never traced, and it seems probable that they were never disposed of. For, you see, pearls are different from any other kind of gems. You can cut up a big diamond, but you can’t cut up a big pearl. And the great value of this necklace was due not only to the size, the perfect shape and ‘orient’ of the separate pearls, but to the fact that the whole set was perfectly matched. To break up the necklace was to destroy a good part of its value.

"And now as to our friend Uyenishi. He disappeared, as I have said; but he reappeared at Los Angeles, in custody of the police, charged with robbery and murder. He was taken red-handed and was duly convicted and sentenced to death; but for some reason—or more probably, for no reason, as we should think—the sentence was commuted to imprisonment for life. Under these circumstances, the English police naturally took no action, especially as they really had no evidence against him.

"Now Uyenishi was, by trade, a metal-worker; a maker of those pretty trifles that are so dear to the artistic Japanese, and when he was in prison he was allowed to set up a little workshop and practise his trade on a small scale. Among other things that he made was a little casket in the form of a seated figure, which he said he wanted to give to his brother as a keepsake. I don’t know whether any permission was granted for him to make this gift, but that is of no consequence; for Uyenishi got influenza and was carried off in a few days by pneumonia; and the prison authorities learned that his brother had been killed, a week or two previously, in a shooting affair at San Francisco. So the casket remained on their hands.

"About this time, Miss Bonney was invited to accompany an American lady on a visit to California, and accepted gratefully. While she was there she paid a visit to the prison to inquire whether Uyenishi had ever made any kind of statement concerning the missing pearls. Here she heard of Uyenishi’s recent death; and the governor of the prison, as he could not give her any information, handed over to her the casket as a sort of memento. This transaction came to the knowledge of the press, and—well, you know what the Californian press is like. There were ‘some comments’, as they would say, and quite an assortment of Japanese, of shady antecedents, applied to the prison to have the casket ‘restored’ to them as Uyenishi’s heirs. Then Miss Bonney’s rooms at the hotel were raided by burglars—but the casket was in the hotel strong-room—and Miss Bonney and her hostess were shadowed by various undesirables in such a disturbing fashion that the two ladies became alarmed and secretly made their way to New York. But there another burglary occurred, with the same unsuccessful result, and the shadowing began again. Finally, Miss Bonney, feeling that her presence was a danger to her friend, decided to return to England, and managed to get on board the ship without letting her departure be known in advance.

"But even in England she has not been left in peace. She has had an uncomfortable feeling of being watched and attended, and has seemed to be constantly meeting Japanese men in the streets, especially in the vicinity of her house. Of course, all the fuss is about this infernal casket; and when she told me what was happening, I promptly popped the thing in my pocket and took it, to my office, where I stowed it in the strong-room. And there, of course, it ought to have remained. but it didn’t. One day Miss Bonney told me that she was sending some small things to a loan exhibition of oriental works of art at the South Kensington Museum, and she wished to include the casket. I urged her strongly to do nothing of the kind, but she persisted; and at the end of it was that we went to the museum together, with her pottery and stuff in a handbag and the casket in my pocket.

"It was a most imprudent thing to do, for there the beastly casket was, for several months, exposed in a glass case for anyone to see, with her name on the label; and what was worse, full particulars of the origin of the thing. However, nothing happened while it was there—the museum is not an easy place to steal from—and all went well until it was time to remove the things after the close of the exhibition. Now, to-day was the appointed day, and, as on the previous occasion, she and I went to the museum together. But the unfortunate thing is that we didn’t come away together. Her other exhibits were all pottery, and these were dealt with first, so that she had her handbag packed and was ready to go before they had begun on the metal work cases. As we were not going the same way, it didn’t seem necessary for her to wait; so she went off with her bag and I stayed behind until the casket was released, when I put it in my pocket and went home, where I locked the thing up again in the strong-room.

"It was about seven when I got home. A little after eight I heard the telephone ring down in the office, and down I went, cursing the untimely ringer, who turned out to be a policeman at St. George’s Hospital. He said he had found Miss Bonney lying unconscious in the street and had taken her to the hospital, where she had been detained for a while, but she was now recovered and he was taking her home. She would like me, if possible, to go and see her at once. Well, of course, I set off forthwith and got to her house a few minutes after her arrival, and just after you had left.

"She was a good deal upset, so I didn’t worry her with many questions, but she gave me a short account of her misadventure, which amounted to this: She had started to walk home from the museum along the Brompton Road, and she was passing down a quiet street between that and Fulham Road when she heard soft footsteps behind her. The next moment, a scarf or shawl was thrown over her head and drawn tightly round her neck. At the same moment, the bag was snatched from her hand. That is all that she remembers, for she was so terrified that she fainted, and knew no more until
she found herself in a cab with two policemen who were taking her to the hospital.

“Now it is obvious that her assailants were in search of that damned casket, for the bag had been broken open and searched, but nothing taken or damaged; which suggests the Japanese again, for a British thief would have smashed the crockery. I found your card there, and I put it to Miss Bonney that we had better ask you to help us—I told her all about you—and she agreed emphatically. So that is why I am here, drinking your port and robbing you of your night’s rest.”

“And what do you want me to do?” Thorndyke asked.

“Whatever you think best,” was the cheerful reply. “In the first place, this nuisance must be put a stop to—this shadowing and hanging about. But apart from that, you must see that there is something queer about this accursed casket. The beastly thing is of no intrinsic value. The museum man turned up his nose at it. But it evidently has some extrinsic value, and no small value either. If it is good enough for these devils to follow it all the way from the States, as they seem to have done, it is good enough for us to try to find out what its value is. That is where you come in. I propose to bring Miss Bonney to see you to-morrow, and I will bring the infernal casket, too. Then you will ask her a few questions, take a look at the casket—through the microscope, if necessary—and tell us all about it in your usual necromantic way.”

Thorndyke laughed as he refilled our friend’s glass. “If faith will move mountains, Brodribb,” said he, “you ought to have been a civil engineer. But it is certainly a rather intriguing problem.”

“Ha!” exclaimed the old solicitor; “then it’s all right. I’ve known you a good many years, but I’ve never known you to be stumped; and you are not going to be stumped now. What time shall I bring her? Afternoon or evening would suit her best.”

“Very well,” replied Thorndyke; “bring her to tea—say, five o’clock. How will that do?”

“Excellent; and here’s good luck to the adventure.” He drained his glass, and the decanter being now empty, he rose, shook our hands warmly, and took his departure in high spirits.

It was with a very lively interest that I looked forward to the prospective visit. Like Thorndyke, I found the case rather intriguing. For it was quite clear, as our shrewd old friend had said, that there was something more than met the eye in the matter of this casket.

Hence, on the following afternoon, when, on the stroke of five, footsteps became audible on our stairs, I awaited the arrival of our new client with keen curiosity, both as to herself and her mysterious property.

To tell the truth, the lady was better worth looking at than the casket. At the first glance, I was strongly prepossessed in her favour, and so, I think, was Thorndyke. Not that she was a beauty, though comely enough. But she was an example of a type that seems to be growing rarer; quiet, gentle, soft-spoken, and a lady to her finger-tips; a little sad-faced and care worn, with a streak or two of white in her prettily-disposed black hair, though she could not have been much over thirty-five. Altogether a very gracious and winning personality.

When we had been presented to her by Brodribb—who treated her as if she had been a royal personage—and had enthroned her in the most comfortable easy-chair, we inquired as to her health, and were duly thanked for the salvage of the bag. Then Polton brought in the tray, with an air that seemed to demand an escort of choristers; the tea was poured out, and the informal proceedings began.

She had not, however, much to tell; for she had not seen her assailants, and the essential facts of the case had been fully presented in Brodribb’s excellent summary. After a very few questions, therefore, we came to the next stage; which was introduced by Brodribb’s taking from his pocket a small parcel which he proceeded to open.

“Here,” said he, “that is the fons et origo mali. Not much to look at, I think you will agree.” He set the object down on the table and glared at it malevolently, while Thorndyke and I regarded it with a more impersonal interest. It was not much to look at. Just an ordinary Japanese casket in the form of a squat, shapeless figure with a silly little grinning face, of which the head and shoulders opened on a hinge; a pleasant enough object, with its quiet, warm colouring, but certainly not a masterpiece of art.

Thorndyke picked it up and turned it over slowly for preliminary inspection; then he went on to examine it detail by detail, watched closely, in his turn, by Brodribb and me. Slowly and methodically, his eye—fortified by a watchmaker’s eyeglass—travelled over every part of the exterior. Then he opened it, and I having examined the inside of the lid, scrutinised the bottom from within, long and attentively. Finally, he turned the casket upside down and examined the bottom from without, giving to it the longest and most rigorous inspection of all—which puzzled me somewhat, for the bottom was absolutely plain. At length, he passed the casket and the eyeglass to me without comment.

“Well,” said Brodribb, “what is the verdict?”

“It is of no value as a work of art,” replied Thorndyke. “The body and lid are just castings of common white metal—an antimony alloy, I should say. The bronze colour is lacquer.”

“So the museum man remarked,” said Brodribb.

“But,” continued Thorndyke, “there is one very odd thing about it. The only piece of fine metal in it is in the part which matters least. The bottom is a separate plate of the alloy known to the Japanese as Shakudo—an alloy of copper and gold.”

“Yes,” said Brodribb, “the museum man noted that, too, and couldn’t make out why it had been put there.”
“Then,” Thorndyke continued, “there is another anomalous feature; the inside of the bottom is covered with elaborate decoration—just the place where decoration is most inappropriate, since it would be covered up by the contents of the casket. And, again, this decoration is etched; not engraved or chased. But etching is a very unusual process for this purpose, if it is ever used at all by Japanese metal-workers. My impression is that it is not; for it is most unsuitable for decorative purposes. That is all that I observe, so far.”

“And what do you infer from your observations?” Brodribb asked.

“I should like to think the matter over,” was the reply. “There is an obvious anomaly, which must have some significance. But I won’t embark on speculative opinions at this stage. I should like, however, to take one or two photographs of the casket, for reference; but that will occupy some time. You will hardly want to wait so long.”

“No,” said Brodribb. “But Miss Bonney is coming with me to my office to go over some documents and discuss a little business. When we have finished, I will come back and fetch the confounded thing.”

“There is no need for that,” replied Thorndyke. “As soon as I have done what is necessary, I will bring it up to your place.”

To this arrangement Brodribb agreed readily, and he and his client prepared to depart. I rose, too, and as I happened to have a call to make in Old Square, Lincoln’s Inn, I asked permission to walk with them.

As we came out into King’s Bench Walk I noticed a smallish, gentlemanly-looking man who had just passed our entry and now turned in at the one next door; and by the light of the lamp in the entry he looked to me like a Japanese. I thought Miss Bonney had observed him, too, but she made no remark, and neither did I. But, passing up Inner Temple Lane, we nearly overtook two other men, who—though I got but a back view of them and the light was feeble enough—aroused my suspicions by their neat, small figures. As we approached, they quickened their pace, and one of them looked back over his shoulder; and then my suspicions were confirmed, for it was an unmistakable Japanese face that looked round at us. Miss Bonney saw that I had observed the men, for she remarked, as they turned sharply at the Cloisters and entered Pump Court: “You see, I am still haunted by Japanese.”

“I noticed them,” said Brodribb. “They are probably law students. But we may as well be companionable;” and with this, he, too, headed for Pump Court.

We followed our oriental friends across the Lane into Fountain Court, and through that and Devereux Court out to Temple Bar, where we parted from them; they turning westward and we crossing to Bell Yard, up which we walked, entering New Square by the Carey Street gate. At Brodribb’s doorway we halted and looked back, but no one was in sight. I accordingly went my way, promising to return anon to hear Thorndyke’s report, and the lawyer and his client disappeared through the portal.

My business occupied me longer than I had expected, but nevertheless, when I arrived at Brodribb’s premises—where he lived in chambers over his office—Thorndyke had not yet made his appearance. A quarter of an hour later, however, we heard his brisk step on the stairs, and as Brodribb threw the door open, he entered and produced the casket from his pocket.

“Well,” said Brodribb, taking it from him and locking it, for the time being, in a drawer, “has the oracle Spoken; and if so, what did he say?”

“Oracles,” replied Thorndyke, “have a way of being more concise than explicit. Before I attempt to interpret the message, I should like to view the scene of the escape; to see if there was any intelligible reason why this man Uyenishi should have returned up Brownlow Street into what must have been the danger zone. I think that is a material question.”

“Then,” said Brodribb, with evident eagerness, “let us all walk up and have a look at the confounded place. It is quite close by.”

We all agreed instantly, two of us, at least, being on the tip-toe of expectation. For Thorndyke, who habitually understated his results, had virtually admitted that the casket had told him something; and as we walked up the Square to the gate in Lincoln’s Inn Fields, I watched him furtively, trying to gather from his impassive face a hint as to what the something amounted to, and wondering how the movements of the fugitive bore on the solution of the mystery. Brodribb was similarly occupied, and as we crossed from Great Turnstile and took our way up Brownlow Street, I could see that his excitement was approaching bursting-point.

At the top of the street Thorndyke paused and looked up and down the rather dismal thoroughfare which forms a continuation of Bedford Row and bears its name. Then he crossed to the paved island surrounding the pump which stands in the middle of the road, and from thence surveyed the entrances to Brownlow Street and Hand Court; and then he turned and looked thoughtfully at the pump.

“A quaint old survivor, this,” he remarked, tapping the iron shell with his knuckles. “There is a similar one, you may remember, in Queen Square, and another at Aldgate. But that is still in use.”

“Yes,” Brodribb assented, almost dancing with impatience and inwardly damning the pump, as I could see, “I’ve noticed it.”

“I suppose,” Thorndyke proceeded, in a reflective tone, “they had to remove the handle. But it was rather a pity.”
“Perhaps it was,” growled Brodribb, whose complexion was rapidly developing affinities to that of a pickled cabbage, “but what the d—”

Here he broke off short and glared silently at Thorndyke, who had raised his arm and squeezed his hand into the opening once occupied by the handle. He grooped in the interior with an expression of placid interest, and presently reported: “The barrel is still there, and so, apparently, is the plunger”—(Here I heard Brodribb mutter huskily, "Damn the barrel and the plunger too!“)—“but my hand is rather large for the exploration. Would you, Miss Bonney, mind slipping your hand in and telling me if I am right?”

We all gazed at Thorndyke in dismay, but in a moment Miss Bonney recovered from her astonishment, and with a deprecating smile, half shy, half amused, she slipped off her glove, and reaching up—it was rather high for her—inserted her hand into the narrow slit. Brodribb glared at her and gobbled like a turkey-cock, and I watched her with a sudden suspicion that something was going to happen. Nor was I mistaken. For, as I looked, the shy, puzzled smile faded from her face and was succeeded by an expression of incredulous astonishment. Slowly she withdrew her hand, and as it came out of the slit it dragged something after it. I started forward, and by the light of the lamp above the pump I could see that the object was a leather bag secured by a string from which hung a broken seal.

“It can’t be!” she gasped as, with trembling fingers, she untied the string. Then, as she peered into the open mouth, she uttered a little cry. “It is! It is! It is the necklace!”

Brodribb was speechless with amazement. So was I; and I was still gazing open-mouthed at the bag in Miss Bonney’s hands when I felt Thorndyke touch my arm. I turned quickly and found him offering me an automatic pistol. “Stand by, Jervis,” he said quietly, looking towards Gray’s Inn.

I looked in the same direction, and then perceived three men stealing round the corner from Jockey’s Fields. Brodribb saw them, too, and snatching the bag of pearls from his client’s hands, buttoned it into his breast pocket and placed himself before its owner, grasping his stick with a war-like air. The three men filed along the pavement until they were opposite us, when they turned simultaneously and bore down on the pump, each man, as I noticed, holding his right hand behind him. In a moment, Thorndyke’s hand, grasping a pistol, flew up—as did mine, also—and he called out sharply: “Stop! If any man moves a hand, I fire.”

The challenge brought them up short, evidently unprepared for this kind of reception. What would have happened next it is impossible to guess. But at this moment a police whistle sounded and two constables ran out from Hand Court. The whistle was instantly echoed from the direction of Warwick Court, whence two more constabulary figures appeared through the postern gate of Gray’s Inn. Our three attendants hesitated but for an instant. Then, with one accord, they turned tail and flew like the wind round into Jockey’s Fields, with the whole posse of constables close on their heels.

“Remarkable coincidence,” said Brodribb, “that those policemen should happen to be on the look-out. Or isn’t it a coincidence?”

“I telephoned to the station superintendent before I started,” replied Thorndyke, “warning him of a possible breach of the peace at this spot.”

Brodribb chuckled. “You’re a wonderful man, Thorndyke. You think of everything. I wonder if the police will catch those fellows.”

“It is no concern of ours,” replied Thorndyke. “We’ve got the pearls, and that finishes the business. There will be no more shadowing, in any case.”

Miss Bonney heaved a comfortable little sigh and glanced gratefully at Thorndyke. “You can have no idea what a relief that is!” she exclaimed; “to say nothing of the treasure-trove.”

We waited some time, but as neither the fugitives nor the constables reappeared, we presently made our way back down Brownlow Street. And there it was that Brodribb had an inspiration.

“I’ll tell you what,” said be. “I will just pop these things in my strong-room—they will be perfectly safe there until the bank opens to-morrow—and then we’ll go and have a nice little dinner. I’ll pay the piper.”

“Indeed you won’t!” exclaimed Miss Bonney. “This is my thanksgiving festival, and the benevolent wizard shall be the guest of the evening.”

“Very well, my dear,” agreed Brodribb. “I will pay and charge it to the estate. But I stipulate that the benevolent wizard shall tell us exactly what the oracle said. That is essential to the preservation of my sanity.”

“You shall have his ipsissima verba,” Thorndyke promised; and the resolution was carried, nem. con.

An hour and a half later we were seated around a table in a private room of a café to which Mr. Brodribb had conducted us. I may not divulge its whereabouts, though I may, perhaps, hint that we approached it by way of Wardour Street. At any rate, we had dined, even to the fulfillment of Brodribb’s ideal, and coffee and liqueurs furnished a sort of gastronomic doxology. Brodribb had lighted a cigar and Thorndyke had produced a vicious-looking little black cheroot, which he regarded fondly and then returned to its abiding-place as unsuited to the present company.

“Now,” said Brodribb, watching Thorndyke fill his pipe (as understudy of the cheroot aforesaid), “we are waiting to hear the words of the oracle.”
“You shall hear them,” Thorndyke replied. “There were only five of them. But first, there are certain introductory matters to be disposed of. The solution of this problem is based on two well-known physical facts, one metallurgical and the other optical.”

“Ha!” said Brodribb. “But you must temper the wind to the shorn lamb, you know, Thorndyke. Miss Bonney and I are not scientists.”

“I will put the matter quite simply, but you must have the facts. The first relates to the properties of malleable metals—excepting iron and steel—and especially of copper and its alloys. If a plate of such metal or alloy—say, bronze, for instance—is made red-hot and quenched in water, it becomes quite soft and flexible—the reverse of what happens in the case of iron. Now, if such a plate of softened metal be placed on a steel anvil and hammered, it becomes extremely hard and brittle.”

“I follow that,” said Brodribb.

“Then see what follows. If, instead of hammering the soft plate, you put on it the edge of a blunt chisel and strike on that chisel a sharp blow, you produce an indented line. Now the plate remains soft; but the metal forming the indented line has been hammered and has become hard. There is now a line of hard metal on the soft plate. Is that clear?”

“Perfectly,” replied Brodribb; and Thorndyke accordingly continued: “The second fact is this: If a beam of light falls on a polished surface which reflects it, and that surface is turned through a given angle, the beam of light is deflected through double that angle.”

“If I’m!” grunted Brodribb. “Yes. No doubt. I hope we are not going to get into any deeper waters, Thorndyke.”

“We are not,” replied the latter, smiling urbanely. “We are now going to consider the application of these facts. Have you ever seen a Japanese magic mirror?”

“Never; nor even heard of such a thing.”

“They are bronze mirrors, just like the ancient Greek or Etruscan mirrors—which are probably ‘magic’ mirrors, too. A typical specimen consists of a circular or oval plate of bronze, highly polished on the face and decorated on the back with chased ornament—commonly a dragon or some such device—and furnished with a handle. The ornament is, as I have said, chased; that is to say, it is executed in indented lines made with chasing tools, which are, in effect, small chisels, more or less blunt, which are struck with a chasing-hammer.

“Now these mirrors have a very singular property. Although the face is perfectly plain, as a mirror should be, yet, if a beam of sunlight is caught on it and reflected, say, on to a white wall, the round or oval patch of light on the wall is not a plain light patch. It shows quite clearly the ornament on the back of the mirror.”

“But how extraordinary!” exclaimed Miss Bonney.

“It sounds quite incredible.” I said.

“It does,” Thorndyke agreed. “And yet the explanation is quite simple. Professor Sylvanus Thompson pointed it out years ago. It is based on the facts which I have just stated to you. The artist who makes one of these mirrors begins, naturally, by annealing the metal until it is quite soft. Then he chases the design on the back, and this design then shows slightly on the face. But he now grinds the face perfectly flat with fine emery and water so that the traces of the design are completely obliterated. Finally, he polishes the face with rouge on a soft buff.

“But now observe that wherever the chasing-tool has made a line, the metal is hardened right through, so that the design is in hard metal on a soft matrix. But the hardened metal resists the wear of the polishing buffer more than the soft metal does. The result is that the act of polishing causes the design to appear in faint relief on the face. Its projection is infinitesimal—less than the hundred-thousandth of an inch—and totally invisible to the eye. But, minute as it is, owing to the optical law which I mentioned—which, in effect, doubles the projection—it is enough to influence the reflection of light. As a consequence, every chased line appears on the patch of light as a dark line with a bright border, and so the whole design is visible. I think that is quite clear.”

“Perfectly clear,” Miss Bonney and Brodribb agreed.

“But now,” pursued Thorndyke, “before we come to the casket, there is a very curious corollary which I must mention. Supposing our artist, having finished the mirror, should proceed with a scraper to erase the design from the back; and on the blank, scraped surface to etch a new design. The process of etching does not harden the metal, so the new design does not appear on the reflection. But the old design would. For although it was invisible on the face and had been erased from the back, it would still exist in the substance of the metal and continue to influence the reflection. The odd result would be that the design which would be visible in the patch of light on the wall would be a different one from that on the back of the mirror.

“No doubt, you see what I am leading up to. But I will take the investigation of the casket as it actually occurred. It was obvious, at once, that the value of the thing was extrinsic. It had no intrinsic value, either in material or workmanship. What could that value be? The clear suggestion was that the casket was the vehicle of some secret message or information. It had been made by Uyenishi, who had almost certainly had possession of the missing pearls, and who had been so closely pursued that he never had an opportunity to communicate with his confederates. It was to be given to a man who was almost certainly one of those confederates; and, since the pearls had never been traced, there was a distinct probability
that the (presumed) message referred to some hiding-place in which Uyenishi had concealed them during his flight, and
where they were probably still hidden.

"With these considerations in my mind, I examined the casket, and this was what I found. The thing, itself, was a
common white-metal casting, made presentable by means of lacquer. But the white metal bottom had been cut out and
replaced by a plate of fine bronze—Shakudo. The inside of this was covered with an etched design, which immediately
aroused my suspicions. Turning it over, I saw that the outside of the bottom was not only smooth and polished; it was a
true mirror. It gave a perfectly undistorted reflection of my face. At once, I suspected that the mirror held the secret; that
the message, whatever it was, had been chased on the back, had then been scraped away and an etched design worked on it
to hide the traces of the scraper.

"As soon as you were gone, I took the casket up to the laboratory and threw a strong beam of parallel light from a
condenser on the bottom, catching the reflection on a sheet of white paper. The result was just what I had expected. On the
bright oval patch on the paper could be seen the shadowy, but quite distinct, forms of five words in the Japanese character.

"I was in somewhat of a dilemma, for I have no knowledge of Japanese, whereas the circumstances were such as to make
it rather unsafe to employ a translator. However, as I do just know the Japanese characters and possess a Japanese
dictionary, I determined to make an attempt to fudge out the words myself. If I failed, I could then look for a discreet
translator.

"However, it proved to be easier than I had expected, for the words were detached; they did not form a sentence, and so
involved no questions of grammar. I spelt out the first word and then looked it up in the dictionary. The translation was
'pearls.' This looked hopeful, and I went on to the next, of which the translation was 'pump.' The third word floored me. It
seemed to be 'jokkis,' or 'jokkish,' but there was no such word in the dictionary; so I turned to the next word, hoping that it
would explain its predecessor. And it did. The fourth word was 'fields,' and the last word was evidently 'London.' So the
entire group read 'Pearls, Pump, Jokkis, Fields, London.'

"Now, there is no pump, so far as I know, in Jockey Fields, but there is one in Bedford Row close to the corner of the
Fields, and exactly opposite the end of Brownlow Street And by Mr. Brodribb's account, Uyenishi, in his flight, ran down
Hand Court and returned up Brownlow Street, as if he were making for the pump. As the latter is disused and the handle-
hole is high up, well out of the way of children, it offers quite a good temporary hiding-place, and I had no doubt that the
bag of pearls had been poked into it and was probably there still. I was tempted to go at once and explore; but I was
anxious that the discovery should be made by Miss Bonney, herself, and I did not dare to make a preliminary exploration
for fear of being shadowed. If I had found the treasure I should have had to take it and give it to her; which would have
been a flat ending to the adventure. So I had to dissemble and be the occasion of much smothered objurgation on the part
of my friend Brodribb. And that is the whole story of my interview with the oracle."

Our mantelpiece is becoming a veritable museum of trophies of victory, the gifts of grateful clients. Among them is a
squat, shapeless figure of a Japanese gentleman of the old school, with a silly grinning little face—The Magic Casket. But its
possession is no longer a menace. Its sting has been drawn; its magic is exploded; its secret is exposed, and its glory
departed.

THE CONTENTS OF A MARE’S NEST

"IT is very unsatisfactory,” said Mr. Stalker, of the Griffin Life Assurance Company, at the close of a consultation on a
doubtful claim. "I suppose we shall have to pay up."

"I am sure you will,” said Thorndyke. “The death was properly certified, the deceased is buried, and you have not a single
fact with which to support an application for further inquiry.”

"No,” Stalker agreed. "But I am not satisfied. I don’t believe that doctor really knew what she died from. I wish cremation
were more usual.”

"So, I have no doubt, has many a poisoner,” Thorndyke remarked dryly.

Stalker laughed, but stuck to his point. "I know you don’t agree,” said he, "but from our point of view it is much more
satisfactory to know that the extra precautions have been taken. In a cremation case, you have not to depend on the mere
death certificate; you have the cause of death verified by an independent authority, and it is difficult to see how any
miscarriage can occur.”

Thorndyke shook his head. "It is a delusion, Stalker. You can’t provide in advance for unknown contingencies. In
practice, your special precautions degenerate into mere formalities. If the circumstances of a death appear normal, the
independent authority will certify; if they appear abnormal, you won’t get a certificate at all. And if suspicion arises only
after the cremation has taken place, it can neither be confirmed nor rebutted.”

"My point is,” said Stalker, “that the searching examination would lead to discovery of a crime before cremation.”

"That is the intention,” Thorndyke admitted. "But no examination, short of an exhaustive post-mortem, would make it
safe to destroy a body so that no reconsideration of the cause of death would be possible.”

Stalker smiled as he picked up his hat. "Well,” he said, "to a cobbler there is nothing like leather, and I suppose that to a
toxicologist there is nothing like an exhumation,” and with this parting shot he took his leave.

We had not seen the last of him, however. In the course of the same week he looked in to consult us on a fresh matter.

“A rather queer case has turned up,” said he. “I don’t know that we are deeply concerned in it, but we should like to have your opinion as to how we stand. The position is this: Eighteen months ago, a man named Ingle insured with us for fifteen hundred pounds, and he was then accepted as a first-class life. He has recently died—apparently from heart failure, the heart being described as fatty and dilated—and his wife, Sibyl, who is the sole legatee and executrix, has claimed payment.

“But just as we were making arrangements to pay, a caveat has been entered by a certain Margaret Ingle, who declares that she is the wife of the deceased and claims the estate as next-of-kin. She states that the alleged wife, Sibyl, is a widow named Huggard who contracted a bigamous marriage with the deceased, knowing that he had a wife living.”

“An interesting situation,” commented Thorndyke, “but, as you say, it doesn’t particularly concern you. It is a matter for the Probate Court.”

“Yes,” agreed Stalker. “But that is not all. Margaret Ingle not only charges the other woman with bigamy; she accuses her of having made away with the deceased.”

“On what grounds?”

“Well, the reasons she gives are rather shadowy. She states that Sibyl’s husband, James Huggard, died under suspicious circumstances—there seems to have been some suspicion that he had been poisoned—and she asserts that Ingle was a healthy, sound man and could not have died from the causes alleged.”

“There is some reason in that,” said Thorndyke, “if he was really a first-class life only eighteen months ago. As to the first husband, Huggard, we should want some particulars: as to whether there was an inquest what was the alleged cause of death, and what grounds there were for suspecting that he had been poisoned. If there really were any suspicious circumstances, it would be advisable to apply to the Home Office for an order to exhume the body of Ingle and verify the cause of death.”

Stalker smiled somewhat sheepishly. “Unfortunately,” said he, “that is not possible. Ingle was cremated.”

“Aha!” said Thorndyke, “that is, as you say, unfortunate. It clearly increases the suspicion of poisoning, but destroys the means of verifying that suspicion.”

“I should tell you,” said Stalker, “that the cremation was in accordance with the provisions of the will.”

“That is not very material,” replied Thorndyke. “In fact, it rather accentuates the suspicious aspect of the case; for the knowledge that the death of the deceased would be followed by cremation might act as a further inducement to get rid of him by poison. There were two death certificates, of course?”

“Yes. The confirmatory certificate was given by Dr. Halbury, of Wimpole Street. The medical attendant was a Dr. Barber, of Howland Street. The deceased lived in Stock-Orchard Crescent, Holloway.”

“A good distance from Howland Street,” Thorndyke remarked. “Do you know if Halbury made a post-mortem? I don’t suppose he did.”

“No, he didn’t,” replied Stalker.

“Then,” said Thorndyke, “his certificate is worthless. You can’t tell whether a man has died from heart failure by looking at his dead body. He must have just accepted the opinion of the medical attendant. Do I understand that you want me to look into this case?”

“If you will. It is not really our concern whether or not the man was poisoned, though I suppose we should have a claim on the estate of the murderer. But we should like you to investigate the case; though how the deuce you are going to do it I don’t quite see.”

“Neither do I,” said Thorndyke. “However, we must get into touch with the doctors who signed the certificates, and possibly they may be able to clear the whole matter up.”

“Of course,” said I, “there is the other body—that of Huggard—which might be exhumed—unless he was cremated, too.”

“Yes,” agreed Thorndyke; “and for the purposes of the criminal law, evidence of poisoning in that case would be sufficient. But it would hardly help the Griffin Company, which is concerned exclusively with Ingle deceased. Can you let us have a précis of the facts relating to this case, Stalker?”

“I have brought one with me,” was the reply; “a short statement, giving names, addresses, dates, and other particulars. Here it is;” and he handed Thorndyke a sheet of paper bearing a tabulated statement.

When Stalker had gone Thorndyke glanced rapidly through the précis and then looked at his watch. “If we make our way to Wimpole Street at once,” said he, “we ought to catch Halbury. That is obviously the first thing to do. He signed the ‘C’ certificate, and we shall be able to judge from what he tells us whether there is any possibility of foul play. Shall we start now?”

As I assented, he slipped the précis in his pocket and we set forth. At the top of Middle Temple Lane we chartered a taxi by which we were shortly deposited at Dr. Halbury’s door and a few minutes later were ushered into his consulting room,
and found him shovelling a pile of letters into the waste-paper basket.

“How d’ye do?” he said briskly, holding out his hand. “I’m up to my eyes in arrears, you see. Just back from my holiday. What can I do for you?”

“We have called,” said Thorndyke, “about a man named Ingle.”

“Ingle—Ingle,” repeated Halbury. “Now, let me see—”

“Stock-Orchard Crescent, Holloway,” Thorndyke explained.

“Oh, yes. I remember him. Well, how is he?”

“He’s dead,” replied Thorndyke.

“Is he really?” exclaimed Halbury. “Now that shows how careful one should be in one’s judgments. I half suspected that fellow of malingering. He was supposed to have a dilated heart, but I couldn’t make out any appreciable dilatation. There was excited, irregular action. That was all. I had a suspicion that he had been dosing himself with trinitrine. Reminded me of the cases of cordite chewing that I used to meet with in South Africa. So he’s dead, after all. Well, it’s queer. Do you know what the exact cause of death was?”

“Failure of a dilated heart is the cause stated on the certificates—the body was cremated; and the ‘C’ Certificate was signed by you.”

“By me!” exclaimed the physician. “Nonsense! It’s a mistake. I signed a certificate for a Friendly Society. Ingle brought it here for me to sign—but I didn’t even know he was dead. Besides, I went away for my holiday a few days after I saw the man and only came back yesterday. What makes you think I signed the death certificate?”

Thorndyke produced Stalker’s précis and handed it to Halbury, who read out his own name and address with a puzzled frown. “This is an extraordinary affair,” said he. “It will have to be looked into.”

“It will, indeed,” assented Thorndyke; “especially as a suspicion of poisoning has been raised.”

“Ha!” exclaimed Halbury. “Then it was trinitrine, you may depend. But I suspected him unjustly. It was somebody else who was dosing him; perhaps that sly-looking baggage of a wife of his. Is anyone in particular suspected?

“Yes. The accusation, such as it is, is against the wife.”

“I’m. Probably a true bill. But she’s done us. Artful devil. You can’t get much evidence out of an urnful of ashes. Still, somebody has forged my signature. I suppose that is what the hussy wanted that certificate for—to get a specimen of my handwriting. I see the ‘B’ certificate was signed by a man named Meeking. Who’s he? It was Barber who called me in for an opinion.”

“I must find out who he is,” replied Thorndyke. “Possibly Dr. Barber will know. I shall go and call on him now.”

“Yes,” said Dr. Halbury, shaking hands as we rose to depart, “you ought to see Barber. He knows the history of the case, at any rate.”

From Wimpole Street we steered a course for Howland Street, and here we had the good fortune to arrive just as Dr. Barber’s car drew up at the door. Thorndyke introduced himself and me, and then introduced the subject of his visit, but said nothing, at first, about our call on Dr. Halbury.

“Ingle,” repeated Dr. Barber. “Oh, yes, I remember him. And you say he is dead. Well, I’m rather surprised. I didn’t regard his condition as serious.”

“Was his heart dilated?” Thorndyke asked.

“Not appreciably. I found nothing organic; no valvular disease. It was more like a tobacco heart. But it’s odd that Meeking didn’t mention the matter to me—he was my locum, you know. I handed the case over to him when I went on my holiday. And you say he signed the death certificate?”

“Yes; and the ‘B’ certificate for cremation, too.”

“Very odd,” said Dr. Barber. “Just come in and let us have a look at the day book.”

We followed him into the consulting room, and there, while he was turning over the leaves of the day book, I ran my eye along the shelf over the writing-table from which he had taken it; on which I observed the usual collection of case books and books of certificates and notification forms, including the book of death certificates.

“Yes!” said Dr. Barber, “here we are; ’Ingle, Mr., Stock-Orchard Crescent.’ The last visit was on the 4th of September, and Meeking seems to have given some sort of certificate. Wonder if he used a printed form.” He took down two of the books and turned over the counterfoils.

“Here we are,” he said presently; “’Ingle, Jonathan, 4 September. Now recovered and able to resume duties.’ That doesn’t look like dying, does it? Still, we may as well make sure.”

He reached down the book of death certificates and began to glance through the most recent entries.

“No,” he said, turning over the leaves, “there doesn’t seem to be—Hullo! What’s this? Two blank counterfoils; and about the date, too; between the 2nd and 13th of September. Extraordinary! Meeking is such a careful, reliable man.”
He turned back to the day book and read through the fortnight’s entries. Then he looked up with an anxious frown.

“I can’t make this out,” he said. “There is no record of any patient having died in that period.”

“Where is Dr. Meeking at present?” I asked.

“Somewhere in the South Atlantic,” replied Barber. “He left here three weeks ago to take up a post on a Royal Mail Boat. So he couldn’t have signed the certificate in any case.”

That was all that Dr. Barber had to tell us, and a few minutes later we took our departure.

“This case looks pretty fishy,” I remarked, as we turned down Tottenham Court Road.

“Yes,” Thorndyke agreed. “There is evidently something radically wrong. And what strikes me especially is the cleverness of the fraud; the knowledge and judgment and foresight that are displayed.”

“She took pretty considerable risks,” I observed.

“Yes, but only the risks that were unavoidable. Everything that could be foreseen has been provided for. All the formalities have been complied with—in appearance. And you must notice, Jervis, that the scheme did actually succeed. The cremation has taken place. Nothing but the incalculable accident of the appearance of the real Mrs. Ingle, and her vague and apparently groundless suspicions, prevented the success from being final. If she had not come on the scene, no questions would ever have been asked.”

“No,” I agreed. “The discovery of the plot is a matter of sheer bad luck. But what do you suppose has really happened?”

Thorndyke shook his head.

“It is very difficult to say. The mechanism of the affair is obvious enough, but the motives and purpose are rather incomprehensible. The illness was apparently a sham, the symptoms being produced by nitro-glycerine or some similar heart poison. The doctors were called in, partly for the sake of appearances and partly to get specimens of their handwriting. The fact that both the doctors happened to be away from home and one of them at sea at the time when verbal questions might have been asked—by the undertaker, for instance—suggests that this had been ascertained in advance. The death certificate forms were pretty certainly stolen by the woman when she was left alone in Barber’s consulting-room, and, of course, the cremation certificates could be obtained on application to the crematorium authorities. That is all plain sailing. The mystery is, what is it all about? Barber or Meeking would almost certainly have given a death certificate, although the death was unexpected, and I don’t suppose Halbury would have refused to confirm it. They would have assumed that their diagnosis had been at fault.”

“Do you think it could have been suicide, or an inadvertent overdose of trinitrine?”

“Hardly. If it was suicide, it was deliberate, for the purpose of getting the insurance money for the woman, unless there was some further motive behind. And the cremation, with all its fuss and formalities, is against suicide; while the careful preparation seems to exclude inadvertent poisoning. Then, what was the motive for the sham illness except as a preparation for an abnormal death?”

“That is true,” said I. “But if you reject suicide, isn’t it rather remarkable that the victim should have provided for his own cremation?”

“We don’t know that he did,” replied Thorndyke. “There is a suggestion of a capable forger in this business. It is quite possible that the will itself is a forgery.”

“So it is!” I exclaimed. “I hadn’t thought of that.”

“You see,” continued Thorndyke, “the appearances suggest that cremation was a necessary part of the programme; otherwise these extraordinary risks would not have been taken. The woman was sole executrix and could have ignored the cremation clause. But if the cremation was necessary, why was it necessary? The suggestion is that there was something suspicious in the appearance of the body; something that the doctors, would certainly have observed or that would have been discovered if an exhumation had taken place.”

“You mean some injury or visible signs of poisoning?”

“I mean something discoverable by examination even after burial.”

“But what about the undertaker? Wouldn’t he have noticed anything palpably abnormal?”

“An excellent suggestion, Jervis. We must see the undertaker. We have his address: Kentish Town Road—a long way from deceased’s house, by the way. We had better get on a bus and go there now.”

A yellow omnibus was approaching as he spoke. We hailed it and sprang on, continuing our discussion as we were borne northward.

Mr. Burrell, the undertaker, was a pensive-looking, profoundly civil man who was evidently in a small way, for he combined with his funeral functions general carpentry and cabinet making. He was perfectly willing to give any required information, but he seemed to have very little to give.

“I never really saw the deceased gentleman,” he said in reply to Thorndyke’s cautious inquiries. “When I took the measurements, the corpse was covered with a sheet; and as Mrs. Ingle was in the room, I made the business as short as
possible."

"You didn't put the body in the coffin, then?"

"No. I left the coffin at the house, but Mrs. Ingle said that she and the deceased gentleman's brother would lay the body in it."

"But didn't you see the corpse when you screwed the coffin-lid down?"

"I didn't screw it down. When I got there it was screwed down already. Mrs. Ingle said they had to close up the coffin, and I dare say it was necessary. The weather was rather warm; and I noticed a strong smell of formalin."

"Well," I said, as we walked back down the Kentish Town Road, "we haven't got much more forward."

"I wouldn't say that," replied Thorndyke. "We have a further instance of the extraordinary adroitness with which this scheme was carried out; and we have confirmation of our suspicion that there was something unusual in the appearance of the body. It is evident that this woman did not dare to let even the undertaker see it. But one can hardly help admiring the combination of daring and caution, the boldness with which these risks were taken, and the care and judgment with which they were provided against. And again I point out that the risks were justified by the result. The secret of that man's death appears to have been made secure for all time."

It certainly looked as if the mystery with which we were concerned were beyond the reach of investigation. Of course, the woman could be prosecuted for having forged the death certificates, to say nothing of the charge of bigamy. But that was no concern of ours or Stalker's. Jonathan Ingle was dead, and no one could say how he died.

On our arrival at our chambers we found a telegram that had just arrived, announcing that Stalker would call on us in the evening; and as this seemed to suggest that he had some fresh information we looked forward to his visit with considerable interest. Punctually at six o'clock he made his appearance and at once opened the subject.

"There are some new developments in this Ingle case," said he. "In the first place, the woman, Huggard, has bolted. I went to the house to make a few inquiries and found the police in possession. They had come to arrest her on the bigamy charge, but she had got wind of their intentions and cleared out. They made a search of the premises, but I don't think they found anything of interest except a number of rifle cartridges; and I don't know that they are of much interest either, for she could hardly have shot him with a rifle."

"What kind of cartridges were they?" Thorndyke asked.

Stalker put his hand in his pocket.

"The inspector let me have one to show you," said he; and he laid on the table a military cartridge of the pattern of some twenty years ago. Thorndyke picked it up, and taking from a drawer a pair of pliers drew the bullet out of the case and inserted into the latter a pair of dissecting forceps. When he withdrew the forceps, their points grasped one or two short strings of what looked like cat-gut.

"Cordite!" said I. "So Halbury was probably right, and this is how she got her supply." Then, as Stalker looked at me inquiringly, I gave him a short account of the results of our investigations.

"Ha!" he exclaimed, "the plot thickens. This juggling with the death certificates seems to connect itself with another kind of juggling that I came to tell you about. You know that Ingle was Secretary and Treasurer to a company that bought and sold land for building estates. Well, I called at their office after I left you and had a little talk with the chairman. From him I learned that Ingle had practically complete control of the financial affairs of the company, that he received and paid all moneys and kept the books. Of late, however, some of the directors have had a suspicion that all was not well with the finances, and at last it was decided to have the affairs of the company thoroughly overhauled by a firm of chartered accountants. This decision was communicated to Ingle, and a couple of days later a letter arrived from his wife saying that he had had a severe heart attack and asking that the audit of the books might be postponed until he recovered and was able to attend at the office."

"And was it postponed?" I asked.

"No," replied Stalker. "The accountants were asked to get to work at once, which they did; with the result that they discovered a number of discrepancies in the books and a sum of about three thousand pounds unaccounted for. It isn't quite obvious how the frauds were carried out, but it is suspected that some of the returned cheques are fakes with forged endorsements."

"Did the company communicate with Ingle on the subject?" asked Thorndyke.

"No. They had a further letter from Mrs. Ingle—that is, Huggard—saying that Ingle's condition was very serious; so they decided to wait until he had recovered. Then, of course, came the announcement of his death, on which the matter was postponed pending the probate of the will. I suppose a claim will be made on the estate, but as the executrix has absconded, the affair has become rather complicated."

"You were saying," said Thorndyke, "that the fraudulent death certificates seem to be connected with these frauds on the company. What kind of connection do you assume?"

"I assume—or at least, suggest," replied Stalker, "that this was a case of suicide. The man, Ingle, saw that his frauds were
discovered, or were going to be, and that he was in for a long term of penal servitude, so he just made away with himself. And I think that if the murder charge could be dropped, Mrs. Huggard might be induced to come forward and give evidence as to the suicide."

Thorndyke shook his head.

"The murder charge couldn’t be dropped," said he, "if it was suicide, Huggard was certainly an accessory; and in law, an accessory to suicide is an accessory to murder. But, in fact, no official charge of murder has been made, and at present there are no means of sustaining such a charge. The identity of the ashes might be assumed to be that stated in the cremation order, but the difficulty is the cause of death. Ingle was admittedly ill. He was attended for heart disease by three doctors. There is no evidence that he did not die from that illness."

"But the illness was due to cordite poisoning," said I, "That is what we believe. But no one could swear to it. And we certainly could not swear that he died from cordite poisoning."

"Then," said Stalker, "apparently there is no means of finding out whether his death was due to natural causes, suicide, or murder?"

"There is only one chance," replied Thorndyke. "It is just barely possible that the cause of death might be ascertainable by an examination of the ashes."

"That doesn’t seem very hopeful," said I. "Cordite poisoning would certainly leave no trace."

"We mustn’t assume that he died from cordite poisoning," said Thorndyke. "Probably he did not. That may have masked the action of a less obvious poison, or death might have been produced by some new agent."

"But," I objected, "how many poisons are there that could be detected in the ashes? No organic poison would leave any traces, nor would metallic poisons such as mercury, antimony, or arsenic."

"No," Thorndyke agreed. "But there are other metallic poisons which could be easily recovered from the ashes; lead, tin, gold, and silver, for instance. But it is useless to discuss speculative probabilities. The only chance that we have of obtaining any new facts is by an examination of the ashes. It seems infinitely improbable that we shall learn anything from it, but there is the bare possibility and we ought not to leave it untried."

Neither Stalker nor I made any further remark, but I could see that the same thought was in both our minds. It was not often that Thorndyke was "gravelled;" but apparently the resourceful Mrs. Huggard had set him a problem that was beyond even his powers. When an investigator of crime is reduced to the necessity of examining a potful of ashes in the wild hope of ascertaining from them how the deceased met his death, one may assume that he is at the very end of his tether. It is a forlorn hope indeed.

Nevertheless, Thorndyke seemed to view the matter quite cheerfully, his only anxiety being lest the Home Secretary should refuse to make the order authorising the examination. And this anxiety was dispelled a day or two later by the arrival of a letter giving the necessary authority, and informing him that a Dr. Hemming—known to us both as an expert pathologist—had been deputed to be present at the examination and to confer with him as to the necessity for a chemical analysis.

On the appointed day Dr. Hemming called at our chambers and we set forth together for Liverpool Street; and as we drove thither it became evident to me that his view of our mission was very similar to my own. For, though he talked freely enough, and on professional topics, he maintained a most discreet silence on the subject of the forthcoming inspection; indeed, the first reference to the subject was made by Thorndyke himself just as the train was approaching Corfield, where the crematorium was situated.

"I presume," said he, "you have made all necessary arrangements, Hemming?"

"Yes," was the reply. "The superintendent will meet us and will conduct us to the catacombs, and there, in our presence, will take the casket from its niche in the columbarium and have it conveyed to the office, where the examination will be made. I thought it best to use these formalities, though, as the casket is sealed and bears the name of the deceased, there is not much point in them."

"No," said Thorndyke, "but I think you were right. It would be easy to challenge the identity of a mass of ashes if all precautions were not taken, seeing that the ashes themselves are unidentifiable."

"That was what I felt," said Hemming; and then, as the train slowed down, he added: "This is our station, and that gentleman on the platform, I suspect, is the superintendent."

The surmise turned out to be correct; but the cemetery official was not the only one present bearing that title; for as we were mutually introducing ourselves, a familiar tall figure approached up the platform from the rear of the train—our old friend Superintendent Miller of the Criminal Investigation Department.

"I don’t wish to intrude," said he, as he joined the group and was presented by Thorndyke to the strangers, "but we were notified by the Home Office that an investigation was to be made, so I thought I would be on the spot to pick up any crumbs of information that you may drop. Of course, I am not asking to be present at the examination."

"You may as well be present as an additional witness to the removal of the urn," said Thorndyke; and Miller accordingly joined the party, which now made its way from the station to the cemetery.
The catacombs were in a long, low arcaded building at the end of the pleasantly-wooded grounds, and on our way thither we passed the crematorium, a smallish, church-like edifice with a perforated chimney-shaft partly concealed by the low spire. Entering the catacombs, we were conducted to the "columbarium," the walls of which were occupied by a multitude of niches or pigeon-holes, each niche accommodating a terra-cotta urn or casket. The superintendent proceeded to near the end of the gallery, where he halted, and opening the register, which he had brought with him, read out a number and the name "Jonathan Ingle," and then led us to a niche bearing that number and name, in which reposed a square casket, on which was inscribed the name and date of death. When we had verified these particulars, the casket was tenderly lifted from its place by two attendants, who carried it to a well-lighted room at the end of the building, where a large table by a window had been covered with white paper. Having placed the casket on the table, the attendants retired, and the superintendent then broke the seals and removed the cover.

For a while we all stood looking in at the contents of the casket without speaking; and I found myself contrasting them with what would have been revealed by the lifting of a coffin-lid. Truly corruption had put on incorruption. The mass of snow-white, coral-like fragments, delicate, fragile, and lace-like in texture, so far from being repulsive in aspect, were almost attractive. I ran my eye, with an anatomist's curiosity, over these dazzling remnants of what had lately been a man, half-unconsciously seeking to identify and give a name to particular fragments, and a little surprised at the difficulty of determining that this or that irregularly-shaped white object was a part of any one of the bones with which I had thought myself so familiar.

Presently Hemming looked up at Thorndyke and asked: "Do you observe anything abnormal in the appearance of these ashes? I don't."

"Perhaps," replied Thorndyke, "we had better turn them out on to the table, so that we can see the whole of them."

This was done very gently, and then Thorndyke proceeded to spread out the heap, touching the fragments with the utmost delicacy—for they were extremely fragile and brittle—until the whole collection was visible.

"Well," said Hemming, when we had once more looked them over critically, "what do you say? I can see no trace of any foreign substance. Can you?"

"No," replied Thorndyke. "And there are some other things that I can't see. For instance, the medical referee reported that the proposer had a good set of sound teeth. Where are they? I have not seen a single fragment of a tooth. Yet teeth are far more resistant to fire than bones, especially the enamel caps."

Hemming ran a searching glance over the mass of fragments and looked up with a perplexed frown.

"I certainly can't see any sign of teeth," he admitted, "and it is rather curious, as you say. Does the fact suggest any particular significance to you?"

By way of reply, Thorndyke delicately picked up a flat fragment and silently held it out towards us. I looked at it and said nothing; for a very strange suspicion was beginning to creep into my mind.

"A piece of a rib," said Hemming. "Very odd that it should have broken across so cleanly. It might have been cut with a saw."

Thorndyke laid it down and picked up another, larger fragment, which I had already noticed.

"Here is another example," said he, handing it to our colleague.

"Yes," agreed Hemming. "It is really rather extraordinary. It looks exactly as if it had been sawn across."

"It does," agreed Thorndyke. "What bone should you say it is?"

"That is what I was just asking myself," replied Hemming, looking at the fragment with a sort of half-vexed smile. "It seems ridiculous that a competent anatomist should be in any doubt with as large a portion as this, but really I can't confidently give it a name. The shape seems to me to suggest a tibia, but of course it is much too small. Is it the upper end of the ulna?"

"I should say no," answered Thorndyke. Then he picked out another of the larger fragments, and handing it to Hemming, asked him to name it.

Our friend began to look somewhat worried.

"It is an extraordinary thing, you know," said he, "but I can't tell you what bone it is part of. It is clearly the shaft of a long bone, but I'm hanged if I can say which. It is too big for a metatarsal and too small for any of the main limb bones. It reminds one of a diminutive thigh bone."

"It does," agreed Thorndyke, "very strongly." While Hemming had been speaking he had picked out four more large fragments, and these he now laid in a row with the one that had seemed to resemble a tibia in shape. Placed thus together, the five fragments bore an obvious resemblance.

"Now," said he, "look at these. There are five of them. They are parts of limb bones, and the bones of which they are parts were evidently exactly alike, excepting that three were apparently from the left side and two from the right. Now, you know, Hemming, a man has only four limbs and of those only two contain similar bones. Then two of them show distinct traces of what looks like a saw-cut."
Hemming gazed at the row of fragments with a frown of deep cogitation.

"It is very mysterious," he said. "And looking at them in a row they strike me as curiously like tibia in shape; not in size."

"The size," said Thorndykeis about that of a sheep's tibia."

"A sheep's?" exclaimed Hemming, staring in amazement, first at the calcined bones and then at my colleague.

"Yes; the upper half, sawn across in the middle of the shank."

Hemming was thunderstruck. "It is an astounding affair!" he exclaimed. "You mean to suggest—"

"I suggest," said Thorndyke, "that there is not a sign of a human bone in the whole collection. But there are very evident traces of at least five legs of mutton."

For a few moments there was a profound silence, broken only by a murmur of astonishment from the cemetery official and a low chuckle from Superintendent Miller, who had been listening with absorbed interest. At length Hemming spoke.

"Then, apparently, there was no corpse in the coffin at all?"

"No," answered Thorndyke. "The weight was made up, and the ashes furnished, by joints of butcher's meat. I dare say, if we go over the ashes carefully, we shall be able to judge what they were. But it is hardly necessary. The presence of five legs of mutton and the absence of a single recognisable fragment of a human skeleton, together with the forged certificates, gives us a pretty conclusive case. The rest, I think we can leave to Superintendent Miller."

"I take it, Thorndyke," said I, as the train moved out of the station, "that you came here expecting to find what you did find?"

"Yes," he replied. "It seemed to me the only possibility, having regard to all the known facts."

"When did it first occur to you?"

"It occurred to me as a possibility as soon as we discovered that the cremation certificates had been forged; but it was the undertaker's statement that seemed to clinch the matter."

"But he distinctly stated that he measured the body."

"True. But there was nothing to show that it was a dead body. What was perfectly clear was that there was something that must on no account be seen; and when Stalker told us of the embezzlement we had a body of evidence that could point to only one conclusion. Just consider that evidence."

"Here we had a death, preceded by an obviously sham illness and followed by cremation with forged certificates. Now, what was it that had happened? There were four possible hypotheses. Normal death, suicide, murder, and fictitious death. Which of these hypotheses fitted the facts?

"Normal death was apparently excluded by the forged certificates."

"The theory of suicide did not account for the facts. It did not agree with the careful, elaborate preparation. And why the forged certificates? If Ingle had really died, Meeking would have certified the death. And why the cremation? There was no purpose in taking those enormous risks."

"The theory of murder was unthinkable. These certificates were almost certainly forged by Ingle himself, who we know was a practised forger. But the idea of the victim arranging for his own cremation is an absurdity."

"There remained only the theory of fictitious death; and that theory fitted all the facts perfectly. First, as to the motive. Ingle had committed a felony. He had to disappear. But what kind of disappearance could be so effectual as death and cremation? Both the prosecutors and the police would forthwith write him off and forget him. Then there was the bigamy—a criminal offence in itself. But death would not only wipe that off; after 'death' he could marry Huggard regularly under another name, and he would have shaken off his deserted wife for ever. And he stood to gain fifteen hundred pounds from the Insurance Company. Then see how this theory explained the other facts. A fictitious death made necessary a fictitious illness. It necessitated the forged certificates, since there was no corpse. It made cremation highly desirable; for suspicion might easily have arisen, and then the exhumation of a coffin containing a dummy would have exploded the fraud. But successful cremation would cover up the fraud for ever. It explained the concealment of the corpse from the undertaker, and it even explained the smell of formalin which he noticed."

"How did it?" I asked.

"Consider, Jervis," he replied. "The dummy in this coffin had to be a dummy of flesh and bone which would yield the correct kind of ash. Joints of butcher's meat would fulfil the conditions. But the quantity required would be from a hundred and fifty to two hundred pounds. Now Ingle could not go to the butcher and order a whole sheep to be sent the day before the funeral. The joints would have to be bought gradually and stored. But the storage of meat in warm weather calls for some kind of preservative; and formalin is highly effective, as it leaves no trace after burning."

"So you see that the theory of fictitious death agreed with all the known circumstances, whereas the alternative theories presented inexplicable discrepancies and contradictions. Logically, it was the only possible theory, and, as you have seen, experiment proved it to be the true one."
As he concluded, Dr. Hemming took his pipe from his mouth and laughed softly.

"When I came down to-day," said he, "I had all the facts which you had communicated to the Home Office, and I was absolutely convinced that we were coming to examine a mare’s nest. And yet, now I have heard your exposition, the whole thing looks perfectly obvious."

"That is usually the case with Thorndyke’s conclusions," said I. "They are perfectly obvious—when you have heard the explanation."

Within a week of our expedition, Ingle was in the hands of the police. The apparent success of the cremation adventure had misled him to a sense of such complete security that he had neglected to cover his tracks, and he had accordingly fallen an easy prey to our friend Superintendent Miller. The police were highly gratified, and so were the directors of the Griffin Life Assurance Company.

THE STALKING HORSE

As Thorndyke and I descended the stairs of the foot bridge at Densford Junction we became aware that something unusual had happened. The platform was nearly deserted save at one point, where a small but dense crowd had collected around the open door of a first-class compartment of the down train; heads were thrust out of the windows of the other coaches, and at intervals doors opened and inquisitive passengers ran along to join the crowd, from which an excited porter detached himself just as we reached the platform.

"You’d better go for Dr. Pooke first," the station-master called after him.

On this, Thorndyke stepped forward.

"My friend and I," said he, "are medical men. Can we be of any service until the local doctor arrives?"

"I’m very much afraid not, sir," was the reply, "but you’ll see." He cleared a way for us and we approached the open door.

At the first glance there appeared to be nothing to account for the awe-stricken expression with which the bystanders peered into the carriage and gazed at its solitary occupant. For the motionless figure that sat huddled in the corner seat, chin on breast, might have been a sleeping man. But it was not. The waxen pallor of the face and the strange, image-like immobility forbade the hope of any awakening.

"It looks almost as if he had passed away in his sleep," said the station when we had concluded our brief examination and ascertained certainly that the man was dead. "Do you think it was a heart attack, sir?"

Thorndyke shook his head and touched with his finger a depressed spot on the dead man’s waistcoat. When he withdrew his finger it was smeared with blood.

"Good God!" the official gasped, in a horrified whisper. "The man has been murdered!" He stared incredulously at the corpse for a few moments and then turned and sprang out of the compartment, shutting the door behind him, and we heard him giving orders for the coach to be separated and shunted into the siding.

"This is a gruesome affair, Jervis," my colleague, said as he sat down on the seat opposite the dead man and cast a searching glance round the compartment. "I wonder who this poor fellow was and what was the object of the murder? It looks almost too determined, for a common robbery; and, in fact, the body does not appear to have been robbed." Here he stooped suddenly to pick up one or two minute fragments of glass which seemed to have been trodden into the carpet, and which he examined closely in the palm of his hand. I leaned over and looked at the fragments, and we agreed that they were portions of the bulb of an electric torch or flash-lamp.

"The significance of these—if they have any," said Thorndyke, "we can consider later. But if they are recent, it would appear that the metal part of the bulb has been picked up and taken away. That might be an important fact. But, on the other hand, the fragments may have been here some time and have no connection with the tragedy; though you notice that they were lying opposite the body and opposite the seat which the murderer must have occupied when the crime was committed."

As he was speaking, the uncoupled coach began slowly to move towards the siding, and we both stooped to make a further search for the remainder of the lamp-bulb. And then, almost at the same moment, we perceived two objects lying under the opposite seat—the seat occupied by the dead man. One was a small pocket-handkerchief, the other a sheet of notepaper.

"This," said I, as I picked up the former, "accounts for the strong smell of scent in the compartment."

"Possibly," Thorndyke agreed, "though you will notice that the odour does not come principally from the handkerchief, but from the back cushion of the corner seat. But here is something more distinctive—a most incriminating piece of evidence, unless it can be answered by an undeniable alibi." He held out to me a sheet of letter paper, both pages of which were covered with writing in bright blue ink, done with a Hectograph or some similar duplicator. It was evidently a circular letter, for it bore the printed heading, "Women’s Emancipation League, 16 Barnabas Square, S.W.,” and the contents appeared to refer to a “militant demonstration” planned for the near future.

"It is dated the day before yesterday," commented Thorndyke, "so that it might have been lying here for twenty-four
hours, though that is obviously improbable; and as this is neither the first sheet nor the last, there are—or have been—at least two more sheets. The police will have something to start on, at any rate.”

He laid the letter on the seat and explored both of the hat-racks, taking down the dead man’s hat, gloves, and umbrella, and noting in the hat the initials “F. B.” He had just replaced them when voices became audible outside, and the station-master climbed up on the foot-board and opened the door to admit two men, one of whom I assumed to be a doctor, the other being a police inspector.

“The station-master tells me that this is a case of homicide,” said the former, addressing us jointly.

“That is what the appearances suggest,” replied Thorndyke. “There is a bullet wound, inflicted apparently at quite short range—the waistcoat is perceptibly singed—and we have found no weapon in the compartment.”

The doctor stepped past us and proceeded to make a rapid examination of the body.

“Yes,” he said, “I agree with you. The position of the wound and the posture of the body both suggest that death was practically instantaneous. If it had been suicide, the pistol would have been in the hand or on the floor. There is no clue to the identity of the murderer, I suppose?”

“We found these on the floor under the dead man’s seat,” replied Thorndyke, indicating the letter and the handkerchief; “and there is some glass trodden into the carpet—apparently the remains of an electric flash-lamp.”

The inspector pounced on the handkerchief and the letter, and having scrutinised the former vainly in search of name or initials, turned to the letter.

“Why, this is a suffragist’s letter!” he exclaimed. “But it can’t have anything to do with this affair. They are mischievous beggars, but they don’t do this sort of thing.” Nevertheless, he carefully bestowed both articles in a massive wallet, and approaching the corpse, remarked: “We may as well see who he is while we are waiting for the stretcher.”

With a matter-of-fact air, which seemed somewhat to shock the station-master, he unbuttoned the coat of the passive figure in the corner and thrust his hand into the breast pocket, drawing out a letter-case which he opened, and from which he extracted a visiting card. As he glanced at it, his face suddenly took on an expression of amazement.

“God!” he exclaimed in a startled tone. “Who do you think he is, doctor? He is Mr. Francis Burnham!”

The doctor looked at him with an interrogative frown. “Burnham—Burnham,” he repeated. “Let me see, now—”

“Don’t you know? The anti-suffrage man. Surely—”

“Yes, yes,” interrupted the doctor. “Of course I remember him. The arch-enemy of the suffrage movement and—yes, of course.” The doctor’s brisk speech changed abruptly into a hesitating mumble. Like the inspector, he had suddenly “seen a great light;” and again, like the officer, his perception had begotten a sudden reticence.

Thorndyke glanced at his watch. “Our train is a minute overdue,” said he. “We ought to get back to the platform.” Taking a card from his case, he handed it to the inspector, who looked at it and slightly raised his eyebrows.

“I don’t think my evidence will be of much value,” said he; “but, of course, I am at your service if you want it.” With this and a bow to the doctor and the station-master, he climbed down to the ground; and when I had given the inspector my card, I followed, and we made our way to the platform.

The case was not long in developing. That very evening, as Thorndyke and I were smoking our after-dinner pipes by the fire, a hurried step was heard on the stairs and was followed by a peremptory knock on our door. The visitor was a man of about thirty, with a clean-shaven face, an intense and rather neurotic expression, and a restless, excited manner. He introduced himself by the name of Cadmus Bawley, and thereby, in effect, indicated the purpose of his visit.

“You know me by name, I expect,” he said, speaking rapidly and with a sharp, emphatic manner, “and probably you can guess what I have come about. You have seen the evening paper, of course?”

“I have not,” replied Thorndyke.

“Well,” said Mr. Bawley, “you know about the murder of the man Burnham, because I see that you were present at the discovery; and you know that part of a circular letter from our League was found in the compartment. Perhaps you will not be surprised to learn that Miss Isabel Dalby has been arrested and charged with the murder.”

“Indeed!” said Thorndyke.

“Yes. It’s an infamous affair! A national disgrace!” exclaimed Bawley, banging the table with his fist. “A manifest plot of the enemies of social reform to get rid of a high-minded, noble-hearted lady whose championship of this great Cause they are unable to combat by fair means in the open. And it is a wild absurdity, too. As to the fellow, Burnham, I can’t pretend to feel any regret—”

“May I suggest”—Thorndyke interrupted somewhat stiffly—“that the expression of personal sentiments is neither helpful nor discreet? My methods of defence—if that is what you have come about—are based on demonstration rather than rhetoric. Could you give us the plain facts?”

Mr. Cadmus Bawley looked unmistakably sulkily, but after a short pause, he began his recital in a somewhat lower key.

“The bald facts,” he said, “are these: This afternoon, at half-past two, Miss Dalby took the train from King’s Cross to
Holmwood. This is the train that stops at Densford Junction and is the one in which Burnham travelled. She took a first-class ticket and occupied a compartment for ladies only, of which she was the only occupant. She got out at Holmwood and went straight to the house of our Vice-President, Miss Carleigh—who has been confined to her room for some days—and stayed there about an hour. She came back by the four-fifteen train, and I met her at the station—King's Cross—at a quarter to five. We had tea at a restaurant opposite the station, and over our tea we discussed the plans for the next demonstration, and arranged the rendezvous and the most convenient routes for retreat and dispersal when the police should arrive. This involved the making of sketch plans, and these Miss Dalby drew on a sheet of paper that she took from her pocket, and which happened to be part of the circular letter referring to the raid. After tea we walked together down Gray's Inn Road and parted at Theobald's Road, I going on to the head-quarters and she to her rooms in Queen Square. On her arrival home, she found two detectives waiting outside her house, and then—and then, in short, she was arrested, like a common criminal, and taken to the police station, where she was searched and the remainder of the circular letter found in her pocket. Then she was formally charged with the murder of the man Burnham, and she was graciously permitted to send a telegram to head-quarters. It arrived just after I got there, and, of course, I at once went to the police station. The police refused to accept bail, but they allowed me to see her to make arrangements for the defence.

"Does Miss Dalby offer any suggestion," asked Thorndyke, "as to how a sheet of her letter came to be in the compartment with the murdered man?"

"Oh, yes!" replied Mr. Bawley. "I had forgotten that. It wasn't her letter at all. She destroyed her copy of the letter as soon as she had read it."

"Then," inquired Thorndyke, "how came the letter to be in her pocket?"

"Ah," replied Bawley, "that is the mystery. She thinks someone must have slipped it into her pocket to throw suspicion on her."

"Did she seem surprised to find it in her pocket when you were having tea together?"

"No. She had forgotten having destroyed her copy. She only remembered it when I told her that the sheet had been found in Burnham's carriage."

"Can she produce the fragments of the destroyed letter?"

"No, she can't. Unfortunately she burned it."

"Do these circular letters bear any distinguishing mark? Are they addressed to members by name?"

"Only on the envelopes. The letters are all alike. They are run off a duplicator. Of course, if you don't believe the story—"

"I am not judging the case," interrupted Thorndyke; "I am simply collecting the facts. What do you want me to do?"

"If you feel that you could undertake the defence I should like you to do so. We shall employ the solicitors to the League, Bird & Marshall, but I know they will be willing and glad to act with you."

"Very well," said Thorndyke. "I will investigate the case and consult with your solicitors. By the way, do the police know about the sheet of the letter on which the plans were drawn?"

"No, I thought it best to say nothing about that, and I have told Miss Dalby not to mention it."

"That is just as well," said Thorndyke. "Have you the sheet with the plan on it?"

"I haven't it about me," was the reply. "It is in my desk at my chambers."

"You had better let me have it to look at," said Thorndyke.

"You can have it if you want it, of course," said Bawley, "but it won't help you. The letters are all alike, as I have told you."

"I should like to see it, nevertheless," said Thorndyke; "and perhaps you could give me some account of Mr. Burnham. What do you know about him?"

Mr. Bawley shut his lips tightly, and his face took on an expression of vindictiveness verging on malignity.

"All I know about Burnham," he said, "is that he was a fool and a ruffian. He was not only an enemy of the great reform that our League stands for; he was a treacherous enemy—violent, crafty, and indefatigably active. I can only regard his death as a blessing to mankind."

"May I ask," said Thorndyke, "if any members of your League have ever publicly threatened to take personal measures against him?"

"Yes," snapped Bawley. "Several of us—including myself—have threatened to give him the hiding that he deserved. But a hiding is a different thing from murder, you know."

"Yes," Thorndyke agreed somewhat dryly; then he asked: "Do you know anything about Mr. Burnham's occupation and habits?"

"He was a sort of manager of the London and Suburban Bank. His job was to supervise the suburban branches, and his habit was to visit them in rotation. He was probably going to the branch at Holmwood when he was killed. That is all I can tell you about him."
“Thank you,” said Thorndyke; and as our visitor rose to depart he continued: “Then I will look into the case and arrange with your solicitors to have Miss Dalby properly represented at the inquest; and I shall be glad to have that sheet of the letter as soon as you can send or leave it.”

“Very well,” said Bawley, “though, as I have told you, it won’t be of any use to you. It is only a duplicated circular.”

“Possibly,” Thorndyke assented. “But the other sheets will be produced in Court, so I may as well have an opportunity of examining it beforehand.”

For some minutes after our client had gone Thorndyke remained silent and reflective, copying his rough notes into his pocket-book and apparently amplifying and arranging them. Presently he looked up at me with an unspoken question in his eyes.

“It is a queer case,” said I. “The circumstantial evidence seems to be strongly against Miss Dalby, but it is manifestly improbable that she murdered the man.”

“It seems so,” he agreed. “But the case will be decided on the evidence; and the evidence will be considered by a judge, not by a Home Secretary. You notice the importance of Burnham’s destination?”

“Yes. He was evidently dead when the train arrived at Holmwood. But it isn’t clear how long he had been dead.”

“The evidence,” said Thorndyke, “points strongly to the tunnel between Cawden and Holmwood as the place where the murder was committed. You will remember that the up-express passed our train in the tunnel. If the adjoining compartments were empty, the sound of a pistol shot would be completely drowned by the noise of the express thundering past. Then you will remember the fragments of the electric bulb that we picked up, and that there was no light on in the carriage. That is rather significant. It not only suggests that the crime was committed in the dark, but there is a distinct suggestion of preparation—arrangement and premeditation. It suggests that the murderer knew what the circumstances would be and provided for them.”

“Yes; and that is rather a point against our client. But I don’t quite see what you expect to get out of that sheet of the letter. It is the presence of the letter, rather than its matter, that constitutes the evidence against Miss Dalby.”

“I don’t expect to learn anything from it,” replied Thorndyke; “but the letter will be the prosecution’s trump card, and it is always well to know in advance exactly what cards your opponent holds. It is a mere matter of routine to examine everything, relevant or irrelevant.”

The inquest was to be held at Densford on the third day after the discovery of the body. But in the interval certain new facts had come to light. One was that the deceased was conveying to the Holmwood branch of the bank a sum of three thousand pounds, of which one thousand was in gold and the remainder in Bank of England notes, the whole being contained in a leather handbag. This bag had been found, empty, in a ditch by the side of the road which led from the station to the house of Miss Carleigh, the Vice-President of the Women’s Emancipation League. It was further stated that the ticket-collector at Holmwood had noticed that Miss Dalby—whom he knew by sight—was carrying a bag of the kind described when she passed the barrier, and that when she returned, about an hour later, she had no bag with her. On the other hand, Miss Carleigh had stated that the bag which Miss Dalby brought to her house was her (Miss Carleigh’s) property, and she had produced it for the inspection of the police. So that already there was some conflict of evidence, with a balance distinctly against Miss Dalby.

“There is no denying,” said Thorndyke, as we discussed the case at the breakfast table on the morning of the inquest that the circumstantial evidence is formidable complete and consistent, while the rebutting evidence is of the feeblest. Miss Dalby’s statement that the letter had been put into her pocket by some unknown person will hardly be taken seriously, and even Miss Carleigh’s statement with reference to the bag will not carry much weight unless she can furnish corroboration.”

“Nevertheless,” said I, “the general probabilities are entirely in favour of the accused. It is grossly improbable that a lady like Miss Dalby would commit a robbery with murder of this cold-blooded, deliberate type.”

“That may be,” Thorndyke retorted, “but a jury has to find in accordance with the evidence.”

“By the way,” said I, “did Bawley ever send you that sheet of the letter that you asked for?”

“No, confound him! But I have sent Polton round to get it from him, so that I can look it over carefully in the train. Which reminds me that I can’t get down in time for the opening of the inquest. You had better travel with the solicitors and see the shorthand writers started. I shall have to come down by a later train.”

Half an hour later, just as I was about to start, a familiar step was heard on the stair, and then our laboratory assistant, Polton, let himself in with his key.

“Just caught him, sir, as he was starting for the station,” he said, with a satisfied, crinkly smile, laying an envelope on the table, and added, “Lord! how he did swear!”

Thorndyke chuckled, and having thanked his assistant, opened the envelope and handed it to me. It contained a single sheet of letter-paper, exactly similar to the one that we had found in the railway carriage, excepting that the writing filled one side and a quarter only, and, since it concluded with the signature “Letitia Humboe, President,” it was evidently the last sheet. There was no water-mark nor anything, so far as I could see, to distinguish it from the dozens of other impressions that had been run off on the duplicator with it, excepting the roughly-pencilled plan on the blank side of the
“Well,” I said as I put on my hat and walked towards the door, “I suspect that Bawley was right. You won’t get much help from this to support Miss Dalby’s rather improbable statement.” And Thorndyke agreed that appearances were not very promising.

The scene in the coffee-room of “The Plough” Inn at Densford was one with which I was familiar enough. The quiet, business-like coroner, the half-embarrassed jurors, the local police and witnesses and the spectators, penned up at one end of the room, were all well-known characters. The unusual feature was the handsome, distinguished-looking young lady who sat on a plain Windsor chair between two inscrutable policemen, watched intently by Mr. Cadmus Bawley. Miss Dalby was pale and obviously agitated, but quiet, resolute, and somewhat defiant in manner. She greeted me with a pleasant smile when I introduced myself, and hoped that I and my colleague would have no difficulty in disposing of “this grotesque and horrible accusation.”

I need not describe the proceedings in detail. Evidence of the identity of the deceased having been taken, Dr. Poole deposed that death was due to a wound of the heart produced by a spherical bullet, apparently fired from a small, smooth-bore pistol at very short range. The wound was in his opinion not self-inflicted. The coroner then produced the sheet of the circular letter found in the carriage, and I was called to testify to the finding of it. The next witness was Superintendent Miller of the Criminal Investigation Department, who produced the two sheets of the letter which were taken from Miss Dalby’s pocket when she was arrested. These he handed to the coroner for comparison with the one found in the carriage with the body of deceased.

“There appear,” said the coroner, after placing the three sheets together, “to be one or more sheets missing. The two you have handed me are sheets one and three, and the one found in the railway carriage is sheet two.”

“Yes,” the witness agreed, “sheet four is missing, but I have a photograph of it. Here is a set of the complete letter,” and he laid four unmounted prints on the table.

The coroner examined them with a puzzled frown. “May I ask,” he said, “how you obtained these photographs?”

“They are not photographs of the copy that you have,” the witness explained, “but of another copy of the same letter which we intercepted in the post. That letter was addressed to a stationer’s shop to be called for. We have considered it necessary to keep ourselves informed of the contents of these circulars, so that we can take the necessary precautions; and as the envelopes are marked with the badge and are invariably addressed in blue ink, it is not difficult to identify them.”

“I see,” said the coroner, glaring stonily at Mr. Bawley, who had accompanied the superintendent’s statement with audible and unfavourable comments. “Is that the whole of your evidence? Thank you. Then, if there is no cross-examination, I will call the next witness. Mr. Bernard Parsons.”

Mr. Parsons was the general manager of the London and Suburban Bank, and he deposed that deceased was, on the day when he met his death, travelling to Holmwood to visit and inspect the new local branch of the bank, and that he was taking thither the sum of three thousand pounds, of which one thousand was in gold and the remainder in Bank of England notes—mostly five-pound notes. He carried the notes and specie in a strong leather handbag.

“Can you say if either of these is the bag that he carried?” the coroner asked, indicating two largish, black leather bags that his officer had placed on the table.

Mr. Parsons promptly pointed to the larger of the two, which was smeared externally with mud. The coroner noted the answer and then asked: “Did anyone besides yourself know that deceased was making this visit?”

“Many persons must have known,” was the reply. “Deceased visited the various branches in a fixed order. He came to Holmwood on the second Tuesday in the month.”

“And would it be known that he had this great sum of money with him?”

“The actual amount would not be generally known, but he usually took with him supplies of specie and notes—sometimes very large sums—and this would be known to many of the bank staff, and probably to a good many persons outside. The Holmwood Branch consumes a good deal of specie, as most of the customers pay in cheques and draw out cash for local use.”

This was the substance of Mr. Parsons’ evidence, and when he sat down the ticket-collector was called. That official identified Miss Dalby as one of the passengers by the train in which the body of deceased was found. She was carrying a bag when she passed the barrier. He could not identify either of the bags, but both were similar to the one that she was carrying. She returned about an hour later and caught an up-train, and he noticed that she was then not carrying a bag. He could not say whether any of the other passengers was carrying a bag. There were very few first-class passengers by that train, but a large number of third-class—mostly fruit-pickers—and they made a dense crowd at the barrier so that he did not notice individual passengers particularly. He noticed Miss Dalby because he knew her by sight, as she often came to Holmwood with other suffragist ladies. He did not see which carriage Miss Dalby came from, and he did not see any first-class compartment with an open door.

The coroner noted down this evidence with thoughtful deliberation, and I was considering whether there were any questions that it would be advisable to ask the witness when I felt a light touch on my shoulder, and looking up perceived a constable holding out a telegram. Observing that it was addressed to “Dr. Jervis, Plough Inn, Densford,” I nodded to the
constable, and taking the envelope from him, opened it and unfolded the paper. The telegram was from Thorndyke, in the simple code that he had devised for our private use. I was able to decode it without referring to the key—which each of us always carried in his pocket—and it then read:

"I AM STARTING FOR FOLKESTONE IN RE BURNHAM DECEASED. FOLLOW IMMEDIATELY AND BRING MILLER IF YOU CAN FOR POSSIBLE ARREST. MEET ME ON PIER NEAR OUESTEND BOAT. THORNDYKE."

Accustomed as I was to my colleague’s inveterate habit of acting in the least expected manner, I must confess that I gazed at the decoded message in absolute stupefaction. I had been totally unaware of the faintest clue beyond the obvious evidence to which I had been listening, and behold! here was Thorndyke with an entirely fresh case, apparently cut-and-dried, and the unsuspected criminal in the hollow of his hand. It was astounding.

Unconsciously I raised my eyes—and met those of Superintendent Miller, fixed on me with devouring curiosity. I held up the telegram and beckoned, and immediately he tip-toed across and took a seat by my side. I laid the decoded telegram before him, and when he had glanced through it, I asked in a whisper: “Well, what do you say?”

By way of reply, he whisked out a time-table, conned it eagerly for a few minutes, and then held it towards me with his thumb-nail on the words "Densford Junction."

“There’s a fast train up in seven minutes,” he whispered hoarsely. “Get the coroner to excuse us and let your solicitors carry on for you.”

A brief, and rather vague, explanation secured the assent of the coroner—since we had both given our evidence—and the less willing agreement of my clients. In another minute the superintendent and I were heading for the station, which we reached just as the train swept up alongside the platform.

“This is a queer start,” said Miller, as the train moved out of the station; “but, Lord! there is never any calculating Dr. Thorndyke’s moves. Did you know that he had anything up his sleeve?”

“No; but then one never does know. He is as close as an oyster. He never shows his hand until he can play a trump card. But it is possible that he has struck a fresh clue since I left.”

“Well,” rejoined Miller, “we shall know when we get to the other end And I don’t mind telling you that it will be a great relief to me if we can drop this charge against Miss Dalby.”

From time to time during the journey to London, and from thence to Folkestone, the superintendent reverted to Thorndyke’s mysterious proceedings. But it was useless to speculate. We had not a single fact to guide us; and when, at last, the train ran into Folkestone Central Station we were as much in the dark as when we started.

Assuming that Thorndyke would have made any necessary arrangements for assistance from the local police, we charted a cab and proceeded direct to the end of Rendez-vous Street—a curiously appropriate destination, by the way. Here we alighted in order that we might make our appearance at the meeting-place as inconspicuously as possible, and, walking towards the harbour, perceived Thorndyke waiting on the quay, ostensibly watching the loading of a barge, and putting in their case a pair of prismatic binoculars with which he had apparently observed our arrival.

“I am glad you have come, Miller,” he said, shaking the superintendent’s hand. “I can’t make any promises, but I have no doubt that it is a case for you even if it doesn’t turn out all that I hope and expect. The Cornflower is our ship, and we had better go on board separately in case our friends are keeping a look-out. I have arranged matters with the captain, and the local superintendent has got some plain-clothes men on the pier.”

With this we separated. Thorndyke went on in advance, and Miller and I followed at a discreet interval.

As I descended the gangway a minute or so after Miller, a steward approached me, and having asked my name requested me to follow him, when he conducted me to the purser’s office, in which I found Thorndyke and Miller in conversation with the purser.

“The gentlemen you are inquiring for,” said the latter, “are in the smoking-room playing cards with another passenger. I have put a tarpaulin over one of the cabins you want to have a look at them without being seen.”

“Perhaps you had better make a preliminary inspection, Miller,” said Thorndyke. “You may know some of them.”

To this suggestion the superintendent agreed, and forthwith went off with the purser, leaving me and Thorndyke alone. I at once took the opportunity to demand an explanation. “I take it that you struck some new evidence after I left you?”

“Yes,” Thorndyke replied. “And none too soon, as you see. I don’t quite know what it will amount to, but I think we have secured the defence, at any rate and that is really all that we are concerned with. The positive aspects of the case are the business of the police. But here comes Miller, looking very pleased with himself, and with the purser.”

The superintendent, however, was not only pleased; he was also not a little puzzled.

“Well!” he exclaimed, “this is a quaint affair. We have got two of the leading lights of the suffrage movement in there. One is Jameson, the secretary of the Women’s Emancipation League, the other is Pinder, their chief bobbery-monger. Then there are two men named Dorman and Spiller, both of them swell crooks, I am certain, though we have never been able to fix anything on them. The fifth man I don’t know.”
“Neither do I,” said Thorndyke. “My repertoire includes only four. And now we will proceed to sort them out. Could we have a few words with Mr. Thorpe—in here, if you don’t mind.”

“Certainly,” replied the purser “I’ll go and fetch him.” He bustled away in the direction of the smoking-room, whence he presently reappeared, accompanied by a tall, lean man who wore large bi-focal spectacles of the old-fashioned, split-lens type, and was smoking a cigar. As the newcomer approached down the alley-way, it was evident that he was nervous and uneasy, though he maintained a certain jaunty swagger that accorded ill with a pronounced, habitual stoop. As he entered the cabin, however, and became aware of the portentous group of strangers, the swagger broke down completely; suddenly his face became ashen and haggard, and he peered through his great spectacles from one to the others, with an expression of undisguised terror.

“Mr. Thorpe?” queried Thorndyke; and the superintendent murmured: “Alias Pinder.”

“Yes,” was the reply, in a husky undertone. “What can I do for you?”

Thorndyke turned to the superintendent. “I charge this man,” said he, “with having murdered Francis Burnham in the train between London and Holmwood.”

The superintendent was visibly astonished, but not more so than the accused, on whom Thorndyke’s statement produced the most singular effect. In a moment, his terror seemed to drop from him; the colour returned to his face, the haggard expression of which gave place to one of obvious relief.

Miller stood up, and addressing the accused, began “It is my duty to caution you—” but the other interrupted: “Caution your grandmother! You are talking a parcel of dam’ nonsense. I was in Birmingham when the murder was committed. I can prove it, easily.”

The superintendent was somewhat taken aback, for the accused spoke with a confidence that carried conviction.

“In that case,” said Thorndyke, “you can probably explain how a letter belonging to you came to be found in the carriage with the murdered man.”

“Belonging to me!” exclaimed Thorpe. “What the deuce do you mean? That letter belonged to Miss Dalby. The rest of it was found in her pocket.”

“Precisely,” said Thorndyke. “One sheet had been placed in the railway carriage and the remainder in Miss Dalby’s pocket to fix suspicion on her. But it was your letter, and the inference is that you disposed of it in that manner for the purpose that I have stated.”

“But,” persisted Thorpe, with visibly-growing uneasiness, “this was a duplicated circular. You couldn’t tell one copy from another.”

“Mr. Pinder,” said Thorndyke, in an impressively quiet tone, “if I tell you that I ascertained from that letter that you had taken a passage on this ship in the name of Thorpe, you will probably understand what I mean.”

Apparently he did understand, for, once more, the colour faded from his face and he sat down heavily on a locker, fixing on Thorndyke a look of undisguised dismay. Thus he sat for some moments, motionless and silent, apparently thinking hard. Suddenly he started up. “My God!” he exclaimed, “I see now what has happened. The infernal scoundrel! First he put it on to Miss Dalby, and now he has put it on to me. Now I understand why he looked so startled when I ran against him.”

“What do you mean?” asked Thorndyke.

“I’ll tell you,” replied Pinder. “As I move about a good deal—and for other reasons—I used to have my suffrage letters sent to a stationer’s shop in Barlow Street—”

“I know,” interrupted the superintendent; “Bedall’s. I used to look them over and take photographs of them.” He grinned craftily as he made this statement, and, rather to my surprise, the accused grinned too. A little later I understood that grin.

“Well,” continued Pinder, “I used to collect these letters pretty regularly. But this last letter was delivered while I was away at Birmingham. Before I came back I met a man who gave me certain—er—instructions—you know what they were,” he added, addressing Thorndyke—“so I did not need the letter. But, of course, I couldn’t leave it there uncollected, so when I got back to London, I called for it. That was two days ago. To my astonishment Miss Bedall declared that I had collected it three days previously. I assured her that I was not in London on that day, but she was positive that I had called. ‘I remember clearly,’ she said, ‘giving you the letter myself.’ Well, there was no arguing. Evidently she had given the letter to the wrong person—she is very near-sighted, I should say, judging by the way she holds things against her nose—but how it happened I couldn’t understand. But I think I understand now. There is one person only in the world who knew that I had my letters addressed there: a sort of pal of mine named Payne. He happened to be with me one evening when I called to collect my letters. Now, Payne chanced to be a good deal like me—at least he is tall and thin and stoops a bit; but he does not wear spectacles. He tried on my spectacles once for a joke, and then he really looked extremely like me. He looked in a mirror and remarked on the resemblance himself. Now, Payne did not belong to the Women’s League, and I suggest that he took advantage of this resemblance to get possession of this letter. He got a pair of spectacles like mine and personated me at the shop.”

“Why should he want to get possession of that letter?” Miller demanded.
“To plant it as he has planted it,” replied Pinder, “and set the police on a false trail.”

“This sounds pretty thin,” said Miller. “You are accusing this man of having murdered Mr. Burnham. What grounds have you for this accusation?”

“My grounds,” replied Pinder, “are, first, that he stole this letter which has been found, obviously planted; and, second, that he had a grudge against Burnham and knew all about his movements.”

“Indeed!” said Miller, with suddenly increased interest. “Then who and what is this man Payne?”

“Why,” replied Pinder, “until a month ago, he was assistant cashier at the Streatham branch of the bank. Then Burnham came down and hooved him out without an hour’s notice. I don’t know what for, but I can guess.”

“Do you happen to know where Payne is at this moment?”

“Yes, I do. He is on this ship, in the smoking-room—only he is Mr. Shenstone now. And mighty sick he was when he found me on board.”

The superintendent looked at Thorndyke. “What do you think about it, doctor?” he asked.

“I think,” said Thorndyke, “that we had better have Mr. Shenstone in here and ask him a few questions. Would you see if you can get him to come here?” he added, addressing the purser, who had been listening with ecstatic enjoyment.

“I’ll get him to come along all right,” replied the purser, evidently scenting a new act in this enthralling drama; and away he hustled, all agog. In less than a minute we saw him returning down the alley-way, with a tall, thin man, who, at a distance, was certainly a good deal like Pinder, though the resemblance diminished as he approached. He, too, was obviously agitated, and seemed to be plying the purser with questions. But when he came opposite the door of the cabin he stopped dead and seemed disposed to shrink back.

“Is that the man?” Thorndyke demanded sharply and rather loudly, springing to his feet as he spoke.

The effect of the question was electrical. As Thorndyke rose, the new-comer turned, and, violently thrusting the purser aside, raced madly down the alley-way and out on to the deck.

“Stop that man!” roared Miller, darting out in pursuit; and at the shout a couple of loitering deck-hands headed the fugitive off from the gangway. Following, I saw the terrified man swerving this way and that across the littered deck to avoid the seamen, who joined in the pursuit; I saw him make a sudden frantic burst for a baggage-slide springing from a bollard up to the bulwark-rail. Then his foot must have tripped on a lashing, for he staggered for a moment, flung out his arms with a wild shriek, and plunged headlong into the space between the ship’s side and the quay wall.

In an instant the whole ship was in an uproar. An officer and two hands sprang to the rail with ropes and a boathook, while others manned the cargo derrick and lowered a rope with a running bowline between the ship and the quay.

“He’s gone under,” a hoarse voice proclaimed from below; “but I can see him jammed against the side.”

There were a couple of minutes of sickening suspense. Then the voice from below was heard again. “Heave up!”

The derrick-engine rattled, the taut rope came up slowly, and at length out of that horrid gulf arose a limp and dripping shape that, as it cleared the bulwark, was swung inboard and let down gently on the deck. Thorndyke and I stooped over him. But it was a dead man’s face that we looked into; and a tinge of blood on the lips told the rest of the tale.

“Cover him up,” said the superintendent. “He’s out of our jurisdiction now. But what’s going on there?”

Following his look, I perceived a small scattered crowd of men all running furiously along the quay towards the town. Some of them I judged to be the late inmates of the smoking-room and some plain-clothes men. The only figure that I recognised was that of Mr. Pinder, and he was already growing small in the distance.

“The local police will have to deal with them,” said Miller. Then turning to the purser, he asked: “What baggage had this man?”

“Only two cabin trunks,” was the reply. “They are both in his state-room.”

To the state-room we followed the purser, when Miller had possessed himself of the dead man’s keys, and the two trunks were hoisted on to the bunk and opened. Each trunk contained a large cash-box, and each cash-box contained five hundred pounds in gold and a big bundle of notes. The latter Miller examined closely, checking their numbers by a column of entries in his pocket-book.

“Yes,” he reported at length; “it’s a true bill. These are the notes that were stolen from Mr. Burnham. And now I will have a look at the baggage of those other four sportsmen.”

This being no affair of ours, Thorndyke and I went ashore and slowly made our way towards the town. But presently the superintendent overtook us in high glee, with the news that he had discovered what appeared to be the accumulated “swag” of a gang of swell burglars for whom he had been for some months vainly on the look-out.

“How was it done?” repeated Thorndyke in reply to Miller’s question, as we sat at a retired table in the “Lord Warden” Hotel. “Well, it was really very simple. I am afraid I shall disappoint you if you expect anything ingenious and recondite. Of course, it was obvious that Miss Dalby had not committed this atrocious murder and robbery; and it was profoundly improbable that this extremely incriminating letter had been dropped accidentally. That being so, it was almost certain
that the letter had been ‘planted,’ as Pinder expressed it. But that was a mere opinion that helped us not at all. The actual solution turned upon a simple chemical fact with which I happened to be acquainted; which is this: that all the basic coal tar dyes, and especially methylene blue, dye oxycellulose without requiring a mordant, but do not react in this way on cellulose. Now, good paper is practically pure cellulose; and if you dip a sheet of such paper into certain oxidising liquids, such as a solution of potassium chlorate with a slight excess of hydrochloric acid, the paper is converted into oxycellulose. But if instead of immersing the paper, you write on it with a quill or glass pen dipped in the solution, only the part which has been touched by the pen is changed into oxycellulose. No change is visible to the eye: but if a sheet of paper written on with this colourless fluid is dipped in a solution of, say, methylene blue, the invisible writing immediately becomes visible. The oxycellulose takes up the blue dye.

“Now, when I picked up that sheet of the letter in the railway carriage and noted that the ink used appeared to be methylene blue, this fact was recalled to my mind. Then, on looking at it closely, I seemed to detect a certain slight spottiness in the writing. There were points on some of the letters that were a little deeper in colour than the rest; and it occurred to me that it was possible that these circulars might be used to transmit secret messages of a less innocent kind than those that met the unaided eye, just as these political societies might form an excellent cover for the operations of criminal associations. But if the circulars had been so used, it is evident that the secret writing would not be on all the circulars. The prepared sheets would be used only for the circulars that were to be sent to particular persons, and in those cases the secret writing would probably be in the nature of a personal communication, either to a particular individual or to a small group. The possible presence of a secret message thus became of vital evidential importance; for if it could be shown that this letter was addressed to some person other than Miss Dalby, that would dispose of the only evidence connecting her with the crime.

“It happened, most fortunately, that I was able to get possession of the final sheet of this letter—”

“Of course it did,” growled Miller, with a sour smile.

“It reached me,” continued Thorndyke, “only after Dr. Jervis had started for Densford. The greater part of one side was blank, excepting for a rough plan drawn in pencil, and this blank side I laid down on a sheet of glass and wetted the written side with a small wad of cotton-wool dipped in distilled water. Of course, the blue writing began to run and dissolve out; and then, very faintly, some other writing began to show through in reverse. I turned the paper over, and now the new writing, though faint, was quite legible, and became more so when I wiped the blue-stained cotton-wool over it a few times. A solution of methylene blue would have made it still plainer, but I used water only, as I judged that the blue writing was intended to furnish the dye for development. Here is the final result.”

He drew from his pocket a letter-case, from which he extracted a folded paper which he opened and laid on the table. It was stained a faint blue, through which the original writing could be seen, dim and blurred, while the secret message, though very pale, was quite sharp and clear. And this was the message:

“...so although we are not actually blown on, the position is getting risky and it’s time for us to hop. I have booked passages for the four of us to Ostend by the Cornflower, which sails on Friday evening next (20th). The names of the four illustrious passengers are, Walsh (that’s me), Grubb (Dorman), Jenkins (Spiller) and Thorpe (that’s you). Get those names well into your canister—better make a note of them—and turn up in good time on Friday.”

“Well,” said Miller, as he handed back the letter, “we can’t know everything—unless we are Dr. Thorndyke. But there’s one thing I do know.”

“What is that?” I asked.

“I know why that fellow Pinder grinned when I told him that I had photographed his confounded letters.”

THE NATURALIST AT LAW

A HUSH had fallen on the court as the coroner concluded his brief introductory statement and the first witness took up his position by the long table. The usual preliminary questions elicited that Simon Moffet, the witness aforesaid, was fifty-eight years of age, that he followed the calling of a shepherd and that he was engaged in supervising the flocks that fed upon the low-lying meadows adjoining the little town of Bantree in Buckinghamsire.

“Tell us how you came to discover the body,” said the coroner.

“Twas on Wednesday morning, about half-past five,” Moffet began. “I was getting the sheep through the gate into the big meadow by Reed’s farm, when I happened to look down the dyke, and then I noticed a boot sticking up out of the water. Seemed to me as if there was a foot in it by the way it stuck up, so as soon as all the sheep was in, I shut the gate and walked down the dyke to have a look at un. When I got close I see the toe of another boot just alongside. Looks a bit queer, I thinks, but I couldn’t see anything more, ‘cause the duck-weed is that thick as it looks as if you could walk on it. Howsever, I clears away the weed with my stick, and then I see ‘twas a dead man. Give me a rare turn, it did. He was a-layin’ at the bottom of the ditch with his head near the middle and his feet up close to the bank. Just then young Harry Walker comes along the cart-track on his way to work, so I shows him the body and sends him back to the town for to give notice at the police station.”

“And is that all you know about the affair?”
“Ay. Later on I see the sergeant come along with a man wheelin’ the stretcher, and I showed him where the body was and helped to pull it out and load it on the stretcher. And that’s all I know about it.”

On this the witness was dismissed and his place taken by a shrewd-looking, business-like police sergeant, who deposed as follows:

“Last Wednesday, the 8th of May, at 6.15 a.m., I received information from Henry Walker that a dead body was lying in the ditch by the cart-track leading from Ponder’s Road to Reed’s farm. I proceeded there forthwith, accompanied by Police Constable Ketchum, and taking with us a wheeled stretcher. On the track I was met by the last witness, who conducted me to the place where the body was lying and where I found it in the position that he has described; but we had to clear away the duck-weed before we could see it distinctly. I examined the bank carefully, but could see no trace of footprints, as the grass grows thickly right down to the water’s edge. There were no signs of a struggle or any disturbance on the bank. With the aid of Moffet and Ketchum, I drew the body out and placed it on the stretcher. I could not see any injuries or marks of violence on the body or anything unusual about it. I conveyed it to the mortuary, and with Constable Ketchum’s assistance removed the clothing and emptied the pockets, putting the contents of each pocket in a separate envelope and writing the description on each. In a letter-case from the coat pocket were some visiting cards bearing the name and address of Mr. Cyrus Pedley, of 21 Hawtrey Mansions, Kensington, and a letter signed Wilfred Pedley, apparently from deceased’s brother. Acting on instructions, I communicated with him and served a summons to attend this inquest.”

“With regard to the ditch in which you found the body,” said the coroner, “can you tell us how deep it is?”

“Yes; I measured it with Moffet’s crook and a tape measure. In the deepest part, where the body was lying, it is four feet two inches deep. From there it slopes up pretty sharply to the bank.”

“So far as you can judge, if a grown man fell into the ditch by accident, would he have any difficulty in getting out?”

“None at all, I should say, if he were sober and in ordinary health. A man of medium height, standing in the middle at the deepest part, would have his head and shoulders out of water; and the sides are not too steep to climb up easily, especially with the grass and rushes on the bank to lay hold of.”

“You say there were no signs of disturbance on the bank. Were there any in the ditch itself?”

“None that I could see. But, of course, signs of disturbance soon disappear in water. The duck-weed drifts about as the wind drives it, and there are creatures moving about on the bottom. I noticed that deceased had some weed grasped in one hand.”

This concluded the sergeant’s evidence, and as he retired, the name of Dr. Albert Parton was called. The new witness was a young man of grave and professional aspect, who gave his evidence with an extreme regard for clearness and accuracy.

“I have made an examination of the body of the deceased,” he began, after the usual preliminaries. “It is that of a healthy man of about forty-five. I first saw it about two hours after it was found. It had then been dead from twelve to fifteen hours. Later I made a complete examination. I found no injuries, marks of violence or any definite bruises, and no signs of disease.”

“Did you ascertain the cause of death?” the coroner asked.

“Yes. The cause of death was drowning.”

“You are quite sure of that?”

“Quite sure. The lungs contained a quantity of water and duck-weed, and there was more than a quart of water mixed with duck-weed and water-weed in the stomach. That is a clear proof of death by drowning. The water in the lungs was the immediate cause of death, by making breathing impossible, and as the water and weed in the stomach must have been swallowed, they furnish conclusive evidence that deceased was alive when he fell into the water.”

“The water and weed could not have got into the stomach after death?”

“No, that is quite impossible. They must have been swallowed when the head of the deceased was just below the surface; and the water must have been drawn into the lungs by spasmodic efforts to breathe when the mouth was under water.”

“Did you find any signs indicating that deceased might have been intoxicated?”

“No. I examined the water from the stomach very carefully with that question in view, but there was no trace of alcohol—or, indeed, of anything else. It was simple ditch-water. As the point is important I have preserved it, and—here the witness produced a paper parcel which he unfastened, revealing a large glass jar containing about a quart of water plentifully sprinkled with duck-weed. This he presented to the coroner, who waved it away hastily and indicated the jury; to whom it was then offered and summarily rejected with emphatic head-shakes. Finally it came to rest on the table by the place where I was sitting with my colleague, Dr. Thorndyke, and our client, Mr. Wilfred Pedley. I glanced at it with faint interest, noting how the duck-weed plants had risen to the surface and floated, each with its tassel of roots hanging down into the water, and how a couple of tiny, flat shells, like miniature ammonites, had sunk and lay on the bottom of the jar. Thorndyke also glanced at it; indeed, he did more than glance, for he drew the jar towards him and examined its contents in the systematic way in which it was his habit to examine everything. Meanwhile the coroner asked: “Did you find anything abnormal or unusual, or anything that could throw light on how deceased came to be in the water?”

“Nothing whatever,” was the reply. “I found simply that deceased met his death by drowning.”
Here, as the witness seemed to have finished his evidence, Thorndyke interposed.

“The witness states, sir, there were no definite bruises. Does he mean that there were any marks that might have been bruises?”

The coroner glanced at Dr. Parton, who replied: “There was a faint mark on the outside of the right arm, just above the elbow, which had somewhat the appearance of a bruise, as if the deceased had been struck with a stick. But it was very indistinct. I shouldn’t like to swear that it was a bruise at all.”

This concluded the doctor’s evidence, and when he had retired, the name of our client, Wilfred Pedley, was called. He rose, and having taken the oath and given his name and address, deposed: “I have viewed the body of deceased. It is that of my brother, Cyrus Pedley, who is forty-three years of age. The last time I saw deceased alive was on Tuesday morning, the day before the body was found.”

“Did you notice anything unusual in his manner or state of mind?”

The witness hesitated but at length replied: “Yes. He seemed anxious and depressed. He had been in low spirits for some time past, but on this occasion he seemed more so than usual.”

“Had you any reason to suspect that he might contemplate taking his life?”

“No,” the witness replied, emphatically, “and I do not believe that he would, under any circumstances, have contemplated suicide.”

“Have you any special reason for that belief?”

“Yes. Deceased was a highly conscientious man and he was in my debt. He had occasion to borrow two thousand pounds from me, and the debt was secured by an insurance on his life. If he had committed suicide that insurance would be invalidated and the debt would remain unpaid. From my knowledge of him, I feel certain that he would not have done such a thing.”

The coroner nodded gravely, and then asked: “What was deceased’s occupation?”

“He was employed in some way by the Foreign Office, I don’t know in what capacity. I know very little about his affairs.”

“Do you know if he had any money worries or any troubles or embarrassments of any kind?”

“I have never heard of any; but deceased was a very reticent man. He lived alone in his flat, taking his meals at his club, and no one knew—at least, I did not—how he spent his time or what was the state of his finances. He was not married, and I am his only near relative.”

“And as to deceased’s habits. Was he ever addicted to taking more stimulants than was good for him?”

“Never,” the witness replied emphatically. “He was a most temperate and abstemious man.”

“Was he subject to fits of any kind, or fainting attacks?”

“I have never heard that he was.”

“Can you account for his being in this solitary place at this time—apparently about eight o’clock at night?”

“I cannot. It is a complete mystery to me. I know of no one with whom either of us was acquainted in this district. I had never heard of the place until I got the summons to the inquest.”

This was the sum of our client’s evidence, and, so far, things did not look very favourable from our point of view—we were retained on the insurance question, to rebut, if possible, the suggestion of suicide. However, the coroner was a discreet man, and having regard to the obscurity of the case—and perhaps to the interests involved—summed up in favour of an open verdict; and the jury, taking a similar view, found that deceased met his death by drowning, but under what circumstances there was no evidence to show.

“Well,” I said, as the court rose, “that leaves it to the insurance people to make out a case of suicide if they can. I think you are fairly safe, Mr. Pedley. There is no positive evidence.”

“No,” our client replied. “But it isn’t only the money I am thinking of. It would be some consolation to me for the loss of my poor brother if I had some idea how he met with his death, and could feel sure that it was an unavoidable misadventure. And for my own satisfaction—leaving the insurance out of the question—I should like to have definite proof that it was not suicide.”

He looked half-questioningly at Thorndyke, who nodded gravely. “Yes,” the latter agreed, “the suggestion of suicide ought to be disposed of if possible, both for legal and sentimental reasons. How far away is the mortuary?”

“A couple of minutes’ walk,” replied Mr. Pedley. “Did you wish to inspect the body?”

“If it is permissible,” replied Thorndyke; “and then I propose to have a look at the place where the body was found.”

“In that case,” our client said, “I will go down to the Station Hotel and wait for you. We may as well travel up to town together, and you can then tell me if you have seen any further light on the mystery.”

As soon as he was gone, Dr. Parton advanced, tying the string of the parcel which once more enclosed the jar of ditch-water.
“I heard you say, sir, that you would like to inspect the body,” said he. “If you like, I will show you the way to the mortuary. The sergeant will let us in, won’t you, sergeant? This gentleman is a doctor as well as a lawyer.”

“Bless you, sir,” said the sergeant, “I know who Dr. Thorndyke is, and I shall feel it an honour to show him anything he wishes to see.”

Accordingly we set forth together, Dr. Parton and Thorndyke leading the way.

“The coroner and the jury didn’t seem to appreciate my exhibit,” the former remarked with a faint grin, tapping the parcel as he spoke.

“No,” Thorndyke agreed; “and it is hardly reason able to expect a layman to share our own matter-of-fact outlook. But you were quite right to produce the specimen. That ditch-water furnishes conclusive evidence on a vitally material question. Further, I would advise you to preserve that jar for the present, well covered and under lock and key.”

Parton looked surprised. “Why?” he asked. “The inquest is over and the verdict pronounced.”

“Yes, but it was an open verdict, and an open verdict leaves the case in the air. The inquest has thrown no light on the question as to how Cyrus Pedley came by his death.”

“There doesn’t seem to me much mystery about it,” said the doctor. “Here is a man found drowned in a shallow ditch which he could easily have got out of if he had fallen in by accident. He was not drunk. Apparently he was not in a fit of any kind. There are no marks of violence and no signs of a struggle, and the man is known to have been in an extremely depressed state of mind. It looks like a clear case of suicide, though I admit that the jury were quite right, in the absence of direct evidence.”

“Well,” said Thorndyke, “it will be my duty to contest that view if the insurance company dispute the claim on those grounds.”

“I can’t think what you will have to offer in answer to the suggestion of suicide,” said Parton.

“Neither can I, at present,” replied Thorndyke. “But the case doesn’t look to me quite so simple as it does to you.”

“You think it possible that an analysis of the contents of this jar may be called for?”

“That is a possibility,” replied Thorndyke. “But I mean that the case is obscure, and that some further inquiry into the circumstances of this man’s death is by no means unlikely.”

“Then,” said Parton, “I will certainly follow your advice and lock up this precious jar. But here we are at the mortuary. Is there anything in particular that you want to see?”

“I want to see all that there is to see,” Thorndyke replied. “The evidence has been vague enough so far. Shall we begin with that bruise or mark that you mentioned?”

Dr. Parton advanced to the grim, shrouded figure that lay on the slate-toped table, like some solemn effigy on an altar tomb, and drew back the sheet that covered it. We all approached, stepping softly, and stood beside the table, looking down with a certain awesome curiosity at the still, waxen figure that, but a few hours since, had been a living man like ourselves. The body was that of a good-looking, middle-aged man with a refined, intelligent face—slightly disfigured by a scar on the cheek—now set in the calm, reposeful expression that one so usually finds on the faces of the drowned; with drowsy, half-closed eyes and slightly parted lips that revealed a considerable gap in the upper front teeth.

Thorndyke stood awhile looking down on the dead man with a curious questioning expression. Then his eye travelled over the body, from the placid face to the marble-like torso and the hand which, though now relaxed, still lightly grasped a tuft of water-weed. The latter Thorndyke gently disengaged from the limp hand, and, after a glance at the dark green, feathery fronds, laid it down and stooped to examine the right arm at the spot above the elbow that Parton had spoken of.

“Yes,” he said, “I think I should call it a bruise, though it is very faint. As you say, it might have been produced by a blow with a stick or rod. I notice that there are some teeth missing. Presumably he wore a plate?”

“Yes,” replied Parton; “a smallish gold plate with four teeth on it—at least, so his brother told me. Of course, it fell out when he was in the water, but it hasn’t been found; in fact, it hasn’t been looked for.”

Thorndyke nodded and then turned to the sergeant. “Could I see what you found in the pockets?” he asked.

The sergeant complied readily, and my colleague watched his orderly procedure with evident approval. The collection of envelopes was produced from an attaché-case and conveyed to a side table, where the sergeant emptied out the contents of each into a little heap, opposite which he placed the appropriate envelope with its written description. Thorndyke ran his eye over the collection—which was commonplace enough—until he came to the tobacco pouch, from which protruded the corner of a scrap of crumpled paper. This he drew forth and smoothed out the creases, when it was seen to be a railway receipt for an excess fare.

“Seems to have lost his ticket or travelled without one,” the sergeant remarked. “But not on this line.”

“No,” agreed Thorndyke. “It is the Tilbury and Southend line. But you notice the date. It is the 18th; and the body was found on the morning of Wednesday, the 19th. So it would appear that he must have come into this neighbourhood in the evening: and that he must have come either by way of London or by a very complicated cross-country route. I wonder what brought him here.”
He produced his notebook and was beginning to copy the receipt when the sergeant said: “You had better take the paper, sir. It is of no use to us now, and it isn’t very easy to make out.”

Thorndyke thanked the officer, and, handing me the paper, asked: “What do you make of it, Jervis?”

I scrutinised the little crumpled scrap and deciphered with difficulty the hurried scrawl, scribbled with a hard, ill-sharpened pencil.

“It seems to read ‘Ldn to C.B.’ or ‘S.B.’ ‘Hlt’—that is some ‘Halt,’ I presume. But the amount, 4/9, is clear enough, and that will give us a clue if we want one.” I returned the paper to Thorndyke, who bestowed it in his pocket-book and then remarked: “I don’t see any keys.”

“No, sir,” replied the sergeant, “there aren’t any. Rather queer, that, for he must have had at least a latch key. They must have fallen out into the water.”

“That is possible,” said Thorndyke, “but it would be worth while to make sure. Is there anyone who could show us the place where the body was found?”

“I will walk up there with you myself, sir, with pleasure,” said the sergeant, hastily repacking the envelopes. “It is only a quarter of an hour’s walk from here.”

“That is very good of you, sergeant,” my colleague responded; “and as we seem to have seen everything here, I propose that we start at once. You are not coming with us, Parton?”

“No,” the doctor replied. “I have finished with the case and I have got my work to do.” He shook hands with us heartily and watched us—with some curiosity, I think—as we set forth in company with the sergeant.

His curiosity did not seem to me to be unjustified. In fact, I shared it. The presence of the police officer precluded discussion, but as we took our way out of the town I found myself speculating curiously on my colleague’s proceedings. To me, suicide was written plainly on every detail of the case. Of course, we did not wish to take that view, but what other was possible? Had Thorndyke some alternative theory? Or was he merely, according to his invariable custom, making an impartial survey of everything, no matter how apparently trivial, in the hope of lighting on some new and informative fact?

The temporary absence of the sergeant, who had stopped to speak to a constable on duty, enabled me to put the question: “Is this expedition intended to clear up anything in particular?”

“No,” he replied, “excepting the keys, which ought to be found. But you must see for yourself that this is not a straightforward case. That man did not come all this way merely to drown himself in a ditch. I am quite in the dark at present, so there is nothing for it but to examine everything with our own eyes and see if there is anything that has been overlooked that may throw some light on either the motive or the circumstances. It is always desirable to examine the scene of a crime or a tragedy.”

Here the return of the sergeant put a stop to the discussion and we proceeded on our way in silence. Already we had passed out of the town, and we now turned out of the main road into a lane or by-road, bordered by meadows and orchards and enclosed by rather high hedgerows.

“This is Ponder’s Road,” said the sergeant. “It leads to Renham, a couple of miles farther on, where it joins the Aylesbury Road. The cart track is on the left a little way along.”

A few minutes later we came to our turning, a narrow and rather muddy lane, the entrance to which was shaded by a grove of tall elms. Passing through this shady avenue, we came out on a grass-covered track, broken by deep wagon-ruts and bordered on each side by a ditch, which was a wide expanse of marshy meadows.

“This is the place,” said the sergeant, halting by the side of the right-hand ditch and indicating a spot where the rushes had been flattened down. “It was just as you see it now, only the feet were just visible sticking out of the duck-weed, which had drifted back after Moffet had disturbed it.”

We stood awhile looking at the ditch, with its thick mantle of bright green, spotted with innumerable small dark objects and showing here and there a faint track where a water-voile had swum across.

“Those little dark objects are water-snails, I suppose,” said I, by way of making some kind of remark.

“Yes,” replied Thorndyke; “the common Amber shell, I think—Succinea putris.” He reached out his stick and fished up a sample of the duck-weed, on which one or two of the snails were crawling. “Yes,” he repeated. “Succinea putris it is; a queer little left handed shell, with the spire, as you see, all lop-sided. They have a habit of swarming in this extraordinary way. You notice that the ditch is covered with them.”

I had already observed this, but it hardly seemed to be worth commenting on under the present circumstances—which was apparently the sergeant’s view also, for he looked at Thorndyke with some surprise, which developed into impatience when my colleague proceeded further to expand on the subject of natural history.

“These water-weeds,” he observed, “are very remarkable plants in their various ways. Look at this duck-weed, for instance. Just a little green oval disc with a single root hanging down into the water, like a tiny umbrella with a long handle; and yet it is a complete plant, and a flowering plant, too.” He picked a specimen off the end of his stick and held it up by its root to exhibit its umbrella-like form; and as he did so, he looked in my face with an expression that I felt to be
somehow significant; but of which I could not extract the meaning. But there was no difficulty in interpreting the expression on the sergeant’s face. He had come here on business and be wanted to “cut the cackle and get to the hosses.”

“Well, sergeant,” said Thorndyke, “there isn’t much to see, but I think we ought to have a look for those keys. He must have had keys of some kind, if only a latchkey; and they must be in this ditch.”

The sergeant was not enthusiastic. “I’ve no doubt you are right, sir,” said he; “but I don’t see that we should be much forradier if we found them. However, we may as well have a look, only I can’t stay more than a few minutes. I’ve got my work to do at the station.”

“Then,” said Thorndyke, “let us get to work at once. We had better hook out the weed and look it over; and if the keys are not in that, we must try to expose the bottom where the body was lying. You must tell us if we are working in the right place.”

With this he began, with the crooked handle of his stick, to rake up the tangle of weed that covered the bottom of the ditch and drag the detached masses ashore, piling them on the bank and carefully looking them through to see if the keys should chance to be entangled in their meshes. In this work I took my part under the sergeant’s direction, raking in load after load of the delicate, stringy weed, on the pale green ribbon-like leaves of which multitudes of the water-snails were creeping; and sorting over each batch in hopeless and fruitless search for the missing keys. In about ten minutes we had removed the entire weedy covering from the bottom of the ditch over an area of from eight to nine feet—the place which, according to the sergeant, the body had occupied; and as the duck-weed had been caught by the tangled masses of waterweed that we had dragged ashore, we now had an uninterrupted view of the cleared space save for the clouds of mud that we had stirred up.

“We must give the mud a few minutes to settle,” said Thorndyke.

“Yes,” the sergeant agreed, “it will take some time; and as it doesn’t really concern me now that the inquest is over, I think I will get back to the station if you will excurse me.”

Thorndyke excused him very willingly, I think, though politely and with many thanks for his help. When he had gone I remarked, “I am inclined to agree with the sergeant. If we find the keys we shan’t be much forrader.”

“We shall know that he had them with him,” he replied. “Though, of course, if we don’t find them, that will not prove that they are not here. Still, I think we should try to settle the question.”

His answer left me quite unconvinced; but the care with which he searched the ditch and sorted out the weed left me in no doubt that, to him, the matter seemed to be of some importance. However, nothing came of the search. If the keys were there they were buried in the mud, and eventually we had to give up the search and make our way back towards the station.

As we passed out of the lane into Ponder’s Road, Thorndyke stopped at the entrance, under the trees, by a little triangle of turf which marked the beginning of the lane, and looked down at the muddy ground.

“Here is quite an interesting thing, Jervis,” he remarked, “which shows us how standardised objects tend to develop an individual character. These are the tracks of a car, or more probably a tradesman’s van, which was fitted with Barlow tyres. Now there must be thousands of vans fitted with these tyres; they are the favourite type for light covered vans, and when new they are all alike and indistinguishable. Yet this tyre—of the toff hind wheel—has acquired a character which would enable one to pick it out with certainty from ten thousand others. First, you see, there is a deep cut in the tyre at an angle of forty-five, then a kidney-shaped ‘Blakey’ has stuck in the outer tyre without puncturing the inner; and finally some adhesive object—perhaps a lump of pitch from a newly-mended road—has become fixed on just behind the ‘Blakey.’ Now, if we make a rough sketch of those three marks and indicate their distance apart, thus”—here he made a rapid sketch in his notebook, and wrote in the intervals in inches—“we have the means of swearing to the identity of a vehicle which we have never seen.”

“And which,” I added, “had for some reason swerved over to the wrong side of the road. Yes, I should say that tyre is certainly unique. But surely most tyres are identifiable when they have been in use for some time.”

“Exactly,” he replied. “That was my point. The standardised thing is devoid of character only when it is new.”

It was not a very subtle point, and as it was fairly obvious I made no comment, but presently reverted to the case of Pedley deceased.

“I don’t quite see why you are taking all this trouble. The insurance claim is not likely to be contested. No one can prove that it was a case of suicide, though I should think no one will feel any doubt that it was, at least that is my own feeling.”

Thorndyke looked at me with an expression of reproach.

“I am afraid that my learned friend has not been making very good use of his eyes,” said he. “He has allowed his attention to be distracted by superficial appearances.”

“You don’t think that it was suicide, then?” I asked, considerably taken aback.

“It isn’t a question of thinking,” he replied. “It was certainly not suicide. There are the plainest indications of homicide; and, of course, in the particular circumstances, homicide means murder.”

I was thunderstruck. In my own mind I had dismissed the case somewhat contumely as a mere commonplace
suicide. As my friend had truly said, I had accepted the obvious appearances and let them mislead me, whereas Thorndyke had followed his golden rule of accepting nothing and observing everything. But what was it that he had observed? I knew that it was useless to ask, but still I ventured on a tentative question.

"When did you come to the conclusion that it was a case of homicide?"

"As soon as I had had a good look at the place where the body was found," he replied promptly.

This did not help me much, for I had given very little attention to anything but the search for the keys. The absence of those keys was, of course, a suspicious fact, if it was a fact. But we had not proved their absence; we had only failed to find them.

"What do you propose to do next?" I asked.

"Evidently," he answered, "there are two things to be done. One is to test the murder theory—to look for more evidence for or against it; the other is to identify the murderer, if possible. But really the two problems are one, since they involve the questions Who had a motive for killing Cyrus Pedley? and Who had the opportunity and the means?"

Our discussion brought us to the station, where, outside the hotel, we found Mr. Pedley waiting for us.

"I am glad you have come," said he. "I was beginning to fear that we should lose this train. I suppose there is no new light on this mysterious affair?"

"No," Thorndyke replied. "Rather there is a new problem. No keys were found in your brother's pockets, and we have failed to find them in the ditch; though, of course, they may be there."

"They must be," said Pedley. "They must have fallen out of his pocket and got buried in the mud, unless he lost them previously, which is most unlikely. It is a pity, though. We shall have to break open his cabinets and drawers, which he would have hated. He was very fastidious about his furniture."

"You will have to break into his flat, too," said I.

"No," he replied, "I shan't have to do that. I have a duplicate of his latchkey. He had a spare bedroom which he let me use if I wanted to stay in town." As he spoke, he produced his key-bunch and exhibited a small Chubb latchkey. "I wish we had the others, though," he added.

Here the up-train was heard approaching and we hurried on to the platform, selecting an empty first-class compartment as it drew up. As soon as the train had started, Thorndyke began his inquiries, to which I listened attentively.

"You said that your brother had been anxious and depressed lately. Was there anything more than this? Any nervousness or foreboding?"

"Well yes," replied Pedley. "Looking back, I seem to see that the possibility of death was in his mind. A week or two ago he brought his will to me to see if it was quite satisfactory to me as the principal beneficiary and he handed to me his last receipt for the insurance premium. That looks a little suggestive."

"It does," Thorndyke agreed. "And as to his occupation and his associates, what do you know about them?"

"His private friends are mostly my own, but of his official associates I know nothing. He was connected with the Foreign Office; but in what capacity I don't know at all. He was extremely reticent on the subject. I only know that he travelled about a good deal, presumably on official business."

This was not very illuminating, but it was all our client had to tell; and the conversation languished somewhat until the train drew up at Marylebone, when Thorndyke said, as if by an after-thought: "You have your brother's latchkey. How would it be if we just took a glance at the flat? Have you time now?"

"I will make time," was the reply, "if you want to see the flat. I don't see what you could learn from inspecting it; but that is your affair. I am in your hands."

"I should like to look round the rooms," Thorndyke answered; and as our client assented, we approached a taxi-cab and entered while Pedley gave the driver the necessary directions. A quarter of an hour later we drew up opposite a tall block of buildings, and Mr. Pedley, having paid off the cab, led the way to the lift.

The dead man's flat was on the third floor, and, like the others, was distinguished only by the number on the door. Mr. Pedley inserted the key into the latch, and having opened the door, preceded us across the small lobby into the sitting-room.

"Ha!" he exclaimed, as he entered, "this solves your problem." As he spoke, he pointed to the table, on which lay a small bunch of keys, including a latch key similar to the one that he had shown us. "But," he continued, "it is rather extraordinary. It just shows what a very disturbed state his mind must have been in."

"Yes," Thorndyke agreed, looking critically about the room; "and as the latchkey is there, it raises the question whether the keys may have been out of his possession. Do you know what the various locked receptacles contain?"

"I know pretty well what is in the bureau; but as to the cupboard above it, I have never seen it open and don't know what he kept in it. I always assumed that he reserved it for his official papers. I will just see if anything seems to have been disturbed."
He unlocked and opened the flap of the old-fashioned bureau and pulled out the small drawers one after the other, examining the contents of each. Then he opened each of the larger drawers and turned over the various articles in them. As he closed the last one, he reported “Everything seems to be in order—cheque-book, insurance policy, a few share certificates, and so on. Nothing seems to have been touched. Now we will try the cupboard, though I don’t suppose its contents would be of much interest to anyone but himself. I wonder which is the key.”

He looked at the keyhole and made a selection from the bunch, but it was evidently the wrong key. He tried another and yet another with a like result, until he had exhausted the resources of the bunch.

“It is very remarkable,” he said. “None of these keys seems to fit. I wonder if he kept this particular key locked up or hidden. It wasn’t in the bureau. Will you try what you can do?”

He handed the bunch to Thorndyke, who tried all the keys in succession with the same result. None of them was the key belonging to the lock. At length, having tried them all, he inserted one and turned it as far as it would go. Then he gave a sharp pull; and immediately the door came open.

“Why, it was unlocked after all!” exclaimed Mr. Pedley. “And there is nothing in it. That is why there was no key on the bunch. Apparently he didn’t use the cupboard.”

Thorndyke looked critically at the single vacant shelf, drawing his finger along it in two places and inspecting his fingers. Then he turned his attention to the lock, which was of the kind that is screwed on the inside of the door, leaving the bolt partly exposed. He took the bolt in his fingers and pushed it out and then in again; and by the way it moved I could see that the spring was broken. On this he made no comment, but remarked, “The cupboard has been in use pretty lately. You can see the trace of a largish volume—possibly a box-file—on the shelf. There is hardly any dust there whereas the rest of the shelf is fairly thickly coated However, that does not carry us very far; and the appearance of the rooms is otherwise quite normal.”

“Quite,” agreed Pedley. “But why shouldn’t it be? You didn’t suspect—”

“I was merely testing the suggestion offered by the absence of the keys,” said Thorndyke. “By the way, have you communicated with the Foreign Office?”

“No,” was the reply, “but I suppose I ought to. What had I better say to them?”

“I should merely state the facts in the first instance. But you can, if you like, say that I definitely reject the idea of suicide.”

“I am glad to hear you say that,” said Pedley. “Can I give any reasons for your opinion?”

“Not in the first place,” replied Thorndyke. “I will consider the case and let you have a reasoned report in a day or two, which you can show to the Foreign Office and also to the insurance company.”

Mr. Pedley looked as if he would have liked to ask some further questions, but as Thorndyke now made his way to the door, he followed in silence, pocketing the keys as we went out. He accompanied us down to the entry and there we left him, setting forth in the direction of South Kensington Station.

“It looked to me,” said I, as soon as we were out of ear-shot, “as if that lock had been forced. What do you think?”

“Well,” he answered, “locks get broken in ordinary use, but taking all the facts together, I think you are right. There are too many coincidences for reasonable probability. First, this man leaves his keys, including his latchkey, on the table, which is an extraordinary thing to do. On that very occasion, he is found dead under inexplicable circumstances. Then, of all the locks in his rooms, the one which happens to be broken is the one of which the key is not on the bunch. That is a very suspicious group of facts.”

“It is,” I agreed. “And if there is, as you say—that I can’t imagine on what grounds—evidence of foul play, that makes it still more suspicious. But what is the next move? Have you anything in view?”

“The next move,” he replied, “is to clear up the mystery of the dead man’s movements on the day of his death. The railway receipt shows that on that day be travelled down somewhere into Essex. From that place, he took a long, cross-country journey of which the destination was a ditch by a lonely meadow in Buckinghamshire. The questions that we have to answer are, What was he doing in Essex? Why did he make that strange journey? Did he make it alone? and, if not, Who accompanied him?”

“Now, obviously, the first thing to do is to locate that place in Essex; and when we have done that, to go down there and see if we can pick up any traces of the dead man.”

“That sounds like a pretty vague quest,” said I; “but if we fail, the police may be able to find out something. By the way, we want a new Bradshaw.”

“An excellent suggestion, Jervis,” said he. “I will get one as we go into the station.”

A few minutes later, as we sat on a bench waiting for our train, he passed to me the open copy of Bradshaw, with the crumpled railway receipt.

“You see,” said he, “it was apparently ‘G.B.Hlt.,’ and the fare from London was four and ninepence. Here is Great Buntingfield Halt, the fare to which is four and ninepence. That must be the place. At any rate, we will give it a trial. May I
take it that you are coming to lend a hand? I shall start in good time to-morrow morning."

I assented emphatically. Never had I been more completely in the dark than I was in this case, and seldom had I known Thorndyke to be more positive and confident. Obviously, he had something up his sleeve; and I was racked with curiosity as to what that something was.

On the following morning we made a fairly early start, and half-past ten found us seated in the train, looking out across a dreary waste of marshes, with the estuary of the Thames a mile or so distant. For the first time in my recollection Thorndyke had come unprovided with his inevitable “research case,” but I noted that he had furnished himself with a botanist’s vasculum—or tin collecting-case—and that his pocket bulged as if he had some other appliances concealed about his person. Also that he carried a walking-stick that was strange to me.

"This will be our destination, I think," he said, as the train slowed down; and sure enough it presently came to rest beside a little makeshift platform on which was displayed the name “Great Buntingfield Halt.” We were the only passengers to alight, and the guard, having noted the fact, blew his whistle and dismissed the little station with a contemptuous wave of his flag.

Thorndyke lingered on the platform after the train had gone, taking a general survey of the country. Half a mile away to the north a small village was visible; while to the south the marshes stretched away to the river, their bare expanse unbroken save by a solitary building whose unredeemed hideousness proclaimed it a factory of some kind. Presently the station-master approached deferentially, and as we proffered our tickets, Thorndyke remarked: “You don’t seem overburdened with traffic here.”

“No, sir. You’re right,” was the emphatic reply. “Tis a dead-alive place. Excepting the people at the Golomite Works and one now and then from the village, no one uses the halt. You’re the first strangers I’ve seen for more than a month.”

“Indeed,” said Thorndyke. “But I think you are forgetting one. An acquaintance of mine came here last Tuesday—and by the same token, he hadn’t got a ticket and had to pay his fare.”

“Oh, I remember,” the station-master replied. “You mean a gentleman with a scar on his cheek. But I don’t count him as a stranger. He has been here before; I think he is connected with the works, as he always goes up their road.”

“Do you happen to remember what time he came back?” Thorndyke asked.

“He didn’t come back at all,” was the reply. “I am sure of that, because I work the halt and level crossing by myself. I remember thinking it queer that he didn’t come back, because the ticket that he had lost was a return. He must have gone back in the van belonging to the works—that one that you see coming towards the crossing.”

As he spoke, he pointed to a van that was approaching down the factory road—a small covered van with the name “Golomite Works” painted, not on the cover, but on a board that was attached to it. The station-master walked towards the crossing to open the gates, and we followed; and when the van had passed, Thorndyke wished our friend “Good morning,” and led the way along the road, looking about him with lively interest and rather with the air of one looking for something in particular.

We had covered about two-thirds of the distance to the factory when the road approached a wide ditch; and from the attention with which my friend regarded it, I suspected that this was the something for which he had been looking. It was, however, quite unapproachable, for it was bordered by a wide expanse of soft mud thickly covered with rushes and trodden deeply by cattle. Nevertheless, Thorndyke followed its margin, still looking about him keenly, until, about a couple of hundred yards from the factory, I observed a small decayed wooden staging or quay, apparently the remains of a vanished footbridge. Here Thorndyke halted and unbuttoning his coat, began to empty out his pockets, producing first the vasculum, then a small case containing three wide-mouthed bottles—both of which he deposited on the ground—and finally a sort of miniature landing-net, which he proceeded to screw on to the ferrule of his stick.

“I take it,” said I, “that these proceedings are a blind to cover some sort of observations.”

“Not at all,” he replied. “We are engaged in the study of pond and ditch natural history, and a most fascinating and instructive study it is. The variety of forms is endless. This ditch, you observe, like the one at Bantree, is covered with a dense growth of duck-weed: but whereas that ditch was swarming with succinea here there is not a single succinea to be seen.”

I grunted a sulkily assent, and watched suspiciously as he filled the bottles with water from the ditch and then made a preliminary sweep with his net.

“Here is a trial sample,” said he, holding the loaded net towards me. “Duck-weed, horn-weed, Planorbus nautilus, but no succinea. What do you think of it, Jervis?”

I looked distastefully at the repulsive mess, but yet with attention, for I realised that there was a meaning in his question. And then, suddenly, my attention sharpened. I picked out of the net a strand of dark green, plumy weed and examined it. “So this is horn-weed,” I said. “Then it was a piece of horn-weed that Cyrus Pedley held grasped in his hand; and now I come to think of it, I don’t remember seeing any horn-weed in the ditch at Bantree.”

He nodded approvingly. “There wasn’t any,” said he.

“And these little ammonite-like shells are just like those that I noticed at the bottom of Dr. Parton’s jar. But I don’t
remember seeing any in the Bantree ditch.”

“There were none there,” said he. “And the duck-weed?”

“Oh, well,” I replied, “duck-weed is duck-weed, and there’s an end of it.”

He chuckled aloud at my answer, and quoting: “A primrose by the river’s brim A yellow primrose was to him,” bestowed a part of the catch in the vasculum, then turned once more to the ditch and began to ply his net vigorously, emptying out each netful on the grass, looking it over quickly and then making a fresh sweep, dragging the net each time through the mud at the bottom. I watched him now with a new and very lively interest; for enlightenment was dawning, mingled with some self-contempt and much speculation as to how Thorndyke had got his start in this case.

But I was not the only interested watcher. At one of the windows of the factory I presently observed a man who seemed to be looking our way. After a few seconds’ inspection he disappeared, to reappear almost immediately with a pair of field-glasses, through which he took a long look at us. Then he disappeared again, but in less than a minute I saw him emerge from a side door and advance hurriedly towards us.

“We are going to have a notice of ejectment served on us, I fancy,” said I.

Thorndyke glanced quickly at the approaching stranger but continued to ply his net, working, as I noticed, methodically from left to right. When the man came within fifty yards he hailed us with a brusque inquiry as to what our business was. I went forward to meet him and, if possible, to detain him in conversation; but this plan failed, for he ignored me and bore straight down on Thorndyke.

“Now, then,” said he, “what’s the game? What are you doing here?”

Thorndyke was in the act of raising his net from the water, but he now suddenly let it fall to the bottom of the ditch while he turned to confront the stranger.

“I take it that you have some reason for asking,” said he.

“Yes, I have,” the other replied angrily and with a slight foreign accent that agreed with his appearance—he looked like a Slav of some sort. “This is private land. It belongs to the factory. I am the manager.”

“The land is not enclosed,” Thorndyke remarked.

“I tell you the land is private land,” the fellow retorted excitedly. “You have no business here. I want to know what you are doing.”

“My good sir,” said Thorndyke, “there is no need to excite yourself. My friend and I are just collecting botanical and other specimens.”

“How do I know that?” the manager demanded. He looked round suspiciously and his eye lighted on the vasculum.

“What have you got in that thing?” he asked.

“Let him see what is in it,” said Thorndyke, with a significant look at me.

Interpreting this as an instruction to occupy the man’s attention for a few moments, I picked up the vasculum and placed myself so that he must turn his back to Thorndyke to look into it. I fumbled awhile with the catch, but at length opened the case and began to pick out the weed strand by strand. As soon as the stranger’s back was turned Thorndyke raised his net and quickly picked out of it something which he slipped into his pocket. Then he advanced towards us, sorting out the contents of his net as he came.

“Well,” he said, “you see we are just harmless naturalists. By the way, what did you think we were looking for?”

“Never mind what I thought,” the other replied fiercely. “This is private land. You have no business here, and you have got to clear out.”

“Very well,” said Thorndyke. “As you please. There are plenty of other ditches.” He took the vasculum and the case of bottles, and having put them in his pocket, unscrewed his net, wished the stranger “Good-morning,” and turned back towards the station. The man stood watching us until we were near the level crossing, when he, too, turned back and retired to the factory.

“I saw you take something out of the net,” said I. “What was it?”

He glanced back to make sure that the manager was out of sight. Then he put his hand in his pocket, drew it out closed, and suddenly opened it. In his palm lay a small gold dental plate with four teeth on it.

“My word!” I exclaimed; “this clinches the matter with a vengeance. That is certainly Cyrus Pedley’s plate. It corresponds exactly to the description.”

“Yes,” he replied, “it is practically a certainty. Of course, it will have to be identified by the dentist who made it. But it is a foregone conclusion.”

I reflected as we walked towards the station on the singular sureness with which Thorndyke had followed what was to me an invisible trail. Presently I said, “What is puzzling me is how you got your start in this case. What gave you the first hint that it was homicide and not suicide or misadventure?”
“It was the old story, Jervis,” he replied; “just a matter of observing and remembering apparently trivial details. Here, by the way, is a case in point.”

He stopped and looked down at a set of tracks in the soft, earth road—apparently those of the van which we had seen cross the line. I followed the direction of his glance and saw the clear impression of a Blakey’s protector, preceded by that of a gash in the tyre and followed by that of a projecting lump.

“But this is astounding!” I exclaimed. “It is almost certainly the same track that we saw in Ponder’s Road.”

“Yes,” he agreed. “I noticed it as we came along.” He brought out his spring-tape and notebook, and handing the latter to me, stooped and measured the distances between the three impressions. I wrote them down as he called them out, and then we compared them with the note made in Ponder’s Road. The measurements were identical, as were the relative positions of the impressions.

“This is an important piece of evidence,” said he. “I wish we were able to take casts, but the notes will be pretty conclusive. And now,” he continued as we resumed our progress towards the station, “to return to your question. Parton’s evidence at the inquest proved that Cyrus Pedley was drowned in water which contained duck-weed. He produced a specimen and we both saw it. We saw the duck-weed in it and also two Planorbis shells. The presence of those two shells proved that the water in which he was drowned must have swarmed with them. We saw the body, and observed that one hand grasped a wisp of horn-weed. Then we went to view the ditch and we examined it. That was when I got, not a mere hint, but a crucial and conclusive fact. The ditch was covered with duck-weed, as we expected. But it was the wrong duck-weed.”

“The wrong duck-weed!” I exclaimed. “Why, how many kinds of duck-weed are there?”

“There are four British species,” he replied. “The Greater Duck-weed, the Lesser Duck-weed, the Thick Duck-weed, and the Ivy-leaved Duckweed. Now the specimens in Parton’s jar I noticed were the Greater Duck-weed, which is easily distinguished by its roots, which are multiple and form a sort of tassel. But the duck-weed on the Bantree ditch was the Lesser Duck weed, which is smaller than the other, but is especially distinguished by having only a single root. It is impossible to mistake one for the other.

“Here, then, was practically conclusive evidence of murder. Cyrus Pedley had been drowned in a pond or ditch. But not in the ditch in which his body was found. Therefore his dead body had been conveyed from some other place and put into this ditch. Such a proceeding furnishes prima facie evidence of murder. But as soon as the question was raised, there was an abundance of confirmatory evidence. There was no horn-weed or Planorbis shells in the ditch, but there were swarms of succinea, some of which would inevitably have been swallowed with the water. There was an obscure linear pressure mark on the arm of the dead man, just above the elbow: such a mark as might be made by a cord if a man were pinioned to render him helpless. Then the body would have had to be conveyed to this place in some kind of vehicle; and we found the traces of what appeared to be a motor-van, which had approached the cart-track on the wrong side of the road, as if to pull up there. It was a very conclusive mass of evidence; but it would have been useless but for the extraordinarily lucky chance that poor Pedley had lost his railway ticket and preserved the receipt; by which we were able to ascertain where he was on the day of his death and in what locality the murder was probably committed. But that is not the only way in which Fortune has favoured us. The station-master’s information was, and will be, invaluable. Then it was most fortunate for us that there was only one ditch on the factory land; and that that ditch was accessible at only one point, which must have been the place where Pedley was drowned.”

“The duck-weed in this ditch is, of course, the Greater Duck-weed?”

“Yes. I have taken some specimens as well as the horn-weed and shells.”

He opened the vasculum and picked out one of the tiny plants, exhibiting the characteristic tassel of roots.

“I shall write to Parton and tell him to preserve the jar and the horn-weed if it has not been thrown away. But the duck-weed alone, produced in evidence, would be proof enough that Pedley was not drowned in the Bantree ditch; and the dental plate will show where he was drowned.”

“Are you going to pursue the case any farther?” I asked.

“No,” he replied. “I shall call at Scotland Yard on my way home and report what I have learned and what I can prove in court. Then I shall have finished with the case. The rest is for the police, and I imagine they won’t have much difficulty. The circumstances seem to tell their own story. Pedley was employed by the Foreign Office, probably on some kind of secret service. I imagine that he discovered the existence of a gang of evil-doers—probably foreign revolutionaries, of whom we may assume that our friend the manager of the factory is one; that he contrived to associate himself with them and to visit the factory occasionally to ascertain what was made there besides Golomite—if Golomite is not itself an illicit product. Then I assume that he was discovered to be a spy, that he was lured down here; that he was pinioned and drowned some time on Tuesday night and his body put into the van and conveyed to a place miles away from the scene of his death, where it was deposited in a ditch apparently identical in character with that in which he was drowned. It was an extremely ingenious and well-thought-out plan. It seemed to have provided for every kind of inquiry, and it very narrowly missed being successful.”

“Yes,” I agreed. “But it didn’t provide for Dr. John Thorndyke.”

“It didn’t provide for a searching examination of all the details,” he replied; “and no criminal plan that I have ever met
has done so. The completeness of the scheme is limited by the knowledge of the schemers, and, in practice, there is always something overlooked. In this case, the criminals were unlearned in the natural history of ditches.”

Thorndyke’s theory of the crime turned out to be substantially correct. The Golomite Works proved to be a factory where high explosives were made by a gang of cosmopolitan revolutionaries who were all known to the police. But the work of the latter was simplified by a detailed report which the dead man had deposited at his bank and which was discovered in time to enable the police to raid the factory and secure the whole gang. When once they were under lock and key, further information was forthcoming; for a charge of murder against them jointly soon produced King’s Evidence sufficient to procure a conviction of the three actual perpetrators of the murder.
MR. PONTING’S ALIBI

THORNDYKE looked doubtfully at the pleasant-faced athletic-looking clergyman who had just come in, bearing Mr. Brodribb’s card as an explanatory credential.

“I don’t quite see,” said he, “why Mr. Brodribb sent you to me. It seems to be a purely legal matter which he could have dealt with himself, at least as well as I can.”

“He appeared to think otherwise,” said the clergyman. (“The Revd. Charles Meade” was written on the card.)

“At any rate,” he added with a persuasive smile, “here I am, and I hope you are not going to send me away.”

“I shouldn’t offer that affront to my old friend Brodribb,” replied Thorndyke, smiling in return; “so we may as well get to business, which, in the first place, involves the setting out of all the particulars. Let us begin with the lady who is the subject of the threats which you spoke.”

“Her name,” said Mr. Meade, “is Miss Millicent Fawcett. She is a person of independent means, which she employs in works of charity. She was formerly a hospital sister, and she does a certain amount of voluntary work in the parish as a sort of district nurse. She has been a very valuable help to me and we have been close friends for several years; and I may add, as a very material fact, that she has consented to marry me in about two months’ time. So that, you see, I am properly entitled to act on her behalf.”

“Yes,” agreed Thorndyke. “You are an interested party. And now, as to the threats. What do they amount to?”

“That,” replied Meade, “I can’t tell you. I gathered quite by chance, from some words that she dropped, that she had been threatened. But she was unwilling to say more on the subject, as she did not take the matter seriously. She is not at all nervous. However, I told her I was taking advice; and I hope you will be able to extract more details from her. For my own part, I am decidedly uneasy.”

“And as to the person or persons who have uttered the threats. Who are they? and out of what circumstances have the threats arisen?”

“The person is a certain William Ponting, who is Miss Fawcett’s step-brother—if that is the right term. Her father married, as his second wife, a Mrs. Ponting, a widow with one son. This is the son. His mother died before Mr. Fawcett, and the latter, when he died, left his daughter, Millicent, sole heir to his property. That has always been a grievance to Ponting. But now he has another. Miss Fawcett made a will some years ago by which the bulk of her rather considerable property is left to two cousins, Frederick and James Barnett, the sons of her father’s sister. A comparatively small amount goes to Ponting. When he heard this he was furious. He demanded a portion at least equal to the others, and has continued to make this demand from time to time. In fact, he has been extremely troublesome, and appears to be getting still more so. I gathered that the threats were due to her refusal to alter the will.”

“But,” said I, “doesn’t he realise that her marriage will render that will null and void?”

“Apparently not,” replied Meade; “nor, to tell the truth, did I realise it myself. Will she have to make a new will?”

“Certainly,” I replied. “And as that new will may be expected to be still less favourable to him, that will presumably be a further grievance.”

“One doesn’t understand,” said Thorndyke, “why he should excite himself so much about her will. What are their respective ages?”

“Miss Fawcett is thirty-six and Ponting is about forty.”

“And what kind of man is he?” Thorndyke asked.

“A very unpleasant kind of man, I am sorry to say. Morose, rude, and violent-tempered. A spendthrift and a cadger. He has had quite a lot of money from Miss Fawcett—loans, which, of course, are never repaid. And he is none too industrious, though he has a regular job on the staff of a weekly paper. But he seems to be always in debt.”

“We may as well note his address,” said Thorndyke.

“He lives in a small flat in Bloomsbury—alone now, since he quarrelled with the man who used to share it with him. The address is 12 Borneo House, Devonshire Street.”

“What sort of terms is he on with the cousins, his rivals?”

“No sort of terms now,” replied Meade. “They used to be great friends. So much so that he took his own flat to be near them—they live in the adjoining flat, number 12 Sumatra House. But since the trouble about the wills he is hardly on speaking terms with them.”

“They live together, then?”

“Yes. Frederick and his wife and James, who is unmarried. They are rather a queer lot, too. Frederick is a singer on the variety stage, and James accompanies him on various instruments. But they are both sporting characters of a kind, especially James, who does a bit on the turf and engages in other odd activities. Of course, their musical habits are a grievance to Ponting. He is constantly making complaints of their disturbing him at his work.”
Mr. Meade paused and looked wistfully at Thorndyke, who was making full notes of the conversation.

“Well,” said the latter, “we seem to have got all the facts excepting the most important—the nature of the threats. What do you want us to do?”

“I want you to see Miss Fawcett—with me, if possible—and induce her to give you such details as would enable you to put a stop to the nuisance. You couldn’t come to-night, I suppose? It is a beast of a night, but I would take you there in a taxi—it is only to Tooting Bec. What do you say?” he added eagerly, as Thorndyke made no objection. “We are sure to find her in, because her maid is away on a visit to her home and she is alone in the house.”

Thorndyke looked reflectively at his watch.

“Half-past eight,” he remarked, “and half an hour to get there. These threats are probably nothing but ill-temper. But we don’t know. There may be something more serious behind them; and, in law as in medicine, prevention is better than a post-mortem. What do you say, Jervis?”

What could I say? I would much sooner have sat by the fire with a book than turn out into the murk of a November night. But I felt it necessary, especially as Thorndyke had evidently made up his mind. Accordingly I made a virtue of necessity; and a couple of minutes later we had exchanged the cosy room for the chilly darkness of Inner Temple Lane, up which the gratified parson was speeding ahead to capture a taxi. At the top of the Lane we perceived him giving elaborate instructions to a taxi-driver as he held the door of the cab open; and Thorndyke, having carefully disposed of his research-case—which, to my secret amusement, he had caught up, from mere force of habit, as we started—took his seat, and Meade and I followed.

As the taxi trundled smoothly along the dark streets, Mr. Meade filled in the details of his previous sketch, and, in a simple, manly, unaffected way dilated upon his good fortune and the pleasant future that lay before him. It was not, perhaps, a romantic marriage, he admitted; but Miss Fawcett and he had been faithful friends for years, and faithful friends they would remain till death did them part. So he ran on, now gleefully, now with a note of anxiety, and we listened by no means unsympathetically, until at last the cab drew up at a small, unpretentious house, standing in its own little grounds in a quiet suburban road.

“She is at home, you see,” observed Meade, pointing to a lighted ground-floor window. He directed the taxi-driver to wait for the return journey, and striding up the path, delivered a characteristic knock at the door. As this brought no response, he knocked again and rang the bell. But still there was no answer, though twice I thought I heard the sound of a bolt being either drawn or shot softly. Again Mr. Meade plied the knocker more vigorously, and pressed the push of the bell, which we could hear ringing loudly within.

“This is very strange,” said Meade, in an anxious tone, keeping his thumb pressed on the bell-push. “She can’t have gone out and left the electric light on. What had we better do?”

“We had better enter without more delay,” Thorndyke replied. “There were certainly sounds from within. Is there a side gate?”

Meade ran off towards the side of the house, and Thorndyke and I glanced at the lighted window, which was slightly open at the top.

“Looks a bit queer,” I remarked, listening at the letter-box.

Thorndyke assented gravely, and at this moment Meade returned, breathing hard.

“The side gate is bolted inside,” said he; and at this I recalled the stealthy sound of the bolt that I had heard. “What is to be done?”

Without replying, Thorndyke handed me his research-case, stepped across to the window, sprang up on the sill, drew down the upper sash and disappeared between the curtains into the room. A moment later the street door opened and Meade and I entered the hall. We glanced through the open doorway into the lighted room, and I noticed a heap of needlework thrown hastily on the dining-table. Then Meade switched on the hall light, and Thorndyke walked quickly past him to the half-open door of the next room. Before entering, he reached in and switched on the light; and as he stepped into the room he partly closed the door behind him.

“Don’t come in here, Meade!” he called out. But the parson’s eye, like my own, had seen something before the door closed: a great, dark stain on the carpet just within the threshold. Regardless of the admonition, he pushed the door open and darted into the room. Following him, I saw him rush forward, fling his arms up wildly, and with a dreadful, strangled cry, sink upon his knees beside a low couch on which a woman was lying.

“Merciful God!” he gasped. “She is dead! Is she dead, doctor? Can nothing be done?”

Thorndyke shook his head. “Nothing,” he said in a low voice. “She is dead.”

Poor Meade knelt by the couch, his hands clutching at his hair and his eyes riveted on the dead face, the very embodiment of horror and despair.

“God Almighty!” he exclaimed in the same strangled undertone. “How frightful! Poor, poor Millie! Dear, sweet friend!” Then suddenly—almost savagely—he turned to Thorndyke. “But it can’t be, doctor! It is impossible—unbelievable. That, I mean!” and he pointed to the dead woman’s right hand, which held an open razor.
Our poor friend had spoken my own thought. It was incredible that this refined, pious lady should have inflicted those savage wounds, that gaped scarlet beneath the waxen face. There, indeed, was the razor lying in her hand. But what was its testimony worth? My heart rejected it; but yet, unwillingly, I noted that the wounds seemed to support it; for they had been made from left to right, as they would have been if self-inflicted.

“It is hard to believe,” said Thorndyke, “but there is only one alternative. Someone should acquaint the police at once.”

“I will go,” exclaimed Meade, starting up. “I know the way and the cab is there.” He looked once more with infinite pity and affection at the dead woman. “Poor, sweet girl!” he murmured. “If we can do no more for you, we can defend your memory from calumny and call upon the God of Justice to right the innocent and punish the guilty.”

With these words and a mute farewell to his dead friend, he hurried from the room, and immediately afterwards we heard the street door close.

As he went out, Thorndyke’s manner changed abruptly. He had been deeply moved—as who would not have been—by this awful tragedy that had in a moment shattered the happiness of the genial, kindly parson. Now he turned to me with a face set and stern. “This is an abominable affair, Jervis,” he said in an ominously quiet voice.

“You reject the suggestion of suicide, then?” said I, with a feeling of relief that surprised me.

“Absolutely,” he replied. “Murder shouts at us from everything that meets our eye. Look at this poor woman, in her trim nurse’s dress, with her unfinished needlework lying on the table in the next room and that preposterous razor loose in her limp hand. Look at the savage wounds. Four of them, and the first one mortal. The great bloodstain by the door, the great bloodstain on her dress from the neck to the feet. The gashed collar, the cap-string cut right through. Note that the bleeding had practically ceased when she lay down. That is a group of visible facts that is utterly inconsistent with the idea of suicide. But we are wasting time. Let us search the premises thoroughly. The murderer has pretty certainly got away, but as he was in the house when we arrived, any traces will be quite fresh.”

As he spoke he took his electric lamp from the research-case and walked to the door.

“We can examine this room later,” he said, “but we had better look over the house. If you will stay by the stairs and watch the front and back doors, I will look through the upper rooms.”

He ran lightly up the stairs while I kept watch below, but he was absent less than a couple of minutes.

“There is no one there,” he reported, “and as there is no basement we will just look at this floor and then examine the grounds.”

After a rapid inspection of the ground-floor rooms, including the kitchen, we went out by the back door, which was unbolted, and inspected the grounds. These consisted of a large garden with a small orchard at the side. In the former we could discover no traces of any kind, but at the end of the path that crossed the orchard we came an a possible clue. The orchard was enclosed by a five-foot fence, the top of which bristled with hooked nails; and at the point opposite to the path, Thorndyke’s lantern brought into view one or two wisps of cloth caught on the hooks.

“Someone has been over here,” said Thorndyke, “but as this is an orchard, there is nothing remarkable in the fact. However, there is no fruit on the trees now, and the cloth looks fairly fresh. There are two kinds, you notice: a dark blue and a black and white mixture of some kind.”

“Corresponding, probably, to the coat and trousers,” I suggested.

“Possibly,” he agreed, taking from his pocket a couple of the little seed-envelopes of which he always carried a supply. Very delicately he picked the tiny wisps of cloth from the hooks and bestowed each kind in a separate envelope. Having pocketed these, he leaned over the fence and threw the light of his lamp along the narrow lane or alley that divided the orchard from the adjoining premises. It was ungravelled and covered with a growth of rank grass, which suggested that it was little frequented. But immediately below was a small patch of bare earth, and on this was a very distinct impression of a foot, covering several less distinct prints.

“Several people have been over here at different times,” I remarked.

“Yes,” Thorndyke agreed. “But that sharp footprint belongs to the last one over, and he is our concern. We had better not confuse the issues by getting over ourselves. We will mark the spot and explore from the other end.” He laid his handkerchief on the top of the fence and we then went back to the house.

“You are going to take a plaster cast, I suppose?” said I; and as he assented, I fetched the research-case from the drawing-room. Then we fixed the catch of the front-door latch and went out, drawing the door to after us.

We found the entrance to the alley about sixty yards from the gate, and entering it, walked slowly forwards, scanning the ground as we went. But the bright lamplight showed nothing more than the vague marks of trampling feet on the grass until we came to the spot marked by the handkerchief on the fence.

“It is a pity,” I remarked, “that this footprint has obliterated the others.”

“On the other hand,” he replied, “this one, which is the one that interests us, is remarkably clear and characteristic: a circular heel and a rubber sole of a recognisable pattern mended with a patch of cement paste. It is a footprint that could be identified beyond a doubt.”
As he was speaking, he took from the research-case the water-bottle, plaster-tin, rubber mixing-bowl and spoon, and a piece of canvas with which to "reinforce" the cast. Rapidly, he mixed a bowlful—extra thick, so that it should set quickly and hard—dipped the canvas into it, poured the remainder into the footprint, and laid the canvas on it.

"I will get you to stay here, Jervis," said he, "until the plaster has set. I want to examine the body rather more thoroughly before the police arrive, particularly the back."

"Why the back?" I asked.

"Did not the appearance of the body suggest to you the advisability of examining the back?" he asked, and then, without waiting for a reply, he went off, leaving the inspection-lamp with me.

His words gave me matter for profound thought during my short vigil. I recalled the appearance of the dead woman very vividly—indeed, I am not likely ever to forget it—and I strove to connect that appearance with his desire to examine the back of the corpse. But there seemed to be no connection at all. The visible injuries were in front, and I had seen nothing to suggest the existence of any others. From time to time I tested the condition of the plaster, impatient to rejoin my colleague but fearful of cracking the thin cast by raising it prematurely. At length the plaster seemed to be hard enough, and trusting to the strength of the canvas, I prised cautiously at the edge, when, to my relief, the brittle plate came up safely and I lifted it clear. Wrapping it carefully in some spare rag, I packed it in the research-case, and then, taking this and the lantern, made my way back to the house.

When I had let down the catch and closed the front door, I went to the drawing-room, where I found Thorndyke stooping over the dark stain at the threshold and scanning the floor as if in search of something. I reported the completion of the cast and then asked him what he was looking for.

"I am looking for a button," he replied. "There is one missing from the back; the one to which the collar was fastened."

"Is it of any importance?" I asked.

"It is important to ascertain when and where it became detached," he replied. "Let us have the inspection-lamp."

I gave him the lamp, which he placed on the floor, turning it so that its beam of light travelled along the surface. Stooping to follow the light, I scrutinised the floor minutely but in vain.

"It may not be here at all," said I; but at that moment the bright gleam, penetrating the darkness under a cabinet, struck a small object close to the wall. In a moment I had thrown myself prone on the carpet, and reaching under the cabinet, brought forth a largish mother-of-pearl button.

"You notice," said Thorndyke, as he examined it, "that the cabinet is near the window, at the opposite end of the room to the couch. But we had better see that it is the right button."

He walked slowly towards the couch, still stooping and searching the floor with the light. The corpse, I noticed, had been turned on its side, exposing the back and the displaced collar. Through the strained button-hole of the latter Thorndyke passed the button without difficulty.

"Yes," he said, "that is where it came from. You will notice that there is a similar one in front. By the way," he continued, bringing the lamp close to the surface of the grey serge dress, "I picked off one or two hairs—animal hairs; cat and dog they looked like. Here are one or two more. Will you hold the lamp while I take them off?"

"They are probably from some pets of hers," I remarked, as he picked them off with his forceps and deposited them in one of the invaluable seed-envelopes. "Spinsters are a good deal addicted to pets, especially cats and dogs."

"Possibly," he replied. "But I could see none in front, where you would expect to find them, and there seem to be none on the carpet. Now let us replace the body as we found it and just have a look at our material before the police arrive. I expected them here before this."

We turned the body back into its original position, and taking the research-case and the lamp, went into the dining-room. Here Thorndyke rapidly set up the little travelling microscope, and bringing forth the seed-envelopes, began to prepare slides from the contents of some while I prepared the others. There was time only for a very hasty examination, which Thorndyke made as soon as the specimens were mounted.

"The clothing," he reported, with his eye at the microscope, "is woollen in both cases. Fairly good quality. The one a blue serge, apparently indigo dyed; the other a mixture of black and white, no other colour. Probably a fine tabby or a small shepherd's plaid."

"Serge coat and shepherd's plaid trousers," I suggested. "Now see what the hairs are." I handed him the slide, on which I had roughly mounted the collection in oil of lavender, and he placed it on the stage.

"There are three different kinds of hairs here," he reported, after a rapid inspection. "Some are obviously from a cat—a smoky Persian. Others are long, rather fine tawny hairs from a dog. Probably a Pekinese. But there are two that I can't quite place. They look like monkey's hairs, but they are a very unusual colour. There is a perceptible greenish tint, which is extremely uncommon in mammalian hairs. But I hear the taxi approaching. We need not be expansive to the local police as to what we have observed. This will probably be a case for the C.I.D."

I went out into the hall and opened the door as Meade came up the path, followed by two men; and as the latter came
into the light, I was astonished to recognise in one of them our old friend, Detective-Superintendent Miller, the other being, apparently, the station superintendent.

"We have kept Mr. Meade a long time," said Miller, "but we knew you were here, so the time wouldn’t be wasted. Thought it best to get a full statement before we inspected the premises. How do, doctor?" he added, shaking hands with Thorndyke. "Glad to see you here. I suppose you have got all the facts. I understood so from Mr. Meade."

"Yes," replied Thorndyke, "we have all the antecedents of the case, and we arrived within a few minutes of the death of the deceased."

"Ha!" exclaimed Miller. "Did you? And I expect you have formed an opinion on the question as to whether the injuries were self-inflicted?"

"I think," said Thorndyke, "that it would be best to act on the assumption that they were not—and to act promptly."

"Precisely," Miller agreed emphatically. "You mean that we had better find out at once where a certain person was at—What time did you arrive here?"

"It was two minutes to nine when the taxi stopped," replied Thorndyke; "and, as it is now only twenty-five minutes to ten, we have good time if Mr. Meade can spare us the taxi. I have the address."

"The taxi is waiting for you," said Mr. Meade, "and the man has been paid for both journeys. I shall stay here in case the superintendent wants anything." He shook our hands warmly, and as we bade him farewell and noted the dazed, despairing expression and lines of grief that had already eaten into the face that had been so blithe and hopeful, we both thought bitterly of the few fatal minutes that had made us too late to save the wreckage of his life.

We were just turning away when Thorndyke paused and again faced the clergyman. "Can you tell me," he asked, "whether Miss Fawcett had any pets? Cats, dogs, or other animals?"

Meade looked at him in surprise, and Superintendent Miller seemed to prick up his ears. But the former answered simply: "No. She was not very fond of anything; she reserved her affections for men and women."

Thorndyke nodded gravely, and picking up the research-case walked slowly out of the room, Miller and I following.

As soon as the address had been given to the driver and we had taken our seats in the taxi, the superintendent opened the examination-in-chief.

"I see you have got your box of magic with you, doctor," he said, cocking his eye at the research-case. "Any luck?"

"We have secured a very distinctive footprint," replied Thorndyke, "but it may have no connection with the case."

"I hope it has," said Miller. "A good cast of a footprint which you can let the jury compare with the boot is first-class evidence." He took the cast, which I had produced from the research-case, and turning it over tenderly and gloatingly, exclaimed: "Beautiful! beautiful! Absolutely distinctive! There can’t be another exactly like it in the world. It is as good as a fingerprint. For the Lord’s sake take care of it. It means a conviction if we can find the boot."

The superintendent’s efforts to engage Thorndyke in discussion were not very successful, and the conversational brunt was borne by me. For we both knew my colleague too well to interrupt him if he was disposed to be meditative. And such was now his disposition. Looking at him as he sat in his corner, silent but obviously wrapped in thought, I knew that he was mentally sorting out the data and testing the hypotheses that they yielded.

"Here we are," said Miller, opening the door as the taxi stopped. "Now what are we going to say? Shall I tell him who I am?"

"I expect you will have to," replied Thorndyke, "if you want him to let us in."

"Very well," said Miller. "But I shall let you do the talking, because I don’t know what you have got up your sleeve."

Thorndyke’s prediction was verified literally. In response to the third knock, with an obbligato accompaniment on the bell, wrathful footsteps—I had no idea footsteps could be so expressive—advanced rapidly along the lobby, the door was wrenched open—but only for a few inches—and an angry, hairy face appeared in the opening.

"Now then," the hairy person demanded, "what the devil do you want?"

"Are you Mr. William Pouting?" the superintendent inquired.

"What the devil is that to do with you?" was the genial answer—in the Scottish mode.

"We have business," Miller began persuasively.

"So have I," the presumable Ponting replied, "and mine won’t wait."

"But our business is very important," Miller urged.

"So is mine," snapped Ponting, and would have shut the door but for Miller’s obstructing foot, at which he kicked viciously, but with unsatisfactory results, as he was shod in light slippers, whereas the superintendent’s boots were of constabulary solidity.

"Now, look here," said Miller, dropping his conciliatory manner very completely, "you’d better stop this nonsense. I am a police officer, and I am going to come in;" and with this he inserted a massive shoulder and pushed the door open.
"Police officer, are you?" said Ponting. "And what might your business be with me?"

"That is what I have been waiting to tell you," said Miller. "But we don't want to do our talking here."

"Very well," growled Panting. "Come in. But understand that I am busy. I've been interrupted enough this evening."

He led the way into a rather barely furnished room with a wide bay-window in which was a table fitted with a writing-slope and lighted by an electric standard lamp. A litter of manuscript explained the nature of his business and his unwillingness to receive casual visitors. He sulkily placed three chairs, and then, seating himself, glowered at Thorndyke and me.

"Are they police officers, too?" he demanded.

"No," replied Miller, "they are medical gentlemen. Perhaps you had better explain the matter, doctor," he added, addressing Thorndyke, who thereupon opened the proceedings.

"We have called," said he, "to inform you that Miss Millicent Fawcett died suddenly this evening."

"The devil!" exclaimed Panting. "That's sudden with a vengeance. What time did this happen?"

"About a quarter to nine."

"Extraordinary!" muttered Ponting. "I saw her only the day before yesterday, and she seemed quite well then. What did she die of?"

"The appearances," replied Thorndyke, "suggest suicide."

"Suicide!" gasped Ponting. "Impossible! I can't believe it. Do you mean to tell me she poisoned herself?"

"No," said Thorndyke, "it was not poison. Death was caused by injuries to the throat inflicted with a razor."

"Good God!" exclaimed Ponting. "What a horrible thing! But," he added, after a pause, "I can't believe she did it herself, and I don't. Why should she commit suicide? She was quite happy, and she was just going to be married to that mealy-faced parson. And a razor, too! How do you suppose she came by a razor? Women don't shave. They smoke and drink and swear, but they haven't taken to shaving yet. I don't believe it. Do you?"

He glared ferociously at the superintendent who replied: "I am not sure that I do. There's a good deal in what you've just said, and the same objections had occurred to us. But you see, if she didn't do it herself, someone else must have done it, and we should like to find out who that someone is. So we begin by ascertaining where any possible persons may have been at a quarter to nine this evening."

Ponting smiled like an infuriated cat. "So you think me a possible person, do you?" said he.

"Everyone is a possible person," Miller replied blandly, "especially when he is known to have uttered threats."

The reply sothed Ponting considerably. For a few moments he sat, looking reflectively at the superintendent; then, in comparatively quiet tones, he said: "I have been working here since six o'clock. You can see the stuff for yourself, and I can prove that it has been written since six."

The superintendent nodded, but made no comment, and Ponting gazed at him fixedly, evidently thinking hard. Suddenly he broke into a harsh laugh.

"What is the joke?" Miller inquired stolidly.

"The joke is that I have got another alibi—a very complete one. There are compensations in every evil. I told you I had been interrupted in my work already this evening. It was those fools next door, the Barnetts—cousins of mine. They are musicians, save the mark! Variety stage, you know. Funny songs and jokes for mental defectives. Well, they practise their infernal ditties in their rooms, and the row comes into mine, and an accursed nuisance it is. However, they have agreed not to practise on Thursdays and Fridays—my busy nights—and usually they don't. But to-night, just as I was in the thick of my writing, I suddenly heard the most unholy din; that idiot, Fred Barnett, bawling one of his imbecile songs—'When the pigs their wings have folded,' and balderdash of that sort—and the other donkey accompanying him on the clarinet, if you please! I stuck it for a minute or two. Then I rushed round to their flat and raised Cain with the bell and knocker. Mrs. Fred opened the door, and I told her what I thought of it. Of course she was very apologetic, said they had forgotten that it was Thursday and promised that she would make her husband stop. And I suppose she did; for by the time I got back to my rooms the row had ceased. I could have punched the whole lot of them into a jelly, but it was all for the best as it turns out."

"What time was it when you went round there?" asked Miller.

"About five minutes past nine," replied Ponting. "The church bell had struck nine when the row began."

"Hm!" grunted Miller, glancing at Thorndyke. "Well, that is all we wanted to know, so we need not keep you from your work any longer."

He rose, and being let out with great alacrity, stumped down the stairs, followed by Thorndyke and me. As we came out into the street, he turned to us with a deeply disappointed expression.

"Well," he exclaimed, "this is a suck-in. I was in hopes that we had pounced on our quarry before he had got time to clear away the traces. And now we've got it all to do. You can't get round an alibi of that sort."

"Police officer, are you?" said Ponting. "And what might your business be with me?"

"That is what I have been waiting to tell you," said Miller. "But we don't want to do our talking here."

"Very well," growled Panting. "Come in. But understand that I am busy. I've been interrupted enough this evening."

He led the way into a rather barely furnished room with a wide bay-window in which was a table fitted with a writing-slope and lighted by an electric standard lamp. A litter of manuscript explained the nature of his business and his unwillingness to receive casual visitors. He sulkily placed three chairs, and then, seating himself, glowered at Thorndyke and me.

"Are they police officers, too?" he demanded.

"No," replied Miller, "they are medical gentlemen. Perhaps you had better explain the matter, doctor," he added, addressing Thorndyke, who thereupon opened the proceedings.

"We have called," said he, "to inform you that Miss Millicent Fawcett died suddenly this evening."

"The devil!" exclaimed Panting. "That's sudden with a vengeance. What time did this happen?"

"About a quarter to nine."

"Extraordinary!" muttered Ponting. "I saw her only the day before yesterday, and she seemed quite well then. What did she die of?"

"The appearances," replied Thorndyke, "suggest suicide."

"Suicide!" gasped Ponting. "Impossible! I can't believe it. Do you mean to tell me she poisoned herself?"

"No," said Thorndyke, "it was not poison. Death was caused by injuries to the throat inflicted with a razor."

"Good God!" exclaimed Ponting. "What a horrible thing! But," he added, after a pause, "I can't believe she did it herself, and I don't. Why should she commit suicide? She was quite happy, and she was just going to be married to that mealy-faced parson. And a razor, too! How do you suppose she came by a razor? Women don't shave. They smoke and drink and swear, but they haven't taken to shaving yet. I don't believe it. Do you?"

He glared ferociously at the superintendent who replied: "I am not sure that I do. There's a good deal in what you've just said, and the same objections had occurred to us. But you see, if she didn't do it herself, someone else must have done it, and we should like to find out who that someone is. So we begin by ascertaining where any possible persons may have been at a quarter to nine this evening."

Ponting smiled like an infuriated cat. "So you think me a possible person, do you?" said he.

"Everyone is a possible person," Miller replied blandly, "especially when he is known to have uttered threats."

The reply sothed Ponting considerably. For a few moments he sat, looking reflectively at the superintendent; then, in comparatively quiet tones, he said: "I have been working here since six o'clock. You can see the stuff for yourself, and I can prove that it has been written since six."

The superintendent nodded, but made no comment, and Ponting gazed at him fixedly, evidently thinking hard. Suddenly he broke into a harsh laugh.

"What is the joke?" Miller inquired stolidly.

"The joke is that I have got another alibi—a very complete one. There are compensations in every evil. I told you I had been interrupted in my work already this evening. It was those fools next door, the Barnetts—cousins of mine. They are musicians, save the mark! Variety stage, you know. Funny songs and jokes for mental defectives. Well, they practise their infernal ditties in their rooms, and the row comes into mine, and an accursed nuisance it is. However, they have agreed not to practise on Thursdays and Fridays—my busy nights—and usually they don't. But to-night, just as I was in the thick of my writing, I suddenly heard the most unholy din; that idiot, Fred Barnett, bawling one of his imbecile songs—'When the pigs their wings have folded,' and balderdash of that sort—and the other donkey accompanying him on the clarinet, if you please! I stuck it for a minute or two. Then I rushed round to their flat and raised Cain with the bell and knocker. Mrs. Fred opened the door, and I told her what I thought of it. Of course she was very apologetic, said they had forgotten that it was Thursday and promised that she would make her husband stop. And I suppose she did; for by the time I got back to my rooms the row had ceased. I could have punched the whole lot of them into a jelly, but it was all for the best as it turns out."

"What time was it when you went round there?" asked Miller.

"About five minutes past nine," replied Ponting. "The church bell had struck nine when the row began."

"Hm!" grunted Miller, glancing at Thorndyke. "Well, that is all we wanted to know, so we need not keep you from your work any longer."

He rose, and being let out with great alacrity, stumped down the stairs, followed by Thorndyke and me. As we came out into the street, he turned to us with a deeply disappointed expression.

"Well," he exclaimed, "this is a suck-in. I was in hopes that we had pounced on our quarry before he had got time to clear away the traces. And now we've got it all to do. You can't get round an alibi of that sort."
I glanced at Thorndyke to see how he was taking this unexpected check. He was evidently puzzled, and I could see by the expression of concentration in his face that he was trying over the facts and inferences in new combinations to meet this new position. Probably he had noticed, as I had, that Ponting was wearing a tweed suit, and that therefore the shreds of clothing from the fence could not be his unless he had changed. But the alibi put him definitely out of the picture, and, as Miller had said, we now had nothing to give us a lead.

Suddenly Thorndyke came out of his reverie and addressed the superintendent.

“We had better put this alibi on the basis of ascertained fact. It ought to be verified at once. At present we have only Ponting’s unsupported statement.”

“It isn’t likely that he would risk telling a lie,” Miller replied gloomily.

“A man who is under suspicion of murder will risk a good deal,” Thorndyke retorted, “especially if he is guilty. I think we ought to see Mrs. Barnett before there is any opportunity of collusion.”

“There has been time for collusion already,” said Miller. “Still, you are quite right, and I see there is a light in their sitting-room, if that is it, next to Ponting’s. Let us go up and settle the matter now. I shall leave you to examine the witness and say what you think it best to say.”

We entered the building and ascended the stairs to the Barnetts’ flat, where Miller rang the bell and executed a double knock. After a short interval the door was opened and a woman looked out at us inquisitively.

“Are you Mrs. Frederick Barnett?” Thorndyke inquired. The woman admitted her identity in a tone of some surprise, and Thorndyke explained: “We have called to make a few inquiries concerning your neighbour, Mr. Ponting, and also about certain matters relating to your family. I am afraid it is a rather unseasonable hour for a visit, but as the affair is of some importance and time is an object, I hope you will overlook that.”

Mrs. Barnett listened to this explanation with a puzzled and rather suspicious air. After a few moments’ hesitation, she said: “I think you had better see my husband, if you will wait here a moment I will go and tell him.” With this, she pushed the door to, without actually closing it, and we heard her retire along the lobby, presumably to the sitting-room. For, during the short colloquy, I had observed a door at the end of the lobby, partly open, through which I could see the end of a table covered with a red cloth.

The “moment” extended to a full minute, and the superintendent began to show signs of impatience.

“I don’t see why you didn’t ask her the simple question straight out,” he said, and the same question had occurred to me. But at this point footsteps were heard approaching, the door opened, and a man confronted us, holding the door open with his left hand, his right being wrapped in a handkerchief. He looked suspiciously from one to the other of us, and asked stiffly: “What is it that you want to know? And would you mind telling me who you are?”

“My name is Thorndyke,” was the reply. “I am the legal adviser of the Reverend Charles Meade, and these two gentlemen are interested parties. I want to know what you can tell me of Mr. Ponting’s recent movements—to-day, for instance. When did you last see him?”

The man appeared to be about to refuse any conversation, but suddenly altered his mind, reflected for a few moments, and then replied: “I saw him from my window at his—they are bay-windows—about half-past eight. But my wife saw him later than that. If you will come in she can tell you the time exactly.” He led the way along the lobby with an obviously puzzled air. But he was not more puzzled than I, or than Miller, to judge by the bewildered glance that the superintendent cast at me, as he followed our host along the lobby. I was still meditating on Thorndyke’s curiously indirect methods when the sitting-room door was opened; and then I got a minor surprise of another kind. When I had last looked into the room, the table had been covered by a red cloth. It was now bare; and when we entered the room I saw that the red cover had been thrown over a side table, on which was some bulky and angular object. Apparently it had been thought desirable to conceal that object, whatever it was, and as we took our seats beside the bare table, my mind was busy with conjectures as to what that object could be.

Mr. Barnett repeated Thorndyke’s question to his wife, adding: “I think it must have been a little after nine when Ponting came round. What do you say?”

“Yes,” she replied, “it would be, for I heard it strike nine just before you began your practice, and he came a few minutes after.”

“You see,” Barnett explained, “I am a singer, and my brother, here, accompanies me on various instruments, and of course we have to practise. But we don’t practise on the nights when Ponting is busy—Thursdays and Fridays—as he said that the music disturbed him. To-night, however, we made a little mistake. I happen to have got a new song that I am anxious to get ready—it has an illustrative accompaniment on the clarinet, which my brother will play. We were so much taken up with the new song that we all forgot what day of the week it was, and started to have a good practice. But before we had got through the first verse, Ponting came round, battering at the door like a madman. My wife went out and pacified him, and of course we shut down for the evening.”

While Mr. Barnett was giving his explanation, I looked about the room with vague curiosity. Somehow—I cannot tell exactly how—I was sensible of something queer in the atmosphere of this place; of a certain indefinite sense of tension. Mrs. Barnett looked pale and flurried. Her husband, in spite of his volubility, seemed ill at ease, and the brother, who sat
huddled in an easy-chair, nursing a dark-coloured Persian cat, stared into the fire, and neither moved nor spoke. And again I looked at the red table-cloth and wondered what it covered.

“By the way,” said Barnett, after a brief pause, “what is the point of these inquiries of yours? About Ponting, I mean. What does it matter to you where he was this evening?”

As he spoke, he produced a pipe and tobacco-pouch, and proceeded to fill the former, holding it in his bandaged right hand and filling it with his left. The facility with which he did this suggested that he was left-handed, an inference that was confirmed by the ease with which he struck the match with his left hand, and by the fact that he wore a wrist-watch on his right wrist.

“Your question is a perfectly natural one,” said Thorndyke. “The answer to it is that a very terrible thing has happened. Miss Millicent Fawcett, who is, I think, a connection of yours, met her death this evening under circumstances of grave suspicion. She died, either by her own hand or by the hand of a murderer, a few minutes before nine o’clock. Hence it has become I necessary to ascertain the whereabouts at that time of any persons on whom suspicion might reasonably fall.”

“Good God!” exclaimed Barnett. “What a shocking thing!”

The exclamation was followed by a deep silence, amidst which I could hear the barking of a dog in an adjacent room, the unmistakable sharp, treble yelp of a Pekinese. And again I seemed to be aware of a strange sense of tension in the occupants of this room. On hearing Thorndyke’s answer, Mrs. Barnett had turned deadly pale and let her head fall forward on her hand. Her husband had sunk on to a chair, and he, too, looked pale and deeply shocked, while the brother continued to stare silently into the fire.

At this moment Thorndyke astonished me by an exhibition of what seemed—under the tragic circumstances—the most outrageous bad manners and bad taste. Rising from his chair with his eyes fixed on a print which hung on the wall above the red-covered table, he said: “That looks like one of Cameron’s etchings,” and forthwith stepped across the room to examine it, resting his hand, as he leaned forward, on the object covered by the cloth.

“Mind where you are putting your hand, sir!” Fred Barnett called out, springing to his feet.

Thorndyke looked down at his hand, and deliberately raising a corner of the cloth, looked under. “There is no harm done,” he remarked quietly, letting the cloth drop; and with another glance at the print, he went back to his chair.

Once more a deep silence fell upon the room, and I had a vague feeling that the tension had increased. Mrs. Barnett was as white as a ghost and seemed to catch at her breath. Her husband watched her with a wild, angry expression and smoked furiously, while the superintendent—also conscious of something abnormal in the atmosphere of the room—looked furtively from the woman to the man and from him to Thorndyke.

Yet again in the silence the shrill barking of the Pekinese dog broke out, and somehow that sound connected itself in my mind with the Persian cat that dozed on the knees of the immovable man by the fire. I looked at the cat and at the man, and even as I looked, I was startled by a most extraordinary apparition. Above the man’s shoulder, slowly rose a little round head like the head of a diminutive, greenish-brown man. Higher and higher the tiny monkey raised itself, resting on its little hands to peer at the strangers. Then, with sudden coyness, like a shy baby, it popped down out of sight.

I was thunderstruck. The cat and the dog I had noted merely as a curious coincidence. But the monkey—and such an unusual monkey, too—put coincidences out of the question. I stared at the man in positive stupefaction. Somehow that man was connected with that unforgettable figure lying upon the couch miles away. But how? When that deed of horror was doing, he had been here in this very room. Yet, in some way, he had been concerned in it. And suddenly a suspicion dawned upon me that Thorndyke was waiting for the actual perpetrator to arrive.

“It is a most ghastly affair,” Barnett repeated presently in a husky voice. Then, after a pause, he asked: “Is there any sort of evidence as to whether she killed herself or was killed by somebody else?”

“I think that my friend, here, Detective-Superintendent Miller, has decided that she was murdered.” He looked at the bewildered superintendent, who replied with an inarticulate grunt.

“And is there any clue as to who the—the murderer may be? You spoke of suspected persons just now.”

“Yes,” replied Thorndyke, “there is an excellent clue, if it can only be followed up. We found a most unmistakable footprint; and what is more, we took a plaster cast of it. Would you like to see the cast?”

Without waiting for a reply, he opened the research-case and took out the cast, which he placed in my hands.

“Just take it round and show it to them,” he said.

The superintendent had witnessed Thorndyke’s amazing proceedings with an astonishment that left him speechless. But now he sprang to his feet, and, as I walked round the table, he pressed beside me to guard the precious cast from possible injury. I laid it carefully down on the table, and as the light fell on it obliquely, it presented a most striking appearance—that of a snow-white boot-sole on which the unshapely patch, the circular heel, and the marks of wear were clearly visible.

The three spectators gathered round, as near as the superintendent would let them approach, and I observed them closely, assuming that this incomprehensible move of Thorndyke’s was a device to catch one or more of them off their guard. Fred Barnett looked at the cast stolidly enough, though his face had gone several shades paler, but Mrs. Barnett stared at it with starting eyeballs and dropped jaw—the very picture of horror and dismay. As to James Barnett, whom I
now saw clearly for the first time, he stood behind the woman with a singularly scared and haggard face, and his eyes riveted on the white boot-sole. And now I could see that he wore a suit of blue serge and that the front both of his coat and waistcoat were thickly covered with the shed hairs of his pets.

There was something very uncanny about this group of persons gathered around that accusing footprint, all as still and rigid as statues and none uttering a sound. But something still more uncanny followed. Suddenly the deep silence of the room was shattered by the shrill notes of a clarinet, and a brassy voice burst forth:

“When the pigs their wings have folded
And the cows are in their nest—”

We all spun round in amazement, and at the first glance the mystery of the crime was solved. There stood Thorndyke with the red table-cover at his feet, and at his side, on the small table, a massively-constructed phonograph of the kind used in offices for dictating letters, but fitted with a convoluted metal horn in place of the rubber ear-tubes.

A moment of astonished silence was succeeded by a wild confusion. Mrs. Barnett uttered a piercing shriek and fell back on to a chair, her husband broke away and rushed at Thorndyke, who instantly gripped his wrist and pinned him, while the superintendent, taking in the situation at a glance, fastened on the unresisting James and forced him down into a chair. I ran round, and having stopped the machine—for the preposterous song was hideously incongruous with the tragedy that was enacting—went to Thorndyke’s assistance and helped him to remove his prisoner from the neighbourhood of the instrument.

“Superintendent Miller,” said Thorndyke, still maintaining a hold on his squirming captive, “I believe you are a justice of the peace?”

“Yes,” was the reply, “ex officio.”

“Then,” said Thorndyke, “I accuse these three persons of being concerned in the murder of Miss Millicent Fawcett; Frederick Barnett as the principal who actually committed the murder, James Barnett as having aided him by holding the arms of the deceased, and Mrs. Barnett as an accessory before the fact in that she worked this phonograph for the purpose of establishing a false alibi.”

“I knew nothing about it!” Mrs. Barnett shrieked hysterically. “They never told me why they wanted me to work the thing.”

“We can’t go into that now,” said Miller. “You will be able to make your defence at the proper time and place. Can one of you go for assistance or must I blow my whistle?”

“You had better go, Jervis,” said Thorndyke. “I can hold this man until reinforcements arrive. Send a constable up and then go on to the station. And leave the outer door ajar.”

I followed these directions, and having found the police station, presently returned to the flat with four constables and a sergeant in two taxis.

When the prisoners had been removed, together with the three animals—the latter in charge of a zoophilist constable—we searched the bedrooms. Frederick Barnett had changed his clothing completely, but in a locked drawer—the lock of which Thorndyke picked neatly, to the superintendent’s undisguised admiration—we found the discarded garments, including a pair of torn shepherd’s plaid trousers, covered with blood stains, and a new, empty razor-case. These things, together with the wax cylinder of the phonograph, Miller made up into a neat parcel and took away with him.

“Of course,” said I, as we walked homewards, “the general drift of this case is quite obvious. But it seemed to me that you went to the Barnetts’ flat with a definite purpose already formed, and with a definite suspicion in your mind. Now, I don’t see how you came to suspect the Barnetts.”

“I think you will,” he replied, “if you will recall the incidents in their order from the beginning, including poor Meade’s preliminary statement. To begin with the appearances of the body: the suggestion of suicide was transparently false. To say nothing of its incongruity with the character and circumstances of the deceased and the very unlikely weapon used, there were the gashed collar and the cut cap-string. As you know, it is a well-established rule that suicides do not damage their clothing. A man who cuts his own throat doesn’t cut his collar. He takes it off. He removes all obstructions. Naturally, for he wishes to complete the act as easily and quickly as possible, and he has time for preparation. But the murderer must take things as he finds them and execute his purpose as best he can.

“But further; the wounds were inflicted near the door, but the body was on the couch at the other end of the room. We saw, from the absence of bleeding, that she was dying—in fact, apparently dead—when she lay down. She must therefore have been carried to the couch after the wounds were inflicted.

“Then there were the blood-stains. They were all in front, and the blood had run down vertically. Then she must have been standing upright while the blood was flowing. Now there were four wounds, and the first one was mortal, it divided the common carotid artery and the great veins. On receiving that wound she would ordinarily have fallen down. But she did not fall, or there would have been a blood-stain across the neck. Why did she not fall? The obvious suggestion was that someone was holding her up. This suggestion was confirmed by the absence of cuts on her hands—which would certainly have been cut if someone had not been holding them. It was further confirmed by the rough crumpling of the collar at the back: so rough that the button was torn off. And we found that button near the door.
“Further, there were the animal hairs. They were on the back only. There were none on the front—where they would have been if derived from the animals—or anywhere else. And we learned that she kept no animals. All these appearances pointed to the presence of two persons, one of whom stood behind her and held her arms while the other stood in front and committed the murder. The cloth on the fence supported this view, being probably derived from two different pairs of trousers. The character of the wounds made it nearly certain that the murderer was left-handed.

“While we were returning in the cab, I reflected on these facts and considered the case generally. First, what was the motive? There was nothing to suggest robbery, nor was it in the least like a robber’s crime. What other motive could there be? Well, here was a comparatively rich woman who had made a will in favour of certain persons, and she was going to be married. On her marriage the will would automatically become void, and she was not likely to make another will so favourable to those persons. Here, then, was a possible motive, and that motive applied to Ponting, who had actually uttered threats and was obviously suspect.

“But, apart from those threats, Ponting was not the principal suspect, for he benefited only slightly under the will. The chief beneficiaries were the Barnetts, and Miss Fawcett’s death would benefit them, not only by securing the validity of the will, but by setting the will into immediate operation. And there were two of them. They therefore fitted the circumstances better than Ponting did. And when we came to interview Ponting, he went straight out of the picture. His manuscript would probably have cleared him—with his editor’s confirmation. But the other alibi was conclusive.

“What instantly struck me, however, was that Ponting’s alibi was also an alibi for the Barnetts. But there was this difference: Ponting had been seen; the Barnetts had only been heard. Now, it has often occurred to me that a very effective false alibi could be worked with a gramophone or a phonograph—especially with one on which one can make one’s own records. This idea now recurred to me; and at once it was supported by the appearance of an arranged effect. Ponting was known to be at work. It was practically certain that a blast of ‘music’ would bring him out. Then he would be available, if necessary, as a witness to prove an alibi. It seemed to be worth while to investigate.

“When we came to the flat we encountered a man with an injured hand—the right, it would have been more striking if it had been his left. But it presently turns out that he is left-handed; which is still more striking as a coincidence. This man is extraordinarily ready to answer questions which most persons would have refused to answer at all. Those answers contain the alibi.

“Then there was the incident of the table—I think you noticed it. That cover was on the large table when we arrived, but it was taken off and thrown over something, evidently to conceal it. But I need not pursue the details. When I had seen the cat, heard the dog, and then seen the monkey, I determined to see what was under the table-cover; and finding that it was a phonograph with the cylinder record still on the drum, I decided to ‘go Nap’ and chance making a mistake. For until we had tried the record, the alibi remained. If it had failed, I should have advised Miller to hold a boot parade. Fortunately we struck the right record and completed the case.”

Mrs. Barnett’s defence was accepted by the magistrate and the charge against her was dismissed. The other two were committed for trial, and in due course paid the extreme penalty. “Yet another illustration,” was Thorndyke’s comment, “of the folly of that kind of criminal who won’t let well alone, and who will create false clues. If the Barnetts had not laid down those false tracks, they would probably never have been suspected. It was their clever alibi that led us straight to their door.”

PANDORA’S BOX

“I SEE our friend, S. Chapman, is still a defaulter,” said I, as I ran my eye over the “personal” column of The Times.

Thorndyke looked up interrogatively.

“Chapman?” he repeated; “let me see, who is he?”

“The man with the box. I read you the advertisement the other day. Here it is again. ‘If the box left in the luggage-room by S. Chapman is not claimed within a week from this date, it will be sold to defray expenses.—Alexander Butt, “Red Lion” Hotel, Stoke Varley, Kent.’ That sounds like an ultimatum; but it has been appearing at intervals for the last month. As the first notice expired about three weeks ago, the question is, why doesn’t Mr. Butt sell the box and have done with it?”

“He may have some qualms as to the legality of the proceeding,” said Thorndyke. “It would be interesting to know what expenses he refers to and what is the value of the box.”

The latter question was resolved a day or two later by the appearance in our chambers of an agitated gentleman, who gave his name as George Chapman. After apologising for his unannounced visit he explained: “I have come to you on the advice of my solicitor and on behalf of my brother, Samuel, who has become involved in a most extraordinary and horrible set of complications. At present he is in custody of the police charged with an atrocious murder.”

“That is certainly a rather serious complication,” Thorndyke observed dryly. “Perhaps you had better give us an account of the circumstances—the whole set of circumstances, from the beginning.”

“I will,” said Mr. Chapman, “without any reservations. The only question is, which is the beginning? There are the business and the domestic affairs. Perhaps I had better begin with the business concerns. My brother was a sort of travelling agent for a firm of manufacturing jewellers. He held a stock of the goods, which he used as samples for large
orders, but in the case of small retailers he actually supplied the goods himself. When travelling, he usually carried his stock in a small Gladstone bag, but he kept the bulk of it in a safe in his house, and he used to go home at week-ends, or oftener, to replenish his travelling stock. Now, about two months ago he left home on a trip, but instead of taking a selection of his goods, he took the entire stock in a largish wooden box, leaving the safe empty. What he meant to do I don’t know, and that’s the fact. I offer no opinion. The circumstances were peculiar, as you will hear presently, and his proceedings were peculiar; for he went down to Stoke Varley—a village not far from Folkestone—put up at the ‘Red Lion,’ and deposited his box in the luggage-room that is kept for the use of commercial travellers; and then, after staying there for a few days, came up to London to make some arrangements for selling or letting his house—which, it seems, he had decided to leave. He came up in the evening, and the very next morning the first of his adventures befell, and a very alarming one it was.

“It appears that, as he was walking down a quiet street, he saw a lady’s purse lying on the pavement. Naturally he picked it up, and as it contained nothing to show the name or address of the owner, he put it in his pocket, intending to hand it in at a police station. Shortly after this, he got into an omnibus, and a well-dressed woman entered at the same time and sat down next to him. Just as the conductor was coming in to collect the fares, the woman began to search her pocket excitedly, and then, turning to my brother, called on him loudly to return her purse. Of course, he said that he knew nothing about her purse, whereupon she rounded him of having picked her pocket, declaring to the conductor that she had felt him take out her purse, and demanding that the omnibus should be stopped and a policeman fetched. At this moment a policeman was seen on the pavement. The conductor stopped the omnibus and hailed the constable, who came, and having examined the floor of the vehicle without finding the missing purse, and taken the conductor’s name and number, took my brother into custody and conducted him and the woman to the police station. Here the inspector took down from the woman a description of the stolen purse and its contents, which my brother, to his utter dismay, recognised as that of the purse which he had picked up and which was still in his pocket. Immediately, he gave the inspector an account of the incident and produced the purse; but it is hardly necessary to say that the inspector refused to take his explanation seriously.

“Then my brother did a thing which was natural enough, but which did not help him. Seeing that he was practically certain to be convicted—for there was really no answer to the charge—he gave a false name and refused his address. He was then locked up in a cell for the night, and the next morning was brought before the magistrate, who, having heard the evidence of the woman and the inspector and having listened without comment to my brother’s story, committed him for trial at the Central Criminal Court, and refused bail. He was then removed to Brixton, where he was detained for nearly a month, pending the opening of the sessions.

“At length the day of his trial drew near. But it was then found that the woman who had accused him had left her lodgings and could not be traced. As there was no one to prosecute, and as the disappearance of the woman put a rather new light upon my brother’s story, the case against him was allowed to drop, and he was released.

“He went home by train, and at the station he bought a copy of The Times to read on the way. Before opening it he chanced to run his eye over the ‘personal’ column, and there his attention was arrested by his own name in an advertisement—”

“Relating to a box?” said I.

“Precisely. Then you have seen it. Well, considering the value of the contents of that box, he was naturally rather anxious. At once he sent off a telegram saying that he would call on the following day before noon to claim the box and pay what was owing. And he did so. Yesterday morning he took an early train down to Stoke Varley and went straight to the ‘Red Lion.’ On his arrival he was asked to step into the coffee-room, which he did; and there he found three police officers, who forthwith arrested him on a charge of murder. But before going into the particular that charge I had better give you an account of his domestic affairs on which this incredible and horrible accusation turns.

“My brother, I am sorry to say, was living with a woman who was not his wife. He had originally intended to marry her, but his association with her—which lasted over several years—did not encourage that intention. She was a terrible woman, and she led him a terrible life. Her temper was un gov ernable; and when she had taken too much to drink—which was a pretty frequent occurrence—she was not only noisy and quarrelsome, but physically violent as well. Her antecedents were disgraceful; she had been connected with the seamy side of the music-hall stage; her associations were disreputable; she brought questionable women to my brother’s house; she consorted with men of doubtful character, and her relations with them were equally doubtful. Indeed, with one of them, a man named Gamble, I should say that her relations were not doubtful at all, though I understand he was a married man.

“Well, my brother put up with her for years, living a life that cut him off from all decent society. But at last his patience gave way (and I may add that he made the acquaintance of a very desirable lady, who was willing to condone his past and marry him if he could secure a possible future). After a particularly outrageous scene, he ordered the woman—Rebecca Mings was her name—out of the house and declared their relationship at an end.

“But she refused to be shaken off. She kept possession of the street-door key, and she returned again and again, and made a public scandal. The last time she created such an uproar when the door was bolted against her that a crowd collected in the street and my brother was forced to let her in. She stayed with him some hours, alone in the house—for the only servant he had was a daily girl who left at three o’clock—and went away quite quietly about ten at night. But, although a good many people saw her go into the house, no one but my brother seems to have seen her leave it; a most disastrous
circumstance, for, from the moment when she left the house, no one ever saw her again. She did not go to her lodgings that night. She disappeared utterly—until—but I must go back now to the ‘Red Lion’ at Stoke Varley.

“When my brother was arrested on the charge of having murdered Rebecca Mings, certain particulars were given to him; and when I went down there in response to a telegram, I gathered some more. The circumstances are these: About a fortnight after my brother had left to come to London, some of the ‘commercials’ who used the luggage-room complained of an unpleasant odour in it, which was presently traced to my brother’s box. As that box appeared to have been abandoned, the landlord became suspicious, and communicated with the police. They telephoned to the London police, who found my brother’s house shut up and his whereabouts unknown. Thereupon the local police broke open the box and found in it a woman’s left arm and a quantity of blood-stained clothing. On which they caused the advertisement to be put in The Times, and meanwhile they made certain inquiries. It appeared that my brother had spent part of his time at Stoke Varley fishing in the little river. On learning this, the police proceeded to dredge the river, and presently they brought up a right arm—apparently the fellow of the one found in the box—and a leg divided into three parts, evidently a woman’s. Now, as to the arm found in the box, there could be no question about its identity, for it bore a very distinct tattooed inscription consisting of the initials R. M. above a heart transfixed by an arrow, with the initials J. B. underneath. A few inquiries elicited the fact that the woman, Rebecca Mings, who had disappeared, bore such a tattooed mark on her left arm and certain persons who had known her, having been sworn to secrecy, were shown the arm, and recognised the mark without hesitation. Further inquiries showed that Rebecca Mings was last seen alive entering my brother’s house, as I have described; and on this information the police broke into the house and searched it.”

“Do you know if they found anything?” Thorndyke asked.

“I don’t,” replied Chapman, “but I infer that they did. The police at Stoke Varley were very courteous and kind, but they declined to give any particulars about the visit to the house. However, we shall hear at the inquest if they made any discoveries.”

“And is that all that you have to tell us?” asked Thorndyke.

“Yes,” was the reply, “and enough, too. I make no comment on my brother’s story, and I won’t ask whether you believe it. I don’t expect you to. The question is whether you would undertake the defence. I suppose it isn’t necessary for a lawyer to be convinced of his client’s innocence in order to convince the jury.”

“You are thinking of an advocate,” said Thorndyke. “I am not an advocate, and I should not defend a man whom I believed to be guilty. The most that I can do is to investigate the case. If the result of the investigation is to confirm the suspicions against your brother, I shall, go no farther in the case. You will have to get an ordinary criminal barrister to defend your brother. If, on the other hand, I find reasonable grounds for believing him innocent, I will undertake the defence. What do you say to that?”

“I’ve no choice,” replied Chapman; “and I suppose if you find all the evidence against him, the defence won’t matter much.”

“I am afraid that is so,” said Thorndyke. “And, now there are one or two questions to be cleared up. First, does your brother offer any explanation of the presence of these remains in his box?”

“He supposes that somebody at the ‘Red Lion’ must have taken the jewellery out and put the remains in. Anyone could get access to the luggage-room by asking for the key at the office.”

“Well,” said Thorndyke, “that is conceivable. Then, as to the person who might have made this exchange. Is there anyone who had any reason for wishing to make away with deceased?”

“No,” replied Chapman. “Plenty of people disliked her, but no one but my brother had any motive for getting rid of her.”

“You spoke of a man with whom she was on somewhat intimate terms. There had been no quarrel or breach there, I suppose?”

“The man Gamble, you mean. No, I should say they were the best of friends. Besides, Gamble had no responsibilities in regard to her. He could have dropped her whenever he was tired of her.”

“Do you know anything about him?” Thorndyke asked.

“Very little. He has been a rolling stone, and has been in all sorts of jobs, I believe. He was in the New Zealand trade for some time, and dealt in all sorts of things—among others, in smoked human heads; sold them to collectors and museums, I understand. So he would have had some previous experience,” Chapman added with a faint grin.

“Not in dismemberment,” said Thorndyke. “Those will have been ancient Maori heads—relics of the old head hunters. There are some in the Hunterian Museum. But, as you say, there seems to be no motive in Gamble’s case, even if there had been the opportunity; whereas, in your brother’s case, there seem to have been both the motive and the opportunity. I suppose your brother never threatened the deceased?”

“I am sorry to say he did,” replied Chapman. “On several occasions, and before witnesses, too, he threatened to put her out of the way. Of course he never meant it—he was really the mildest of men. But it was a foolish thing to do and most unfortunate, as things have turned out.”

“Well,” said Thorndyke, “I will look into the matter and let you know what I think of it. It is unnecessary to remark that
appearances are not very encouraging.”

“No, I can see that,” said Chapman, rising and producing his card-case. “But we must hope for the best.” He laid his card on the table, and having shaken hands with us gloomily, took his departure.

“It doesn’t do to take things at their face value,” I remarked, when he had gone; “but I don’t think we have ever had a more hopeless-looking case. All it wants to complete it is the discovery of remains in Chapman’s house.”

“In that respect,” said Thorndyke, “it may already be complete. But it hardly wants that finishing touch. On the evidence that we have, any jury would find a verdict of ‘guilty’ without leaving the box. The only question for us is whether the face value of the evidence is its real value. If it is, the defence will be a mere formality.”

“I suppose,” said I, “you will begin the investigation at Stoke Varley?”

“Yes,” he replied. “We begin by checking the alleged facts. If they are really as stated, we shall probably need to go no farther. And we had better lose no time, as the remains may be moved into the jurisdiction of a London coroner, and we ought to see everything in situ as far as possible. I suggest that we postpone the rest of to-day’s business and start at once, taking Scotland Yard on the way to get authority to inspect the remains and the premises.”

In a few minutes we were ready for the expedition. While Thorndyke packed the “research-case” with the necessary instruments, I gave instructions to our laboratory assistant, Polton, as to what was to be done in our absence, and then, when we had consulted the time-table, we set forth by way of the Embankment.

At Scotland Yard, on inquiring for our friend, Superintendent Miller, we received the slightly unwelcome news that he was at Stoke Varley, inquiring into the case. However, the authorisation was given readily enough, and, armed with this, we made our way to Charing Cross Station, arriving there in good time to catch our train.

We had just given up our tickets and turned into the pleasant station approach of Stoke Varley when Thorndyke gave a soft chuckle. I looked at him inquiringly, and he explained. “Miller has had a telegram, and we are going to have facilities, with a little supervision.” Following the direction of his glance, I now observed the superintendent strolling towards us, trying to look surprised, but achieving only a somewhat sheepish grin.

“Well, I’m sure, gentlemen!” he exclaimed. “This is an unexpected pleasure. You don’t mean to say you are engaged in this treasure-trove case?”

“Why not?” asked Thorndyke.

“Well, I’ll tell you why not,” replied Miller. “Because it’s no go. You’ll only waste your time and injure your reputation. I may as well let you know, in confidence, that we’ve been through Chapman’s house in London. It wasn’t very necessary; but still, if there was a vacancy in his coffin for one or two more nails, we’ve knocked them in.”

“What did you find in his house?” Thorndyke asked.

“We found,” replied Miller, “in a cupboard in his bedroom, a good-sized bottle of hyoscine tablets, about two-thirds full—one-third missing. No great harm in that; he might have taken ‘em himself. But when we went down into the cellar, we noticed that the place smelt—well, a bit graveyards, so to speak. So we had a look round. It was a stone-floored cellar, not very even, but so far as we could see, none of the flagstones seemed to have been disturbed. We didn’t want the job of digging the whole of them up, so I just filled a bucket with water and poured it over the floor. Then I watched.

“In less than a minute one big flagstone near the middle went nearly dry, while the water still stood on all the others. ‘What O!’ says I. ‘Loose earth underneath here.’ So we got a crow-bar and prised up that big flag; and sure enough, underneath it we found a good-sized bundle done up in a sheet. I won’t go into unpleasant particulars—not that it would upset you, I suppose—but that bundle contained human remains.”

“Any bones?” inquired Thorndyke.

“No. Mostly in’ards and some skin from the front of the body. We handed them over to the Home Office experts, and they examined them and made an analysis. Their report states that the remains are those of a woman of about thirty-five—that was about Mings’ age—and that the various organs contained a large quantity of hyoscine; more than enough to have caused death. So there you are. If you are going to conduct the defence, you won’t get much glory from it.”

“It is very good of you, Miller,” said Thorndyke, “to have given us this private information. It is very helpful, though I have not undertaken the defence. I have merely come down to check the facts and see if there is any material for a defence. And I shall go through the routine, as I am here. Where are the remains?”

“In the mortuary. I’ll show you the way, and as I happen to have the key in my pocket, I can let you in.”

We passed through the outskirts of the village, gathering a small train of stealthy followers, who dogged us to the door of the mortuary and hungrily watched us as the superintendent let us in and locked the door after us.

“There you are,” said Miller, indicating the slate table on which the remains lay, covered by a sheet soaked in an antiseptic. “I’ve seen all I want to see.” And he retired into a corner and lit his pipe.

The remnants of mortality, disclosed by the removal of the sheet, were dreadfully suggestive of crime in its most brutal and horrible form, but they offered little information. The dismemberment had been manifestly rude and unskilful, and the remains were clearly those of a woman of medium size and apparently in the prime of life. The principal interest
centred in the left arm, the waxen skin of which bore a very distinct tattoo-mark, consisting of the initials R. M. over a very symmetrical heart, transfixed by an arrow, beneath which were the initials J. B. The letters were Roman capitals about half an inch high, well-formed and finished with serifs, and the heart and arrow quite well drawn. I looked reflectively at the device, standing out in dull blue from its ivory-like background, and speculated vaguely as to who J. B. might have been and how many predecessors and successors he had had. And then my interest waned, and I joined the superintendent in the corner. It was a sordid case, and a conviction being a foregone conclusion, it did not seem to call for further attention.

Thorndyke, however, seemed to think otherwise. But that was his way. When he was engaged in an investigation he put out of his mind everything that he had been told and began from the very beginning. That was what he was doing now. He was inspecting these remains as if they had been the remains of some unidentified person. He made, and noted down, minute measurements of the limbs; he closely examined every square inch of surface; he scrutinised each finger separately, and then with the aid of his portable inking-plate and roller, took a complete set of finger-prints. He measured all the dimensions of the tattoo-marks with a delicate calliper-gauge, and then examined the marks themselves, first with a chinon lens and then with the high-power Coddington. The principles that he laid down in his lectures at the hospital were: “Accept no statement without verification; observe every fact independently for yourselves; and keep an open mind.” And, certainly, no one ever carried out more conscientiously his own precepts.

“Do you know, Dr. Jervis,” the superintendent whispered to me as Thorndyke brought his Coddington to bear on the tattoo-marks, “I believe this lens business is becoming a habit with the doctor. It’s my firm conviction that if somebody were to blow up the Houses of Parliament, he’d go and examine the ruins through a magnifying glass. Just look at him poring over those tattooed letters that you could read plainly twenty feet away!”

Meanwhile, Thorndyke, unconscious of these criticisms, placidly continued his inspection. From the table, with its gruesome burden, he transferred his attention to the box, which had been placed on a bench by the window, examining it minutely inside and out; feeling with his fingers the dark grey paint with which it was coated and the white-painted initials, “S. C.,” on the lid, which he also measured carefully. He even copied into his note book the maker’s name, which was stamped on a small brass label affixed to the inside of the lid, and the name of the lock-maker, and inspected the screws which had drawn from the wood when it was forced open. At length he put away his notebook, closed the research-case and announced that he had finished, adding the inquiry: “How do you get to the ‘Red Lion’ from here?”

“It’s only a few minutes’ walk,” said Miller. “I’ll show you the way. But you’re wasting your time, doctor, you are indeed. You see,” he continued, when he had locked up the mortuary and pocketed the key, “that suggestion of Chapman’s is ridiculous on the face of it. Just imagine a man bringing a portmanteau full of human remains into the luggage-room of a commercial hotel, opening it and opening another’s man’s box, and swapping the contents of the one for the other with the chance of one of the commercials coming in at any moment. Supposing one of ‘em had, what would he have had to say? ‘Hallo, there was a baggy, you seem to have somebody’s man’s box! ’ So I have,’ says Chapman. ‘I expect it’s my wife’s. Careless woman! must have dropped it in when she was packing the box.’ Bah! It’s a fool’s explanation. Besides, how could he have got Chapman’s box open? We couldn’t. It was a first-class lock. We had to break it open, but it hadn’t been broken open before. No, sir, that cat won’t jump. Still, you needn’t take my word for it. Here is the place, and here is Mr. Butt, himself, standing at his own front door looking as pleasant as the flowers in May, like the lump of sugar that you put in a fly-trap to induce ‘em to walk in.”

The landlord, who had overheard—without difficulty—the concluding passage of Miller’s peroration, smiled genially; and when the purpose of the visit had been explained, suggested a “modest quencher” in the private parlour as an aid to conversation.

“I wanted,” said Thorndyke, waiving the suggestion of the ‘quencher,’ “to ascertain whether Chapman’s theory of an exchange of contents could be seriously entertained.”

Well, sir,” said the landlord, “the fact is that it couldn’t. That room is a public room, and people may be popping in there at any time all day. We don’t usually keep it locked. It isn’t necessary. We know most of our customers, and the contents of the packages that are stowed in the room are principally travellers’ samples of no considerable value. The thing would have been impossible in the daytime, and we lock the room up at night.”

“Have you had any strangers staying with you in the interval between Chapman’s going away and the discovery of the remains?”

“Yes. There was a Mr. Doler; he had two cabin trunks: and a uniform case which went to the luggage-room. And then there was a lady, Mrs. Murchison. She had a lot of stuff in there: a small, flat trunk, a hat-box, and a big dress-basket—one of these great basket pantechnicons that ladies take about with them. And there was another gentleman—I forget his name, but you will see it in the visitors’ book—he had a couple of largish portmanteaux in there. Perhaps you would like to see the book?”

“I should,” said Thorndyke, and when the book was produced and the names of the guests pointed out, he copied the entries into his notebook, adding the particulars of their luggage.

“And now, sir,” said Miller, “I suppose you won’t be happy until you’ve seen the room itself?”

“Your insight is really remarkable, superintendent,” my colleague replied. “Yes, I should like to see the room.”

There was little enough to see, however, when we arrived there. The key was in the door, and the latter was not only
unlocked but stood ajar; and when we pushed it open and entered we saw a small room, empty save for a collection of portmanteaux, trunks, and Gladstone bags. The only noteworthy fact was that it was at the end of a corridor, covered with linoleum, so that anyone inside would have a few seconds' notice of another person's approach. But evidently that would have been of little use in the alleged circumstances. For the hypothetical criminal must have emptied Chapman's box of the jewellery before he could put the incriminating objects into it; so that, apart from the latter, the arrival of an inopportune visitor would have found him apparently in the act of committing a robbery. The suggestion was obviously absurd.

"By the way," said Thorndyke, as we descended the stairs, "where is the central character of this drama—Chapman? He is not here, I suppose?"

"Yes, he is," replied Miller. "He is committed for trial, but we are keeping him here until we know where the inquest is to be held. You would probably like to have a few words with him? Well, I'll take you along to the police station and tell them who you are, and then perhaps you would like to come back here and have some lunch or dinner before you return to town."

I warmly seconded the latter proposal, and the arrangement having been made, we set forth for the police station, which we gathered from Miller was incorporated with a small local prison. Here we were shown into what appeared to be a private office, and presently a sergeant entered, ushering in a man whom we at once recognised from his resemblance to our client, Mr. George Chapman, disguised though it was by his pallor, his unshaven face, and his air of abject misery. The sergeant, having announced him by name, withdrew with the superintendent and locked the door on the outside. As soon as we were alone, Thorndyke rapidly acquainted the prisoner with the circumstances of his brother's visit and then continued: "Now, Mr. Chapman, you want me to undertake your defence. If I do so, I must have all the facts. If there is anything known to you that your brother has not told me, I ask you to tell it to me without reservation."

Chapman shook his head wearily.

"I know nothing more than you know," said he. "The whole affair is a mystery that I can make nothing of. I don't expect you to believe me. Who would, with all this evidence against me? But I swear to God that I know nothing of this abominable crime. When I brought that box down here, it contained my stock of jewellery and nothing else; and after I put it in the luggage-room, I never opened it."

"Do you know of anybody who might have had a motive for getting rid of Rebecca Mings?"

"Not a soul," replied Chapman. "She led me the devil's own life, but she was popular enough with her own friends. And she was an attractive woman in her way: a fine, well-built woman, rather big—she stood five-feet-seven—with a good complexion and very handsome golden hair. Such as her friends were—they were a shady lot—I think they were fond of her, and I don't believe she had any enemies."

"Some hyoscine was found in your house," said Thorndyke. "Do you know anything about it?"

"Yes. I got it when I suffered from neuralgia. But I never took any. My doctor heard about it and sent me to the dentist. The bottle was never opened. It contained a hundred tablets."

"And with regard to the box," said Thorndyke. "Had you had it long?"

"Not very long. I bought it at Fletchers, in Holborn, about six months ago."

"And you have nothing more to tell us?"

"No," he replied. "I wish I had;" and then, after a pause, he asked with a wistful look at Thorndyke: "Are you going to undertake my defence, sir? I can see that there is very little hope, but I should like to be given just a chance."

I glanced at Thorndyke, expecting at the most a cautious and conditional reply. To my astonishment he answered: "There is no need to take such a gloomy view of the case, Mr. Chapman. I shall undertake the defence, and I think you have quite a fair chance of an acquittal."

On this amazing reply I reflected, not without some self-condemnation, during our walk to the hotel and the meal that preceded our departure. For it was evident that I had missed something vital. Thorndyke was a cautious man and little given to making promises or forecasts of results. He must have picked up some evidence of a very conclusive kind; but what that evidence could be, I found it impossible to imagine. The superintendent, too, was puzzled, I could see, for Thorndyke made no secret of his intention to go on with the case. But Miller's delicate attempts to pump him came to nothing; and when he had escorted us to the station and our train moved off, I could see him standing on the platform, gently scratching the back of his head and gazing speculatively at our retreating carriage.

As soon as we were clear of the station, I opened my attack.

"What on earth," I demanded, "did you mean by giving that poor devil, Chapman, hopes of acquittal? I can't see that he has a dog's chance."

Thorndyke looked at me gravely.

"My impression is, Jervis," he said, "that you have not kept an open mind in this case. You have allowed yourself to fall under the suggestive influence of the obvious; whereas the function of the investigator is to consider the possible alternatives of the obvious inference. And you have not brought your usual keen attention to bear on the facts. If you had considered George Chapman's statement attentively you would have noticed that it contained some very curious and
significant suggestions; and if you had examined those dismembered remains critically, you would have seen that they confirmed those suggestions in a very remarkable manner."

"As to George Chapman's statement," said I, "the only suggestive point that I recall is the reference to those Maori heads. But, as you, yourself, pointed out, the dealers in those heads don't do the dismemberment."

Thorndyke shook his head a little impatiently.

"Tut, tut, Jervis," said he, "that isn't the point at all. Any fool can cut up a dead body as this one has been cut up. The point is that that statement, carefully considered, yields a definite and consistent alternative to the theory that Samuel Chapman killed this woman and dismembered her body; and that alternative theory is supported by the appearance of these remains. I think you will see the point if you recall Chapman's statement, and reflect on the possible bearing of the various incidents that he described."

In this, however, Thorndyke was unduly optimistic. I recalled the statement completely enough, and reflected on it frequently and profoundly during the next few days; but the more I thought of it the more conclusive did the case against the accused appear.

Meanwhile, my colleague appeared to be taking no steps in the matter, and I assumed that he was waiting for the inquest. It is true that, when, on one occasion, he had accompanied me towards the City, and leaving me in Queen Victoria Street disappeared into the premises of Messrs. Burden Brothers, lock manufacturers, I was inclined to associate his proceedings with his minute examination of the lock at Stoke Varley. And, again, when our laboratory assistant, Polton, was seen to issue forth, top-hatted and armed with an umbrella and an attaché-case, I suspected some sort of "private inquiries," possibly connected with the case. But from Thorndyke I could get no information at all. My tentative "pumpings" elicited one unvarying reply. "You have the facts, Jervis. You heard George Chapman's statement, and you have seen the remains. Give me a reasonable theory and I will discuss it with pleasure." And that was how the matter remained. I had no reasonable theory—other than that of the police—and there was accordingly no discussion.

On a certain evening, a couple of days before the inquest—which had been postponed in the hope that some further remains might be discovered—I observed signs of an expected visitor: a small table placed by the supernumerary arm-chair and furnished with a tray bearing a siphon, a whisky-decanter and a box of cigars. Thorndyke caught my inquiring glance at these luxuries, for which neither of us had any use, and proceeded to explain.

"I have asked Miller to look in this evening—he is due now. I have been working at this Chapman case, and, as it is now complete, I propose to lay my cards on the table."

"Is that safe?" said I. "Supposing the police still go for a conviction and try to forestall your evidence?"

"They won't," he replied. "They couldn't. And it would be most improper to let the case go for trial on a false theory. But here is Miller; and a mighty twitter he is in, I have no doubt."

He was. Without even waiting for the customary cigar, he plumped down into the chair, and dragging a letter from his pocket, fixed a glare of astonishment on my placid colleague.

"This letter of yours, sir," said he, "is perfectly incomprehensible to me. You say that you are prepared to put us in possession of the facts of this Chapman case. But we are in possession of the facts already. We are absolutely certain of a conviction. Let me remind you, sir, of what those facts are. We have got a dead body which has been identified beyond all doubt. Part of that body was found in a box which is the property of Samuel Chapman, which was brought by him and deposited by him at the 'Red Lion' Hotel. Another part of that body was found in his dwelling-house. A supply of poison—an uncommon poison, too—similar to that which killed the dead person, has also been found in his house; and the dead body is that of a woman with whom Chapman was known to be on terms of enmity and whom he has threatened, in the presence of witnesses, to kill. Now, sir, what have you got to say to those facts?"

Thorndyke regarded the agitated detective with a quiet smile. "My comments, "Miller," said he, "can be put in a nutshell. You have got the wrong man, you have got the wrong box, and you have got the wrong body."

The superintendent was thunderstruck, and no wonder. So was I. As to Miller, he drew himself forward until he was sitting on the extreme edge of the chair, and for some moments stared at my impassive colleague in speechless amazement. At length he burst out: "But, my dear sir! This is sheer nonsense—at least, that's what it sounds like, though I know it can't be. Let's begin with the body. You say it's the wrong one."

"Yes. Rebecca Mings was a biggish woman. Her height was five-feet-seven. This woman was not more than five-feet-four."

"Bah!" exclaimed Miller. "You can't judge to an inch or two from parts of a dismembered body. You are forgetting the tattoo-mark. That clinches the identity beyond any possible doubt."

"It does, indeed," said Thorndyke. "That is the crucial evidence. Rebecca Mings had a certain tattoo mark on her left forearm. This woman had not."

"Had not!" shrieked Miller, coming yet farther forward on his chair. (I expected, every moment, to see him sitting on the floor.) "Why, I saw it; and so did you."

"I am speaking of the woman, not of the body," said Thorndyke. "The mark that you saw was a post-mortem tattoo-
mark. It was made after death. But the fact that it was made after death is good evidence, that it was not there during life."

"Moses!" exclaimed the superintendent. "This is a facer. Are you perfectly sure it was done after death?"

"Quite sure. The appearance, through a powerful lens, is unmistakable. Tattoo-marks are made, as you know, of course, by painting Indian ink on the skin and pricking it in with fine needles. In the living skin the needle-wounds heal up at once and disappear, but in the dead skin the needle-holes remain unclosed and can be easily seen with a lens. In this case the skin had been well washed and the surface pressed with some smooth object; but the holes were plainly visible and the ink was still in them."

"Well, I'm sure!" said Miller. "I never heard of tattooing a dead body before."

"Very few people have, I expect," said Thorndyke. "But there is one class of persons who know all about it: the persons who deal in Maori heads."

"Indeed?" queried Miller. "How does it concern them?"

"Those heads are usually elaborately tattooed, and the value of a head depends on the quality of the tattooing. Now, when those heads became objects of trade, the dealers conceived the idea of touching up defective specimens by additional tattooing on the dead head, and from this they proceeded to obtain heads which had no tattoo-marks, and turn them into tattooed heads."

"Well, to be sure," said the superintendent, with a grin, "what wicked men there are in the world, aren't there, Dr. Jervis?"

I murmured a vague assent, but I was principally conscious of a desire to kick myself for having failed to pick this invaluable clue out of George Chapman's statement.

"And now," said Miller, "we come to the box. How do you know it is the wrong one?"

"That," replied Thorndyke, "is proved even more conclusively. The original box was made by Fletchers, in Holborn. It was sold to Chapman, and his initials painted on it, on the 9th of last April. I have seen the entry in the day-book. The locks of these boxes are made by Burden Brothers of Queen Victoria Street, and as they are quite high-class locks each is given a registered number, which is stamped on the lock. The number on the box that you have is 5007, and Burden's books show that it was made and sold to Fletchers about the middle of July—the sale was dated the 13th. Therefore this can not be Chapman's box."

"Apparently not," Miller agreed. "But whose box is it? And what has become of Chapman's box?"

"That," replied Thorndyke, "was presumably taken away in Mrs. Murchison's dress-basket."

"Then who the deuce is Mrs. Murchison?" demanded the superintendent.

"I should say," replied Thorndyke, "that she was formerly known as Rebecca Mings."

"The deceased!" exclaimed Miller, falling back in his chair with a guffaw. "My eye! What a lark it is! But she must have some sauce, to walk off with the jewellery and leave her own dismembered remains in exchange! By the way, whose remains are they?"

"We shall come to that presently," Thorndyke answered. "Now we have to consider the man you have in custody."

"Yes," agreed Miller, "we must settle about him. Of course if it isn't his box, and the body isn't Mings' body, that puts him out of it so far. But there are those remains that we dug up in his cellar. What about them?"

"That question," replied Thorndyke, "will, I think, be answered by a general review of the case. But I must, remind you that if the box is not Chapman's, it is some other person's; that is to say, that if Chapman goes out of the case, as to the Stoke Varley incidents, someone else comes in. So, if the body is not Mings' body, it is some other woman's, and that other woman must have disappeared. And now let us review the case as a whole.

"You know about the pocket-picking charge. It was obviously a false charge, deliberately prepared by 'planting' the purse; that is, it was a conspiracy. Now what was the object of this conspiracy? Clearly it was to get Chapman out of the way while the boxes were exchanged at Stoke Varley, and the remains deposited in the river and elsewhere. Then who were the conspirators—other than the agent who planted the purse?"

"They—if there were more than one—must have had access to Mings, dead or alive, in order to make the exact copy, or tracing, of her tattoo-mark. They must have had some knowledge of the process of post-mortem tattooing. They must have had access to Chapman's house. And, since they had in their possession the dead body of a woman, they must have been associated with some woman who has disappeared."

"Who is there who answers this description? Well, of course, Mings had access to herself, though she could hardly have taken a tracing from her own arm, and she had access to Chapman's house, since she had possession of the latchkey. Then there is a man named Gamble, with whom Mings was on terms of great intimacy. Now Gamble was formerly a dealer in tattooed Maori heads, so he may be assumed to know something about post-mortem tattooing. And I have ascertained that Gamble's wife has disappeared from her usual places of resort. So here are two persons who, together, agree with the description of the conspirators. And now let us consider the train of events in connection with the dates."

"On July the 29th Chapman came to town from Stoke Varley. On the 30th he was arrested as a pick pocket. On the 31st
he was committed for trial. On the 2nd of August Mrs. Gamble went away to the country. No one seems to have seen her go, but that is the date on which she is reported to have gone. On August the 5th Mrs. Murchison deposited at Stoke Varley a box which must have been purchased between the 13th of July and the 4th of August, and which contained a woman’s arm. On the 14th of August that box was opened by the police. On the 18th human remains were discovered in Chapman’s house. On the 27th Chapman was released from Brixton. On the 28th he was arrested for murder at Stoke Varley. I think, Miller, you will agree that that is a very striking succession of dates.”

“Yes,” Miller agreed. “It looks like a true bill. If you will give me Mr. Gamble’s address, I’ll call on him.”

“I’m afraid you won’t find him at home,” said Thorndyke. “He has gone into the country, too; and I gather from his landlord, who holds a returned cheque, that Mr. Gamble’s banking account has gone into the country with him.”

“Then,” said the superintendent “I suppose I must take a trip into the country, too.”

“Well, Thorndyke,” I said, as I laid down the paper containing the report of the trial of Gamble and Mings for the murder of Theresa Gamble, one morning about four months later, “you ought to be very highly gratified. After sentencing Gamble to death and Mings to fifteen years’ penal servitude, the judge took the opportunity to compliment the police on their ingenuity in unravelling this crime, and the Home Office experts on their skill in detecting the counterfeit tattoo-marks. What do you think of that?”

“I think,” replied Thorndyke, “that his lordship showed a very proper and appreciative spirit.”

THE TRAIL OF BEHEMOTH

OF all the minor dissipations in which temperate men indulge there is none, I think, more alluring than the after-breakfast pipe. I had just lit mine and was standing before the fire with the unopened paper in my hand when my ear caught the sound of hurried footsteps ascending the stair. Now experience has made me somewhat of a connoisseur in footsteps. A good many are heard on our stair, heralding the advent of a great variety of clients, and I have learned to distinguish those which are premonitory of urgent cases. Such I judged the present ones to be, and my judgment was confirmed by a hasty, importunate tattoo on our small brass knocker, Regretfully taking the much-appreciated pipe from my mouth, I crossed the room and threw the door open.

“Good morning, Dr. Jervis,” said our visitor, a barrister whom I knew slightly. “Is your colleague at home?”

“No, Mr. Bidwell,” I replied. “I am sorry to say he is out of town. He won’t be back until the day after to-morrow.”

Mr. Bidwell was visibly disappointed.

“Ha! Pity!” he exclaimed; and then with quick tact he added. “But still, you are here. It comes to the same thing.”

“I don’t know about that,” said I. “But, at any rate, I am at your service.”

“Thank you,” said he. “And in that case I will ask you to come round with me at once to Tanfield Court. A most shocking thing has happened. My old friend and neighbour, Giles Herrington has been—well, he is dead—died suddenly, and I think there can be no doubt that he was killed. Can you come now? I will give you the particulars as we go.”

I scribbled a hasty note to say where I had gone, and having laid it on the table, got my hat and set forth with Mr. Bidwell.

“It has only just been discovered,” said he, as we crossed King’s Bench Walk. “The laundress who does his chambers and mine was battering at my door when I arrived—I don’t live in the Temple, you know. She was as pale as a ghost and in an awful state of alarm and agitation. It seems that she had gone up to Herrington’s chambers to get his breakfast ready as usual; but when she went into the sitting-room she found him lying dead on the floor. Thereupon she rushed down to my chambers—I am usually an early bird—and there I found her, as I said, battering at my door, although she has a key.

“Well, I went up with her to my friend’s chambers—they are on the first floor, just over mine—and there, sure enough, was poor old Giles lying on the floor, cold and stiff. Evidently he had been lying there all night.”

“Were there any marks of violence on the body?” I asked.

“I didn’t notice any,” he replied, “but I didn’t look very closely. What I did notice was that the place was all in disorder—a chair overturned and things knocked off the table. It was pretty evident that there had been a struggle and that he had not met his death by fair means.”

“And what do you want us to do?” I asked.

“Well,” he replied, “I was Herrington’s friend; about the only friend he had, for he was not an amiable or a sociable man; and I am the executor of his will.

“Appearances suggest very strongly that he has been murdered, and I take it upon myself to see that his murderer is brought to account. Our friendship seems to demand that. Of course, the police will go into the affair, and if it turns out to be all plain sailing, there will be nothing for you to do. But the murderer, if there is one, has got to be secured and convicted, and if the police can’t manage it, I want you and Thorndyke to see the case through. This is the place.”

He hurried in through the entry and up the stairs to the first-floor landing, where he rapped loudly at the closed “oak” of
a set of chambers above which was painted the name of "Mr. Giles Herrington."

After an interval, during which Mr. Bidwell repeated the summons, the massive door opened and a familiar face looked out: the face of Inspector Badger of the Criminal Investigation Department. The expression that it bore was not one of welcome, and my experience of the inspector caused me to brace myself up for the inevitable contest.

"What is your business?" he inquired forbiddingly.

Mr. Bidwell took the question to himself and replied: "I am Mr. Herrington's executor, and in that capacity I have instructed Dr. Jervis and his colleague, Dr. Thorndyke, to watch the case on my behalf. I take it that you are a police officer?"

"I am," replied Badger, "and I can't admit any unauthorised persons to these chambers."

"We are not unauthorised persons," said Mr. Bidwell. "We are here on legitimate business. Do I understand that you refuse admission to the legal representatives of the deceased man?"

In the face of Mr. Bidwell's firm and masterful attitude, Badger began, as usual, to weaken. Eventually, having warned us to convey no information to anybody, he grudgingly opened the door and admitted us.

"I have only just arrived, myself," he said. "I happened to be in the porter's lodge on other business when the laundress came and gave the alarm."

As I stepped into the room and looked round, I saw at a glance the clear indications of a crime. The place was in the utmost disorder. The cloth had been dragged from the table, littering the floor with broken glass, books, a tobacco jar, and various other objects. A chair sprawled on its back, the fender was dislodged from its position, the hearth-rug was all awry; and in the midst of the wreckage, on the space of the table and the fireplace, the body of a man was stretched in a not uneasy posture.

I stooped over him and looked him over searchingly; an elderly man, clean-shaved and slightly bald, with a grim, rather forbidding countenance, which was not, however, distorted or apparently unusual in expression. There were no obvious injuries, but the crumpled state of the collar caused me to look more closely at the throat and neck, and I then saw pretty plainly a number of slightly discoloured marks, such as would be made by fingers tightly grasping the throat. Evidently Badger had already observed them, for he remarked: "There's no need to ask you what he died of, doctor; I can see that for myself."

"The actual cause of death," said I, "is not quite evident. He doesn't appear to have died from suffocation, but those are very unmistakable marks on the throat."

"Uncommonly," agreed Badger; "and they are enough for my purpose without any medical hair-splittings. How long do you think he has been dead?"

"From nine to twelve hours," I replied, "but nearer nine, I should think."

The inspector looked at his watch.

"That makes it between nine o'clock and midnight, but nearer midnight," said he. "Well, we shall hear if the night porter has anything to tell us. I've sent word for him to come over, and the laundress, too. And here is one of 'em."

It was, in fact, both of them, for when the inspector opened the door, they were discovered conversing eagerly in whispers. "One at a time," said Badger. "I'll have the porter in first," and having admitted the man, he unceremoniously shut the door on the woman. The night porter saluted me as he came in—we were old acquaintances—and then halted near the door, where he stood stiffly, with his eyes riveted on the corpse.

"Now," said Badger, "I want you to try to remember if you let in any strangers last night, and if so, what their business was."

"I remember quite well," the porter replied. "I let in three strangers while I was on duty. One was going to Mr. Bolter in Fig Tree Court, one was going to Sir Alfred Blain's chambers, and the third said he had an appointment with Mr. Herrington."

"Ha!" exclaimed Badger, rubbing his hands. "Now, what time did you let him in?"

"It was just after ten-fifteen."

"Can you tell us what he was like and how he was dressed?"

"Yes," was the reply. "He didn't know where Tanfield Court was, and I had to walk down and show him, so I was able to have a good look at him. He was a middle-sized man, rather thin, dark hair, small moustache, no beard, and he had a long, sharp nose with a bump on the bridge. He wore a soft felt hat, a loose light overcoat, and he carried a thickish rough stick."

"What class of man was he? Seem to be a gentleman?"

"He was quite a gentlemanly kind of man, so far as I could judge, but he looked a bit shabby as to his clothes."

"Did you let him out?"

"Yes. He came to the gate a few minutes before eleven."
“And did you notice anything unusual about him then?”

“I did,” the porter replied impressively. “I noticed that his collar was all crumpled and his hat was dusty and dented. His face was a bit red, and he looked rather upset, as if he had been having a tussle with somebody. I looked at him particularly and wondered what had been happening, seeing that Mr. Herrington was a quiet, elderly gentleman, though he was certainly a bit peppery at times.”

The inspector took down these particulars glibly in a large notebook and asked: “Is that all you know of the affair?” And when the porter replied that it was, he said: “Then I will ask you to read this statement and sign your name below it.”

The porter read through his statement and carefully signed his name at the foot. He was about to depart when Badger said: “Before you go, perhaps you had better help us to move the body into the bedroom. It isn’t decent to leave it lying there.”

Accordingly the four of us lifted the dead man and carried him into the bedroom, where we laid him on the undisturbed bed and covered him with a rug. Then the porter was dismissed, with instructions to send in Mrs. Runt.

The laundress’s statement was substantially a repetition of what Mr. Bidwell had told me. She had let herself into the chambers in the usual way, had come suddenly on the dead body of the tenant, and had forthwith rushed downstairs to give the alarm. When she had concluded the inspector stood for a few moments looking thoughtfully at his notes.

“I suppose,” he said presently, “you haven’t looked round these chambers this morning? Can’t say if there is anything unusual about them, or anything missing?”

The laundress shook her head.

“I was too upset,” she said, with another furtive glance at the place where the corpse had lain; “but,” she added, letting her eyes roam vaguely round the room, “there doesn’t seem to be anything missing, so far as I can see—wait! Yes, there is. There’s something gone from that nail on the wall; and it was there yesterday morning, because I remember dusting it.”

“Ha!” exclaimed Badger. “Now what was it that was hanging on that nail?”

“Well,” Mrs. Runt replied hesitatingly. “I really don’t know what it was. Seemed like a sort of sword or dagger, but I never looked at it particularly, and I never took it off its nail. I used to dust it as it hung.”

“Still,” said Badger, “you can give us some sort of description of it, I suppose?”

“I don’t know that I can,” she replied. “It had a leather case, and the handle was covered with leather, I think, and it had a sort of loop, and it used to hang on that nail.”

“Yes, you said that before,” Badger commented sourly. “When you say it had a case, do you mean a sheath?”

“You can call it a sheath if you like,” she retorted, evidently ruffled by the inspector’s manner. “I call it a case.”

“And how big was it? How long, for instance?”

Mrs. Runt held out her hands about a yard apart, looked at them critically, shortened the interval to a foot, extended it to two, and still varying the distance, looked vaguely at the inspector.

“I should say it was about that,” she said.

“About what?” snorted Badger. “Do you mean a foot or two feet or a yard? Can’t you give us some idea?”

“I can’t say no clearer than what I have,” she snapped. “I don’t go round gentlemen’s chambers measuring the things.”

It seemed to me that Badger’s questions were rather unnecessary, for the wall-paper below the nail gave the required information. A coloured patch on the faded ground furnished a pretty clear silhouette of a broad-bladed sword or large dagger, about two feet six inches long, which had apparently hung from the nail by a loop or ring at the end of the handle. But it was not my business to point this out. I turned to Bidwell and asked:

“Can you tell us what the thing was?”

“I am afraid I can’t,” he replied. “I have very seldom been in these chambers. Herrington and I usually met in mine and went to the club. I have a dim recollection of something hanging on that nail, but I have not the least idea what it was or what it was like. But do you think it really matters? The thing was almost certainly a curiosity of some kind. It couldn’t have been of any appreciable value. It is absurd, on the face of it, to suppose that this man came to Herrington’s chambers, apparently by appointment, and murdered him for the sake of getting possession of an antique sword or dagger. Don’t you think so?”

I did, and so, apparently, did the inspector, with the qualification that the thing seemed to have disappeared, and its disappearance ought to be accounted for; which was perfectly true, though I did not quite see how the “accounting for” was to be effected. However, as the laundress had told all that she knew, Badger gave her her dismissal and she retired to the landing, where I noticed that the night porter was still lurking. Mr. Bidwell also took his departure, and happening, a few moments later, to glance out of the window, I saw him walking slowly across the court, apparently conferring with the laundress and the porter.

As soon as we were alone, Badger assumed a friendly and confidential manner and proceeded to give advice.
“I gather that Mr. Bidwell wants you to investigate this case, but I don’t fancy it is in your line at all. It is just a matter of tracing that stranger and getting hold of him. Then we shall have to find out what property there was on these premises. The laundress says that there is nothing missing, but of course no one supposes that the man came here to take the furniture. It is most probable that the motive was robbery of some kind. There’s no sign of anything broken open; but then, there wouldn’t be, as the keys were available.”

Nevertheless he prowled round the room, examining every receptacle that had a lock and trying the drawers of the writing-table and of what looked like a file cabinet.

“You will have your work cut out,” I remarked, “to trace that man. The porter’s description was pretty vague.”

“Yes,” he replied; “there isn’t much to go on. That’s where you come in,” he added with a grin, “with your microscopes and air-pumps and things. Now if Dr. Thorndyke was here he would just sweep a bit of dust from the floor and collect any stray oddments and have a good look at them through his magnifier, and then we should know all about it. Can’t you do a bit in that line? There’s plenty of dust on the floor. And here’s a pin. Wonderful significant thing is a pin. And here’s a wax vesta; now, that ought to tell you quite a lot. And here is the end of a leather boot-lace—at least, that is what it looks like. That must have come out of somebody’s boot. Have a look at it, doctor, and see if you can tell me what kind of boot it came out of and whose boot it was.”

He laid the fragment, and the match, and the pin on the table and grinned at me somewhat offensively. Inwardly I resented his impertinence—perhaps the more so since I realised that Thorndyke would probably not have been so completely gravelled as I undoubtedly was. But I considered it politic to take his clumsy irony in good part, and even to carry on his elephantine joke. Accordingly, I picked up the three “clues,” one after the other, and examined them gravely, noting that the supposed boot-lace appeared to be composed of whalebone or vulcanite.

“Well, inspector,” I said. “I can’t give you the answer off-hand. There’s no microscope here. But I will examine these objects at my leisure and let you have the information in due course.”

With that I wrapped them with ostentatious care in a piece of note and bestowed them in my pocket, a proceeding which the inspector watched with a sour smile.

“I’m afraid you’ll be too late,” said he. “Our men will probably pick up the tracks while you are doing the microscope stunt. However, I mustn’t stay here any longer. We can’t do anything until we know what valuables there were on the premises; and I must have the body removed and examined by the police surgeon.”

He moved towards the door, and as I had no further business in the rooms, I followed, and leaving him to lock up, I took my way back to our chambers.

When Thorndyke returned to town a couple of days later, I mentioned the case to him. But what Badger had said appeared to be true. It was a case of ascertaining the identity of the stranger who had visited the dead man on that fatal night, and this seemed to be a matter for the police rather than for us. So the case remained in abeyance until the evening following the inquest, when Mr. Bidwell called on us, accompanied by a Mr. Carston, whom he introduced as an old friend of his and of Herrington’s family.

“I have called,” he said, “to bring you a full report of the evidence at the inquest. I had a shorthand writer there, and this is a typed transcript of his notes. Nothing fresh transpired beyond what Dr. Jervis knows and has probably told you, but I thought you had better have all the information in writing.”

“There is no clue as to who the suspicious visitor was, I suppose?” said Thorndyke.

“Not the slightest,” replied Bidwell. “The porter’s description is all they have to go on, and of course it would apply to hundreds of persons. But, in connection with that, there is a question on which I should like to take your opinion. Poor Herrington once mentioned to me that he was subjected to a good deal of annoyance by a certain person who from time to time applied to him for financial help. I gathered that some sort of claim was advanced, and that the demands for money were more or less of the nature of blackmail. Giles didn’t say who the person was, but I got the impression that he was a relative. Now, my friend Carston, who attended the inquest with me, noticed that the porter’s description of the stranger would apply fairly well to a nephew of Giles’s, whom he knows slightly and who is a somewhat shady character; and the question that Carston and I have been debating is whether these facts ought to be communicated to the police. It is a serious matter to put a man under suspicion on such very slender data; and yet—”

“And yet,” said Carston, “the facts certainly fit the circumstances. This fellow—his name is Godfrey Herrington—is a typical ne’er-do-weel. Nobody knows how he lives. He doesn’t appear to do any work. And then there is the personality of the deceased. I didn’t know Giles Herrington very well, but I knew his brother, Sir Gilbert, pretty intimately, and if Giles was at all like him, a catastrophe might easily have occurred.”

“What was Sir Gilbert’s special characteristic?” Thorndyke asked.

“Unamiability,” was the reply. “He was a most cantankerous, overbearing man, and violent at times. I knew him when I was at the Colonial Office with him, and one of his official acts will show the sort of man he was. You may remember it, Bidwell—the Bekwè affair. There was some trouble in Bekwè, which is one of the minor kingdoms bordering on Ashanti, and Sir Gilbert was sent out as a special commissioner to settle it. And settle it he did with a vengeance. He took up an armed force, deposed the king of Bekwè, seized the royal stool, message stick, state sword, drums, and the other insignia of royalty, and brought them away with him. And what made it worse was that he treated these important things as mere loot
kept some of them himself and gave away others as presents to his friends.

“It was an intolerably high-handed proceeding, and it caused a rare outcry. Even the Colonial Governor protested, and in the end the Secretary of State directed the Governor to reinstate the king and restore the stolen insignia, as these things went with the royal title and were necessary for the ceremonies of reinstatement or the accession of a new king.”

“And were they restored?” asked Bidwell.

“Most of them were. But just about this time Gilbert died, and as the whereabouts of one or two of them were unknown, it was impossible to collect them then. I don’t know if they have been found since.”

Here Thorndyke led Mr. Carston back to the point from which he had digressed.

“You are suggesting that certain peculiarities of temper and temperament on the part of the deceased might have some bearing on the circumstances of his death.”

“Yes,” said Carston. “If Giles Herrington was at all like his brother—I don’t know whether he was—” here he looked inquiringly at Bidwell, who nodded emphatically.

“I should say he was, undoubtedly,” said he. “He was my friend, and I was greatly attached to him; but to others, I must admit, he must have appeared a decidedly morose, cantankerous, and irascible man.”

“Very well,” resumed Carston. “If you imagine this cadging, blackmailing wastrel calling on him and trying to squeeze him, and then you imagine Herrington refusing to be squeezed and becoming abusive and even violent, you have a fair set of antecedents for—for what, in fact, did happen.”

“By the way,” said Thorndyke, “what exactly did happen, according to the evidence?”

“The medical evidence,” replied Bidwell, “showed that the immediate cause of death was heart failure. There were marks of fingers on the throat, as you know, and various other bruises. It was evident that deceased had been violently assaulted, but death was not directly due to the injuries.”

“And the finding of the jury?” asked Thorndyke.

“Wilful murder, committed by some person unknown.”

“It doesn’t appear to me,” said I, “that Mr. Carston’s suggestion has much present bearing on the case. It is really a point for the defence. But we are concerned with the identity of the unknown man.”

“I am inclined to agree with Dr. Jervis,” said Bidwell. “We have got to catch the hare before we go into culinary details.”

“My point is,” said Carston, “that Herrington’s peculiar temper suggests a set of circumstances that would render it probable that his visitor was his nephew Godfrey.”

“There is some truth in that,” Thorndyke agreed. “It is highly speculative, but a reasonable speculation cannot be disregarded when the known facts are so few. My feeling is that the police ought to be informed of the existence of this man and his possible relations with the deceased. As to whether he is or is not the suspected stranger, that could be settled at once if he were confronted with the night porter.”

“Yes, that is true,” said Bidwell “I think Carston and I had better call at Scotland Yard and give the Assistant Commissioner a hint on the subject. It will have to be a very guarded hint, of course.”

“Was the question of motive raised?” Thorndyke asked. “As to robbery, for instance.”

“There is no evidence of robbery,” replied Bidwell. “I have been through all the receptacles in the chambers, and everything seems intact. The keys were in poor Giles’s pocket and nothing seems to have been disturbed; indeed, it doesn’t appear that there was any portable property of value on the premises.”

“Well,” said Thorndyke, “the first thing that has to be done is to establish the identity of the nocturnal visitor. That is the business of the police. And if you call and tell them what you have told us, they will, at least, have something to investigate. They should have no difficulty in proving either that he is or is not the man whom the porter let in at the gate; and until they have settled that question, there is no need for us to take any action.”

“Exactly,” said Bidwell, rising and taking up his hat. “If the police can complete the case, there is nothing for us to do. However, I will leave you the report of the inquest to look over at your leisure, and will keep you informed as to how the case progresses.”

When our two friends had gone, Thorndyke sat for some time turning over the sheets of the report and glancing through the depositions of the witnesses. Presently he remarked: “If it turns out that this man, Godfrey Herrington, is not the man whom the porter let in, the police will be left in the air. Apart from Bidwell’s purely speculative suggestion, there seems to be no clue whatever to the visitor’s identity.”

“Badger would like to hear you say that,” said I. “He was very sarcastic respecting our methods of research,” and here I gave him an account of my interview with the inspector, including the “clues” with which he had presented me.

“It was like his impudence,” Thorndyke commented smilingly, “to pull the leg of my learned junior. Still, there was a germ of sense in what he said. A collection of dust from the floor of that room, in which two men had engaged in a violent struggle, would certainly yield traces of both of them.”
“Mixed up with the traces of a good many others,” I remarked.

“True,” he admitted. “But that would not affect the value of a positive trace of a particular individual. Supposing, for instance, that Godfrey Herrington were known to have dyed hair; and suppose that one or more dyed male hairs were found in the dust from the floor of the room. That would establish a probability that he had been in that room, and also that he was the person who had struggled with the deceased.”

“Yes, I see that,” said I. “Perhaps I ought to have collected some of the dust. But it isn’t too late now, as Bidwell has locked up the chambers. Meanwhile, let me present you with Badger’s clues. They came off the floor.”

I searched in my pocket and produced the paper packet, the existence of which I had forgotten, and having opened it, offered it to him with an ironical bow. He looked gravely at the little collection, and, disregarding the pin and the match, picked out the third object and examined it curiously.

“That is the alleged boot-lace end,” he remarked. “It doesn’t do much credit to Badger’s powers of observation. It is as unlike leather as it could well be.”

“Yes,” I agreed, “it is obviously whalebone or vulcanite.”

“It isn’t vulcanite,” said he, looking closely at the broken end and getting out his pocket lens for a more minute inspection.

“What do you suppose it is?” I asked, my curiosity stimulated by the evident interest with which he was examining the object.

“We needn’t suppose,” he replied. “I fancy that if we get Polton to make a cross section of it, the microscope will tell us what it is. I will take it up to him.” As he went out and I heard him ascending to the laboratory where our assistant, Polton, was at work, I was conscious of a feeling of vexation and a sense of failure. It was always thus. I had treated this fragment with the same levity as had the inspector, just dropping it into my pocket and forgetting it. Probably the thing was of no interest or importance; but whether it was or not, Thorndyke would not be satisfied until he knew for certain what it was. And that habit of examining everything, of letting nothing pass without the closest scrutiny, was one of the great secrets of his success as an investigator.

When he came down again I reopened the subject.

“It has occurred to me,” I said, “that it might be as well for us to have a look at that room. My inspection was rather perfunctory, as Badger was there.”

“I have just been thinking the same,” he replied. “If Godfrey is not the man, and the police are left stranded, Bidwell will look to us to take up the inquiry, and by that time the room may have been disturbed. I think we will get the key from Bidwell to-morrow morning and make a thorough examination. And we may as well adopt Badger’s excellent suggestion respecting the dust. I will instruct Polton to come over with us and bring a full-sized vacuum-cleaner, and we can go over what he collects at our leisure.”

Agreeably to this arrangement, we presented ourselves on the following morning at Mr. Bidwell’s chambers, accompanied by Polton, who, however, being acutely conscious of the vacuum-cleaner, which was thinly disguised in brown paper, sneaked up the stairs and got out of sight. Bidwell opened the door himself, and Thorndyke explained our intentions to him.

“Of course you can have the key,” he said, “but I don’t know that it is worth your while to go into the matter. There have been developments since I saw you last night. When Carston and I called at Scotland Yard we found that we were too late. Godfrey Herrington had come forward and made a voluntary statement.”

“That was wise of him,” said Thorndyke, “but he would have been wiser still to have notified the porter of what had happened and sent for a doctor. He claims that the death was a misadventure, of course?”

“Not at all,” replied Bidwell. “He states that when he left, Giles was perfectly well; so well that he was able to kick him—Godfrey—down the stairs and pitch him out on to the pavement. It seems, according to his account, that he called to try to get some financial help from his uncle. He admits that he was rather impertinently and persisted after Giles had definitely refused. Then Giles got suddenly into a rage, thrust him out of the chambers, ran him down the stairs, and threw him out into Tanfield Court. It is a perfectly coherent story, and quite probable up to a certain point, but it doesn’t account for the bruises on Giles’s body or the finger-marks on his throat.”

“No,” agreed Thorndyke; “either he is lying, or he is the victim of some very inexplicable circumstances. But I gather that you have no further interest in the case?”

Bidwell reflected.

“Well,” he said, “I don’t know about that. Of course I don’t believe him, but it is just possible that he is telling the truth. My feeling is that, if he is guilty, I want him convicted; but if by any chance he is innocent—well, he is Giles’s nephew, and I suppose it is my duty to see that he has a fair chance. Yes, I think I would like you to watch the case independently—with a perfectly open mind, neither for nor against. But I don’t see that there is much that you can do.”

“Neither do I,” said Thorndyke. “But one can observe and note the visible facts, if there are any. Has anything been done to the rooms?”
“Nothing whatever,” was the reply. “They are just as Dr. Jervis and I found them the morning after the catastrophe.”

With this he handed Thorndyke the key and we ascended to the landing, where we found Polton on guard with the vacuum-cleaner, like a sentry armed with some new and unorthodox weapon.

The appearance of the room was unchanged. The half-dislodged table-cloth, the litter of broken glass on the floor, even the displaced fender and hearth-rug, were just as I had last seen them. Thorndyke looked about him critically and remarked “The appearances hardly support Godfrey’s statement. There was clearly a prolonged and violent struggle, not a mere ejectment. And look at the table cloth. The uncovered part of the table is that nearest the door, and most of the things have fallen off at the end nearest the fireplace. Obviously, the body that dislodged the cloth was moving away from the door, not towards it, which again suggests something more than an unresisted ejectment.”

He again looked round, and his glance fell on the nail and the coloured silhouette on the wall-paper.

“That, I presume,” said he, “is where the mysterious sword or dagger hung. It is rather large for a dagger and somewhat wide for a sword, though barbaric swords are of all shapes and sizes.”

He produced his spring tape and carefully measured the phantom shape on the wall. “Thirty-one inches long,” he reported, “including the loop at the end of the handle, by which it hung; seven and a half inches at the top of the scabbard, tapering rather irregularly to three inches at the tip. A curious shape. I don’t remember ever having seen a sword quite like it.”

Meanwhile Polton, having picked up the broken glass and other objects, had uncovered the vacuum-cleaner and now started the motor—which was driven by an attached dry battery—and proceeded very systematically to trundle the machine along the floor. At every two or three sweeps he paused to empty the receiver, placing the grey, felt-like mass on a sheet of paper, with a pencilled note of the part of the room from whence it came. The size of these masses of felted dust, and the astonishing change in the colour of the carpet that marked the trail of the cleaner, suggested that Mrs. Runt’s activities had been of a somewhat perfidious character. Polton’s dredgings apparently represented the accumulations of years.

“Wonderful lot of hairs in this old dust,” Polton remarked as he deposited a fresh consignment on the paper, “especially in this lot. It came from under that looking-glass on the wall. Perhaps that clothes brush that hangs under the glass accounts for it.”

“Yes,” I agreed, “they will be hairs brushed off Mr. Herrington’s collar and shoulders. But,” I added, taking the brush from its nail and examining it, “Mrs. Runt seems to have used the glass, too. There are three long hairs still sticking to the brush.”

As Thorndyke was still occupied in browsing inquisitively round the room, I proceeded to make a preliminary inspection of the heaps of dust, picking out the hairs and other recognisable objects with my pocket forceps, and putting them on a separate sheet of paper. Of the former, the bulk were pretty obviously those of the late tenant—white or dull black male hairs—but Mrs. Runt had contributed quite liberally, for I picked out of the various heaps over a dozen long hairs, the mousy brown colour of which seemed to identify them as hers. The remainder were mostly ordinary male hairs of various colours, eyebrow hairs and eyelashes, of no special interest, with one exception. This was a black hair which lay flat on the paper in a Close coil, like a tiny watch-spring.

“I wonder who this negro was,” said I, inspecting it through my lens.

“Probably some African or West Indian Law student,” Thorndyke suggested. “There are always a good many about the Inns of Court.”

He came round to examine my collection, and while he was viewing the negro hair with the aid of my lens, I renewed my investigation of the little dust-heaps. Presently I made a new discovery.

“Why,” I exclaimed, “here is another of Badger’s boot-laces—another piece of the same one, I think. By the way, did you ascertain what that boot-lace really was?”

“Yes,” he replied. “Polton made a section of it and mounted it; and furthermore, he made a magnified photograph of it. I have the photograph in my pocket, so you can answer your own question.”

He produced from his letter-case a half-plate print which he handed to me and which I examined curiously.

“It is a singular object,” said I, “but I don’t quite make it out. It looks rather like a bundle of hairs embedded in some transparent substance.”

“That, in effect,” he replied, “is what it is. It is an elephant’s hair, probably from the tail. But, as you see, it is a compound hair; virtually a group of hairs agglutinated into a single stem. Most very large hairs are compound. A tiger’s whiskers, for instance, are large, stiff hairs which, if cut across, are seen to be formed of several largish hairs fused together; and the colossal hair which grows on the nose of the rhinoceros—the so-called nasal horn—is made up of thousands of subordinate hairs.”

“It is a remarkable-looking thing,” I said, handing back the photograph; “very distinctive—if you happen to know what it is. But the mystery is how on earth it came here. There are no elephants in the Temple.”

“I certainly haven’t noticed any,” he replied; “and, as you say, the presence of an elephant’s hair in a room in the middle
of London is a rather remarkable circumstance. And yet, perhaps, if we consider all the other circumstances, it may not be impossible to form a conjecture as to how it came here. I recommend the problem to my learned friend for consideration at his leisure and now, as we have seen all that there is to see—which is mighty little—we may as well leave Polton to finish the collection of data from the floor. We can take your little selection with us."

He folded the paper containing the hairs that I had picked out into a neat packet, which he slipped into his pocket; then, having handed the key of the outer door to Polton, for return to Mr. Bidwell, he went out and I followed. We descended the stairs slowly, both of us deeply reflective. As to the subject of his meditations I could form no opinion, but my own were occupied by the problem which he had suggested; and the more I reflected on it, the less capable of solution did it appear.

We had nearly reached the ground floor when I became aware of quick footsteps descending the stairs behind us. Near the entry our follower overtook us, and as we stood aside to let him pass, I had a brief vision of a shortish, dapper, smartly-dressed coloured man—apparently an African or West Indian—who carried a small suit-case and a set of golf-clubs.

"Now," said I, in a low tone, "I wonder if that gentleman is the late owner of that negro hair that I picked up. It seems intrinsically probable as he appears to live in this building, and would be a near neighbour of Herrington’s." I halted at the entry and read out the only name painted on the door-post as appertaining to the second floor—Mr. Kwaku Essien, which, I decided, seemed to fit a gentleman of colour.

But Thorndyke was not listening. His long legs were already carrying him, with a deceptively leisurely air, across Tanfield Court in the wake of Mr. Essien, and at about the same pace. I put on a spurt and over took him, a little mystified by his sudden air of purpose and by the fact that he was not walking in the direction of our chambers. Still more mystified was I when it became clear that Thorndyke was following the African and keeping at a constant distance in rear of him; but I made no comment until, having pursued our quarry to the top of Middle Temple Lane, we saw him hail a taxi and drive off. Then I demanded an explanation.

"I wanted to see him fairly out of the precincts," was the reply, "because I have a particular desire to see what his chambers are like. I only hope his door has a practicable latch."

I stared at him in dismay.

"You surely don’t contemplate breaking into his chambers!" I exclaimed.

"Certainly not," he replied, "if the latch won’t yield to gentle persuasion I shall give it up. But don’t let me involve you, Jervis. I admit that it is a slightly irregular proceeding."

"Irregular!" I repeated. "It is house-breaking, pure and simple I can only hope that you won’t be able to get in."

The hope turned out to be a vain one, as I had secretly feared. When we had reconnoitred the stairs and established the encouraging fact that the third floor was untenanted, we inspected the door above which our victim’s name was painted; and a glance at the yawning key of an old-fashioned draw-latch told me that the deed was as good as done.

"Now, Jervis," said Thorndyke, producing from his pocket the curious instrument that he described as a “smoker’s companion”—it was an undeniable pick-lock, made by Polton under his direction—"you had better clear out and wait for me at our chambers."

"I shall do nothing of the kind," I replied. "I am an accessory before the fact already, so I may as well stay and see the crime committed."

"Then in that case," said he, "you had better keep a look-out from the landing window and call me if any one comes to the house. That will make us perfectly safe."

I accordingly took my station at the window, and Thorndyke, having knocked several times at the “oak” without eliciting any response, set to work with the smoker’s companion. In less than a minute the latch clicked, the outer door opened, and Thorndyke, pushing the inner door open, entered, leaving both doors ajar. I was devoured by curiosity as to what his purpose was. Obviously it must be a very definite one to justify this most extraordinary proceeding. But I dared not leave my post for a moment, seeing that we were really engaged in a very serious breach of the law and it was of vital importance that we should not be surprised in the act. I was therefore unable to observe my colleague’s proceedings, and I waited impatiently to see if anything came of this unlawful entry.

I had waited thus some ten minutes, keeping a close watch on the pavement below, when I heard Thorndyke quickly cross the room and approach the door. A moment later he came out on the landing, bearing in his hand an object which, while it enlightened me as to the purpose of the raid, added to my mystification.

"That looks like the missing sword from Herrington’s room!" I exclaimed, gazing at it in amazement.

"Yes," he replied. "I found it in a drawer in the bedroom. Only it isn’t a sword."

"Then, what the deuce is it?" I demanded, for the thing looked like a broad-bladed sword in a soft leather scabbard of somewhat rude native workman ship.

By way of reply he slowly drew the object from its sheath, and as it came into sight, I uttered an exclamation of astonishment. To the inexpert eye it appeared an elongated body about nine inches in length covered with coarse, black leather, from either side of which sprang a multitude of what looked like thick, black wires. Above, it was furnished with a leather handle which was surmounted by a suspension loop of plaited leather.
“I take it,” said I, “that this is an elephant’s tail.”

“Yes,” he replied, “and a rather remarkable specimen. The hairs are of unusual length. Some of them, you see, are nearly eighteen inches long.”

“And what are you going to do now?” I asked.

“I am going to put it back where I found it. Then I shall run down to Scotland Yard and advise Miller to get a search warrant. He is too discreet to ask inconvenient questions.”

I must admit that it was a great relief to me when, a minute later, Thorndyke came out and shut the door; but I could not deny that the raid had been justified by the results. What had, presumably, been a mere surmise had been converted into a definite fact on which action could confidently be taken.

“I suppose,” said I, as we walked down towards the Embankment en route for Scotland Yard, “I ought to have spotted this case.”

“You had the means,” Thorndyke replied. “At your first visit you learned that an object of some kind had disappeared from the wall. It seemed to be a trivial object of no value, and not likely to be connected with the crime. So you disregarded it. But it had disappeared. Its disappearance was not accounted for, and that disappearance seemed to coincide in time with the death of Herrington. It undoubtedly called for investigation. Then you found on the floor an object the nature of which was unknown to you. Obviously, you ought to have ascertained what it was.”

“Yes, I ought,” I admitted, “though I am not sure that I should have been much forrader even then. In fact, I am not so very much forrader even now. I don’t see how you spotted this man Essien, and I don’t understand why he took all this trouble and risk and even committed a murder to get possession of this trumpery curio. Of course I can make a vague guess. But I should like to hear how you ran the man and the thing to earth.”

“Very well,” said Thorndyke. “Let me retrace the train of discoveries and inferences in their order. First I learned that an object, supposed to be a barbaric sword of some kind, had disappeared about the time of the murder—if it was a murder. Then we heard from Carston that Sir Gilbert Herrington had appropriated the insignia and ceremonial objects belonging to the king of Bekwé; that some had subsequently been restored, but others had been given to friends as curios. As I listened to that story, the possibility occurred to me that this curio which had disappeared might be one of the missing ceremonial objects. It was not only possible: it was quite probable. For Giles Herrington was a very likely person to have received one of these gifts, and his morose temper made it unlikely that he would restore it. And then, since such an object would be of great value to somebody, and since it was actually stolen property, there would be good reasons why some interested person should take forcible possession of it. This, of course, was mere hypothesis of a rather shadowy kind. But when you produced an object which I at once suspected, and then proved, to be an elephant’s hair, the hypothesis became a reasonable working theory. For, among the ceremonial objects which form what we may call the regalia of a West African king is the elephant’s tail which is carried before him by a special officer as a symbol of his power and strength. An elephant’s tail had pretty certainly been stolen from the king, and Carston said nothing about its having been restored.

“Well, when we went to Herrington’s chambers just now, it was clear to me that the thing which had disappeared was certainly not a sword. The phantom shape on the wall did not show much, but it did show plainly that the object had hung from the nail by a large loop at the end of the handle. But the suspension loop of a sword or dagger is always on the scabbard, never on the hilt. But if the thing was not a sword, what was it? The elephant’s hair that you found on the floor seemed to answer the question.

“Now, as we came in, I had noticed on the doorpost the West African name, Kwaku Essien. A man whose name is Kwaku is probably a negro. But if this was an elephant’s tail, its lawful owner was a negro, and that owner wanted to recover it and was morally entitled to take possession of it. Here was another striking agreement. The chambers over Herrington’s were occupied by a negro. Finally, you found among the floor dust a negro’s hair. Then a negro had actually been in this room. But from what we know of Herrington, that negro was not there as an invited visitor. All the probabilities pointed to Mr. Essien. But the probabilities were not enough to act on. Then we had a stroke of sheer luck. We got the chance to explore Essien’s chambers and seek the crucial fact. But here we are at Scotland Yard.”

That night, at about eight o’clock, a familiar tattoo on our knocker announced the arrival of Mr. Superintendent Miller, not entirely unexpected as I guessed.

“Well,” he said, as I let him in, “the coloured nobleman has come home. I’ve just had a message from the man who was detailed to watch the premises.”

“Are you going to make the arrest now?” asked Thorndyke.

“Yes, and I should be glad if you could come across with me. You know more about the case than I do.”

Thorndyke assented at once, and we set forth together. As we entered Tanfield Court we passed a man who was lurking in the shadow of an entry, and who silently indicated the lighted windows of the chambers for which we were bound. Ascending the stairs up which I had lately climbed with unlawful intent, we halted at Mr. Essien’s door, on which the superintendent executed an elaborate flourish with his stick, there being no knocker. After a short interval we heard a bolt with drawn, the door opened a short distance, and in the interval a black face appeared looking out at us suspiciously.

“Who are you, and what do you want?” the owner of the face demanded gruffly.
“You are Mr. Kwaku Essien, I think?” said Miller, unostentatiously insinuating his foot into the door opening.

“Yes,” was the reply. “But I don’t know you. What is your business?”

“I am a police officer,” Miller replied, edging his foot in a little farther, “and I hold a warrant to arrest you on the charge of having murdered Mr. Giles Herrington.”

Before the superintendent had fairly finished his sentence, the dusky face vanished and the door slammed violently—on to the superintendent’s massive foot. That foot was instantly reinforced by a shoulder and for a few moments there was a contest of forces, opposite but not equal. Suddenly the door flew open and the superintendent charged into the room. I had a momentary vision of a flying figure, closely pursued, darting through into an inner room, of the slamming of a second door—once more on an intercepting foot. And then—it all seemed to have happened in a few seconds—a dejected figure, sitting on the edge of a bed, clasping a pair of manacled hands and watching Miller as he drew the elephant’s tail out of a drawer in the dressing-chest.

“This—er—article,” said Miller, “belonged to Mr. Herrington, and was stolen from his premises on the night of the murder.”

Essien shook his head emphatically.

“No,” he replied. “You are wrong. I stole nothing, and I did not murder Mr. Herrington. Listen to me and I will tell you all about it.”

Miller administered the usual caution and the prisoner continued: “This elephant-brush is one of many things stolen, years ago, from the king of Bekwè. Some of those things—most of them—have been restored, but this could not be traced for a long time. At last it became known to me that Mr. Herrington had it, and I wrote to him asking him to give it up and telling him who I was—I am the eldest living son of the king’s sister, and therefore, according to our law, the heir to the kingdom. But he would not give it up or even sell it. Then, as I am a student of the Inn, I took these chambers above his, intending, when I had an opportunity, to go in and take possession of my uncle’s property. The opportunity came that night that you have spoken of. I was coming up the stairs to my chambers when, as I passed his door, I heard loud voices inside as of people quarrelling. I had just reached my own door and opened it when I heard his open door, and then a great uproar and the sound of a struggle. I ran down a little way and looked over the banisters, and then I saw him thrusting a man across the landing and down the lower stairs. As they disappeared, I ran down, and finding his door ajar, I went in to recover my property. It took me a little time to find it, and I had just taken it from the nail and was going out with it when, at the door, I met Mr. Herrington coming in. He was very excited already, and when he saw me he seemed to go mad. I tried to get past him, but he seized me and dragged me back into the room, wrenching the thing out of my hand. He was very violent. I thought he wanted to kill me, and I had to struggle for my life. Suddenly he let go his hold of me, staggered back a few paces, and then fell on the floor. I stooped over him, thinking that he was taken ill, and wondering what I had better do. But soon I saw that he was not ill; he was dead. Then I was very frightened. I picked up the elephant brush and put it back into its case, and I went out very quietly, shut the door, and ran up to my rooms. That is what happened. There was no robbery and murder.”

“Well,” said Miller, as the prisoner and his escort disappeared towards the gate, “I suppose, in a technical sense, it is murder, but they are hardly likely to press the charge.”

“I don’t think it is even technically,” said Thornydye. “My feeling is that he will be acquitted if he is sent for trial. Meanwhile, I take it that my client, Godfrey Herrington, will be released from custody at once.”

“Yes, doctor,” replied Miller. “I will see to that now. He has had better luck than he deserved, I suspect, in having his case looked after by you. I don’t fancy he would have got an acquittal if he had gone for trial.”

Thornydye’s forecast was nearly correct, but there was no acquittal, since there was no trial. The case against Kwaku Essien never got farther than the Grand Jury.
THE PATHOLOGIST TO THE RESCUE

“I HOPE,” said I, as I looked anxiously out of our window up King’s Bench Walk, “that our friend, Foxley, will turn up to time, or I shall lose the chance of hearing his story. I must be in court by half-past eleven. The telegram said that he was a parson, didn’t it?”

“Then perhaps this may be he. There is a parson crossing from the Row in this direction, only he has a girl with him. He didn’t say anything about a girl, did he?”

“No. He merely asked for the appointment. However,” he added, as he joined me at the window and watched the couple approaching with their eyes apparently fixed on the number above our portico, “this is evidently our client, and punctual to the minute.”

In response to the old-fashioned flourish on our little knocker, he opened the inner door and invited the clergyman and his companion to enter; and while the mutual introductions were in progress, I looked critically at our new clients. Mr. Foxley was a typical and favourable specimen of his class: a handsome, refined, elderly gentleman, prim as to his speech, suave and courteous in bearing, with a certain engaging simplicity of manner which impressed me very favourably. His companion I judged to be a parson for she was what ladies are apt to describe as “not quite;” that is to say, her social level appeared to appertain to the lower strata of the middle-class. But she was a fine, Wrapping girl, very sweet-faced and winsome, quiet and gentle in manner and obviously in deep trouble, for her clear grey eyes—fixed earnestly, almost devouringly, on Thorndyke—were reddened and swimming with unshed tears.

“We have sought your aid, Dr. Thorndyke,” the clergyman began, “on the advice of my friend, Mr. Brodribb, who happened to call on me on some business. He assured me that you would be able to solve our difficulties, if it were humanly possible, so I have come to lay those difficulties before you. I pray to God that you may be able to help us; for my poor young friend here, Miss Markham, is in a most terrible position, as you will understand when I tell you that her future husband, a most admirable young man named Robert Fletcher, is in the custody of the police, charged with robbery and murder.”

Thorndyke nodded gravely, and the clergyman continued: “I had better tell you exactly what has happened. The dead man is one Joseph Riggs, a maternal uncle of Fletcher’s, a strange, eccentric man, solitary, miserly, and of a violent, implacable temper. He was quite well-to-do, though penurious and haunted constantly by an absurd fear of poverty. His nephew, Robert, was apparently his only known relative, and, under his will, was his sole heir. Recently, however, Robert has become engaged to my friend, Miss Lilian, and this engagement was violently opposed by his uncle, who had repeatedly urged him to make what he called a profitable marriage. For Miss Lilian is a dowerless maiden—dowerless save for those endowments with which God has been pleased to enrich her, and which her future husband has properly prized above mere material wealth. However, Riggs declared, in his brutal way, that he was not going to leave his property to the husband of a shop-woman, and that Robert might look out for a wife with money or be struck out of his will.

“The climax was reached yesterday when Robert, in response to a peremptory summons, went to see his uncle. Mr. Riggs was in a very intractable mood. He demanded that Robert should break off his engagement unconditionally and at once, and when Robert bluntly insisted on his right to choose his own wife the old man worked himself up into a furious rage, shouting, cursing, using the most offensive language and even uttering threats of personal violence. Finally, he drew his gold watch from his pocket and laid it with its chain on the table then, opening a drawer, he took out a bundle of bearer bonds and threw them down by the watch.

‘There, my friend,’ said he, ‘that is your inheritance. That is all you will get from me, living or dead. Take it and go, and don’t let me ever set eyes on you again.’

‘At first Robert refused to accept the gift, but his uncle became so violent that eventually, for peace’s sake, he took the watch and the bonds, intending to return them later, and went away. He left at half-past five, leaving his uncle alone in the house.’

‘How was that?’ Thorndyke asked. ‘Was there no servant?’

‘Mr. Riggs kept no resident servant. The young woman who did his housework came at half-past eight in the morning and left at half-past four. Yesterday she waited until five to get tea ready, but then, as the uproar in the sitting-room was still unabated, she thought it best to go. She was afraid to go in to lay the tea-things.

‘This morning, when she arrived at the house, she found the front door unlocked, as it always was during the day. On entering, her attention was at once attracted by two or three little pools of blood on the floor of the hall, or passage. Somewhat alarmed by this, she looked into the sitting-room, and finding no one there, and being impressed by the silence in the house, she went along the passage to a back room—a sort of study or office, which was usually kept locked when Mr. Riggs was not in. Now, however, it was unlocked and the door was ajar; so having first knocked and receiving no answer, she pushed open the door and looked in; and there, to her horror, she saw her employer lying on the floor, apparently dead, with a wound on the side of his head and a pistol on the floor by his side.

‘Instantly she turned and rushed out of the house, and she was running up the street in search of a policeman when she

THE PATHOLOGIST TO THE RESCUE

“I HOPE,” said I, as I looked anxiously out of our window up King’s Bench Walk, “that our friend, Foxley, will turn up to time, or I shall lose the chance of hearing his story. I must be in court by half-past eleven. The telegram said that he was a parson, didn’t it?”

“Then perhaps this may be he. There is a parson crossing from the Row in this direction, only he has a girl with him. He didn’t say anything about a girl, did he?”

“No. He merely asked for the appointment. However,” he added, as he joined me at the window and watched the couple approaching with their eyes apparently fixed on the number above our portico, “this is evidently our client, and punctual to the minute.”

In response to the old-fashioned flourish on our little knocker, he opened the inner door and invited the clergyman and his companion to enter; and while the mutual introductions were in progress, I looked critically at our new clients. Mr. Foxley was a typical and favourable specimen of his class: a handsome, refined, elderly gentleman, prim as to his speech, suave and courteous in bearing, with a certain engaging simplicity of manner which impressed me very favourably. His companion I judged to be a parson for she was what ladies are apt to describe as “not quite;” that is to say, her social level appeared to appertain to the lower strata of the middle-class. But she was a fine, Wrapping girl, very sweet-faced and winsome, quiet and gentle in manner and obviously in deep trouble, for her clear grey eyes—fixed earnestly, almost devouringly, on Thorndyke—were reddened and swimming with unshed tears.

“We have sought your aid, Dr. Thorndyke,” the clergyman began, “on the advice of my friend, Mr. Brodribb, who happened to call on me on some business. He assured me that you would be able to solve our difficulties, if it were humanly possible, so I have come to lay those difficulties before you. I pray to God that you may be able to help us; for my poor young friend here, Miss Markham, is in a most terrible position, as you will understand when I tell you that her future husband, a most admirable young man named Robert Fletcher, is in the custody of the police, charged with robbery and murder.”

Thorndyke nodded gravely, and the clergyman continued: “I had better tell you exactly what has happened. The dead man is one Joseph Riggs, a maternal uncle of Fletcher’s, a strange, eccentric man, solitary, miserly, and of a violent, implacable temper. He was quite well-to-do, though penurious and haunted constantly by an absurd fear of poverty. His nephew, Robert, was apparently his only known relative, and, under his will, was his sole heir. Recently, however, Robert has become engaged to my friend, Miss Lilian, and this engagement was violently opposed by his uncle, who had repeatedly urged him to make what he called a profitable marriage. For Miss Lilian is a dowerless maiden—dowerless save for those endowments with which God has been pleased to enrich her, and which her future husband has properly prized above mere material wealth. However, Riggs declared, in his brutal way, that he was not going to leave his property to the husband of a shop-woman, and that Robert might look out for a wife with money or be struck out of his will.

“The climax was reached yesterday when Robert, in response to a peremptory summons, went to see his uncle. Mr. Riggs was in a very intractable mood. He demanded that Robert should break off his engagement unconditionally and at once, and when Robert bluntly insisted on his right to choose his own wife the old man worked himself up into a furious rage, shouting, cursing, using the most offensive language and even uttering threats of personal violence. Finally, he drew his gold watch from his pocket and laid it with its chain on the table then, opening a drawer, he took out a bundle of bearer bonds and threw them down by the watch.

‘There, my friend,’ said he, ‘that is your inheritance. That is all you will get from me, living or dead. Take it and go, and don’t let me ever set eyes on you again.’

‘At first Robert refused to accept the gift, but his uncle became so violent that eventually, for peace’s sake, he took the watch and the bonds, intending to return them later, and went away. He left at half-past five, leaving his uncle alone in the house.’

‘How was that?’ Thorndyke asked. ‘Was there no servant?’

‘Mr. Riggs kept no resident servant. The young woman who did his housework came at half-past eight in the morning and left at half-past four. Yesterday she waited until five to get tea ready, but then, as the uproar in the sitting-room was still unabated, she thought it best to go. She was afraid to go in to lay the tea-things.

‘This morning, when she arrived at the house, she found the front door unlocked, as it always was during the day. On entering, her attention was at once attracted by two or three little pools of blood on the floor of the hall, or passage. Somewhat alarmed by this, she looked into the sitting-room, and finding no one there, and being impressed by the silence in the house, she went along the passage to a back room—a sort of study or office, which was usually kept locked when Mr. Riggs was not in. Now, however, it was unlocked and the door was ajar; so having first knocked and receiving no answer, she pushed open the door and looked in; and there, to her horror, she saw her employer lying on the floor, apparently dead, with a wound on the side of his head and a pistol on the floor by his side.

‘Instantly she turned and rushed out of the house, and she was running up the street in search of a policeman when she
encountered me at a corner and burst out with her dreadful tidings. I walked with her to the police station, and as we went she told me what had happened on the previous afternoon. Naturally, I was profoundly shocked and also alarmed, for I saw that—rightly or wrongly—suspicion must immediately fall on Robert Fletcher. The servant, Rose Turnmill, took it for granted that he had murdered her master; and when we found the station inspector, and Rose had repeated her statement to him, it was evident that he took the same view.

"With him and a sergeant, we went back to the house; but on the way we met Mr. Brodribb, who was staying at the 'White Lion' and had just come out for a walk. I told him, rapidly, what had occurred and begged him to come with us, which, with the inspector's consent, he did; and as we walked I explained to him the awful position that Robert Fletcher might be placed in, and asked him to advise me what to do. But, of course, there was nothing to be said or done until we had seen the body and knew whether any suspicion rested on Robert.

"We found the man Riggs lying as Rose had said. He was quite dead, cold and stiff. There was a pistol wound on the right temple, and a pistol lay on the floor at his right side. A little blood—but not much—had trickled from the wound and lay in a small pool on the oilcloth. The door of an iron safe was open and a bunch of keys hung from the lock; and on a desk one or two share certificates were spread out. On searching the dead man's pockets it was found that the gold watch which the servant told us he usually carried was missing, and when Rose went to the bedroom to see if it was there, it was nowhere to be found.

"Apart from the watch, however, the appearances suggested that the man had taken his own life. But against this view was the blood on the hall floor. The dead man appeared to have fallen at once from the effects of the shot, and there had been very little bleeding. Then how came the blood in the hall? The inspector decided that it could not have been the blood of the deceased; and when we examined it and saw that there were several little pools and that they seemed to form a track towards the street door, he was convinced that the blood had fallen from some person who had been wounded and was escaping from the house. And, under the circumstances, he was bound to assume that that person was Robert Fletcher; and on that assumption, he dispatched the sergeant forthwith to arrest Robert.

"On this I held a consultation with Mr. Brodribb, who pointed out that the case turned principally on the blood in the hall. If it was the blood of deceased, and the absence of the watch could be explained, a verdict of suicide could be accepted. But if it was the blood of some other person, that fact would point to murder. The question, he said, would have to be settled, if possible, and his advice to me, if I believed Robert to be innocent—which, from my knowledge of him, I certainly did—was this: Get a couple of small, clean, labelled bottles from a chemist and—with the inspector's consent—put in one a little of the blood from the hall and in the other some of the blood of the deceased. Seal them both in the inspector's presence and mine and take them up to Dr. Thorndyke. If it is possible to answer the question, Are they or are not from the same person? he will answer it.

"Well, the inspector made no objection, so I did what he advised. And here are the specimens. I trust they may tell us what we want to know."

Here Mr. Foxley took from his attaché-case a small cardboard box, and opening it, displayed two little wide-mouthed bottles carefully packed in cotton wool. Lifting them out tenderly, he placed them on the table before Thorndyke. They were both neatly corked, sealed—with Brodribb's seal, as I noticed—and labelled; the one inscribed "Blood of Joseph Riggs," and the other "Blood of unknown origin," and both signed "Arthur Foxley" and dated. At the bottom of each was a small mass of gelatious blood-clot.

Thorndyke looked a little dubiously at the two bottles, and addressing the clergyman, said: "I am afraid Mr. Brodribb has rather over-estimated our resources. There is no known method by which the blood of one person can be distinguished with certainty from that of another."

"Dear, dear!" exclaimed Mr. Foxley. "How disappointing! Then these specimens are useless, after all?"

"I won't say that; but it is in the highest degree improbable that they will yield any information. You must build no expectations on them."

"But you will examine them and see if anything is to be gleaned," the parson urged, persuasively.

"Yes, I will examine them. But you realise that if they should yield any evidence, that evidence might be unfavourable?"

"Yes; Mr. Brodribb pointed that out, but we are willing to take the risk, and so, I may say, is Robert Fletcher, to whom I put the question."

"Then you have seen Mr. Fletcher since the discovery?"

"Yes, I saw him at the police station after his arrest. It was then that he gave me—and also the police—the particulars that I have repeated to you. He had to make a statement, as the dead man's watch and the bonds were found in his possession."

"With regard to the pistol. Has it been identified?"

"No. It is an old-fashioned derringer which no one has ever seen before, so there is no evidence as to whose property it was."

"And as to those share certificates which you spoke of as lying on the desk. Do you happen to remember what they were?"
“Yes, they were West African mining shares; Abusum Pa-pa was the name, I think.”

“Then,” said Thorndyke, “Mr. Riggs had been losing money. The Abusum Pa-pa Company has just gone into liquidation. Do you know if anything had been taken from the safe?”

“It is impossible to say, but apparently not, as there was a good deal of money in the cash-box, which we unlocked and inspected. But we shall hear more to-morrow at the inquest, and I trust we shall hear something there from you. But in any case I hope you will attend to watch the proceedings on behalf of poor Fletcher. And if possible, to be present at the autopsy at eleven o’clock. Can you manage that?”

“Yes. And I shall come down early enough to make an inspection of the premises if the police will give the necessary facilities.”

Mr. Foxley thanked him effusively, and when the details as to the trains had been arranged, our clients rose to depart. Thorndyke shook their hands cordially, and as he bade farewell to Miss Markham he murmured a few words of encouragement. She looked up at him gratefully and appealingly as she naively held his hand.

“You will try to help us, Dr. Thorndyke, won’t you?” she urged. “And you will examine that blood very, very carefully. Promise that you will. Remember that poor Robert’s life may hang upon what you can tell about it.”

“I realise that, Miss Markham,” he replied gently, “and I promise you that the specimens shall be most thoroughly examined; and further, that no stone shall be left unturned in my endeavours to bring the truth to light.”

At his answer, spoken with infinite kindliness and sympathy, her eyes filled and she turned away with a few broken words of thanks, and the good clergyman—himself not unmoved by the little episode—took her arm and led her to the door.

“Well,” I remarked as their retreating footsteps died away, “old Brodribb’s enthusiasm seems to have let you in for a queer sort of task; and I notice that you appear to have accepted Fletcher’s statement.”

“Without prejudice,” he replied. “I don’t know Fletcher, but the balance of probabilities is in his favour. Still, that blood-track in the hall is a curious feature. It certainly requires explanation.”

“It does, indeed!” I exclaimed, “and you have got to find the explanation! Well, I wish you joy of the job. I suppose you will carry out the farce to the bitter end as you have promised?”

“Certainly,” he replied. “But it is hardly a farce. I should have looked the specimens over in any case. One never knows what illuminating fact a chance observation may bring into view.”

I smiled sceptically.

“The fact that you are asked to ascertain is that these two samples of blood came from the same person. If there are any means of proving that, they are unknown to me. I should have said it was an impossibility.”

“Of course,” he rejoined, “you are quite right, speaking academically and in general terms. No method of identifying the blood of individual persons has hitherto been discovered. But yet I can imagine the possibility, in particular and exceptional cases, of an actual, personal identification by means of blood. What does my learned friend think?”

“He thinks that his imagination is not equal to the required effort,” I answered; and with that I picked up my brief-bag and went forth to my duties at the courts.

That Thorndyke would keep his promise to poor Lilian Markham was a foregone conclusion, preposterous as the examination seemed. But even my long experience of my colleague’s scrupulous conscientiousness had not prepared me for the spectacle which met my eyes when I returned to our chambers. On the table stood the microscope, flanked by three slide-boxes. Each box held six trays, and each tray held six slides—a hundred and eight slides in all!

But why three boxes? I opened one. The slides—carefully mounted blood-films—were labelled “Joseph Riggs.” Those in the second box were labelled, “Blood from hall floor.” But when I opened the third box, I beheld a collection of empty slides labelled “Robert Fletcher”!

I chuckled aloud. Prodigious! Thorndyke was going even one better than his promise. He was not only going to examine—probably had examined—the two samples produced; he was actually going to collect a third sample for himself!

I picked out one of Mr. Riggs’s slides and laid it on the stage of the microscope. Thorndyke seemed to have been using a low-power objective—the inch-and-a-half. After a glance through this, I swung round the nose-piece to the high power. And then I got a further surprise. The brightly-coloured “white” corpuscles showed that Thorndyke had actually been to the trouble of staining the films with eosin! Again I murmured, “Prodigious!” and put the slide back in its box. For, of course, it showed just what one expected: blood—or rather, broken-up blood-clot. From its appearance I could not even have sworn that it was human blood.

I had just closed the box when Thorndyke entered the room. His quick eye at once noted the changed objective and he remarked: “I see you have been having a look at the specimens.”

“A specimen.” I corrected. “Enough is as good as a feast.”

“Blessed are they who are easily satisfied,” he retorted; and then he added: “I have altered my arrangements, though I needn’t interfere with yours. I shall go down to Southaven to-night; in fact, I am starting in a few minutes.”
“Why?” I asked.

“For several reasons. I want to make sure of the post-mortem to-morrow morning, I want to pick up any further facts that are available, and finally, I want to prepare a set of blood-films from Robert Fletcher. We may as well make the series complete,” he added with a smile, to which I replied by a broad grin.

“Really, Thorndyke,” I protested. “I’m surprised at you, at your age, too. She is a nice girl, but she isn’t so beautiful as to justify a hundred and eight blood-films.”

I accompanied him to the taxi, followed by Polton, who carried his modest luggage, and then returned to speculate on his probable plan of campaign. For, of course, he had one. His purposeful, resolute manner told me that he had seen farther into this case than I had. I accepted that as natural and inevitable. Indeed, I may admit that my disrespectful badinage covered a belief in his powers hardly second even to old Brodribb’s. I was, in fact, almost prepared to discover that those preposterous blood-films had, after all, yielded some “illuminating fact” which had sent him hurrying down to Southaven in search of corroboration.

When I alighted from the train on the following day at a little past noon, I found him waiting on the platform, ready to conduct me to his hotel for an early lunch.

“All goes well, so far,” he reported. “I attended the post-mortem, and examined the wound thoroughly. The pistol was held in the right hand not more than two inches from the head; probably quite close, for the skin is scorched and heavily tattooed with black powder grains. I find that Riggs was right-handed. So the prima facie probabilities are in favour of suicide; and the recent loss of money suggests a reasonable motive.”

“But what about that blood in the hall?”

“Oh, we have disposed of that. I completed the blood-film series last night.”

I looked at him quickly to see if he was serious or only playing a facetious return-shot. But his face was as a face of wood.

“You are an exasperating old devil, Thorndyke!” I exclaimed with conviction. Then, knowing that cross-examination would be futile, I asked: “What are we going to do after lunch?”

“The inspector is going to show us over ‘the scene of the tragedy,’ as the newspapers would express it.”

I noted gratefully that he had reserved this item for me, and dismissed professional topics for the time being, concentrating my attention on the old-world, amphibious streets through which we were walking. There is always something interesting in the aspect of a sea-port town, even if it is only a small one like Southaven.

The inspector arrived with such punctuality that he found us still at the table and was easily induced to join us with a cup of coffee and to accept a cigar—administered by Thorndyke, as I suspected, with the object of hindering conversation. I could see that his interest in my colleague was intense and not unmixed with awe, a fact which, in conjunction with the cigar, restrained him from any undue manifestations of curiosity, but not from continuous, though furtive, observation of my friend. Indeed, when we arrived at the late Mr. Riggs’s house, I was secretly amused by the close watch that he kept on Thorndyke’s movements, unsensational as the inspection turned out to be.

The house, itself, presented very little of interest excepting its picturesque old-world exterior, which fronted on a quiet by-street and was furnished with a deep bay which, as Thorndyke ascertained, commanded a clear view of the street from end to end. It was a rather shabby, neglected little house, as might have been expected, and our examination of it yielded, so far as I could see, only a single fact of any significance: which was that there appeared to be no connection whatever between the blood-stain on the study floor and the train of large spots from the middle of the hall to the street door. And on this piece of evidence—definitely unfavourable from our point of view—Thorndyke concentrated his attention when he had made a preliminary survey.

Closely followed by the watchful inspector, he browsed round the little room, studying every inch of the floor between the blood-stain and the door. The latter he examined minutely from top to bottom, especially as to the handle, the jambs, and the lintel. Then he went out into the hall, scrutinising the floor inch by inch, poring over the walls, and even looking behind the framed prints that hung on them. A reflector lamp suspended by a nail on the wall received minute and prolonged attention, as did also a massive lamp-hook screwed into one of the beams of the low ceiling, of which Thorndyke remarked as he stooped to pass under it, that it must have been fixed there by a dwarf.

“Yes,” the inspector agreed, “and a fool. A swinging lamp hung on that hook would have blocked the whole fairway. There isn’t too much room as it is. What a pity we weren’t a bit more careful about footprints in this place. There are plenty of tracks of wet feet here on this oil-cloth; faint, but you could have made them out all right if they hadn’t all been on top of one another. There’s Mr. Foxley’s, the girl’s, mine, and the men who carried out the body, but I’m hanged if I can tell which is which. It’s a regular mix up.”

“Yes,” I agreed, “it is all very confused. But I notice one rather odd thing. There are several faint traces of a large right foot, but I can’t see any sign of the corresponding left foot. Can you?”

“Perhaps this is it,” said Thorndyke, pointing to a large, vague oval mark. “I have noticed that it seems to occur in some sort of connection with the big right foot; but I must admit that it is not a very obvious foot-print.”

“I shouldn’t have taken it for a foot-print at all, or at any rate, not a human foot-print. It is more like the spoor of some
The inspector shook his head. He could not recognise the mark as a foot-print, but he could see very plainly that he had been a fool not to have taken more care to protect the floor.

When the examination of the hall was finished, Thorndyke opened the door and looked at the big, flat doorstep. “What was the weather like here on Wednesday evening?” he asked.

“Shower,” the inspector replied; “and there were one or two heavy showers during the night. You were noticing that there are no blood-tracks on the doorstep. But there wouldn’t be in any case; for if a man had come out of this door dropping blood, the blood would have dropped on wet stone and got washed away at once.”

Thorndyke admitted the truth of this; and so another item of favourable evidence was extinguishe. The probability that the blood in the hall was that of some person other than the deceased remained undisturbed; and I could not see that a single fact had been elicited by our inspection of the house that was in any way helpful to our client. Indeed, it appeared to me that there was absolutely no case for the defence, and I even asked myself whether we were not, in fact, merely trying to fudge up a defence for an obviously guilty man. It was not like Thorndyke to do that. But how did the case stand? There was a suggestion of suicide, but a clear possibility of homicide. There was strong evidence that a second person had been in the house, and that person appeared to have received a wound. But a wound suggested a struggle; and the servant's evidence was to the effect that when she left the house a violent altercation was in progress. The deceased was never again seen alive; and the other party to the quarrel had been found with property of the dead man in his possession. Moreover, there was a clear motive for the crime, stupid as that crime was. For the dead man had threatened to revoke his will but as he had presumably not done so, his death left the will still operative. In short, everything pointed to the guilt of our client, Robert Fletcher.

I had just reached this not very gratifying conclusion when a statement of Thorndyke's shattered my elaborate summing up into impalpable fragments.

"I suppose, sir," said the inspector, "there isn’t anything that you would care to tell us, as you are for the defence. But we are not hostile to Fletcher. In fact, he hasn’t been charged. He is only being detained in custody until we have heard what turns up at the inquest. I know you have examined that blood that Mr. Foxley took, and Fletcher's blood, too, and you've seen the premises. We have all the facilities that we could, and if you could give us any sort of hint that might be useful, I should be very much obliged.”

Thorndyke reflected for a few moments. Then he replied: “There is no reason for secrecy in regard to you, inspector, who have been so helpful and friendly, so I will be quite frank. I have examined both samples of blood and Fletcher’s, and I have inspected the premises; and what I am able to say definitely is this: the blood in the hall is not the blood of the deceased—”

“Ah!” exclaimed the inspector, "I was afraid it wasn’t."

"And it is not the blood of Robert Fletcher."

"Isn’t it now! Well, I am glad to hear that."

"Moreover," continued Thorndyke, “it was shed well after nine o’clock at night, probably not earlier than midnight.”

"There, now!" the inspector exclaimed, with an admiring glance at Thorndyke, “just think of that. See what it is to be a man of science! I suppose, sir, you couldn’t give us any sort of description of the person who dropped that blood in the hall?”

Staggered as I had been by Thorndyke's astonishing statements, I could not repress a grin at the inspector's artless question. But the grin faded rather abruptly as Thorndyke replied in matter-of-fact tones: “A detailed description is, of course, impossible. I can only sketch out the probabilities. But if you should happen to meet with a negro—a tall negro with a bandaged head or a contused wound of the scalp and a swollen leg—you had better keep your eye on him. The leg which is swollen is probably the left.”

The inspector was thrilled; and so was I, for that matter. The thing was incredible; but yet I knew that Thorndyke's amazing deductions were the products of perfectly orthodox scientific methods. Only I could form no sort of guess as to how they had been arrived at. A negro’s blood is no different from any other person’s, and certainly affords no clue to his height or the condition of his legs. I could make nothing of it: and as the dialogue and the inspector’s note-takings brought us to the little town hall in which the inquest was to be held, I dismissed the puzzle until such time as Thorndyke chose to solve it.

When we entered the town hall we found everything in readiness for the opening of the proceedings. The jury were already in their places and the coroner was just about to take his seat at the head of the long table. We accordingly slipped on to the two chairs that were found for us by the inspector, and the latter took his place behind the jury and facing us. Near to him Mr. Foxley and Miss Markham were seated, and evidently hailed our arrival with profound relief, each of them smiling us a silent greeting. A professional-looking man sitting next to Thorndyke I assumed to be the medical witness, and
a rather good young man who sat apart with a police constable I identified as Robert Fletcher.

The evidence of the “common” witnesses, who deposed to the general facts, told us nothing that we did not already know, excepting that it was made clear that Fletcher had left his uncle’s house not later than seven o’clock and that thereafter until the following morning his whereabouts were known. The medical witness was cautious, and kept an uneasy eye on Thorndyke. The wound which caused the death of deceased might have been inflicted by himself or by some other person. He had originally given the probable time of death as six or seven o’clock on Wednesday evening. He now admitted in reply to a question from Thorndyke that he had not taken the temperature of the body, and that the rigidity and other conditions were not absolutely inconsistent with a considerable later time of death. Death might even have occurred after midnight.

In spite of this admission, however, the sum of the evidence tended strongly to implicate Fletcher, and one or two questions from jurymen suggested a growing belief in his guilt. I had no doubt whatever that if the case had been put to the jury at this stage, a unanimous verdict of “wilful murder” would have been the result. But, as the medical witness returned to his seat, the coroner fixed an inquisitive eye on Thorndyke.

“You have not been summoned as a witness, Dr. Thorndyke,” said he, “but I understand that you have made certain investigations in this case. Are you able to throw any fresh light on the circumstances of the death of the deceased, Joseph Riggs?”

“Yes,” Thorndyke replied. “I am in a position to give important and material evidence.”

Thereupon he was sworn, and the coroner, still watching him curiously, said: “I am informed that you have examined samples of the blood of deceased and the blood which was found in the hall of deceased’s house. Did you examine them, and if so, what was the object of the examination?”

“I examined both samples and also samples of the blood of Robert Fletcher. The object was to ascertain whether the blood on the hall floor was the blood of the deceased or of Robert Fletcher.”

The coroner glanced at the medical witness, and a faint smile appeared on the face of each.

“And did you,” the former asked in a slightly ironical tone, “form any opinion on the subject?”

“I ascertained definitely that the blood in the hall was neither that of the deceased nor that of Robert Fletcher.”

The coroner’s eyebrows went up, and once more he glanced significantly at the doctor.

“But,” he demanded incredulously, “is it possible to distinguish the blood of one person from that of another?”

“Usually it is not, but in certain exceptional cases it is. This happened to be an exceptional case.”

“In what respect?”

“It happened,” Thorndyke replied, “that the person whose blood was found in the hall suffered from the parasitic disease known as filariasis. His blood was infested with swarms of a minute worm named Filaria nocturna. I have here,” he continued, taking out of his research-case the two bottles and the three boxes, “thirty-six mounted specimens of this blood, and in every one of them one or more of the parasites is to be seen. I have also thirty-six mounted specimens each of the blood of the deceased and the blood of Robert Fletcher. In not one of these specimens is a single parasite to be found. Moreover, I have examined Robert Fletcher and the body of the deceased, and can testify that no sign of filarial disease was to be discovered in either. Hence it is certain, that the blood found in the hall was not the blood of either of these two persons.”

The ironic smile had faded from the coroner’s face. He was evidently deeply impressed, and his manner was quite deferential as he asked: “Do these very remarkable observations of yours lead to any further inferences?”

“Yes,” replied Thorndyke. “They render it certain that this blood was shed no earlier than nine o’clock and probably nearer midnight.”

“Really!” the astonished coroner exclaimed. “Now, how is it possible to fix the time in that exact manner?”

“By inference from the habits of the parasite,” Thorndyke explained. “This particular filaria is distributed by the mosquito, and its habits are adapted to the habits of the mosquito. During the day, the worms are not found in the blood; they remain hidden in the tissues of the body. But about nine o’clock at night they begin to migrate from the tissues into the blood, and remain in the blood during the hours when the mosquitoes are active. Then about six o’clock in the morning, they leave the blood and migrate back into the tissues.

“There is another very similar species—Filaria diurna—which has exactly opposite habits, adapted to day-flying suctorial insects. It appears in the blood about eleven in the forenoon and goes back into the tissues at about six o’clock in the evening.”

“Astonishing!” exclaimed the coroner. “Wonderful! By the way, the parasites that you found could not, I suppose, have been Filaria diurna?”

“No,” Thorndyke replied. “The time excludes that possibility. The blood was certainly shed after six. They were undoubtedly nocturna, and the large numbers found suggest a late hour. The parasites come out of the tissues very gradually, and it is only about midnight that they appear in the blood in really large numbers.”
“That is very important,” said the coroner. “But does this disease affect any particular class of persons?”

“Yes,” Thorndyke replied. “As the disease is confined to tropical countries, the sufferers are naturally residents of the tropics, and nearly always natives. In West Africa, for instance, it is common among the negroes but practically unknown among the white residents.”

“Should you say that there is a distinct probability that this unknown person was a negro?”

“Yes. But apart from the filaria there is direct evidence that he was. Searching for some cause of the bleeding, I noticed a lamp-hook screwed into the ceiling, and low enough to strike a tall man’s head. I examined it closely, and observed on it a dark, shiny mark, like a blood-smear, and one or two short coiled hairs which I recognised as the scalp-hairs of a negro. I have no doubt that the unknown man is a negro, and that he has a wound of the scalp.”

“Does filarial disease produce any effects that can be recognised?”

“Frequently it does. One of the commonest effects produced by Filaria nocturna, especially among negroes, is the condition known as elephantiasis. This consists of an enormous swelling of the extremities, most usually of one leg, including the foot; whence the name. The leg and foot look like those of an elephant. As a matter of fact, the negro who was in the hall suffered from elephantiasis of the left leg. I observed prints of the characteristically deformed foot on the oil-cloth covering the floor.”

Thorndyke’s evidence was listened to with intense interest by everyone present, including myself. Indeed, so spell-bound was his audience that one could have heard a pin drop; and the breathless silence continued for some seconds after he had ceased speaking. Then, in the midst of the stillness, I heard the door creak softly behind me.

There was nothing particularly significant in the sound. But its effects were amazing. Glancing at the inspector, who faced the door, I saw his eyes open and his jaw drop until his face was a very mask of astonishment. And as this expression was reflected on the faces of the jurors, the coroner and everyone present, excepting Thorndyke, whose back was towards the door, I turned to see what had happened. And then I was as astonished as the others.

The door had been pushed open a few inches and a head thrust in—a negro’s head, covered with a soiled and blood rag forming a rough bandage. As I gazed at the black, shiny, inquisitive face, the man pushed the door farther open and shuffled into the room; and instantly there arose on all sides a soft rustle and an inarticulate murmur followed by breathless silence, while every eye was riveted on the man’s left leg.

It certainly was a strange, repulsive-looking member, its monstrous bulk exposed to view through the slit trouser and its great shapeless foot—shoeless, since no shoe could have contained it—rough and horn like the foot of an elephant. But it was tragic and pitiable too, for the man, apart from this horrible excrescence, was a fine, big, athletic-looking fellow.

The coroner was the first to recover. Addressing Thorndyke, but keeping an eye on the negro, he said: “Your evidence, then, amounts to this: On the night of Joseph Riggs’ death, there was a stranger in the house. That stranger was a negro, who seems to have wounded his head and who, you say, had a swelled left leg.”

“Yes,” Thorndyke admitted, “that is the substance of my evidence.”

Once more a hush fell on the room. The negro stood near the door, rolling his eyes to and fro over the assembly as if uneasily conscious that everyone was looking at him. Suddenly, he shuffled up to the foot of the table and addressed the coroner in deep, buzzing, resonant tones. “You tink I kill dat ole man! I no kill um. He kill himself. I look um.”

Having made this statement, he rolled his eyes defiantly round the court, and then turned his face expectantly towards the coroner, who said: “You say you know that Mr. Riggs killed himself?”

“Then,” said the coroner, “if you know that he killed himself, you must tell us all that you know; and you must swear to tell us the truth.”

“Yas,” the negro agreed, “I tell you eberyting one time. I tell you de troof. Dat ole man kill himself.”

When the coroner had explained to him that he was not bound to make any statement that would incriminate him, as he still elected to give evidence, he was sworn and proceeded to make his statement with curious fluency and self-possession.

“My name Robert Bruce. Dat my English name. My country name Kwaku Mensah. I live for Winnebah on de Gold Coast. Dis time I cook’s mate for dat steamer Leckie. On Wednesday night I lay in my bunk. I no fit sleep. My leg he chook me. I look out of de porthole. Plenty moon live. In my country when de moon Dis time I cook’s mate for dat steamer still elected to give evidence, tell us the truth.”

The coroner was the first to recover. Addressing Thorndyke, but keeping an eye on the negro, he said: “Your evidence, then, amounts to this: On the night of Joseph Riggs’ death, there was a stranger in the house. That stranger was a negro, who seems to have wounded his head and who, you say, had a swelled left leg.”

“Yes,” Thorndyke admitted, “that is the substance of my evidence.”

Once more a hush fell on the room. The negro stood near the door, rolling his eyes to and fro over the assembly as if uneasily conscious that everyone was looking at him. Suddenly, he shuffled up to the foot of the table and addressed the coroner in deep, buzzing, resonant tones. “You tink I kill dat ole man! I no kill um. He kill himself. I look um.”

Having made this statement, he rolled his eyes defiantly round the court, and then turned his face expectantly towards the coroner, who said: “You say you know that Mr. Riggs killed himself?”

“Then,” said the coroner, “if you know that he killed himself, you must tell us all that you know; and you must swear to tell us the truth.”

“Yas,” the negro agreed, “I tell you eberyting one time. I tell you de troof. Dat ole man kill himself.”

When the coroner had explained to him that he was not bound to make any statement that would incriminate him, as he still elected to give evidence, he was sworn and proceeded to make his statement with curious fluency and self-possession.

I tell you eberyting. I tell you de troof. Finish.”

“Do you know what time it was when you came ashore?” the coroner asked.

“Yas. When I come down de ladder I hear eight bells ring. I get back to de ship jus’ before dey ring two bells in de middle watch.”

“Then you came ashore at midnight and got back just before one o’clock?”

“Yas. Dat is what I say.”

A few more questions put by the coroner having elicited nothing fresh, the case was put briefly to the jury.

“You have heard the evidence, gentlemen, and most remarkable evidence it was. Like myself, you must have been deeply impressed by the amazing skill with which Dr. Thorndyke reconstructed the personality of the unknown visitor to that house, and even indicated correctly the very time of the visit, from an examination of a mere chance blood-stain. As to the statement of Kwaku Mensab, I can only say that I see no reason to doubt its truth. You will note that it is in complete agreement with Dr. Thorndyke’s evidence, and it presents no inconsistencies or improbabilities. Possibly the police may wish to make some further inquiries, but for our purposes it is the evidence of an eyewitness, and as such must be given full weight. With these remarks, I leave you to consider your verdict.”

The jury took but a minute or two to deliberate. Indeed, only one verdict was possible if the evidence was to be accepted, and that was agreed unanimously—suicide whilst temporarily insane. As soon as it was announced, the inspector, formally and with congratulations, released Fletcher from custody, and presently retired in company with the negro to make a few inquiries on board the ship.

The rising of the court was the signal for a wild demonstration of enthusiasm and gratitude to Thorndyke. To play his part efficiently in that scene he would have needed to be furnished, like certain repulsive Indian deities, with an unlimited outfit of arms. For everyone wanted to shake his hand, and two of them—Mr. Foxley and Miss Markham—did so with such pertinacity as entirely to exclude the other candidates.

“I can never thank you enough,” Miss Markham exclaimed, with swimming eyes, “if I should live to be a hundred. But I shall think of you with gratitude every day of my life. Whenever I look at Robert, I shall remember that his liberty, and even his life, are your gifts.”

Here she was so overcome by grateful emotion that she again seized and pressed his hand. I think she was within an ace of kissing him; but being, perhaps, doubtful how he would take it, compromised by kissing Robert instead. And, no doubt, it was just as well.

GLEANINGS FROM THE WRECKAGE

THERE was a time, and not so very long ago, when even the main streets of London, after midnight, were as silent as—not the grave; that is an unpleasant simile. Besides, what has any experience of conditions in the grave? But they were nearly as silent as the streets of a village. Then the nocturnal pedestrian could go his way encompassed and soothed by quiet, which was hardly disturbed by the rumble of a country wagon wending to market or the musical tinkle of the little bells on the collar of the hansom-cab horse sedately drawing some late reveller homeward.

Very different is the state of those streets nowadays. Long after the hour when the electric trams have ceased from troubling and the motor omnibuses are at rest, the heavy road transport from the country thunders through the streets; the air is rent by the howls of the electric hooter, and belated motor-cyclists fly past, stuttering explosively like perambulant Lewis guns with an inexhaustible charge.

“Let us get into the by-streets,” said Thorndyke, as a car sped past us uttering sounds suggestive of a dyspeptic dinosaur. “We don’t want our conversation seasoned with mechanical objurgations. In the back-streets it is still possible to hear oneself speak and forget the march of progress.”

We turned into a narrow by-way with the confidence of the born and bred Londoner in the impossibility of losing our direction, and began to thread the intricate web of streets in the neighbourhood of a canal.

“It is a remarkable thing,” Thorndyke resumed anon, “that every new application of science seems to be designed to render the environment of civilised man more and more disagreeable. If the process goes much farther, as it undoubtedly will, we shall presently find ourselves looking back wistfully at the Stone-age as the golden age of human comfort.”

At this point his moralising was cut short by a loud, sharp explosion. We both stopped and looked about from the parapet of the bridge that we were crossing.

“Quite like old times,” Thorndyke remarked. “Carries one back to 1915, when friend Fritz used to call on us. Ah! There is the place; the top story of that tall building across the canal.” He pointed as he spoke to a factory-like structure, from the upper windows of which a lurid light shone and rapidly grew brighter.

“It must be down the next turning,” said I, quickening my pace.

But he restrained me, remarking: “There is no hurry. That was the sound of high explosive, and those flames suggest nitro compounds burning. Festina lente. There may be some other packets of high explosives.”
He had hardly finished speaking when a flash of dazzling violet light burst from the burning building. The windows flew out bodily, the roof opened in places, and almost at the same moment the clang of a violent explosion shook the ground under our feet, a puff of wind stirred our hair, and then came a clatter of falling glass and slates.

We made our way at a leisurely pace towards the scene of the explosion, through streets lighted up by the ruddy glare from the burning factory. But others were less cautious. In a few minutes the street was filled by one of those crowds which, in London, seem mysteriously to spring up in an instant where but a moment before not a person was to be seen. Before we had reached the building, a fire-engine had rumbled past us, and already a sprinkling of policemen had appeared as if, like the traditional frogs, they had dropped from the clouds.

In spite of the ferocity of its outbreak, the fire seemed to be no great matter, for even as we looked and before the fire-hose was fully run out, the flames began to die down. Evidently, they had been dealt with by means of extinguishers within the building, and the services of the engine would not be required after all. Noting this flat ending to what had seemed so promising a start, we were about to move off and resume our homeward journey when I observed a uniformed inspector who was known to us, and who, observing us at the same instant, made his way towards us through the crowd.

“You remind me, sir,” said be, when he had wished us good-evening, “of the stories of the vultures that make their way in the sky from nowhere when a camel drops dead in the desert. I don’t mean anything uncomplimentary,” he hastened to add. “I was only thinking of the wonderful instinct that has brought you to this very spot at this identical moment, as if you had smelt a case afar off.”

“Then your imagination has misled you,” said Thorndyke, “for I haven’t smelt a case, and I don’t smell one now. Fires are not in my province.”

“No, sir,” replied the inspector, “but bodies are, and the fireman tells me that there is a dead man up there—or at least the remains of one. I am going up to inspect. Do you care to come up with me?”

Thorndyke considered for a moment, but I knew what his answer would be, and I was not mistaken.

“As a matter of professional interest, I should,” he replied, “but I don’t want to be summoned as a witness at the inquest.”

“Of course you don’t, sir,” the inspector agreed, “and I will see that you are not summoned, unless an expert witness is wanted. I need not mention that you have been here; but I should be glad of your opinion for my own guidance in investigating the case.”

He led us through the crowd to the door of the building, where we were joined by a fireman—whose helmet I should have liked to borrow—by whom we were piloted up the stairs. Half up we met the night-watchman, carrying an exhausted extinguisher and a big electric lantern, and he joined our procession, giving us the news as we ascended.

“It’s all safe up above,” said he, “excepting the roof; and that isn’t so very much damaged. The big windows saved it. They blew out and let off the force of the explosion. The floor isn’t damaged at all. It’s girder and concrete. But poor Mr. Manford caught it properly. He was fairly blown to bits.”

“Do you know how it happened?” the inspector asked.

“I don’t,” was the reply. “When I came on duty Mr. Manford was up there in his private laboratory. Soon afterwards a friend of his—a foreign gentleman of the name of Bilsky—came to see him. I took him up, and then Mr. Manford said he had some business to do, and after that he had got a longish job to do and would be working late. So he said I might turn in and he would let me know when he had finished. And he did let me know with a vengeance, poor chap. I lay down in my clothes, and I hadn’t been asleep above a couple of hours when some noise woke me up. Then there came a most almighty bang. I rushed for an extinguisher and ran upstairs, and there I found the big laboratory all ablaze, the windows blown out and the ceiling down. But it wasn’t so bad as it looked. There wasn’t very much stuff up there; only the experimental stuff, and that burned out almost at once. I got the rest of the fire out in a few minutes.”

“What stuff is it that you are speaking of?” the inspector asked.

“Celluloid, mostly, I think,” replied the watchman. “They make films and other celluloid goods in the works. But Mr. Manford used to do experiments in the material up in his laboratory. This time he was working with alloys, melting them on the gas furnace. Dangerous thing to do with all that inflammable stuff about. I don’t know what there was up there, exactly. Some of it was celluloid, I could see by the way it burned, but the Lord knows what it was that exploded. Some of the raw stuff, perhaps.”

At this point we reached the top floor, where a door blown off its hinges and a litter of charred wood fragments filled the landing. Passing through the yawning doorway, we entered the laboratory and looked on a hideous scene of devastation. The windows were mere holes, the ceiling a gaping space fringed with black and ragged lathing, through which the damaged roof was visible by the light of the watchman’s powerful lantern. The floor was covered with the fallen plaster and fragments of blackened woodwork, but its own boards were only slightly burnt in places, owing, no doubt, to their being fastened directly to the concrete which formed the actual floor.

“You spoke of some human remains,” said the inspector.

“Aha!” said the watchman, “you may well say ‘remains’. Just come here.” He led the way over the rubbish to a corner of the laboratory, where he halted and threw the light of his lantern down on a brownish, dusty, globular object that lay on
the floor half buried in plaster. "That's all that's left of poor Mr. Manford; that and a few other odd pieces. I saw a hand over the other side."

Thorndyke made no comments, but I noticed that he examined the gruesome object minutely, taking nothing for granted. The inspector noticed this, too; and when the examination was finished, looked at him inquiringly.

"Anything abnormal, sir?" he asked.

"No," replied Thorndyke; "nothing that is not accounted for by fire and the explosion. I see he had no natural teeth, so he must have worn a complete set of false teeth. That should help in the formal identification, if the plates are not completely destroyed."

"There isn't much need for identification," said the watchman, "seeing that there was nobody in the building but him and me. His friend went away about half-past twelve. I heard Mr. Manford let him out."

"The doctor means at the inquest," the inspector explained. "Somebody has got to recognise the body if possible."

He took the watchman's lantern, and throwing its light on the floor, began to search among the rubbish. Very soon he disinterred from under a heap of plaster the headless trunk. Both legs were attached, though the right was charred below the knee and the foot blown off, and one complete arm. The other arm—the right—was intact only to the elbow. Here, again, the burning was very unequal. In some parts the clothing had been burnt off or blown away completely; in others, enough was left to enable the watchman to recognise it with certainty. One leg was much more burnt than the other; and whereas the complete arm was only scorched, the dismembered one was charred almost to the bone. When the trunk had been carried to the bench and laid there beside the head, the lights were turned on it for Thorndyke to make his inspection.

"It almost seems," said the police officer, as the hand was being examined, "as if one could guess how he was standing when the explosion occurred. I think I can make out finger-marks—pretty dirty ones, too—on the back of the hand, as if he had been standing with his hands clasped together behind him while he watched something that he was experimenting with." The inspector glanced for confirmation at Thorndyke, who nodded approvingly.

"Yes," he said, "I think you are right. They are very indistinct, but the marks are grouped like fingers. The small mark near the wrist suggests a little finger and the separate one near the knuckle looks like a fore-finger, while the remaining two marks are close together." He turned the hand over and continued "And there, in the palm, just between the roots of the third and fourth fingers, seems to be the trace of a thumb. But they are all very faint. You have a quick eye, inspector."

The gratified officer, thus encouraged, resumed his explorations among the debris in company with the watchman—the fireman had retired after a professional look round—leaving Thorndyke to continue his examination of the mutilated corpse, at which I looked on unsympathetically. For we had had a long day and I was tired and longing to get home. At length I drew out my watch, and with a portentous yawn, entered a mild protest.

"It is nearly two o'clock," said I. "Don't you think we had better be getting on? This really isn't any concern of ours, and there doesn't seem to be anything in it, from our point of view."

"Only that we are keeping our intellectual joints supple," Thorndyke replied with a smile. "But it is getting late. Perhaps we had better adjourn the inquiry."

At this moment, however, the inspector discovered the missing forearm—completely charred—with the fingerless remains of the hand, and almost immediately afterwards the watchman picked up a dental plate of some white metal, which seemed to be practically uninjured. But our brief inspection of these objects elicited nothing of interest, and having glanced at them, we took our departure, avoiding on the stairs an eager reporter, all agog for "copy."

A few days later we received a visit, by appointment, from a Mr. Herdman, a solicitor who was unknown to us and who was accompanied by the widow of Mr. James Manford, the victim of the explosion. In the interval the inquest had been opened but had been adjourned for further examination of the premises and the remains. No mention had been made of our visit to the building, and so far as I knew nothing had been said to anybody on the subject.

Mr. Herdman came to the point with business directness.

"I have called," he said, "to secure your services, if possible, in regard to the matter of which I spoke in my letter. You have probably seen an account of the disaster in the papers?"

"Yes," replied Thorndyke. "I read the report of the inquest."

"Then you know the principal facts. The inquest, as you know, was adjourned for three weeks. When it is resumed; I should like to retain you to attend on behalf of Mrs. Manford."

"To watch the case on her behalf?" Thorndyke suggested.

"Well, not exactly," replied Herdman. "I should ask you to inspect the premises and the remains of poor Mr. Manford, so
that, at the adjourned inquest, you could give evidence to the effect that the explosion and the death of Mr. Manford were entirely due to accident.”

“Does anyone say that they were not?” Thorndyke asked.

“No, certainly not,” Mr. Herdman replied hastily. “Not at all. But I happened, quite by chance, to see the manager of the ‘Pilot’ Insurance Society, on another matter, and I mentioned the case of Mr. Manford. He then let drop a remark which made me slightly uneasy. He observed that there was a suicide clause in the policy, and that the possibility of suicide would have to be ruled out before the claim could be settled. Which suggested a possible intention to contest the claim.”

“But,” said Thorndyke, “I need not point out to you that if he sets up the theory of suicide, it is for him to prove it, not for you to disprove it. Has anything transpired which would lend colour to such a suggestion?”

“Nothing material,” was the reply. “But we should feel more happy if you could be present and give positive evidence that the death was accidental.”

“That,” said Thorndyke, “would be hardly possible. But my feeling is that the suicide question is negligible. There is nothing to suggest it, so far as I know. Is there anything known to you?”

The solicitor glanced at his client and replied somewhat evasively: “We are anxious to secure ourselves. Mrs. Manford is left very badly off, unless there is some personal property that we don’t know about. If the insurance is not paid, she will be absolutely ruined. There isn’t enough to pay the debts. And I think the suicide question might be raised—even successfully—on several points. Manford had been rather queer lately: jumpy and rather worried. Then, he was under notice to terminate his engagement at the works. His finances were in a confused state; goodness knows why, for he had a liberal salary. And then there was some domestic trouble. Mrs. Manford had actually consulted me about getting a separation. Some other woman, you know.”

“I should like to forget that,” said Mrs. Manford; “and it wasn’t that which worried him. Quite the contrary. Since it began he had been quite changed. So smart in his dress and so particular in his appearance. He even took to dyeing his hair. I remember that he opened a fresh bottle of dye the very morning before his death and took no end of trouble putting it on. It wasn’t that entanglement that made him jumpy. It was his money affairs. He had too many irons in the fire.”

Thorndyke listened with patient attention to these rather irrelevant details and inquired: “What sort of irons?”

“I will tell you,” said Herdman. “About three months ago he had need for two thousand pounds; for what purpose, I can’t say, but Mrs. Manford thinks it was to invest in certain valuables that he used to purchase from time to time from a Russian dealer named Bilsky. At any rate, he got this sum on short loan from a Mr. Clines, but meanwhile arranged for a longer loan with a Mr. Elliott on a note of hand and an agreement to insure his life for the amount.

“As a matter of fact, the policy was made out in Elliott’s name, he having proved an insurable interest. So if the insurance is paid, Elliott is settled with. Otherwise the debt falls on the estate, which would be disastrous; and to make it worse, the day before his death, he drew out five hundred pounds—nearly the whole balance—as he was expecting to see Mr. Bilsky, who liked to be paid in bank-notes. He did see him, in fact, at the laboratory, but they couldn’t have done any business, as no jewels were found.”

“And the bank-notes?”

“Burned with the body, presumably. He must have had them with him.”

“You mentioned,” said Thorndyke, “that he occasionally bought jewels from this Russian. What became of them?”

“Aha!” replied Herdman, “there is a gleam of hope there. He had a safe deposit somewhere. We haven’t located it yet, but we shall. There may be quite a nice little nest-egg in it. But meanwhile there is the debt to Elliott. He wrote to Manford about it a day or two ago. You have the letter, I think,” he added, addressing Mrs. Manford, who thereupon produced two envelopes from her handbag and laid them on the table.

“This is Mr. Elliott’s letter,” she said. “Merely a friendly reminder, you see, telling him that he is just off to the Continent and that he has given his wife a power of attorney to act in his absence.”

Thorndyke glanced through the letter and made a few notes of its contents. Then he looked inquiringly at the other envelope.

“That,” said Mrs. Manford, “is a photograph of my husband. I thought it might help you if you were going to examine the body.”

As Thorndyke drew the portrait out and regarded it thoughtfully, I recalled the shapeless, blackened fragments of its subject; and when he passed it to me, I inspected it with a certain grim interest, and mentally compared it with those grisly remains. It was a commonplace face, rather unsymmetrical—the nose was deflected markedly to the left, and the left eye had a pronounced divergent squint. The bald head, with an abundant black fringe and an irregular scar on the the side of the forehead, sought compensation in a full beard and moustache, both apparently jet-black. It was not an attractive countenance, and it was not improved by a rather odd-shaped ear—long, lobeless, and pointed above, like the ear of a satyr.

“I realise your position,” said Thorndyke, “but I don’t quite see what you want of me. If,” he continued, addressing the solicitor, “you had thought of my giving ex parte evidence, dismiss the idea. I am not a witness-advocate. All I can
undertake to do is to investigate the case and try to discover what really happened. But in that case, whatever I may discover I shall disclose to the coroner. Would that suit you?"

The lawyer looked doubtful and rather glum, but Mrs. Manford interposed, firmly: "Why not? We are not proposing any deception, but I am certain that he did not commit suicide. I agree unreservedly to what you propose."

With this understanding—which the lawyer was disposed to boggle at—our visitors took their leave. As soon as they were gone, I gave utterance to the surprise with which I had listened to Thorndyke's proposal.

"I am astonished at your undertaking this case. Of course, you have given them fair warning, but still, it will be unpleasant if you have to give evidence unfavourable to your client."

"Very," he agreed. "But what makes you think I may have?"

"Well, you seem to reject the probability of suicide, but have you forgotten the evidence at the inquest?"

"Perhaps I have," he replied blandly. "Let us go over it again."

I fetched the report from the office, and spreading it out on the table began to read it aloud. Passing over the evidence of the inspector and the fireman, I came to that of the night-watchman.

"Shortly after I came on duty at ten o'clock, a foreign, gentleman named Bilsky called to see Mr. Manford. I knew him by sight, because he had called once or twice before at about the same time. I took him up to the laboratory, where Mr. Manford was doing something with a big crucible on the gas furnace. He told me that he had some business to transact with Mr. Bilsky and when he had finished he would let him out. Then he was going to do some experiments in making alloys, and as they would probably take up most of the night he said I might as well turn in. He said he would call me when he was ready to go. So I told him to be careful with the furnace and not set the place on fire and burn me in my bed, and then I went downstairs. I had a look round to see that everything was in order, and then I took off my boots and laid down. About half-past twelve I heard Mr. Manford and Bilsky come down. I recognised Mr. Bilsky by a peculiar cough that he had and by the sound of his stick and his limping tread—he had something the matter with his right foot and walked quite lame."

"You say that the deceased came down with him," said the coroner. "Are you quite sure of that?"

"Well, I suppose Mr. Manford came down with him, but I can't say I actually heard him."

"You did not hear him go up again?"

"No, I didn't. But I was rather sleepy and I wasn't listening very particular. Well, then I went to sleep and slept till about half-past one, when some noise woke me. I was just getting up to see what it was when I heard a tremendous bang, right overhead. I ran down and turned the gas off at the main and then I got a fire extinguisher and ran up to the laboratory. The place seemed to be all in a blaze, but it wasn't much of a fire at all, for by the time the fire engines arrived I had got it practically out."

The witness then described the state of the laboratory and the finding of the body, but as this was already known to us, I passed on to the evidence of the next witness, the superintendent of the fire brigade, who had made a preliminary inspection of the premises. It was a cautious statement and subject to the results of a further examination; but clearly the officer was not satisfied as to the cause of the outbreak. There seemed to have been two separate explosions, one near a cupboard and another—apparently the second—in the cupboard itself; and there seemed to be a burned track connecting the two spots. This might have been accidental or it might have been arranged. Witness did not think that the explosive was celluloid. It seemed to be a high explosive of some kind. But further investigations were being made.

The superintendent was followed by Mrs. Manford, whose evidence was substantially similar to what she and Mr. Herdman had told us, and by the police surgeon, whose description of the remains conveyed nothing new to us. Finally, the inquest was adjourned for three weeks to allow of further examination of the premises and the remains.

"Now," I said, as I folded up the report, "I don't see how you are able to exclude suicide. If the explosion was arranged to occur when Manford was in the laboratory, what object, other than suicide, can be imagined?"

Thorndyke looked at me with an expression that I knew only too well. "Is it impossible," he asked, "to imagine that the object might have been homicide?"

"But," I objected, "there was no one there but Manford—after Bilsky left."

"Exactly," he agreed, dryly; "after Bilsky left. But up to that time there were two persons there."

I must confess that I was startled, but as I rapidly reviewed the circumstances I perceived the cogency of Thorndyke's suggestion. Bilsky had been present when Manford dismissed the night-watchman. He knew that there would be no interruption. The inflammable and explosive materials were there, ready to his hand. Then Bilsky had gone down to the door alone instead of being conducted down and let out; a very striking circumstance, this. Again, no jewels had been found though the meeting had been ostensibly for the purpose of a deal; and the bank-notes had vanished utterly. This was very remarkable. In view of the large sum, it was nearly certain that the notes would be in a close bundle, and we all know how difficult it is to burn tightly-folded paper. Yet they had vanished without leaving a trace. Finally, there was Bilsky himself. Who was he? Apparently a dealer in stolen property—a hawker of the products of robbery and murder committed during the revolution."
“Yes,” I admitted, “the theory of homicide is certainly tenable. But unless some new facts can be produced, it must remain a matter of speculation.”

“I think, Jervis,” he rejoined, “you must be overlooking the facts that are known to us. We were there. We saw the place within a few minutes of the explosion and we examined the body. What we saw established a clear presumption of homicide, and what we have heard this, morning confirms it. I may say that I communicated my suspicions the very next day to the coroner and to Superintendent Miller.”

“Then you must have seen more than I did,” I began. But he shook his head and cut short my protestations.

“You saw what I saw, Jervis, but you did not interpret its meaning. However, it is not too late. Try to recall the details of our adventure and what our visitors have told us. I don’t think you will then entertain the idea of suicide.”

I was about to put one or two leading questions, but at this moment footsteps became audible ascending our stairs. The knock which followed informed me that our visitor was Superintendent Miller, and I rose to admit him.

“Just looked in to report progress,” he announced as he subsided into an arm-chair. “Not much to report, but what there is supports your view of the case. Bilsky has made a clean bolt. Never went home to his hotel. Evidently meant to skedaddle, as he has left nothing of any value behind. But it was a stupid move, for it would have raised suspicion in any case. The notes were a consecutive batch. All the numbers are known, but, of course, none of them have turned up yet. We have made inquiries about Bilsky, and gather that he is a shady character; practically a fence who deals in the jewellery stolen from those unfortunate Russian aristocrats. But we shall have him all right. His description has been circulated at all the seaports and he is an easy man to spot with his lame foot and his stick and a finger missing from his right hand.”

Thorndyke nodded, and seemed to reflect for a moment. Then he asked: “Have you made any other inquiries?”

“No; there is nothing more to find out until we get hold of our man, and when we do, we shall look to you to secure the conviction. I suppose you are quite certain as to your facts?”

Thorndyke shook his head with a smile.

“I am never certain until after the event. We can only act on probabilities.”

“I understand,” said the superintendent, casting a sly look at me; “but your probabilities are good enough for me.”

With this, he picked up his hat and departed, leaving us to return to the occupations that our visitors had interrupted.

I heard no more of the Manford case for about a week, and assumed that Thorndyke’s interest in it had ceased. But I was mistaken, as I discovered when he remarked casually one evening: “No news of Bilsky, so far; and time is running on. I am proposing to make a tentative move in a new direction.” I looked at him inquiringly, and he continued: “It appears, ‘from information received,’ that Elliott had some dealings with him, so I propose to call at his house to-morrow and see if we can glean any news of the lost sheep.”

“But Elliott is abroad,” I objected.

“True: but his wife isn’t; and she evidently knows all about his affairs. I have invited Miller to come with me in case he would like to put any questions; and you may as well come, too, if you are free.”

It did not sound like a very thrilling adventure, but one never knew with Thorndyke. I decided to go with him, and at that the matter dropped, though I speculated a little curiously on the source of the information. So, apparently, had the superintendent, for when he arrived on the following morning he proceeded to throw out a few cautious feelers, but got nothing for his pains beyond vague generalities.

“It is a purely tentative proceeding,” said Thorndyke, “and you mustn’t be disappointed if nothing comes of it.”

“I shall be, all the same,” replied Miller, with a sly glance at my senior, and with this we set forth on our quest.

The Elliott’s house was, as I knew, in some part of Wimbledon, and thither we made our way by train. From the station we started along a wide, straight main street from which numbers of smaller streets branched off. At the corner of one of these I noticed a man standing, apparently watching our approach; and something in his appearance seemed to me familiar. Suddenly he took off his hat, looked curiously into its interior, and put it on again. Then he turned about and walked quickly down the side street. I looked at his retreating figure as we crossed the street, wondering who he could be. And then it flashed upon me that the resemblance was to a certain ex-sergeant Barber whom Thorndyke occasionally employed for observation duties. Just as I reached this conclusion, Thorndyke halted and looked about him doubtfully.

“I am afraid we have come too far,” said he. “I fancy we ought to have gone down that last turning.” We accordingly faced about and walked back to the corner, where Thorndyke read out the name, Mendoza Avenue.

“Yes,” he said, “this is the way,” and we thereupon turned down the Avenue, following it to the bottom, where it ended in a cross-road, the name of which, Berners Park, I recognised as that which I had seen on Elliott’s letter.

“Sixty-four is the number,” said Thorndyke, “so as this corner house is forty-six and the next is forty-eight, it will be a little way along on this side, just about where you can see that smoke—which, by the way, seems to be coming out of a window.”

But it was. We read the number and the name, ‘Green Bushes’, on the gate as we came up to it, and we hurried up the short path to the door. There was no knocker, but when Miller fixed his thumb on the bell-push, we heard a loud ringing within. But there was no response; and meanwhile the smoke poured more and more densely out of the open window above.

“Rum!” exclaimed Miller, sticking to the bell-push like a limpet. “House seems to be empty.”

“I don’t think it is.” Thorndyke replied calmly.

The superintendent looked at him with quick suspicion, and then glanced at the ground-floor window.

“That window is unfastened,” said he, “and here comes a constable.”

Sure enough, a policeman was approaching quickly, looking up at the houses. Suddenly he perceived the smoke and quickened his pace, arriving just as Thorndyke had pulled down the upper window-sash and was preparing to climb over into the room. The constable hailed him sternly, but a brief explanation from Miller reduced the officer to a state of respectful subservience, and we all followed Thorndyke through the open window, from which smoke now began to filter.

“Send the constable upstairs to give the alarm,” Thorndyke instructed Miller in a low tone. The order was given without question, and the next moment the officer was bounding up the stairs, roaring like a whole fire brigade. Meanwhile, the superintendent browsed along the hall through the dense smoke, sniffing inquisitively, and at length approached the street door. Suddenly, from the heart of the reek, his voice issued in tones of amazement.

“Well, I’m hanged! It’s a plumber’s smoke-rocket. Some fool has stuck it through into the letter-cage!”

In the silence which followed this announcement I heard an angry voice from above demand: “What is all this infernal row about? And what are you doing here?”

“Can’t you see that the house is on fire?” was the constable’s, stern rejoinder. “You’d better come down and help to put it out.”

The command was followed by the sound of descending footsteps, on which Thorndyke ran quickly up the stairs, followed by the superintendent and me. We met the descending party on the landing, opposite a window, and here we all stopped, gazing at one another with mutual curiosity. The man who accompanied the constable looked distinctly alarmed—as well he might—and somewhat hostile.

“Who put that smoke in the hall?” Miller demanded fiercely. “And why didn’t you come down when you heard us ringing the bell?”

“I don’t know what you a talking about.” the man replied sulkily, “or what business this is of yours. Who are you? And what are you doing in my house?”

“In your house?” repeated Thorndyke. “Then you will be Mr. Elliott?”

The man turned a startled glance on him and replied angrily: “Never you mind who I am. Get out of this house.”

“But I do mind who you are,” Thorndyke rejoined mildly. “I came here to see Mr. Elliott. Are you Mr. Elliott?”

“No, I am not. Mr. Elliott is abroad. If you like to send a letter here for him, I will forward it when I get his address.”

While this conversation had been going on, I had been examining the stranger, not without curiosity. For his appearance was somewhat unusual. In the first place, he wore an unmistakable wig, and his shaven face bore an abundance of cuts and scratches, suggesting a recently and unskillfully mown beard. His spectacles did not disguise a pronounced divergent squint of the left eye; but what specially caught my attention was the ear—large ear, lobeless and pointed at the tip like the ear of a satyr. As I looked at this, and at the scraped face, the squint and the wig, a strange suspicion flashed into my mind; and then, as I noted that the nose was markedly deflected to the left, I turned to glance at Thorndyke.

“Would you mind telling us your name?” the latter asked blandly.

“My name is—is—Johnson; Frederick Johnson.”

“Ah,” said Thorndyke. “I thought it was Manford—James Manford—and I think so still. I suggest that you have a scar on the right side of your forehead, just under the wig. May we see?”

As Thorndyke spoke the name, the man turned a horrible livid grey and started back as if to retreat up the stairs. But the constable blocked the way; and as the man was struggling to push past, Miller adroitly snatched off the wig; and there, on the forehead, was the tell-tale scar.

For an appreciable time we all stood stock-still like the figures of a tableau. Then Thorndyke turned to the superintendent.

“I charge this man, James Manford, with the murder of Stephan Bilsky.”

Again there was a brief interval of intolerable silence. In the midst of it, we heard the street door open and shut, and a woman’s voice called up the stairs: “Whatever is all this smoke? Are you up there, Jim?”

I pass over the harrowing details of the double arrest. I am not a policeman, and to me such scenes are intensely repugnant. But we must needs stay until two taxis and four constables had conveyed the prisoners away from the still
reeking house to the caravanserai of the law. Then, at last, we went forth with relief into the fresh air and bent our steps towards the station.

"I take it," Miller said reflectively, "that you never suspected Bilsky?"

"I did at first. But when Mrs. Manford and the solicitor told their tale I realised that he was the victim and that Manford must be the murderer."

"Let us have the argument," said I. "It is obvious that I have been a blockhead, but I don't mind our old friend here knowing it."

"Not a blockhead, Jervis," he corrected. "You were half asleep that night and wholly uninterested. If you had been attending to the matter, you would have observed several curious and anomalous appearances. For instance, you would have noticed that the body was, in parts, completely charred, and brittle. Now we saw the outbreak of the fire and we found it extinguished when we reached the building. Its duration was a matter of minutes; quite insufficient to reduce a body to that state. For, as you know, a human body is an extremely incombustible thing. The appearance suggested the destruction of a body which had been already burnt; and this suggestion was emphasised by the curiously unequal distribution of the charring. The right hand was burnt to a cinder and blown to pieces. The left hand was only scorched. The right foot was utterly destroyed, but the left foot was nearly intact. The face was burned away completely, and yet there were parts of the head where the hair was only singed."

"Naturally, with these facts in mind, I scrutinised those remains narrowly. And presently something much more definite and sinister came to light. On the left hand, there was a faint impression of another hand—very indistinct and blurred, but still unmistakably a hand."

"I remember," said I, "the inspector pointed it out as evidence that the deceased had been standing with his hands clasped before or behind him; and I must admit that it seemed a reasonable inference."

"So it did, because you were both assuming that the man had been alone and that it must therefore have been the impression of his own hand. For that reason, neither of you looked at it critically. If you had, you would have seen at once that it was the impression of a left hand."

"You are quite right," I confessed ruefully. "As the man was stated to have been alone, the hand impression did not interest me. And it was a mere group of smudges, after all. You are sure that it was a left hand?"

"Quite," he replied. "Blurred as the smudges were, one could make out the relative lengths of the fingers. And there was the thumb mark at the distal end of the palm, but pointing to the outer side of the hand. Try how you may, you can't get a right hand into that position."

"Well, then, here was a crucial fact. The mark of a left hand on a left hand proved the presence of a second person, and at once raised a strong presumption of homicide, especially when considered in conjunction with the unaccountable state of the body. During the evening, a visitor had come and gone, and on him—Bilsky—the suspicion naturally fell. But Mrs. Manford unwittingly threw an entirely new light on the case. You remember she told us that her husband had opened a new bottle of hair dye on the very morning before the explosion and had applied it with unusual care. Then his hair was dyed. But the hair of the corpse was not dyed. Therefore the corpse was not the corpse of Manford. Further, the presumption of murder applied now to Manford, and the body almost certainly was that of Bilsky."

"How did you deduce that the hair of the corpse was not dyed?" I asked.

"I didn't deduce it at all. I observed it. You remember a little patch of hair above the right ear, very much singed but still recognisable as hair? Well, in that patch I made out distinctly two or three white hairs. Naturally, when Mrs. Manford spoke of the dye, I recalled those white hairs, for though you may find silver hairs among the gold, you don't find them among the dyed. So the corpse could not be Manford's and was presumably that of Bilsky."

"But the instant that this presumption was made, a quantity of fresh evidence arose to support it. The destruction of the body was now understandable. Its purpose was to prevent identification. The parts destroyed were the parts that had to be destroyed for that purpose: the face was totally unrecognisable, and the right hand and right foot were burnt and shattered to fragments. But these were Bilsky's personal marks. His right hand was mutilated and his right foot deformed. And the fact that the false teeth found were undoubtedly Manford's was conclusive evidence of the intended deception."

"Then there were those very queer financial transactions, of which my interpretation was this: Manford borrowed two thousand pounds from Clines. With this he opened an account in the name of Elliott. As Elliott, he lent himself two thousand pounds which he repaid Clines—subject to an insurance of his life for that amount, taken out in Elliott's name."

"Then he would have gained nothing," I objected.

"On the contrary, he would have stood to gain two thousand pounds on proof of his own death. That, I assumed, was his scheme: to murder Bilsky, to arrange for Bilsky's corpse to personate his own, and then, when the insurance was paid, to abscond the company of some woman this sum, with the valuables that he had taken from Bilsky, and the five hundred pounds that he had withdrawn from the bank."

"But this was only theory. It had to be tested; and as we had Elliott's address, I did the only thing that was possible. I employed our friend, ex-Sergeant Barber, to watch the house. He took lodgings in a house nearly opposite and kept up continuous observation, which soon convinced him that there was someone on the premises besides Mrs. Elliott. Then, late
one night, he saw a man come out and walk away quickly. He followed the man for some distance, until the stranger turned back and began to retrace his steps. Then Barber accosted him, asking for a direction, and carefully inspecting him. The man’s appearance tallied exactly with the description that I had given—I had assumed that he would probably shave off his beard—and with the photograph; so Barber, having seen him home, reported to me. And that is the whole story.”

“Not quite the whole,” said Miller, with a sly grin. “There is that smoke-rocket. If it hadn’t been for the practical joker who slipped that through the letter-slit, we could never have got into that house. I call it a most remarkable coincidence.”

“So do I,” Thorndyke agreed, without moving a muscle; “but there is a special providence that watches over medical jurists.”

We were silent for a few moments. Then I remarked: “This will come as a terrible shock to Mrs. Manford.”

“I am afraid it will,” Thorndyke agreed. “But it will be better for her than if Manford had absconded with this woman, taking practically every penny that he possessed with him. She stood to lose a worthless husband in either event. At least we have saved her from poverty. And, knowing the facts, we were morally and legally bound to further the execution of justice.”

“A very proper sentiment,” said the superintendent, “though I am not quite clear as to the legal aspects of that smoke-rocket.”

THE END
LOOKING back on events by the light of experience I perceive clearly that the thunder-cloud which burst on me and on those who were dear to me had not gathered unseen. It is true that it had rolled up swiftly; that the premonitory mutterings, now so distinct but then so faint and insignificant, gave but a brief warning. But that was of little consequence, since whatever warnings there were passed unheeded, as warnings commonly do, being susceptible of interpretation only by means of the subsequent events which they foreshadowed.

The opening scene of the tragedy—if I had but realized it—was the arrival of the Reverend Amos Monkhouse from his far-away Yorkshire parish at the house of his brother Harold. I happened to be there at the time; and though it was not my concern, since Harold had a secretary, I received the clergyman when he was announced. We knew one another well enough by name though we had never met, and it was with some interest and curiosity that I looked at the keen-faced, sturdy, energetic-looking parson and contrasted him with his physically frail and rather characterless brother. He looked at me, too, curiously and with a certain appearance of surprise, which did not diminish when I told him who I was.

“Ha!” said he, “yes, Mr Mayfield. I am glad to have the opportunity of making your acquaintance. I have heard a good
deal about you from Harold and Barbara. Now I can fit you with a visible personality. By the way, the maid tells me that Barbara is not at home."

“No, she is away on her travels in Kent.”

“In Kent!” he repeated, raising his eyebrows.

“Yes, on one of her political expeditions; organizing some sort of women’s emancipation movement. I dare say you have heard about it.”

He nodded a little impatiently. “Yes. Then I assume that Harold is not so ill as I had supposed?”

I was inclined to be evasive; for, to be quite candid, I had thought more than once that Barbara might properly have given a little less attention to her political hobbies and a little more to her sick husband. So I replied cautiously:

“I really don’t quite know what his condition is. You see, when a man has chronically bad health, one rather loses count. Harold has his ups and downs, but he always looks pretty poorly. Just now, I should say he is rather below his average.”

“Ha! Well, perhaps I had better go up and have a look at him. The maid has told him that I am here. I wonder if you would be so kind as to show me the way to his room. I have not been in this house before.”

I conducted him up to the door of the bedroom and then returned to the library to wait for him and hear what he thought of the invalid. And now that the question had been raised, I was not without a certain uneasiness. What I had said was true enough. When a man is always ailing one gets to take his ill-health for granted and to assume that it will go on without any significant change. One repeats the old saying of “the creaking gate” and perhaps makes unduly light of habitual illness. Might it be that Harold was being a little neglected? He had certainly looked bad enough when I had called on him that morning. Was it possible that he was really seriously ill? Perhaps in actual danger?

I had just asked myself this question when the door was opened abruptly and the clergyman strode into the room. Something in his expression—a mingling, as it seemed, of anger and alarm—rather startled me; nevertheless I asked him calmly enough how he found his brother. He stared at me, almost menacingly, for a second or two; then slowly and with harsh emphasis he replied: “I am shocked at the change in him. I am horrified. Why, good God, Sir! the man is dying!”

“I think that can hardly be,” I objected. “The doctor saw him this morning and did not hint at anything of the sort. He thought he was not very well but he made no suggestion as to there being any danger.”

“How long has the doctor been attending him?”

“For something like twenty years, I believe; so by this time he ought to understand the patient’s—”

“Tut-tut,” the parson interrupted, impatiently, “what did you say yourself but a few minutes ago? One loses count of the chronic invalid. He exhausts our attention until, at last, we fail to observe the obvious. What is wanted is a fresh eye. Can you give me the doctor’s address? Because, if you can, I will call on him and arrange a consultation. I told Harold that I wanted a second opinion and he made no objection; in fact he seemed rather relieved. If we get a really first-class physician, we may save him yet.”

“I think you are taking an unduly gloomy view of Harold’s condition,” said I. “At any rate, I hope so. But I entirely agree with you as to the advisability of having further advice. I know where Dr Dimsdale lives so if you like I will walk round with you.”

He accepted my offer gladly and we set forth at once, walking briskly along the streets, each of us wrapped in thought and neither speaking for some time. Presently I ventured to remark:

“Strictly, I suppose, we ought to have consulted Barbara before seeking another opinion.”

“I don’t see why,” he replied. “Harold is a responsible person and has given his free consent. If Barbara is so little concerned about him as to go away from home—and for such a trumpery reason, too—I don’t see that we need consider her. Still, as a matter of common civility, I might as well send her a line. What is her present address?”

“Do you know,” I said, shamefacedly, “I am afraid I can’t tell you exactly where she is at the moment. Her permanent address, when she is away on these expeditions, is the head-quarters of the Women’s Friendship League at Maidstone.”

He stopped for a moment and glowered at me with an expression of sheer amazement. “Do you mean to tell me,” he exclaimed, “that she has gone away, leaving her husband in this condition, and that she is not even within reach of a telegram?”

“I have no doubt that a telegram or letter would be forwarded to her.”

He emitted an angry snort and then demanded: “How long has she been away?”

“About a fortnight,” I admitted, reluctantly.

“A fortnight!” he repeated in angry astonishment. “And all that time beyond reach of communication! Why the man might have been dead and buried and she none the wiser!”

“He was much better when she went away,” I said, anxious to make the best of what I felt to be a rather bad case. “In fact, he seemed to be getting on quite nicely. It is only during the last few days that he has got this set-back. Of course, Barbara is kept informed as to his condition. Madeline sends her a letter every few days.”
“But, my dear Mr Mayfield,” he expostulated, “just consider the state of affairs in this amazing household. I came to see my brother, expecting—from the brief letter that I had from him—to find him seriously ill. And I do find him seriously ill; dangerously ill, I should say. And what sort of care is being taken of him? His wife is away from home, amusing herself with her platform fooleries, and has left no practicable address. His secretary, or whatever you call him, Wallingford, is not at home. Madeline is, of course, occupied in her work at the school. Actually, the only person in the house besides the servants is yourself—a friend of the family but not a member of the household at all. You must admit that it is a most astonishing and scandalous state of affairs.”

I was saved from the necessity of answering this rather awkward question by our arrival at Dr Dimsdale’s house; and, as it fortunately happened that the doctor was at home and disengaged, we were shown almost at once into his consulting room.

I knew Dr Dimsdale quite well and rather liked him, though I was not deeply impressed by his abilities. However, his professional skill was really no concern of mine, and his social qualities were unexceptionable. In appearance and manner he had always seemed to me the very type of a high-class general practitioner, and so he impressed me once more as we were ushered into his sanctum. He shook hands with me genially, and as I introduced the Reverend Amos looked at him with a politely questioning expression. But the clergyman lost no time in making clear the purpose of his visit; in fact he came to the point with almost brutal abruptness.

“I have just seen my brother for the first time for several months and I am profoundly shocked at his appearance. I expected to find him ill, but I did not understand that he was so ill as I find him.”

“No,” Dr Dimsdale agreed, gravely, “I suppose not. You have caught him at a rather unfortunate time. He is certainly not so well today.”

“Well!” exclaimed Amos. “To me he has the look of a dying man. May I ask what, exactly, is the matter with him?”

The doctor heaved a patient sigh and put his fingertips together.

“The word ‘exactly,’ he replied, with a faint smile, “makes your question a little difficult to answer. There are so many things the matter with him. For the last twenty years, on and off, I have attended him, and during the whole of that time his health has been unsatisfactory—most unsatisfactory. His digestion has always been defective, his circulation feeble, he has had functional trouble with his heart, and throughout the winter months, more or less continuous respiratory troubles—nasal and pulmonary catarrh and sometimes rather severe bronchitis.”

The Reverend Amos nodded impatiently. “Quite so, quite so. But, to come from the past to the present, what is the matter with him now?”

“That,” the doctor replied suavely, “is what I was coming to. I mentioned the antecedents to account for the consequents. The complaints from which your brother has suffered in the past have been what are called functional complaints. But functional disease—if there really is such a thing—must, in the end, if it goes on long enough, develop into organic disease. Its effects are cumulative. Each slight illness leaves the bodily organs a little less fit.”

“Yes?”

“Well, that is, I fear, what is happening in your brother’s case. The functional illnesses of the past are tending to take on an organic character.”

“Ha!” snorted the Reverend Amos. “But what is his actual condition now? To put it bluntly, supposing he were to die tonight, what would you write on die death certificate?”

“Dear me!” said the doctor. “That is putting it very bluntly. I hope the occasion will not arise.”

“Still, I suppose you don’t regard his death as an impossible contingency?”

“Oh, by no means. Chronic illness confers no immortality, as I have just been pointing out.”

“Then, supposing his death to occur, what would you state to be the cause?”

Dr Dimsdale’s habitual suavity showed a trace of diminution as he replied: “You are asking a very unusual and hardly admissible question, Mr Monkhouse. However, I may say that if your brother were to die tonight he would die from some definite cause, which would be duly set forth in the certificate. As he is suffering from chronic gastritis, chronic bronchial catarrh, functional disorder of the heart and several other morbid conditions, these would be added as contributory causes. But may I ask what is the object of these very pointed questions?”

“My object,” replied Amos, “was to ascertain whether the circumstances justified a consultation. It seems to me that they do. I am extremely disturbed about my brother. Would you have any objection to meeting a consultant?”

“But not in the least. On the contrary, I should be very glad to talk over this rather indefinite case with an experienced physician who would come to it with a fresh eye. Of course, the patient’s consent would be necessary.”

“He has consented, and he agreed to the consultant whom I proposed—Sir Robert Detling—if you concurred.”

“I do certainly. I could suggest no better man. Shall I arrange with him or will you?”

“Perhaps I had better,” the parson replied, “as I know him fairly well. We were of the same year at Cambridge. I shall go straight on to him now and will let you know at once what arrangement he proposes.”
“Excellent,” said the doctor, rising with all his suavity restored. “I shall keep tomorrow as free as I can until I hear from you, and I hope he will be able to manage it so soon. I shall be glad to hear what he thinks of our patient, and I trust that the consultation may be helpful in the way of treatment.”

He shook our hands heartily and conducted us to the street door, whence he launched us safely into the street.

“That is a very suave gentleman,” Amos remarked as we turned away. “Quite reasonable, too; but you see for yourself that he has no real knowledge of the case. He couldn’t give the illness an intelligible name.”

“It seemed to me that he gave it a good many names, and it may well be that it is no more than he seems to think: a sort of collective illness, the resultant of the various complaints that he mentioned. However, we shall know more when Sir Robert has seen him; and meanwhile, I wouldn’t worry too much about the apparent neglect. Your brother, unlike most chronic invalids, doesn’t hanker for attention. He has all he wants and he likes to be left alone with his books. Shall you see him again today?”

“Assuredly. As soon as I have arranged matters with Detling I shall let Dr Dimsdale know what we have settled and I shall then go back and spend the evening with my brother. Perhaps I shall see you tomorrow?”

“No. I have to run down to Bury St Edmunds tomorrow morning and I shall probably be there three or four days. But I should very much like to hear what happens at the consultation. Could you send me a few lines? I shall be staying at the Angel.”

“I will certainly,” he replied, halting and raising his umbrella to signal an approaching omnibus. “Just a short note to let you know what Sir Robert has to tell us of poor Harold’s condition.”

He waved his hand, and stepping off the kerb, hopped on to the foot-board of the omnibus as it slowed down, and vanished into the interior. I stood for a few moments watching the receding vehicle, half inclined to go back and take another look at the sick man; but reflecting that his brother would be presently returning, I abandoned the idea and made my way instead to the Underground railway station and there took a ticket for the Temple.

There is something markedly infectious in states of mind. Hitherto I had given comparatively little attention to Harold Monkhouse. He was a more or less chronic invalid, suffering now from one complaint and now from another, and evidently a source of no particular anxiety either to his friends or to his doctor. He was always pallid and sickly-looking, and if, on this particular morning, he had seemed to look more haggard and ghastly than usual, I had merely noted that he was “not so well today.”

But the appearance on the scene of the Reverend Amos had put a rather different complexion on the affair. His visit to his brother had resulted in a severe shock, which he had passed on to me; and I had to admit that our interview with Dr Dimsdale had not been reassuring. For the fact which had emerged from it was that the doctor could not give the disease a name.

It was very disquieting. Supposing it should turn out that Harold was suffering from some grave, even some mortal disease, which ought to have been detected and dealt with months ago. How should we all feel? How, in particular, would Barbara feel about the easygoing way in which the illness had been allowed to drift on? It was an uncomfortable thought; and though Harold Monkhouse was really no concern of mine, excepting that he was Barbara’s husband, it continued to haunt me as I sat in the rumbling train and as I walked up from the Temple station to my chambers in Fig Tree Court.

II. — BARBARA MONKHOUSE COMES HOME

IN the intervals of my business at Bury St Edmunds I gave more than a passing thought to the man who was lying sick in the house in the quiet square at Kensington. It was not that I had any very deep feeling for him as a friend, though I liked him well enough. But the idea had got into my mind that he had perhaps been treated with something less than ordinary solicitude; that his illness had been allowed to drift on when possibly some effective measures might have been taken for his relief. And as it had never occurred to me to make any suggestions on the matter or to interest myself particularly in his condition, I was now inclined to regard myself as a party to the neglect, if there had really been any culpable failure of attention. I therefore awaited with some anxiety the letter which Amos had promised to send.

It was not until the morning of my third day at Bury that it arrived; and when I had opened and read it I found myself even less reassured than I had expected.

“Dear Mayfield,” it ran. “The consultation took place this afternoon and the result is, in my opinion, highly unsatisfactory. Sir Robert is, at present, unable to say definitely what is the matter with Harold. He states that he finds the case extremely obscure and reserves his opinion until the blood-films and other specimens which he took, have been examined and reported on by an expert pathologist. But on one point he is perfectly clear. He regards Harold’s condition as extremely grave—even critical—and he advised me to send a telegram to Barbara insisting on her immediate return home. Which I have done; and only hope it may reach her in the course of the day.

“That is all I have to tell you and I think you will agree that it is not an encouraging report. Medical science must be in a very backward state if two qualified practitioners—one of them an eminent physician—cannot between them muster enough professional knowledge to say what is the matter with a desperately sick man. However, I hope that we shall have a diagnosis by the time you come back.
“Yours sincerely,

“AMOS MONKHOUSE.”

I could not but agree, in the main, that my clerical friend’s rather gloomy view was justified, though I thought that he was a trifle unfair to the doctors, especially to Sir Robert. Probably a less scientific practitioner, who would have given the condition some sort of name, would have been more satisfying to the parson. Meanwhile, I allowed myself to build on “the blood-films and other specimens” hopes of a definite discovery which might point the way to some effective treatment.

I despatched my business by the following evening and returned to London by the night train, arriving at my chambers shortly before midnight. With some eagerness I emptied the letter-cage in the hope of finding a note from Amos or Barbara; but there was none, although there were one or two letters from solicitors which required to be dealt with at once. I read these through and considered their contents while I was undressing, deciding to get up early and reply to them so that I might have the forenoon free; and this resolution I carried out so effectively that by ten o’clock in the morning I had breakfasted, answered and posted the letters, and was on my way westward in an Inner Circle train.

It was but a few minutes’ walk from South Kensington Station to Hilborough Square and I covered the short distance more quickly than usual. Turning into the square, I walked along the pavement on the garden side, according to my habit, until I was nearly opposite the house. Then I turned to cross the road and as I did so, looked up at the house. And at the first glance I stopped short and stared in dismay: for the blinds were lowered in all the windows. For a couple of seconds I stood and gazed at this ominous spectacle; then I hurried across the road and, instinctively avoiding the knocker, gave a gentle pull at the bell.

The door was opened by the housemaid, who looked at me somewhat strangely but admitted me without a word and shut the door softly behind me. I glanced at her set face and asked in a low voice: “Why are all the blinds down, Mabel?”

“Didn’t you know, Sir?” she replied, almost in a whisper. “It’s the master—Mr Monkhouse. He passed away in the night. I found him dead when I went in this morning to draw up the blinds and give him his early tea.”

I gazed at the girl in consternation, and after a pause she continued:

“It gave me an awful turn, Sir, for I didn’t see, at first, what had happened. He was lying just as he usually did, and looked as if he had gone to sleep, reading. He had a book in his hand, resting on the counterpane, and I could see that his candle-lamp had burned itself right out. I put his tea on the bedside table and spoke to him, and when he didn’t answer I spoke again a little louder. And then I noticed that he was perfectly still and looked even paler and more yellow than usual and I began to feel nervous about him. So I touched his hand: and it was as cold as stone and as stiff as a wooden hand. Then I felt sure he must be dead and I ran away and told Miss Norris.”

“Miss Norris!” I exclaimed.

“Yes, Sir. Mrs Monkhouse only got home about an hour ago. She was fearfully upset when she found she was too late. Miss Norris is with her now, but I expect she’ll be awfully glad you’ve come. She was asking where you were. Shall I tell her you are here?”

“If you please, Mabel,” I replied; and as the girl retired up the stairs with a stealthy, funereal tread, I backed into the open doorway of the dining room (avoiding the library, in case Wallingford should be there) where I remained until Mabel returned with a message asking me to go up.

I think I have seldom felt more uncomfortable than I did as I walked slowly and softly up the stairs. The worst had happened—at least, so I thought—and we all stood condemned; but Barbara most of all. I tried to prepare some comforting, condolent phrases, but could think of nothing but the unexplainable, inexcusable fact that Barbara had, of her own choice and for her own purposes, gone away leaving a sick husband and had come back to find him dead.

As I entered the pleasant little boudoir—now gloomy enough, with its lowered blinds—the two women rose from the settee on which they had been sitting together, and Barbara came forward to meet me, holding out both her hands.

“Rupert!” she exclaimed, “how good of you! But it is like you to be here just when we have need of you.” She took both my hands and continued, looking rather wildly into my face: “Isn’t it an awful thing? Poor, poor Harold! So patient and uncomplaining! And I so neglectful, so callous! I shall never, never forgive myself. I have been a selfish, egotistical brute.”

“We are all to blame,” I said, since I could not honestly dispute her self-accusations; “and Dr Dimsdale not the least. Harold has been the victim of his own patience. Does Amos know?”

“Yes,” answered Madeline, “I sent him a telegram at half-past eight. I should have sent you one, too, but I didn’t know that you had come back.”

There followed a slightly awkward silence during which I reflected with some discomfort on the impending arrival of the dead man’s brother, which might occur at any moment. It promised to be a somewhat unpleasant incident, for Amos alone had gauged the gravity of his brother’s condition, and he was an outspoken man. I only hoped that he would not be too outspoken.

The almost embarrassing silence was broken by Barbara, who asked me in a low voice: “Will you go and see him, Rupert?” and added: “You know the way and I expect you would rather go alone.”

I said “yes” as I judged that she did not wish to come with me, and, walking out of the room, took my way along the
corridor to the well-remembered door, at which I halted for a moment, with an unreasonable impulse to knock, and then entered. A solemn dimness pervaded the room, with its lowered blinds, and an unusual silence seemed to brood over it. But everything was clearly visible in the faint, diffused light—the furniture, the pictures on the walls, the bookshelves and the ghostly shape upon the bed, half-revealed through the sheet which had been laid over it.

Softly, I drew back the sheet, and the vague shape became a man; or rather, as it seemed, a waxen effigy, with something in its aspect at once strange and familiar. The features were those of Harold Monkhouse, but yet the face was not quite the face that I had known. So it has always seemed to me with the dead. They have their own distinctive character which belongs to no living man—the physiognomy of death; impassive, expressionless, immovable; fixed for ever, or at least, until the changes of the tomb shall obliterate even its semblance of humanity.

I stepped back a pace and looked thoughtfully at the dead man who had slipped so quietly out of the land of the living. There he lay, stretched out in an easy, restful posture, just as I had often seen him; the eyes half-closed and one long, thin arm lying on the counterpane, the waxen hand lightly grasping the open volume; looking—save for the stony immobility—as he might if he had fallen asleep over his book. It was not surprising that the housemaid had been deceived, for the surroundings all tended to support the illusion. The bedside table with its pathetic little provisions for a sick man's needs: the hooded candle-lamp, drawn to the table-edge and turned to light the book; the little decanter of brandy, the unused tumbler, the water-bottle, the watch, still ticking in its upright case, the candle-box, two or three spare volumes and the hand-bell for night use; all spoke of illness and repose with never a hint of death.

There was nothing by which I could judge when he had died. I touched his arm and found it rigid as an iron bar. So Mabel had found it some hours earlier, whence I inferred that death had occurred not much past midnight. But the doctors would be able to form a better opinion, if it should seem necessary to form any opinion at all. More to the point than the exact time of death was the exact cause. I recalled the blunt question that Amos had put to Dr Dimsdale and the almost indignant tone in which the latter had put it aside. That was less than a week ago; and now that question had to be answered in unequivocal terms. I found myself wondering what the politic and plausible Dimsdale would put on the death certificate and whether he would seek Sir Robert Detling's collaboration in the execution of that document.

I was about to replace the sheet when my ear caught the footsteps of some one approaching on tip-toe along the corridor. The next moment the door opened softly and Amos stole into the room. He passed me with a silent greeting and drew near the bed, beside which he halted with his hand laid on the dead hand and his eyes fixed gloomily on the yellowish-white, impassive face. He spoke no word, nor did I presume to disturb this solemn meeting and farewell, but silently slipped out into the corridor where I waited for him to come out.

Two or three minutes passed, during which I heard him, once or twice, moving softly about the room and judging that he was examining the surroundings amidst which his brother had passed the last few weeks of his life. Presently he came out, closing the door noiselessly behind him, and joined me opposite the window. I looked a little nervously into the stern, grief-stricken face, and as he did not speak, I said, lamely enough: "This is a grievous and terrible thing, Mr Monkhouse."

He shook his head gravely. "Grievous indeed; and the more so if one suspects, as I do, that it need not have happened. However, he is gone and recriminations will not bring him back."

"No," I agreed, profoundly relieved and a little surprised at his tone; "whatever we may feel or think, reproaches and bitter words will bring no remedy. Have you seen Barbara?"

"No; and I think I won't this morning. In a day or two, I hope I shall be able to meet and speak to her as a Christian man should. Today I am not sure of myself. You will let me know what arrangements are made about the funeral?"

I promised that I would, and walked with him to the head of the stairs, and when I had watched him descend and heard the street door close, I went back to Barbara's little sitting-room.

I found her alone, and, when I entered she was standing before a miniature that hung on the wall. She looked round as I entered and I saw that she still looked rather dazed and strange. Her eyes were red, as if she had been weeping, but they were now fearless, and she seemed calmer than when I had first seen her. I went to her side, and for a few moments we stood silently regarding the smiling, girlish face that looked out at us from the miniature. It was that of Barbara's step-sister, a very sweet, loveable girl, little more than a child, who had died some four years previously, and who, I had sometimes thought, was the only human creature for whom Barbara had felt a really deep affection. The miniature had been painted from a photograph after her death and a narrow plait of her gorgeous, red-gold hair had been carried round inside the frame.

"Poor little Stella!" Barbara murmured, "I have been asking myself if I neglected her, too. I often left her for days at a time."

"You mustn't be morbid, Barbara," I said. "The poor child was very well looked after and as happy as she could be made. And nobody could have done any more for her. Rapid consumption is beyond the resources of medical science at present."

"Yes, unfortunately." She was silent for a while. Then she said: "I wonder if anything could have been done for Harold. Do you think it possible that he might have been saved?"

"I know of no reason for thinking so, and now that he is gone I see no use in raising the question."

She drew closer to me and slipped her hand into mine.
“You will be with us as much as you can, Rupert, won’t you? We always look to you in trouble or difficulty, and you have never failed us. Even now you don’t condemn me, whatever you may think.”

“No, I blame myself for not being more alert, though it was really Dimsdale who misled us all. Has Madeline gone to the school?”

“Yes. She had to give a lecture or demonstration, but I hope she will manage to get a day or two off duty. I don’t want to be left alone with poor Tony. It sounds unkind to say so, for no one could be more devoted to me than he is. But he is so terribly high-strung. Just now, he is in an almost hysterical state. I suppose you haven’t seen him this morning?”

“No. I came straight up to you.” I had, in fact, kept out of his way, for, to speak the truth, I did not much care for Anthony Wallingford. He was of a type that I dislike rather intensely; nervous, high-strung, emotional and in an incessant state of purposeless bustle. I did not like his appearance, his manners or his dress. I resented the obijet fawning way in which he followed Barbara about, and I disapproved of his position in this house; which was nominally that of secretary to Barbara’s husband, but actually that of tame cat and generally useless hanger-on. I think I was on the point of making some disparaging comments on him, but at that moment there came a gentle tap at the door and the subject of my thoughts entered.

I was rather sorry that Barbara was still holding my hand. Of course, the circumstances were very exceptional, but I have an Englishman’s dislike of emotional demonstrations in the presence of third parties. Nevertheless, Wallingford’s behaviour filled me with amazed resentment. He stopped short with a face black as thunder, and, after a brief, insolent stare, muttered that he was afraid he was “intruding” and walked out of the room, closing the door sharply after him.

Barbara flushed (and I daresay I did, too), but made no outward sign of annoyance. “You see what I mean,” she said. “The poor fellow is quite unstrung. He is an added anxiety instead of a help.”

“I see that plainly enough,” I replied, “but I don’t see why he is unstrung, or why an unstrung man should behave like an ill-mannered child. Any rate, he will have to pull himself together. There is a good deal to be done and he will have to do some of it. I may assume, I suppose, that it will be his duty to carry out the instructions of the executors?”

“I suppose so. But you know more about such things than I do.”

“Then I had better go down and explain the position to him and set him to work. Presently I must call on Mr Brodribb, the other executor, and let him know what has happened. But meanwhile there are certain things which have to be done at once. You understand?”

“Yes, indeed. You mean arrangements for the funeral. How horrible it sounds. I can’t realize it yet. It is all so shocking and so sudden and unlooked-for. It seems like some dreadful dream.”

“Well, Barbara,” I said gently, “you shan’t, be troubled more than is unavoidable. I will see to all the domestic affairs and leave the legal business to Brodribb. But I shall want Wallingford’s help, and I think I had better go down and see him now.”

“Very well, Rupert,” she replied with a sigh. “I shall lean on you now as I always have done in times of trouble and difficulty, and you must try to imagine how grateful I am since I can find no words to tell you.”

She pressed my hand and released me, and I took my way down to the library with a strong distaste for my mission.

That distaste was not lessened when I opened the door and was met by a reek of cigarette smoke. Wallingford was sitting huddled up in an easy chair, but as I entered, he sprang to his feet and stood facing me with a sort of hostile apprehensiveness. The man was certainly unstrung; in fact he was on wires. His pale, haggard face twitched, his hands trembled visibly and his limbs were in constant, fidgety movement. But, to me, there seemed to be no mystery about his condition. The deep yellow stains on his fingers, the reek in the air and a pile of cigarette-ends in an ash-bowl were enough to account for a good deal of nervous derangement, even if there were nothing more—no drugs or drink.

I opened the business quietly, explaining what had to be done and what help I should require from him. At first he showed a tendency to dispute my authority and treat me as an outsider, but I soon made the position and powers of an executor clear to him. When I had brought him to heel I gave him a set of written instructions the following-out of which would keep him fairly busy for the rest of the day; and having set the dismal preparations going, I went forth from the house of mourning and took my way to New Square, Lincoln’s Inn, where were the offices of Mr Brodribb, the family solicitor and my co-executor.

III. — A SHOCK FOR THE MOURNERS

It was on the day of the funeral that the faint, unheeded mutterings of the approaching storm began to swell into audible and threatening rumblings, though, even then, the ominous signs failed to deliver their full significance.

How well do I recall the scene in the darkened dining room where we sat in our sable raiment, “ready to wenden on our pilgrimage” to the place of everlasting rest and eternal farewell. There were but four of us, for Amos Monkhouse had not yet arrived, though it was within a few minutes of the appointed time to start; quite a small party; for the deceased had but few relatives, and no outsiders had been hidden.
We were all rather silent. Intimate as we were, there was no need to make conversation. Each, no doubt, was busy with his or her own thoughts, and as I recall my own they seem to have been rather trivial and not very suitable to the occasion. Now and again I stole a look at Barbara and thought what a fine, handsome woman she was, and dimly wondered why, in all the years that I had known her, I had never fallen in love with her. Yet so it was. I had always admired her; we had been intimate friends, with a certain amount of quiet affection, but nothing more—at any rate on my part. Of her I was not so sure. There had been a time, some years before, when I had had an uneasy feeling that she looked to me for something more than friendship. But she was always a reticent girl; very self-reliant and self-contained. I never knew a woman better able to keep her own counsel or control her emotions.

She was now quite herself again, quiet, dignified, rather reserved and even a little inscrutable. Seated between Wallingford and Madeline, she seemed unconscious of either and quite undisturbed by the secretary's incessant nervous fidgeting and by his ill-concealed efforts to bring himself to her notice.

From Barbara my glance turned to the woman who sat by her side noting with dull interest the contrast between the two; a contrast as marked in their bearing as in their appearance. For whereas Barbara was a rather big woman, dark in colouring, quiet and resolute in manner, Madeline Norris was somewhat small and slight, almost delicately fair, rather shy and retiring, but yet with a suggestion of mental alertness under the diffident manner. If Barbara gave an impression of quiet strength, Madeline's pretty, refined face was rather expressive of subtle intelligence. But what chiefly impressed me at this moment was the curious inversion of their attitudes towards the existing circumstances; for whereas Barbara, the person mainly affected, maintained a quiet, untroubled demeanour, Madeline appeared to be overcome by the sudden catastrophe. Looking at her set, white face and the dismay in her wide, grey eyes, and comparing her with the woman at her side, a stranger would at once have assumed the bereavement to be hers.

My observations were interrupted by Wallingford once more dragging out his watch.

"What on earth can have happened to Mr Amos?" he exclaimed "We are due to start in three minutes. If he isn't here by then we shall have to start without him. It is perfectly scandalous! Positively indecent! But there, it's just like a parson."

"My experience of parsons," said I, "is that they are, as a rule, scrupulously punctual. But certainly, Mr Amos is unpardonably late. It will be very awkward if he doesn't arrive in time. Ah, there he is," I added as the bell rang and a muffled knock at the street door was heard.

At the sound, Wallingford sprang up as if the bell had actuated a hidden spring in the chair, and darted over to the window, from which he peered out through the chink beside the blind.

"It isn't Amos," he reported. "It's a stranger, and a fool at that, I should say, if he can't see that all the blinds are down."

We all listened intently. We heard the housemaid's hurried footsteps, though she ran on tip-toe; the door opened softly, and then, after an interval, we heard some one ushered along the hall to the drawing room. A few moments later, Mabel entered with an obviously scandalized air.

"A gentleman wishes to speak to you, Ma'am," she announced.

"But, Mabel," said Barbara, "did you tell him what is happening in this house?"

"Yes, Ma'am, I explained exactly how things were and told him that he must call tomorrow. But he said that his business was urgent and that he must see you at once."

"Very well," said Barbara. "I will go and see what he wants. But it is very extraordinary."

She rose, and nearly colliding with Wallingford, who had rushed to open the door—which was, in fact, wide open—walked out quickly, closing the door after her. After a short interval—during which Wallingford paced the room excitedly, peered out of the window, sat down, got up again and looked at his watch—she came back, and, standing in the doorway, looked at me.

"Would you come here for a minute, Rupert," she said, quietly.

I rose at once and walked back with her to the drawing room, on entering which I became aware of a large man, standing monumentally on the hearth-rug and inspecting the interior of his hat. He looked to me like a plainclothes policeman, and my surmise was verified by a printed card which he presented and which bore the inscription "Sergeant J Burton."

"I am acting as coroner's officer," he explained in reply to my interrogatory glance, "and I have come to notify you that the funeral will have to be postponed as the coroner has decided to hold an inquest; I have seen the undertakers and explained matters to them."

"Do you know what reason there is for an inquest?" I asked. "The cause of death was certified in the regular way."

"I know nothing beyond my instructions, which were to notify Mrs Monkhouse that the funeral is put off and to serve the summonses for the witnesses. I may as well do that now."

With this he laid on the table six small blue papers, which I saw were addressed respectively to Barbara, Madeline, Wallingford, the housemaid, the cook and myself.

"Have you no idea at all why an inquest is to be held?" I asked as I gathered up the papers.

"I have no information," he replied, cautiously, "but I expect there is some doubt about the exact cause of death. The
A certificate may not be quite clear or it may be that some interested party has communicated with the coroner. That is what usually happens, you know, Sir. But at any rate," he added, cheerfully, "you will know all about it the day after tomorrow, which, you will observe, is the day fixed for the inquest."

"And what have we to do meanwhile?" Barbara asked. "The inquest will not be held in this house, I presume."

"Certainly not, Madam," the sergeant replied. "A hearse will be sent round tonight to remove the body to the mortuary, where the post mortem examination will be carried out, and the inquest will be held in the parish hall, as is stated on the summons. I am sorry that you should be put to this inconvenience," he concluded, moving tentatively towards the door, "but—it couldn’t be helped, I suppose. Good morning, Madam."

I walked with him to the door and let him out, while Barbara waited for me in the hall, not unobserved by Wallingford, whose eye appeared in a chink beside the slightly open dining room door. I pointedly led her back into the drawing room and closed the door audibly behind us. She turned a pale and rather shocked face to me but she spoke quite composedly as she asked: "What do you make of it, Rupert? Is it Amos?"

I had already reluctantly decided that it must be. I say, reluctantly, because, if this were really his doing, the resigned tone of his last words to me would appear no less than sheer, gross hypocrisy.

"I don’t know who else it could be," I answered. "The fact that he did not come this morning suggests that he at least knew what was happening. If he did, I think he might have warned us."

"Yes, indeed. It will be a horrid scandal; most unpleasant for us all, and especially for me. Not that I am entitled to any sympathy. Poor Harold! How would he have hated the thought of a public fuss over his body. I suppose we must go in now and tell the others. Do you mind telling them, Rupert?"

We crossed the hall to the dining room where we found the two waiting impatiently, Madeline very pale and agitated while Wallingford was pacing the room like a wild beast. Both looked at us with eager interrogation as we entered, and I made the announcement bluntly and in a dozen words.

The effect on both was electrical. Madeline, with a little cry of horror, sank, white-faced and trembling, into a chair. As for Wallingford, his behaviour was positively maniacal. After staring at me for a few moments with starting eyes and mouth agape, he flung up his arms and uttered a hoarse shout.

"This," he yelled, "is the doing of that accursed parson! Now we know why he kept out of the way—and it is well for him that he did!"

He clenched his fists and glared around him, showing his tobacco-stained teeth in a furious snarl while the sweat gathered in beads on his livid face. Then, suddenly, his mood changed and he dropped heavily on a chair, burying his face in his shaking hands. Barbara admonished him, quietly.

"Do try to be calm, Tony. There is nothing to get so excited about. It is all very unpleasant and humiliating, of course, but at any rate you are not affected. It is I who will be called to account."

"And do you suppose that doesn’t affect me?" demanded Wallingford, now almost on the verge of tears.

"I am sure it does, Tony," she replied, gently, "but if you want to be helpful to me you will try to be calm and reasonable. Come, now," she added, persuasively, "let us put it away for the present. I must tell the servants. Then we had better have lunch and go our several ways to think the matter over quietly each of us alone. We shall only agitate one another if we remain together."

I agreed emphatically with this sensible suggestion. "Not," I added, "that there is much for us to think over. The explanations will have to come from Dimsdale. It was he who failed to grasp the seriousness of poor Harold’s condition."

While Barbara was absent, breaking the news to the servants, I tried to bring Madeline to a more composed frame of mind. With Wallingford I had no patience. Men should leave hysterics to the other sex. But I was sorry for Madeline; and even if she seemed more overwhelmed by the sudden complications than the occasion justified, I told myself that the blow had fallen when she was already shaken by Harold’s unexpected death.

The luncheon was a silent and comfortless function; indeed it was little more than an empty form. But it had the merit of brevity. When the last dish had been sent away almost intact, Wallingford drew out his cigarette case and we all rose.

"What are you going to do, Madeline?" Barbara asked.

"I must go to the school, I suppose, and let the secretary know that—that I may have to be absent for a day or two. It will be horrid. I shall have to tell him all about it—after having got leave for the funeral. But it will sound so strange, so extraordinary. Oh! It is horrible!"

"It is!" exclaimed Wallingford, fumbling with tremulous fingers at his cigarette case. "It is diabolical! A fiendish plot to disgrace and humiliate us. As to that infernal parson, I should like—"

"Never mind that, Tony," said Barbara; "and we had better not stay here, working up one another’s emotions. What are you doing, Rupert?"

"I shall go to my chambers and clear off some correspondence."

"Then you might walk part of the way with Madeline and see if you can’t make her mind a little more easy."

Barbara added:

"I am sure it does, Tony," she replied, gently, "but if you want to be helpful to me you will try to be calm and reasonable. Come, now," she added, persuasively, "let us put it away for the present. I must tell the servants. Then we had better have lunch and go our several ways to think the matter over quietly each of us alone. We shall only agitate one another if we remain together."

I agreed emphatically with this sensible suggestion. "Not," I added, "that there is much for us to think over. The explanations will have to come from Dimsdale. It was he who failed to grasp the seriousness of poor Harold’s condition."

While Barbara was absent, breaking the news to the servants, I tried to bring Madeline to a more composed frame of mind. With Wallingford I had no patience. Men should leave hysterics to the other sex. But I was sorry for Madeline; and even if she seemed more overwhelmed by the sudden complications than the occasion justified, I told myself that the blow had fallen when she was already shaken by Harold’s unexpected death.

The luncheon was a silent and comfortless function; indeed it was little more than an empty form. But it had the merit of brevity. When the last dish had been sent away almost intact, Wallingford drew out his cigarette case and we all rose.

"What are you going to do, Madeline?" Barbara asked.

"I must go to the school, I suppose, and let the secretary know that—that I may have to be absent for a day or two. It will be horrid. I shall have to tell him all about it—after having got leave for the funeral. But it will sound so strange, so extraordinary. Oh! It is horrible!"

"It is!" exclaimed Wallingford, fumbling with tremulous fingers at his cigarette case. "It is diabolical! A fiendish plot to disgrace and humiliate us. As to that infernal parson, I should like—"

"Never mind that, Tony," said Barbara; "and we had better not stay here, working up one another’s emotions. What are you doing, Rupert?"

"I shall go to my chambers and clear off some correspondence."

"Then you might walk part of the way with Madeline and see if you can’t make her mind a little more easy."
Madeline looked at me eagerly. “Will you, Rupert?” she asked.

Of course I assented, and a few minutes later we set forth together.

For a while she walked by my side in silence with an air of deep reflection, and I refrained from interrupting her thoughts, having no very clear idea as to what I should say to her. Moreover, my own mind was pretty busily occupied. Presently she spoke, in a tentative way, as if opening a discussion.

“I am afraid you must think me very weak and silly to be so much upset by this new trouble.”

“Indeed, I don’t,” I replied. “It is a most disturbing and humiliating affair and it will be intensely unpleasant for us all, but especially for Barbara—to say nothing of Dimsdale.”

“Dr Dimsdale is not our concern,” said she, “but it will be perfectly horrible for Barbara. For she really has been rather casual, poor girl, and they are sure to make things unpleasant for her. It will be a most horrid scandal. Don’t you think so?”

To be candid, I did. Indeed, I had just been picturing to myself the possibilities with an officious coroner—and he would not need to be so very officious, either—and one or two cross-grained jurymen. Barbara might be subjected to a very unpleasant examination. But I did not think it necessary to say this to Madeline. Sufficient for the day is the evil thereof. I contented myself with a vague agreement.

There was another interval of silence. Then, a little to my surprise, she drew closer to me, and, slipping her hand under my arm, said very earnestly: “Rupert, I want you to tell me what you really think. What is it all about?”

I looked down, rather disconcerted, into the face that was turned up to me so appealingly; and suddenly—and rather irrelevantly—it was borne in on me that it was a singularly sweet and charming face. I had never quite realized it before. But then she had never before looked at me quite in this way; with this trustful, coaxing, appealing expression.

“I don’t quite understand you, Madeline,” I said, evasively. “I know no more about it than you do.”

“Oh, but you do, Rupert. You are a lawyer and you have had a lot of experience. You must have formed some opinion as to why they have decided to hold an inquest. Do tell me what you think.”

The coaxing, almost wheedling tone, and the entreaty in her eyes, looking so earnestly into mine, nearly conquered my reserve. But not quite. Once more I temporized.

“Well, Madeline, we all realize that what Dimsdale has written on the certificate is little more than a guess, and quite possibly wrong; and even Detling couldn’t get much farther.”

“Yes, I realize that. But I didn’t think that inquests were held just to find out whether the doctors’ opinions were correct or not.”

Of course she was perfectly right; and I now perceived that her thoughts had been travelling along the same lines as my own. An inquest would not be held merely to clear up an obscure diagnosis. There was certainly something more behind this affair than Dimsdale’s failure to recognize the exact nature of the illness. There was only one simple explanation of the coroner’s action, and I gave it—with a strong suspicion that it was not the right one.

“They are not, as a rule, excepting in hospitals. But this is a special case. Amos Monkhouse was obviously dissatisfied with Dimsdale, and with Barbara, too. He may have challenged the death certificate and asked for an inquest. The coroner would be hardly likely to refuse, especially if there were a hint of negligence or malpractice.”

“Did Mr Amos say anything to you that makes you think he may have challenged the certificate?”

“He said very little to me at all,” I replied, rather casuistically and suppressing the fact that Amos had explicitly accepted the actual circumstances and deprecated any kind of recrimination.

“I can hardly believe that he would have done it,” said Madeline, “just to punish Barbara and Dr Dimsdale. It would be so vindictive, especially for a clergyman.”

“Clergymen are very human sometimes,” I rejoined; and, as, rather to my relief, we now came in sight of Madeline’s destination, I adverted to the interview which she seemed to dread so much. “There is no occasion for you to go into details with the secretary,” I said. “In fact you can’t. The exact cause of death was not clear to the doctors and it has been considered advisable to hold an inquest. That is all you know, and it is enough. You are summoned as a witness and you are legally bound to attend, so you are asking no favour. Cut the interview dead short, and when you have done with it, try, like a sensible girl, to forget the inquest for the present. I shall come over tomorrow and then we can reconstitute the history of the case, so that we may go into the witness-box, or its equivalent, with a clear idea of what we have to tell. And now, good-bye, or rather au revoir!”

“Good-bye, Rupert.” She took my proffered hand and held it as she thanked me for walking with her. “Do you know, Rupert,” she added, “there is something strangely comforting and reassuring about you. We all feel it. You seem to carry an atmosphere of quiet strength and security. I don’t wonder that Barbara is so fond of you. Not,” she concluded, “that she holds a monopoly.”

With this she let go my hand, and, with a slightly shy smile and the faintest suspicion of a blush, turned away and walked quickly and with an air quite cheerful and composed towards the gateway of the institution. Apparently, my society had had a beneficial effect on her nervous condition.
I watched her until she disappeared into the entry, and then resumed my journey eastward, rather relieved, I fear, at having disposed of my companion. For I wanted to think—of her among other matters; and it was she who first occupied my cogitations. The change from her usual matter-of-fact friendliness had rather taken me by surprise; and I had to admit that it was not a disagreeable surprise. But what was the explanation? Was this intimate, clinging manner merely a passing phase due to an emotional upset, or was it that the special circumstances had allowed feelings hitherto concealed to come to the surface? It was an interesting question, but one that time alone could answer; and as there were other questions, equally interesting and more urgent, I consigned this one to the future and turned to consider the others.

What could be the meaning of this inquest? The supposition that Amos had suddenly turned vindictive and resolved to expose the neglect, to which he probably attributed his brother’s death, I could not entertain, especially after what he had said to me. It would have written him down the rankest of hypocrites. And yet he was in some way connected with the affair as was proved by his failure to appear at the funeral. As to the idea that the inquiry was merely to elucidate the nature of the illness, that was quite untenable. A private autopsy would have been the proper procedure for that purpose.

I was still turning the question over in my mind when, as I passed the Griffin at Temple Bar, I became aware of a tall figure some distance ahead walking in the same direction. The build of the man and his long, swinging stride seemed familiar. I looked at him more attentively; and just as he turned to enter Devereux Court I recognized him definitely as a fellow Templar named Thorndyke.

The chance encounter seemed a singularly fortunate one, and at once I quickened my pace to overtake him. For Dr Thorndyke was a medical barrister and admittedly the greatest living authority on medical jurisprudence. The whole subject of inquests and Coroners’ Law was an open book to him. But he was not only a lawyer. He had, I understood, a professional and very thorough knowledge of pathology and of the science of medicine in general, so that he was the very man to enlighten me in my present difficulties.

I overtook him at the Little Gate of the Middle Temple and we walked through together into New Court. I wasted no time, but, after the preliminary greetings, asked him if he had a few minutes to spare. He replied, in his quiet, genial way: “But, of course, Mayfield. I always have a few minutes to spare for a friend and a colleague.”

I thanked him for the gracious reply, and, as we slowly descended the steps and sauntered across Fountain Court, I opened the matter without preamble and gave him a condensed summary of the case; to which lie listened with close attention and evidently with keen interest.

“I am afraid,” he said, “that your family doctor will cut rather a poor figure. He seems to have mismanaged the case rather badly, to judge by the fact that the death of the patient took him quite by surprise. By the way, can you give me any idea of the symptoms—as observed by yourself, I mean?”

“I have told you what was on the certificate.”

“Yes. But the certified cause of death appears to be contested. You saw the patient pretty often, I understand. Now what sort of appearance did he present to you?”

The question rather surprised me. Dimsdale’s opinion might not be worth much, but the casual and inexpert observations of a layman would have seemed to me to be worth nothing at all. However, I tried to recall such details as I could remember of poor Monkhouse’s appearance and his own comments on his condition and recounted them to Thorndyke with such amplifications as his questions elicited. “But,” I concluded, “the real question is, who has set the coroner in motion and with what object?”

“That question,” said Thorndyke, “will be answered the day after tomorrow, and there is not much utility in trying to guess at the answer in advance. The real question is whether any arrangements ought to be made in the interests of your friends. We are quite in the dark as to what may occur in the course of the inquest.”

“Yes, I had thought of that. Some one ought to be present to represent Mrs Monkhouse. I suppose it would not be possible for you to attend to watch the case on her behalf?”

“I don’t think it would be advisable,” he replied. “You will be present and could claim to represent Mrs Monkhouse so far as might be necessary to prevent improper questions being put to her. But I do think that you should have a complete record of all that takes place. I would suggest that I send Holman, who does most of my shorthand reporting, with instructions to make a verbatim report of the entire proceedings. It may turn out to be quite unnecessary; but if any complications should arise, we shall have the complete depositions with the added advantage that you will have been present and will have heard all the evidence. How will that suit you?”

“If you think it is the best plan there is nothing more to say, excepting to thank you for your help.”

“And give me a written note of the time and place to hand to Holman when I give him his instructions.”

I complied with this request at once; and having by this time reached the end of the Terrace, I shook hands with him and walked slowly to my chambers in Fig Tree Court. I had not got much out of Thorndyke excepting a very useful suggestion and some valuable help; indeed, as I turned over his extremely cautious utterances and speculated on what he meant by “complications.” I found myself rather more uncomfortably puzzled than I had been before I met him.

IV. — “HOW, WHEN AND WHERE—”
IT was on the second day after the interrupted funeral that the thunderbolt fell. I cannot say that it found me entirely unprepared, for my reflections during the intervening day had filled me with forebodings; and by Thorndyke that catastrophe was pretty plainly foreseen. But on the others the blow fell with devastating effect. However, I must not anticipate. Rather let me get back to a consecutive narration of the actual events.

On the day after the visit of the coroner’s officer we had held, at my suggestion, a sort of family committee to consider what we knew of the circumstances and antecedents of Harold’s death, so that we might be in a position to give our evidence clearly and readily and be in agreement as to the leading facts. Thus we went to the coroners court prepared, at least, to tell an intelligible and consistent story.

As soon as I entered the large room in which the inquest was to be held, my forebodings deepened. The row of expectant reporters was such as one does not find where the proceedings are to be no more than a simple, routine inquiry. Something of public interest was anticipated, and these gentlemen of the Press had received a hint from some well-informed quarter. I ran my eye along the row and was somewhat relieved to observe Mr Holman, Thorndyke’s private reporter, seated at the table with a large note-book and a half-dozen well-sharpened pencils before him. His presence—as, in a sense, Thorndyke’s deputy—gave me the reassuring feeling that, if there were to be “complications,” I should not have to meet them with my own limited knowledge and experience, but that there were reserves of special knowledge and weighty counsel on which I could fall back.

The coroner’s manner seemed to me ominous. His introductory address to the jury was curt and ambiguous, setting forth no more than the name of the deceased and the fact that circumstances had seemed to render an inquiry advisable; and having said this, he proceeded forthwith (the jury having already viewed the body) to call the first witness, the Reverend Amos Monkhouse.

I need not repeat the clergyman’s evidence in detail. When he had identified the body as that of his brother, Harold, he went on to relate the events which I have recorded: his visit to his sick brother, his alarm at the patient’s appearance, his call upon Dr Dimsdale and his subsequent interview with Sir Robert Detling. It was all told in a very concise, matter-of-fact manner, and I noted that the coroner did not seek to amplify the condensed statement by any questions.

“At about nine o’clock in the morning of the 13th,” the witness continued, “I received a telegram from Miss Norris informing me that my brother had died in the night. I went out at once and sent a telegram to Sir Robert Detling informing him of what had happened. I then went to number 16 Hilborough Square, where I saw the body of deceased lying in his bed quite cold and stiff. I saw nobody at the house excepting the housemaid and Mr Mayfield. After leaving the house I walked about the streets for several hours and did not return to my hotel until late in the afternoon. When I arrived there, I found awaiting me a telegram from Sir Robert Detling asking me to call on him without delay. I set forth at once and arrived at Sir Robert’s house at half-past five, and was shown into his study immediately. Sir Robert then told me that he had come to the conclusion that the circumstances of my brother’s death called for some investigation and that he proposed to communicate with the coroner. He urged me not to raise any objections and advised me to say nothing to anyone but to wait until the coroner’s decision was made known. I asked him for his reasons for communicating with the coroner, but he said that he would rather not make any statement. I heard no more until the morning of the fifteenth, the day appointed for the funeral, when the coroner’s officer called at my hotel to inform me that the funeral would not take place and to serve the summons for my attendance here as a witness.”

When Amos had concluded his statement, the coroner glanced at the Jury, and as no one offered to put any questions, he dismissed the witness and called the next—Mabel Withers—who, at once, came forward to the table. Having been sworn and having given her name, the witness deposed that she had been housemaid to deceased and that it was she who had discovered the fact of his death, relating the circumstances in much the same words as I have recorded. When she had finished her narrative, the coroner said: “You have told us that the candle in the deceased’s lamp was completely burnt out. Do you happen to know how long one of those candles would burn?”

“Yes. About four hours.”

“When did you last see deceased alive?”

“At half-past ten on Tuesday night, the twelfth. I looked in at his room on my way up to bed to see if he wanted anything, and I gave him a dose of medicine.”

“What was his condition then?”

“He looked very ill, but he seemed fairly comfortable. He had a book in his hand but was not reading.”

“Was the candle alight then?”

“No, the gas was alight. I asked him if I should turn it out but he said ‘no.’ He would wait until Miss Norris or Mr Wallingford came.”

“Did you notice how much candle there was in the lamp then?”

“There was a whole candle. I put it in myself in the afternoon and it had not been lit. He used to read by the gas as long as it was alight. He only used the candle-lamp if he couldn’t sleep and the gas was out.”

“Could you form any opinion as to how long the candle had been burnt out?”

“It must have been out some time, for there was no smell in the room as there would have been if it had only been out a
short time. The window was hardly open at all; only just a small crack."

"Do you know when deceased last took food?"

"Yes, he had his supper at eight o'clock; an omelette and a tiny piece of toast with a glass of milk."

"Who cooked the omelette?"

"Miss Norris."

"Why did Miss Norris cook it? Was the cook out?"

"No. But Miss Norris usually cooked his supper and sometimes made little dishes for his lunch. She is a very expert cook."

"Who took the omelette up to deceased?"

"Miss Norris. I asked if I should take his supper up, but she said she was going up and would take it herself."

"Was anyone else present when Miss Norris was cooking the omelette?"

"Yes, I was present and so was the cook."

"Did deceased usually have the same food as the rest of the household?"

"No, he usually had his own special diet."

"Who prepared his food, as a rule?"

"Sometimes the cook, but more often Miss Norris."

"Now, with regard to his medicine. Did deceased usually take it himself?"

"No, he didn't like to have the bottle on the bedside table, as it was rather crowded with his books and things. The bottle and the medicine-glass were kept on the mantelpiece and the medicine was given to him by whoever happened to be in the room when a dose was due. Sometimes I gave it to him; at other times Mrs Monkhouse or Miss Norris or Mr Wallingford."

"Do you remember when the last bottle of medicine came?"

"Yes. It came early in the afternoon of the day before he died. I took it in and carried it up at once."

When he had written down this answer, the coroner ran his eye through his previous notes and then glanced at the jury.

"Do any of you gentlemen wish to ask the witness any questions?" he enquired; and as no one answered, he dismissed the witness with the request that she would stay in the court in case any further testimony should be required of her. He then announced that he would take the evidence of Sir Robert Detling next in order to release him for his probably numerous engagements. Sir Robert's name was accordingly called and a grave-looking, elderly gentleman rose from near the doorway and walked up to the table. When the new witness had been sworn and the formal preliminaries disposed of, the coroner said: "I will ask you, Sir Robert, to give the jury an account of the circumstances which led to your making a certain communication to me."

Sir Robert bowed gravely and proceeded at once to make his statement in the clear, precise manner of a practised speaker.

"On Friday, the 8th instant, the Reverend Amos Monkhouse called on me to arrange a consultation with Dr Dimsdale who was in attendance on his brother, the deceased. I met Dr Dimsdale by appointment the following afternoon, the 9th, and with him made a careful examination of deceased. I was extremely puzzled by the patient's condition. He was obviously very seriously—I thought, dangerously—ill, but I was unable to discover any signs or symptoms that satisfactorily accounted for his grave general condition. I could not give his disease a name. Eventually, I took a number of blood-films and some specimens of the secretions to submit to a pathologist for examination and to have them tested for micro-organisms. I took them that night to Professor Garnett's laboratory, but the professor was unfortunately absent and not returning until the following night—Sunday. I therefore kept them until Sunday night when I took them to him and asked him to examine them with as little delay as possible. He reported on the following day that microscopical examination had not brought to light anything abnormal, but he was making cultures from the secretions and would report the result on Wednesday morning. On Wednesday morning at about half-past nine, I received a telegram from the Reverend Amos Monkhouse informing me that his brother had died during the night. A few minutes later, a messenger brought Professor Garnett's report; which was to the effect that no disease-bearing organisms had been found, nor any thing abnormal excepting a rather singular scarcity of micro-organisms of any kind.

"This fact, together with the death of the patient, suddenly aroused my suspicions. For the absence of the ordinary micro-organisms suggested the presence of some foreign chemical substance. And now, as I recalled the patient's symptoms, I found them consistent with the presence in the body of some foreign substance. Instantly, I made my way to Professor Garnett's laboratory and communicated my suspicions to him. I found that he shared them and had carefully preserved the remainder of the material for further examination. We both suspected the presence of a foreign substance, and we both suspected it to be arsenic.

"The professor had at hand the means of making a chemical test, so we proceeded at once to use them. The test that we employed was the one known as Reinsch's test. The result showed a very appreciable amount of arsenic in the secretions
tested. On this, I sealed up what was left of the specimens, and, after notifying Mr. Monkhouse of my intention, reported the circumstances to the coroner.

When Sir Robert ceased speaking, the coroner bowed, and having written down the last words, reflected for a few moments. Then he turned to the jury and said: "I don't think we need detain Sir Robert any longer unless there are any questions that you would like to ask."

At this point the usual over-intelligent juryman interposed.

"We should like to know whether the vessels in which the specimens were contained were perfectly clean and free from chemicals."

"The bottles," Sir Robert replied, "were clean in the ordinary sense. I rinsed them out with clean water before introducing the material. But, of course, they could not be guaranteed to be chemically clean."

"Then doesn't that invalidate the analysis?" the juror asked.

"It was hardly an analysis," the witness replied. "It was just a preliminary test."

"The point which you are raising, Sir," said the coroner, "is quite a sound one but it is not relevant to this inquiry. Sir Robert's test was made to ascertain if an inquiry was necessary. He decided that it was, and we are now holding that inquiry. You will not form your verdict on the results of Sir Robert's test but on those of the post mortem examination and the special analysis that has been made."

This explanation appeared to satisfy the juror and Sir Robert was allowed to depart. The coroner once more seemed to consider awhile and then addressed the jury.

"I think it will be best to take next the evidence relating to the examination of the body. When you have heard that you will be better able to weigh the significance of what the other witnesses have to tell us. We will now take the evidence of Dr. Randall."

As the new witness, a small, dry, eminently professional-looking man, stepped briskly up to the table, I stole a quick, rather furtive glance at my companions and saw my own alarm plainly reflected in their faces and bearing. Barbara, on my left hand, sat up stiffly, rigid as a statue, her face pale and set, but quite composed, her eyes fixed on the man who was about to be sworn. Madeline, on my right, was ghastly. But she, too, was still and quiet, sitting with her hands tightly clasped, as if to restrain or conceal their trembling, and her eyes bent on the floor. As to Wallingford, who sat on the other side of Barbara, I could not see his face, but by his foot, which I could see and hear, tapping quickly on the floor as if he were working a spinning-wheel, and his incessantly moving hands, I judged that his nerves were at full tension.

The new witness deposed that his name was Walter Randall, that he was a Bachelor of Medicine and police surgeon of the district and that he had made a careful examination of the body of deceased and that, with Dr. Barnes, he had made an analysis of certain parts of that body.

"To anticipate a little," said the coroner, "did you arrive at an opinion as to the cause of death?"

"Yes. From the post mortem examination and the analysis taken together, I came to the conclusion that deceased died from the effects of arsenic poisoning."

"Have you any doubt that arsenic poisoning was really the cause of the deceased's death?"

"No, I have no doubt whatever."

The reply, uttered with quiet decision, elicited a low murmur from the jury and the few spectators, amidst which I heard Madeline gasp in a choking whisper, "Oh! God!" and even Barbara was moved to a low cry of horror. But I did not dare to look at either of them. As for me, the blow had fallen already. Sir Robert's evidence had told me all.

"You said," the coroner resumed, "that the post mortem and the analysis, taken together, led you to this conclusion. What did you mean by that?"

"I meant that the appearance of the internal organs, taken alone, would not have been conclusive. The conditions that I found were suggestive of arsenic poisoning but might possibly have been due to disease. It was only the ascertained presence of arsenic that converted the probability into certainty."

"You are quite sure that the conditions were not due to disease?"

"Not entirely. I would rather say that the effects of arsenic poisoning were added to and mingled with those of old-standing disease."

"Would you tell us briefly what abnormal conditions you found?"

"The most important were those in the stomach, which showed marked signs of inflammation."

"You are aware that the death certificate gives old-standing chronic gastritis as one of the causes of death?"

"Yes, and I think correctly. The arsenical gastritis was engrafted on an already existing chronic gastritis. That is what made the appearances rather difficult to interpret, especially as the post mortem appearances in arsenical poisoning are extraordinarily variable."
“What else did you find?”

“There were no other conditions that were directly associated with the poison. The heart was rather fatty and dilated, and its condition probably accounts for the sudden collapse which seems to have occurred.”

“Does not collapse usually occur in poisoning by arsenic?”

“Eventually it does, but it is usually the last of a long train of symptoms. In some cases, however, collapse occurs quite early and may carry the victim off at once. That is what appears from the housemaid’s evidence to have happened in this case. Death seems to have been sudden and almost peaceful.”

“Were there any other signs of disease?”

“Yes, the lungs were affected. There were signs of considerable bronchial catarrh, but I do not regard this as having any connection with the effects of the poison. It appeared to be an old-standing condition.”

“Yes,” said the coroner. “The certificate mentions chronic bronchial catarrh of several years’ standing. Did you find any arsenic in the stomach?”

“Not in the solid form and only a little more than a hundredth of a grain altogether. The stomach was practically empty. The other organs were practically free from disease, excepting, perhaps, the kidneys, which were congested but not organically diseased.”

“And as to the amount of arsenic present?”

“The analysis was necessarily a rather hasty one and probably shows less than the actual quantity; but we found, as I have said, just over a hundredth of a grain in the stomach, one and a half grains in the liver, nearly a fifth of a grain in the kidneys and small quantities, amounting in all to two grains, in the blood and tissues. The total amount actually found was thus a little over three and a half grains—a lethal dose.”

“What is the fatal dose of arsenic?”

“Two grains may prove fatal if taken in solution, as it appears to have been in this case. Two and a half grains, in a couple of ounces of fly-paper water, killed a strong, healthy girl of nineteen in thirty-six hours.”

“And how long does a poisonous dose take to produce death?”

“The shortest period recorded is twenty minutes, the longest, over three weeks.”

“Did you come to any general conclusion as to how long deceased had been suffering from the effects of arsenic and as to the manner in which it had been administered?”

“From the distribution of the poison in the organs and tissues and from the appearance of the body, I inferred that the administration of arsenic had been going on for a considerable time. There were signs of chronic poisoning which led me to believe that for quite a long time—perhaps months—deceased had been taking repeated small doses of the poison, and that the final dose took such rapid effect by reason of the enfeebled state of the deceased at the time when it was administered.”

“And as to the mode of administration? Did you ascertain that?”

“In part, I ascertained it quite definitely. When the bearers went to the house to fetch the body, I accompanied them and took the opportunity to examine the bedroom. There I found on the mantelpiece a bottle of medicine with the name of deceased on the label and brought it away with me. It was an eight ounce bottle containing when full eight doses, of which only one had been taken. Dr Barnes and I, together, analyzed the remaining seven ounces of the medicine and obtained from it just over eleven grains of arsenic; that is a fraction over a grain and a half in each ounce dose. The arsenic was in solution and had been introduced into the medicine in the form of the solution known officially as Liquor Arsenicalis, or Fowler’s Solution.”

“That is perfectly definite,” said the coroner. “But you said that you ascertained the mode of administration in part. Do you mean that you inferred the existence of some other vehicle?”

“Yes. A single dose of this medicine contained only a grain and a half of arsenic, which would hardly account for the effects produced or the amount of arsenic which was found in the body. Of course, the preceding dose from the other bottle may have contained the poison, too, or it may have been taken in some other way.”

“What other way do you suggest?”

“I can merely suggest possibilities. A meal was taken about eight o’clock. If that meal had contained a small quantity of arsenic—even a single grain—that, added to what was in the medicine, would have been enough to cause death. But there is no evidence whatever that the food did contain arsenic.”

“If the previous dose of medicine had contained the same quantity of the poison as the one that was last taken, would that account for the death of deceased?”

“Yes. He would then have taken over three grains in four hours—more than the minimum fatal dose.”

“Did you see the other—the empty medicine bottle?”

“No. I looked for it and should have taken possession of it, but it was not there.”
“Is there anything else that you have to tell us concerning your examination?”

“No, I think I have told you all I know about the case.”

The coroner cast an interrogatory glance at the jury, and when none of them accepted the implied invitation, he released the witness and named Dr Barnes as his successor.

I need not record in detail the evidence of this witness. Having deposed that he was a Doctor of Science and lecturer in Chemistry at St Martha’s Medical College, he proceeded to confirm Dr Randall’s evidence as to the analysis, giving somewhat fuller and more precise details. He had been present at the autopsy, but he was not a pathologist and was not competent to describe the condition of the body. He had analyzed the contents of the medicine bottle with Dr Randall’s assistance and he confirmed the last witness’s statement as to the quantity of arsenic found and the form in which it had been introduced—Fowler’s Solution.

“What is the strength of Fowler’s Solution?”

“It contains four grains of arsenic—or, more strictly, of arsenious acid—to the fluid ounce. So that, as the full bottle of medicine must have contained just over twelve and a half grains of arsenious acid, the quantity of Fowler’s Solution introduced must have been a little over three fluid ounces; three point fourteen, to be exact.”

“You are confident that it was Fowler’s Solution that was used?”

“Yes; the chemical analysis showed that; but in addition, there was the colour and the smell. Fowler’s Solution is coloured red with Red Sandalwood and scented with Tincture of Lavender as a precaution against accidents. Otherwise it would be colourless, odourless and tasteless, like water.”

On the conclusion of Dr Barnes’ evidence, the coroner remarked to the jury: “I think we ought to be clear on the facts with regard to this medicine. Let Mabel Withers be recalled.”

Once more the housemaid took her place by the table and the coroner resumed the examination.

“You say that the last bottle of medicine came early in the afternoon. Can you tell us the exact time?”

“It was about a quarter to three. I remember that because when I took up the new bottle, I asked Mr Monkhouse if he had had his medicine and he said that his brother, Mr Amos Monkhouse, had given him a dose at two o’clock just before he left.”

“Did you open the fresh bottle?”

“I took off the paper wrapping and the cap but I didn’t take the cork out.”

“Was the old bottle empty then?”

“No; there was one dose left in it. That would be due at six o’clock.”

“Do you know what became of the old bottle?”

“Yes. When I had given him his last dose—that was out of the new bottle—I took the old bottle away and washed it at once.”

“Why did you wash the bottle?”

“The used medicine bottles were always washed and sent back to Dr Dimsdale.”

“Did you send back the corks, too?”

“No, the corks were usually burned in the rubbish destructor.”

“Do you know what happened to this particular cork?”

“I took it down with me in the morning and dropped it in the bin which was kept for the rubbish to be taken out to the destructor. The cork must have been burned with the other rubbish the same day.”

“When you gave deceased that last dose of medicine from the new bottle, did you notice anything unusual about it? Any smell, for instance?”

“I noticed a very faint smell of lavender. But that was not unusual. His medicine often smelt of lavender.”

“Do you know if the previous bottle of medicine smelt of lavender?”

“Yes, it did. I noticed it when I was washing out the bottle.”

“That, gentlemen,” said the coroner, as he wrote down the answer, “is a very important fact. You will notice that it bears out Dr Randall’s opinion that more than one dose of the poison had been given; that, in fact, a number of repeated small doses had been administered. And, so far as we can see at present, the medicine was, at least, the principal medium of its administration. The next problem that we have to solve is how the poison got into the medicine. If none of you wish to put any questions to the very intelligent witness whom we have just been examining, I think we had better call Dr Dimsdale and hear what he has to tell us.”

The jury had no questions to put to Mabel but were manifestly all agog to hear Dr Dimsdale’s evidence. The housemaid was accordingly sent back to her seat, and the doctor stepped briskly—almost too briskly, I thought—up to the table.
V. — MADELINE’S ORDEAL

I WAS rather sorry for Dimsdale. His position was a very disagreeable one and he fully realized it. His patient had been poisoned before his very eyes and he had never suspected even grave illness. In a sense, the death of Harold Monkhouse lay at his door and it was pretty certain that every one present would hold him accountable for the disaster. Indeed, it was likely that he would receive less than justice. Those who judged him would hardly stop to reflect on the extraordinary difficulties that beset a busy medical man whose patient is being secretly poisoned; would fail to consider the immense number of cases of illness presented to him in the course of years of practice and the infinitely remote probability that any one of them is a case of poison. The immense majority of doctors pass through the whole of their professional lives without meeting with such a case; and it is not surprising that when the infinitely rare contingency arises, it nearly always takes the practitioner unawares. My own amazement at this incredible horror tended to make me sympathetic towards Dimsdale and it was with some relief that I noted the courteous and considerate manner that the coroner adopted in dealing with the new witness.

“I think,” the former observed, “that we had better, in the first place, pursue our inquiries concerning the medicine. You have heard the evidence of Dr Randall and Dr Barnes. This bottle of medicine, before any was taken from it, contained twelve and a half grains of arsenious acid, in the form of just over three fluid ounces of Fowler’s Solution. Can you suggest any explanation of that fact?”

“No,” replied Dimsdale, “I cannot.”

“What should the bottle have contained? What was the composition of the medicine?”

“The medicine was just a simple, very mild tonic and alternative. The bottle contained twenty-four minims of Tincture of Nux Vomica, sixteen minims of Liquor Arsenicalis, half a fluid ounce of Syrup of Bitter Orange to cover the taste of the Nux Vomica and half an ounce of Compound Tincture of Cardamoms. So that each dose contained three minims of Tincture of Nux Vomica and two minims of Liquor Arsenicalis.”

“Liquor Arsenicalis is another name for Fowler’s Solution, I understand?”

“Yes.”

“Who supplied this medicine?”

“It was supplied by me.”

“Do you usually supply your patients with medicine?”

“No. Only a few of my old patients who prefer to have their medicine from me. Usually, I write prescriptions which my patients have made up by chemists.”

“This bottle, then, was made up in your own dispensary?”

“Yes.”

“Now, I put it to you, Dr Dimsdale: this medicine did actually contain Fowler’s Solution, according to the prescription. Is it not possible that some mistake may have occurred in the amount put into the bottle?”

“No, it is quite impossible.”

“Why is it impossible?”

“Because I made up this particular bottle myself. As my dispenser is not a qualified pharmacist, I always dispense, with my own hands, any medicines containing poisons. All dangerous drugs are kept in a poison cupboard under lock and key, and I carry the key on my private bunch. This is the key, and as you see, the lock is a Yale lock.”

He held up the bunch with the little flat key separated, for the coroner’s and the jurymen’s inspection.

“But,” said the coroner, “you have not made it clear that a mistake in the quantity was impossible.”

“I was coming to that,” replied Dimsdale. “The poisons in the cupboard are, of course, powerful drugs which are given only in small doses, and a special measure-glass is kept in the cupboard to measure them. This glass holds only two drachms—a hundred and twenty minims, that is, a quarter of an ounce. Now, the analysts found in this bottle three fluid ounces of Fowler’s Solution. But to measure out that quantity, I should have had to fill the measure-glass twelve times! That is impossible. No one could do such a thing as that inadvertently, especially when he was dispensing poisons.

“But that is not all. The poison bottles are all quite small. The one in which the Liquor Arsenicalis is kept is a four ounce bottle. It happened that I had refilled it a few days previously and it was full when I dispensed this medicine. Now, obviously, if I had put three ounces of the Liquor into the medicine bottle, there would have remained in the dispensing bottle only one ounce. But the dispensing bottle is still practically full. I had occasion to use it this morning and I found it full save for the few minims that had been taken to make up the deceased’s medicine.

“And there is another point. This medicine was coloured a deepish pink by the Tincture of Cardamoms. But if it had contained three ounces of Fowler’s Solution in addition, it would have been a deep red of quite a different character. But I clearly remember the appearance of the bottle as it lay on the white paper when I was wrapping it up. It had the delicate
pink colour that is imparted by the cochineal in the Tincture of Cardamoms."

The coroner nodded as he wrote down the reply, and enquired:

"Would any of you, gentlemen, like to ask any questions concerning the bottle of medicine?"

"We should like to know, Sir," said the foreman, "whether this bottle of medicine ever left the doctor's hands before it was sent to deceased?"

"No, it did not," replied Dimsdale. "As the dispenser was absent, I put up the bottle entirely myself. I put in the cork, wrote the label, tied on the paper cap, wrapped the bottle up, sealed the wrapping, addressed it and gave it to the boy to deliver."

The foreman expressed himself as fully satisfied with this answer and the coroner then resumed: "Well, we seem to have disposed of the medicine so far as you are concerned, Doctor. We will now go on to consider the condition of deceased during the last few days. Did no suspicion of anything abnormal ever occur to you?"

"No, I neither perceived nor suspected anything abnormal."

"Is that not rather remarkable? I realize that poisoning would be the last thing that you would be looking for or expecting. But when it occurred, is it not a little strange that you did not recognize the symptoms?"

"Not at all," replied Dimsdale. "There was nothing to recognize. The classical symptoms of arsenic poisoning were entirely absent. You will remember that Sir Robert Detling had no more suspicion than I had."

"What are the classical symptoms, as you call them, of arsenic poisoning?"

"The recognized symptoms—which are present in the immense majority of cases—are acute abdominal pain and tenderness, intense thirst, nausea, vomiting and purging: the symptoms, in fact, of extreme irritation of the stomach and intestines. But in the case of deceased, these symptoms were entirely absent. There was, in my opinion, nothing whatever in his appearance or symptoms to suggest arsenic poisoning. His condition appeared in no way different from what I had known it to be on several previous occasions; just a variation for the worse of his ordinary ill-health."

"You do not doubt that arsenic poisoning was really the cause of his death?"

"The analysis seems to put the matter beyond question; otherwise—I mean apart from the analysis—I would not have entertained the idea of arsenic poisoning for a moment."

"But you do not dispute the cause of death?"

"No. Arsenic is extraordinarily variable in its effects, as Dr Randall mentioned, both on the dead body and on the living. Very anomalous cases of arsenic poisoning have been mistaken, during life, for opium poisoning."

The coroner wrote down the answer and having glanced over his notes, asked: "What was the condition of deceased when his wife went away from home?"

"He was much better. In fact his health seemed to be improving so much that I hoped he would soon be about again."

"And how soon after his wife's departure did his last attack begin?"

"I should hardly call it an attack. It was a gradual change for the worse. Mrs Monkhouse went away on the 29th of August. On the 2nd of September deceased was not so well and was extremely depressed and disappointed at the relapse. From that time his condition fluctuated, sometimes a little better and sometimes not so well. On the 8th he appeared rather seriously ill and was no better on the 9th, the day of the consultation with Sir Robert Detling After that he seemed to improve a little, and the slight improvement was maintained up to the 12th. His death came, at least to me, as quite a surprise."

"You spoke just now of several previous occasions on which attacks—or, if you prefer it, relapses—of a similar kind occurred. Looking back on those relapses by the light of what we now know, do you say that they were quite similar, in respect of the symptoms, to the one which ended in the death of deceased?"

"I should say they were identically similar. At any rate, I can recall no difference."

"Did any of them seem to be as severe as the fatal one?"

"Yes; in fact the last of them—which occurred in June—seemed to be more severe, only that it was followed by improvement and recovery. I have here the section of my card-index which relates to deceased. In the entry dated June 19 you will see that I have noted the patient's unsatisfactory condition."

He handed a small pack of index-cards to the coroner, who examined the upper card intently and then, with a sudden raising of the eyebrows, addressed the jury.

"I had better read out the entry. The card is headed 'Harold Monkhouse' and this entry reads: 'June 19. Patient very low and feeble. No appetite. Considerable gastric discomfort and troublesome cough. Pulse 90, small, thready. Heart sounds weak. Sending report to Mrs Monkhouse.'"

He laid the cards down on the table, and, looking fixedly at Dimsdale, repeated: "'Sending report to Mrs Monkhouse? Where was Mrs Monkhouse?'"
“Somewhere in Kent, I believe. I sent the report to the headquarters of the Women’s Freedom League in Knightrider Street, Maidstone, from whence I supposed it would be forwarded to her.”

For some seconds after receiving this answer the coroner continued to gaze steadily at the witness. At length he observed: “This is a remarkable coincidence. Can you recall the condition of deceased when Mrs Monkhouse went away on that occasion?”

“Yes, I remember that he was in comparatively good health. In fact, his improved condition furnished the opportunity for Mrs Monkhouse to make her visit to Maidstone.”

“Can you tell us how soon after her departure on that occasion the relapse occurred?”

“I cannot say definitely, but my impression is that the change for the worse began a few days after she went away. Perhaps I might be able to judge by looking at my notes.”

The coroner handed him back the index-cards, which he looked through rapidly. “Yes,” he said, at length, “here is an entry on June 11 of a bottle of tonic medicine for Mrs Monkhouse. So she must have been at home on that date; and as it was a double-sized bottle, it was probably for her to take away with her.”

“Then,” said the coroner, “it is clear that, on the last two occasions, the deceased was comparatively well when his wife left home, but had a serious relapse soon after she went away. Now, what of the previous relapses?”

“I am afraid I cannot remember. I have an impression that Mrs Monkhouse was away from home when some of them occurred, but at this distance of time, I cannot recollect clearly. Possibly Mrs Monkhouse, herself, may be able to remember.”

“Possibly,” the coroner agreed, rather drily, “but as the point is of considerable importance, I should be glad if you would presently look through your case cards and see if you can glean any definite information on the subject. Meanwhile we may pass on to one or two other matters. First as to the medicine which you prescribed for deceased; it contained, as you have told us, a certain amount of Fowler’s Solution, and you considered deceased to be suffering from chronic gastritis. Is Fowler’s Solution usually given in cases of gastritis?”

“No. It is usually considered rather unsuitable. But deceased was very tolerant of small doses of arsenic. I had often given it to him before as a tonic and it had always seemed to agree with him. The dose was extremely small—only two minims.”

“How long have you known deceased?”

“I have known, and attended him professionally about twenty years.”

“From your knowledge of him, should you say that he was a man who was likely to make enemies?”

“Not at all. He was a kindly, just and generous man, amiable and even-tempered; rather reserved and aloof; not very human, perhaps, and somewhat self-contained and solitary. But I could not imagine him making an enemy and, so far as I know, he never did.”

The coroner reflected awhile after writing down this answer and then turned to the jury.

“Are there any questions that you wish to put to the witness, gentlemen?”

The jury consulted together for a few moments, and the foreman then replied: “We should like to know, Sir, if possible, whether Mrs Monkhouse was or was not away from home when the previous relapses occurred.”

“I am afraid,” saidDimsdale, “that I cannot be more explicit as the events occurred so long ago. The other witnesses—the members of the household—would be much more likely to remember. And I would urge you not to detain me from my professional duties longer than is absolutely necessary.”

Hereupon a brief consultation took place between the coroner and the jury, with the result thatDimsdale was allowed to go about his business and Barbara was summoned to take his place. I had awaited this stage of the proceedings with some uneasiness and was now rather surprised and greatly relieved at the coroner’s manner towards her; which was courteous and even sympathetic. Having expressed his and the jury’s regret at having to trouble her in the very distressing circumstances, he proceeded at once to clear off the preliminaries, eliciting the facts that she was 32 years of age and had been married a little over three years, and then said: “Dr Dimsdale has told us that on the occasion of the attack or relapse in June last you were away from home, but he is not certain about the previous ones. Can you give us any information on the subject?”

“Yes,” she replied, in a quiet, steady voice, “I recall quite clearly at least three previous occasions on which I went away from home leaving my husband apparently well—as well as he ever was—and came back to find him quite ill. But I think there were more than three occasions on which this happened, for I remember having once accused him, facetiously, of saving up his illnesses until I was out of the house.”

“Can you remember if a serious relapse ever occurred when you were at home?”

“Not a really serious one. My husband’s health was always very unstable and he often had to rest in bed for a day or two. But the really bad attacks of illness seem always to have occurred when I was away from home.”

“Did it never strike you that this was a very remarkable fact?”
“I am afraid I did not give the matter as much consideration as I ought to have done. Deceased was always ailing, more or less, and those about him came to accept ill-health as his normal condition.”

“But you see the significance of it now?”

Barbara hesitated and then replied in a low voice and with evident agitation: “I see that it may have some significance, but I don’t in the least understand it. I am quite overwhelmed and bewildered by the dreadful thing that has happened.”

“Naturally, you are,” the coroner said in a sympathetic tone, “and I am most reluctant to trouble you with questions under circumstances that must be so terrible to you. But we must find out the truth if we can.”

“Yes, I realize that,” she replied, “and thank you for your consideration.”

The coroner bowed, and after a brief pause, asked: “Did it never occur to you to engage a nurse to attend to deceased?”

“Yes. I suggested it more than once to deceased, but he wouldn’t hear of it. And I think he was right. There was nothing that a nurse could have done for him. He was not helpless and he was not continuously bed-ridden. He had a bell-push by his bedside and his secretary or the servants were always ready to do anything that he wanted done. The housemaid was most attentive to him. But he did not want much attention. He kept the books that he was reading on his bedside table and he liked to be left alone to read in peace. He felt that the presence of a nurse would have been disturbing.”

“And at night?”

“At night his bell-push was connected with a bell in the secretary’s bedroom. But he hardly ever used it. If his candle-lamp burned out he could put in a fresh candle from the box on his table; and he never seemed to want anything else.”

“Besides deceased and yourself, who were the inmates of the house?”

“There was my husband’s secretary, Mr Wallingford, Miss Norris, the cook, Anne Baker, the housemaid, Mabel Withers, and the kitchenmaid, Doris Brown.”

“Why did deceased need a secretary? Did he transact much business?”

“No. The secretary wrote his few business letters, kept the accounts and executed any commissions, besides doing the various things that the master of the house would ordinarily have done. He is the son of an old friend of my husband’s, and he came to us when his father died.”

“And Miss Norris? What was her position in the household?”

“She lived with us as a guest at my husband’s invitation. She was the daughter of his first wife’s sister, and he, more or less informally, adopted her as he had no children of his own.”

“Deceased was a widower, then, when you married him?”

“Yes. His wife had been dead about two years.”

“What was his age when he died?”

“He had just turned fifty-seven.”

“On what sort of terms was deceased with the members of his household?”

“On the best of terms with them all. He was an undemonstrative man and rather cool and reserved with strangers and distinctly solitary and self-contained. But he was a kind and generous man and all the household, including the servants, were devoted to him.”

“Was deceased engaged in any business or profession?”

“No, he had independent means, inherited from his father.”

“Would you describe him as a wealthy man?”

“I believe he was quite well off, but he never spoke of his financial affairs to me, or to anybody but his lawyers.”

“Do you know how his property is disposed of?”

“I know that he made a will, but I never enquired about the terms of it and he never told me.”

“But surely you were an interested party.”

“It was understood that some provision would be made for me if I survived him. That was all that concerned me. Deceased was not a man with whom it was necessary to make conditions; and I have some small property of my own. Mr Mayfield, who is present, of course, knows what the provisions of the will are as he is one of the executors.”

Once more the coroner paused to look over his notes. Then he glanced inquiringly at the jury, and, when the foreman shook his head, he thanked Barbara and dismissed her; and as she walked back to her chair, pale and grave but perfectly composed, I found myself admiring her calm dignity and only hoping that the other witnesses would make as good a figure. But this hope was no sooner conceived than it was shattered. The next name that was called was Madeline Norris and for a few moments there was no response. At length Madeline rose slowly, ashen and ghastly of face, and walked unsteadily to the table. Her appearance—her deathly pallor and her trembling hands—struck me with dismay; and what increased my concern for the unfortunate girl was the subtle change in manner that I detected in the jury and the coroner.
The poor girl’s manifest agitation might surely have bespoken their sympathy; but not a sign of sympathy was discernible in their faces—nothing but a stony curiosity.

Having been sworn—on a testament which shook visibly in her grasp—she deposed that her name was Madeline Norris and her age twenty-seven.

“Any occupation?” the coroner enquired drily without looking up.

“I am a teacher at the Westminster College of Domestic Science.”

“Teacher of what?”

“Principally of cookery and kitchen management, especially invalid cookery.”

“Are you, yourself, a skilled cook?”

“Yes. It is my duty to demonstrate to the class.”

“Have you ever cooked or prepared food for the deceased?”

“Yes. I usually cooked his meals when I was in the house at meal times.”

“It has been stated that you prepared the last meal that deceased took. Is that correct?”

“Yes. I cooked an omelette for his supper.”

“Will you describe to us the way in which you prepared that omelette?”

Madeline considered for a few moments and then replied in a low, shaky voice: “It was just a simple omelette. I first rubbed the pan with a cut clove of garlic and put in the butter to heat. Then I broke an egg into a cup, separated the yolk from the white, and, having beaten them up separately, mixed them and added a very small portion of pounded anchovy, a pinch or two of finely chopped parsley and a little salt. I cooked it in the usual way and turned it out on a hot plate which I covered at once.”

“Who took it up to deceased?”

“I did. I ran straight up with it and sat and talked to deceased while he ate it.”

“Did you meet anyone on your way up or in the bedroom?”

“No. There was nobody on the stairs, and, the deceased was alone.”

“Did deceased take anything to drink with his supper?”

“Yes. He had a glass of chablis. I fetched the bottle and the glass from the dining room and poured out the wine for him.”

“Did you meet anybody in the dining room or coming or going?”

“No, I met nobody.”

“Can you think of any way in which any poison could have got into the omelette or into the wine?”

“No. Nothing could possibly have got into the omelette. As to the wine, I poured it from the bottle into a clean glass. But the bottle was already open and had been in the cellaret since lunch.”

“Now, with regard to the medicine. Did you give deceased any on the day before his death?”

“Yes. I gave him a dose soon after I came in—about six o’clock. That was the last dose in the bottle.”

“Did you notice anything unusual about the medicine?”

“No. It was similar to what he had been taking for some days past.”

“What was the medicine like?”

“It was nearly colourless with the faintest tinge of red and smelled slightly of lavender and bitter orange.”

“Was there anything that caused you to notice particularly, on this occasion, the appearance and smell of the medicine?”

“No. I noticed the colour and the smell when I opened the bottle on the previous morning to give deceased a dose.”

“Did you examine the new bottle which had just been sent?”

“Yes; I looked at it and took out the cork and smelled it and tasted it.”

“What made you do that?”

“I noticed that it seemed to contain Tincture of Cardamoms and I smelled and tasted it to find out if the other ingredients had been changed.”

“And what conclusion did you arrive at?”

“That they had not been changed. I could taste the Nux Vomica and smell the orange and the Liquor Arsenicalis—at least the lavender.”

“Did you realize what the lavender smell was due to?”
“Yes. I recognized it as the smell of Liquor Arsenicalis. I knew that deceased was taking Liquor Arsenicalis because I had asked Dr Dimsdale about it when I first noticed the smell.”

The coroner wrote down this answer and then, raising his head, looked steadily at Madeline for some seconds without speaking; and the jury looked harder still. At length the former spoke, slowly, deliberately, emphatically.

“You have told us that you examined this medicine to find out what it contained, and that you were able to recognize Tincture of Cardamoms by its colour and Liquor Arsenicalis by its smell. It would seem, then, that you know a good deal about drugs. Is that so?”

“I know something about drugs. My father was a doctor and he taught me simple dispensing so that I could help him.”

Madeline did not answer immediately. And as she stood trembling and hesitating in evident confusion, the coroner gazed at her stonily, and the jury craned forward to catch her reply.

“I used to examine his medicine,” she replied at length, in a low voice and a reluctant and confused manner, “because I knew that it often contained Liquor Arsenicalis and I used to wonder whether that was good for him. I understood from my father that it was a rather irritating drug, and it did not seem very suitable for a patient who suffered from gastritis.”

There was a pause after she had spoken and something in the appearance of the inquisitors almost as if they had been a little disappointed by this eminently reasonable answer. At length the coroner broke the silence by asking, with a slight softening of manner:

“You have said that the change in colour of the last medicine led you to taste and smell it to ascertain if the other ingredients had been changed. You have said that you decided that they had not been changed. Are you sure of that? Can you swear that the smell of lavender was not stronger in this bottle than in the previous ones?”

“It did not seem to me to be stronger.”

“Supposing the bottle had then contained as much Liquor Arsenicalis as was found in it by the analysts, would you have been able to detect it by the smell or otherwise?”

“Yes, I feel sure that I should. The analysts found three ounces of Liquor Arsenicalis; that would be nearly half the bottle. I am sure I should have detected that amount, not only by the strong smell but by the colour, too.”

“You are sure that the colour of this medicine was due to Cardamoms only?”

“Yes, that is to cochineal. I recognized it at once. It is perfectly unmistakable and quite different from the colour of Red Sandalwood, with which Liquor Arsenicalis is coloured. Besides, this medicine was only a deepish pink in colour. But if three ounces of Liquor Arsenicalis had been in the bottle, the medicine would have been quite a dark red.”

“You have had some experience in dispensing. Do you consider it possible that the Liquor Arsenicalis could have been put into the medicine by mistake when it was being made up?”

“It would be quite impossible if a minim measure-glass was used, as the glass would have had to be filled twelve times. But this is never done. One does not measure large quantities in small measures. Three ounces would be measured out in a four or five ounce measure, as a rule, or, possibly in a two ounce measure, by half refilling it.”

“Might not the wrong measure-glass have been taken up by mistake?”

“That is, of course, just possible. But it is most unlikely; for the great disproportion between the large measure-glass and the little stock-bottle would be so striking that it could hardly fail to be noticed.”

“Then, from your own observation and from Dr Dimsdale’s evidence, you reject the idea that a mistake may have been made in dispensing this bottle of medicine?”

“Yes, entirely. I have heard Dr Dimsdale’s evidence and I examined the medicine. I am convinced that he could not have made a mistake under the circumstances that he described and I am certain that the medicine that I saw did not contain more than a small quantity—less than a drachm—of Liquor Arsenicalis.”

“You are not forgetting that the analysts actually found the equivalent of three ounces of Liquor Arsenicalis in the bottle?”

“No. But I am sure it was not there when I examined the bottle.”

The coroner wrote down this answer with a deliberate air, and, when he had finished, turned to the jury.

“I think we have nothing more to ask this witness, unless there is any point that you want made more clear.”

There was a brief silence. Then the super-intelligent juryman interposed.

“I should like to know if this witness ever had any Liquor Arsenicalis in her possession.”

The coroner held up a warning hand to Madeline, and replied:

“That question, Sir, is not admissible. It is a principle of English law that a witness cannot be compelled to make a statement incriminating him—or herself. But an affirmative answer to this question would be an incriminating statement.”
“But I am perfectly willing to answer the question,” Madeline said eagerly. “I have never had in my possession any Liquor Arsenicalis or any other preparation of arsenic.”

“That answers your question, Sir,” said the coroner, as he wrote down the answer, “and if you have nothing more to ask, we can release the witness.”

He handed his pen to Madeline, and when she had signed her depositions—a terribly shaky signature it must have been—she came back to her chair, still very pale and agitated, but obviously relieved at having got through the ordeal. I had taken her arm as she sat down and was complimenting her on the really admirable way in which she had given her evidence, when I heard the name of Anthony Wallingford called and realized that another unpleasant episode had arrived.

VI. — THE VERDICT

I HAD not been taking much notice of Wallingford, my attention being occupied with the two women when it strayed from the proceedings. Beyond an irritated consciousness of his usual restless movements, I had no information as to how the soul-shaking incidents of this appalling day were affecting him. But when he rose drunkenly and, grasping the back of his chair, rolled his eyes wildly round the Court, I realized that there were breakers ahead.

When I say that he rose drunkenly, I use the word advisedly. Familiar as I was with his peculiarities—his jerking, twitchings and grimacings—I saw, at once, that there was something unusual both in his face and in his bearing; a dull wildness of expression and an uncertainty of movement that I had never observed before. He had not come to the Court with the rest of us, preferring, for some reason, to come alone. And I now suspected that he had taken the opportunity to fortify himself on the way.

I was not the only observer of his condition. As he walked, with deliberate care, from his seat to the table, I noticed the coroner eyeing him critically and the jury exchanging dubious glances and whispered comments. He made a bad start by dropping the book on the floor and sniggering nervously as he stooped to pick it up; and I could see plainly, by the stiffness of the coroner’s manner that he had made an unfavourable impression before he began his evidence.

“You were secretary to the deceased?” said the coroner, when the witness had stated his name, age (33) and occupation.

“What was the nature of your duties?”

“The ordinary duties of a secretary,” was the dogged reply.

“What accounts would those be? Deceased was not in business, I understand?”

“No, they were his domestic accounts; his income from investments and rents and his expenditure.”

“I used to look in on him from time to time to see if he wanted anything done. But it wasn’t my business to wait on him. I was his secretary, not his valet.”

“Who did wait on him, and attend to his wants?”

“The housemaid, chiefly, and Miss Norris, and of course, Mrs Monkhouse. But he didn’t usually want much but this food, his medicine, a few books from the library and a supply of candles for his lamp. His bell-push was connected with a bell in my room at night, but he never rang it.”

“Then, practically, the housemaid did everything for him?”

“Not everything. Miss Norris cooked most of his meals, we all used to give him his medicine, I used to put out his books and keep his fountain pen filled, and Mrs Monkhouse kept his candle-box; supplied. That was what he was most particular about as he slept bad and used to read at night.”

“You give us the impression, Mr Wallingford,” the coroner said, drily, “that you must have had a good deal of leisure.”

“Then I have given you the wrong impression. I was kept constantly on the go, doing jobs, paying tradesmen, shopping and running errands.”

“For whom?”

“Everybody. Deceased, Mrs Monkhouse, Miss Norris and even Dr Dimsdale. I was everybody’s servant.”

“What did you do for Mrs Monkhouse?”

“I don’t see what that has got to do with this inquest?”

“That is not for you to decide,” the coroner said, sternly. “You will be good enough to answer my question.”

Wallingford winced as if he had had his ears cuffed. In a moment, his insolence evaporated and I could see his hands
shaking as he, evidently, cudgelled his brains for a reply. Suddenly he seemed to have struck an idea.

“Shopping of various kinds,” said he; “for instance, there were the candles for deceased. His lamp was of German make and English lamp-candles wouldn’t fit it. So I used to have to go to a German shop at Sparrow Corner by the Tower, to get packets of Schneider’s stearine candles. That took about half a day.”

The coroner, stolidly and without comment, wrote down the answer, but my experience as a counsel told me that it had been a dummy question, asked to distract the witness’s attention and cover a more significant one that was to follow. For that question I waited expectantly, and when it came my surmise was confirmed.

“And Dr Dimsdale? What did you have to do for him?”

“I used to help him with his books sometimes when he hadn’t got a dispenser. I am a pretty good accountant and he isn’t.”

“Where does Dr Dimsdale do his bookkeeping?”

“At the desk in the surgery.”

“And is that where you used to work?”

“Yes.”

“Used Dr Dimsdale to work with you or did you do the books by yourself?”

“I usually worked by myself.”

“At what time in the day used you to work there?”

“In the afternoon, as a rule.”

“At what hours does Dr Dimsdale visit his patients?”

“Most of the day. He goes out about ten and finishes about six or seven.”

“So that you would usually be alone in the surgery?”

“Yes, usually.”

As the coroner wrote down the answer I noticed the super-intelligent juryman fidgeting in his seat. At length he burst out: “Is the poison cupboard in the surgery?”

The coroner looked interrogatively at Wallingford, who stared at him blankly in sudden confusion.

“You heard the question? Is the poison cupboard there?”

“I don’t know. It may be. It wasn’t any business of mine.”

“Is there any cupboard in the surgery? You must know that.”

“Yes, there is a cupboard there, but I don’t know what is in it.”

“Did you never see it open?”

“No. Never.”

“And you never had the curiosity to look into it?”

“Of course I didn’t. Besides I couldn’t. It was locked.”

“Was it always locked when you were there?”

“Yes, always.”

“Are you certain of that?”

“Yes, perfectly certain.”

Here the super-intelligent juror looked as if he were about to spring across the table as he demanded eagerly: “How does the witness know that that cupboard was locked?”

The coroner looked slightly annoyed. He had been playing his fish carefully and was in no wise helped by this rude jerk of the line. Nevertheless, he laid down his pen and looked expectantly at the witness. As for Wallingford, he was struck speechless. Apparently his rather muddled brain had suddenly taken in the import of the question, for he stood with dropped jaw and damp, pallid face, staring at the jurymen in utter consternation.

“Well,” said the coroner, after an interval, “how did you know that it was locked?”

Wallingford pulled himself together by an effort and replied: “Why, I knew—I knew, of course, that it must be locked.”

“Yes; but the question is, how did you know?”

“Why it stands to reason that it must have been locked.”

“Why does it stand to reason? Cupboards are not always locked.”
“Poison cupboards are. Besides, you heard Dimsdale say that he always kept this cupboard locked. He showed you the key.”

Once more the coroner, having noted the answer, laid down his pen and looked steadily at the witness.

“Now, Mr Wallingford,” said he, “I must caution you to be careful as to what you say. This is a serious matter, and you are giving evidence on oath. You said just now that you did not know whether the poison cupboard was or was not in the surgery. You said that you did not know what was in that cupboard. Now you say that you knew the cupboard must have been locked because it was the poison cupboard. Then it seems that you did know that it was the poison cupboard. Isn’t that so?”

“No. I didn’t know then. I do now because I heard Dimsdale say that it was.”

“Then, you said that you were perfectly certain that the cupboard was always locked whenever you were working there. That meant that you knew positively, as a fact, that it was locked. Now you say that you knew that it must be locked. But that is an assumption, an opinion, a belief. Now, a man of your education must know the difference between a mere belief and actual knowledge. Will you, please, answer definitely: Did you, or did you not, know as a fact whether that cupboard was or was not locked?”

“Well, I didn’t actually know, but I took it for granted that it was locked.”

“You did not try the door?”

“Certainly not. Why should I?”

“Very well. Does any gentleman of the jury wish to ask any further questions about this cupboard?”

There was a brief silence. Then the foreman said: “We should like the witness to say what he means and not keep contradicting himself.”

“You hear that, Sir,” said the coroner. “Please be more careful in your answers in future. Now, I want to ask you about that last bottle of medicine. Did you notice anything unusual in its appearance?”

“No. I didn’t notice it at all. I didn’t know that it had come.”

“Did you go into deceased’s room on that day—the Wednesday?”

“Yes, I went to see deceased in the morning about ten o’clock and gave him a dose of this medicine; and I looked in on him in the evening about nine o’clock to see if he wanted anything, but he didn’t.”

“Did you give him any medicine then?”

“No. It was not due for another hour.”

“What was his condition then?”

“He looked about the same as usual. He seemed inclined to doze, so I did not stay long.”

“Is that the last time you saw him alive?”

“No. I looked in again just before eleven. He was then in much the same state—rather drowsy—and, at his request, I turned out the gas and left him.”

“Did you light the candle?”

“No. He always did that himself, if he wanted it.”

“Did you give him any medicine?”

“No. He had just had a dose.”

“Did he tell you that he had?”

“No. I could see that there was a dose gone.”

“From which bottle was that?”

“There was only one bottle there. It must have been the new bottle, as only one dose had been taken.”

“What colour was the medicine?”

Wallingford hesitated a moment or two as if suspecting a trap. Then he replied, doggedly: “I don’t know. I told you I didn’t notice it.”

“You said that you didn’t notice it at all and didn’t know that it had come. Now you say that you observed that only one dose had been taken from it and that you inferred that it was the new bottle. Which of those statements is the true one?”

“They are both true,” Wallingford protested in a whining tone. “I meant that I didn’t notice the medicine particularly and that I didn’t know when it came.”

“That is not what you said,” the coroner rejoined. “However, we will let that pass. Is there anything more that you wish to ask this witness, gentlemen? If not, we will release him and take the evidence of Mr Mayfield.”
I think the jury would have liked to bait Wallingford but apparently could not think of any suitable questions. But they watched him malevolently as he added his—probably quite illegible—signature to his depositions and followed him with their eyes as he tottered shakily back to his seat. Immediately afterwards my name was called and I took my place at the table, not without a slight degree of nervousness; for, though I was well enough used to examinations, it was in the capacity of examiner, not of witness, and I was fully alive to the possibility of certain pitfalls which the coroner might, if he were wide enough awake, dig for me. However, when I had been sworn and had given my particulars (Rupert Mayfield, 35, Barrister-at-Law, of No. 64 Fig Tree Court, Inner Temple) the coroner’s conciliatory manner led me to hope that it would be all plain sailing.

“How long have you known deceased?” was the first question.

“About two and a half years,” I replied.

“You are one of the executors of his will, Mrs Monkhouse has told us.”

“Yes.”

“Do you know why you were appointed executor after so short an acquaintance?”

“I am an old friend of Mrs Monkhouse. I have known her since she was a little girl. I was a friend of her father—or rather, her stepfather.”

“Was it by her wish that you were made executor?”

“I believe that the suggestion came from the deceased’s family solicitor, Mr Brodribb, who is my co-executor. But probably he was influenced by my long acquaintance with Mrs Monkhouse.”

“Has probate been applied for?”

“Yes.”

“Then there can be no objections to your disclosing the provisions of the will. We don’t want to hear them in detail, but I will ask you to give us a general idea of the disposal of deceased’s property.”

“The gross value of the estate is about fifty-five thousand pounds, of which twelve thousand represents real property and forty-three thousand personal. The principal beneficiaries are: Mrs Monkhouse, who receives a house valued at four thousand pounds and twenty thousand pounds in money and securities; the Reverend Amos Monkhouse, land of the value of five thousand and ten thousand invested money; Madeline Norris, a house and land valued at three thousand and five thousand in securities; Anthony Wallingford, four thousand pounds. Then there are legacies of a thousand pounds each to the two executors, and of three hundred, two hundred and one hundred respectively to the housemaid, the cook and the kitchen-maid. That accounts for the bulk of the estate. Mrs Monkhouse is the residuary legatee.”

The coroner wrote down the answer as I gave it and then read it out slowly for me to confirm, working out, at the same time, a little sum on a spare piece of paper—as did also the intellectual juryman.

“I think that gives us all the information we want,” the former remarked, glancing at the jury; and as none of them made any comment, he proceeded: “Did you see much of deceased during the last few months?”

“I saw him usually once or twice a week. Sometimes oftener. But I did not spend much time with him. He was a solitary, bookish man who preferred to be alone most of his time.”

“Did you take particular notice of his state of health?”

“No, but I did observe that his health seemed to grow rather worse lately.”

“Did it appear to you that he received such care and attention as a man in his condition ought to have received?”

“It did not appear to me that he was neglected.”

“Did you realize how seriously ill he was?”

“No. I am afraid not. I regarded him merely as a chronic invalid.”

“It never occurred to you that he ought to have had a regular nurse?”

“No, and I do not think he would have consented. He greatly disliked having anyone about his room.”

“Is there anything within your knowledge that would throw any light on the circumstances of his death?”

“No. Nothing.”

“Have you ever known arsenic in any form to be used in that household for any purpose; any fly-papers, weed-killer or insecticides, for instance?”

“No, I do not remember ever having seen anything used in that household which, to my knowledge or belief, contained arsenic.”

“Do you know of any fact or circumstance which, in your opinion, ought to be communicated to this Court or which might help the jury in arriving at their verdict?”

“No, I do not.”
This brought my examination to an end. I was succeeded by the cook and the kitchenmaid, but, as they had little to tell, and that little entirely negative, their examination was quite brief. When the last witness was dismissed, the coroner addressed the jury.

"We have now, gentlemen," said he, "heard all the evidence that is at present available, and we have the choice of two courses; which are, either to adjourn the inquiry until further evidence is available, or to find a verdict on the evidence which we have heard. I incline strongly to the latter plan. We are now in a position to answer the questions, how, when and where the deceased came by his death, and when we have done that, we shall have discharged our proper function. What is your feeling on the matter, gentlemen?"

The jury's feeling was very obviously that they wished to get the inquiry over and go about their business, and when they had made this clear, the coroner proceeded to sum up.

"I shall not detain you, gentlemen, with a long address. All that is necessary is for me to recapitulate the evidence very briefly and point out the bearing of it.

"First as to the cause of death. It has been given in evidence by two fully qualified and expert witnesses that deceased died from the effects of poisoning by arsenic. That is a matter of fact which is not disputed and which you must accept, unless you have any reasons for rejecting their testimony, which I feel sure you have not. Accepting the fact of death by poison, the question then arises as to how the poison came to be taken by deceased. There are three possibilities: he may have taken it himself, voluntarily and knowingly; he may have taken it by accident or mischance; or it may have been administered to him knowingly and maliciously by some other person or persons. Let us consider those three possibilities.

"The suggestion that deceased might have taken the poison voluntarily is highly improbable in three respects. First, since deceased was mostly bed-ridden, it would have been almost impossible for him to have obtained the poison. Second, there is the nature of the poison. Arsenic has often been used for homicidal poisoning but seldom for suicide; for an excellent reason. The properties of arsenic which commend it to poisoners—its complete freedom from taste and the indefinite symptoms that it produces—do not commend it to the suicide. He has no need to conceal either the administration or its results. His principal need is rapidity of effect. But arsenic is a relatively slow poison and one which usually causes great suffering. It is not at all suited to the suicide. Then there is the third objection that the mode of administration was quite unlike that of a suicide. For the latter usually takes his poison in one large dose, to get the business over; but here it was evidently given in repeated small doses over a period that may have been anything from a week to a year. And, finally, there is not a particle of evidence in favour of the supposition that deceased took the poison himself.

"To take the second case, that of accident: the only possibility known to us is that of a mistake in dispensing the medicine. But the evidence of Dr. Dimsdale and Miss Norris must have convinced you that the improbability of a mistake is so great as to be practically negligible. Of course, the poison might have found its way accidentally into the medicine or the food or both in some manner unknown to us. But while we admit this, we have, in fact, to form our decision on what is known to us, not what is conceivable but unknown.

"When we come to the third possibility, that the poison was administered to deceased by some other person or persons with intent to compass his death, we find it supported by positive evidence. There is the bottle of medicine for instance. It contained a large quantity of arsenic in a soluble form. But two witnesses have sworn that it could not have contained, and, in fact, did not contain, that quantity of arsenic when it left Dr. Dimsdale’s surgery or when it was delivered at deceased’s house. Moreover, Miss Norris has sworn that she examined this bottle of medicine at six o’clock in the evening and that it did not then contain more than a small quantity—less than a drachm—of Liquor Arsenicalis. She was perfectly positive. She spoke with expert knowledge. She gave her reasons, and they were sound reasons. So that the evidence in our possession is to the effect that at six o’clock in the afternoon, that bottle of medicine did not contain more than a drachm—about a teaspoonful—of Liquor Arsenicalis; whereas at half-past ten, when a dose from the bottle was given to deceased by the housemaid, it contained some three ounces—about six tablespoonfuls. This is proved by the discovery of the poison in the stomach of deceased and by the exact analysis of the contents of the bottle. It follows that between six o’clock and half-past ten, a large quantity of arsenical solution must have been put into the bottle. It is impossible to suppose that it could have got in by accident. Somebody must have put it in; and the only conceivable object that the person could have had in putting poison into the bottle would be to cause the death of deceased.

"But further; the evidence of the medical witnesses proves that arsenic had been taken by deceased on several previous occasions. That, in fact, he had been taking arsenic in relatively small doses for some time past—how long we do not know—and had been suffering from chronic arsenical poisoning. The evidence, therefore, points very strongly and definitely to the conclusion that some person or persons had been, for some unascertained time past, administering arsenic to him.

"Finally, as to the identity of the person or persons who administered the poison, I need not point out that we have no evidence. You will have noticed that a number of persons benefit in a pecuniary sense by deceased’s death. But that fact establishes no suspicion against any of them in the absence of positive evidence; and there is no positive evidence connecting any one of them with the administration of the poison. With these remarks, gentlemen, I leave you to consider the evidence and agree upon your decision."

The jury did not take long in arriving at their verdict. After a few minutes’ eager discussion, the foreman announced that they had come to an unanimous decision.

"And what is the decision upon which you have agreed?" the coroner asked.
“We find,” was the reply, “that deceased died from the effects of arsenic, administered to him by some person or persons unknown, with the deliberate intention of causing his death.”

“Yes,” said the coroner; “that is, in effect, a verdict of wilful murder against some person or persons unknown. I agree with you entirely. No other verdict was possible on the evidence before us. It is unfortunate that no clue has happened as to the perpetrator of this abominable crime, but we may hope that the investigations of the police will result in the identification and conviction of the murderer.”

The conclusion of the coroner’s address brought the proceedings to an end, and as he finished speaking, the spectators rose and began to pass out of the Court. I remained for a minute to speak a few words to Mr Holman and ask him to transcribe his report in duplicate. Then, I, too, went out to find my three companions squeezing into a taxicab which had drawn up opposite the entrance, watched with ghoulish curiosity by a quite considerable crowd. The presence of that crowd informed me that the horrible notoriety which I had foreseen had now begun to envelop us. The special editions of the evening papers were already out, with, at least, the opening scenes of the inquest in print. Indeed, during the short drive to Hilborough Square, I saw more than one news-vendor dealing out papers to little knots of eager purchasers, and once, through the open window, a stentorian voice was borne in with hideous distinctness, announcing:

“Sensational Inquest! Funeral stopped!”

VII. — THE SEARCH WARRANT

THE consciousness of the horrid notoriety that had already attached itself to us was brought home to me once more when the taxi drew up at the house in Hilborough Square. I stepped out first to pay the driver, and Barbara following, with the latch-key ready in her hand, walked swiftly to the door, looking neither to the right nor left, opened it and disappeared into the hall; while the other two, lurking in the cab until the door was open, then darted across the pavement, entered and disappeared also. Nor was their hasty retreat unjustified. Lingering doggedly and looking about me with a sort of resentful defiance, I found myself a focus of observation. In the adjoining houses, not a window appeared to be unoccupied. The usually vacant foot-way was populous with loiterers whose interest in me and in the ill-omened house was undissembled; while mucous voices, strange to those quiet precincts, told me that the astute news-vendors had scented and exploited a likely market.

With ill-assumed indifference I entered the house and shut the door—perhaps rather noisily; and was about to enter the dining room when I heard hurried steps descending the stairs and paused to look up. It was the woman—the cook’s sister; I think—who had been left to take care of the house while the servants were absent; and something of eagerness and excitement in her manner caused me to walk to the foot of the stairs to meet her.

“Is anything amiss?” I asked in a low voice as she neared the bottom of the flight.

She held up a warning finger, and coming close to me, whispered hoarsely: “There’s two gentlemen upstairs. Sir, leastways they look like gentlemen, but they are really policemen.”

“What are they doing upstairs?” I asked.

“Just walking through the rooms and looking about. They came about a quarter of an hour ago, and when I let them in they said they were police officers and that they had come to search the premises.”

“Did they say anything about a warrant?”

“Oh, yes, Sir. I forgot about that. One of them showed me a paper and said it was a search warrant. So of course I couldn’t do anything. And then they started going through the house with their note-books like auctioneers getting ready for a sale.”

“I will go up and see them,” said I; “and meanwhile you had better let Mrs Monkhouse know. Where did you leave them?”

“In the large back bedroom on the first floor,” she replied. “I think it was Mr Monkhouse’s.”

On this I began quickly to ascend the stairs, struggling to control a feeling of resentment which, though natural enough, I knew to be quite unreasonable. Making my way direct to the dead man’s room, I entered and found two tall men standing before an open cupboard. They turned on hearing me enter and the elder of them drew a large wallet from his pocket.

“Mr Mayfield, I think, sir,” said he. “I am Detective Superintendent Miller and this is Detective-Sergeant Cope. Here is my card and this is the search warrant, if you wish to see it.”

I glanced at the document and returning it to him asked:

“Wouldn’t it have been more in order if you had waited to show the warrant to Mrs Monkhouse before beginning your search?”

“That is what we have done,” he replied, suavely. “We have disturbed nothing yet. We have just been making a preliminary inspection. Of course,” he continued, “I understand how unpleasant this search is for Mrs Monkhouse and the rest of your friends, but you, Sir, as a lawyer will realize the position. That poor gentleman was poisoned with arsenic in this house. Somebody in this house had arsenic in his or her possession and we have got to see if any traces of it are left.
After all, you know, Sir, we are acting in the interests of everybody but the murderer.”

This was so obviously true that it left me nothing to say. Nor was there any opportunity, for, as the superintendent concluded, Barbara entered the room. I looked at her a little anxiously as I briefly explained the situation. But there was no occasion. Pale and sombre, she was nevertheless perfectly calm and self-possessed and greeted the two officers without a trace of resentment; indeed, when the superintendent was disposed to be apologetic, she cut him short by exclaiming energetically: “But, surely, who should be more anxious to assist you than I? It is true that I find it incredible that this horrible crime could have been perpetrated by any member of my household. But it was perpetrated by somebody. And if, either here or elsewhere, I can help you in any way to drag that wretch out into the light of day, I am at your service, no matter who the criminal may be. Do you wish anyone to attend you in your search?”

“I think, Madam, it would be well if you were present, and perhaps Mr Mayfield. If we want any of the others, we can send for them. Where are they now?”

“Miss Norris and Mr Wallingford are in the dining room. The servants have just come in and I think have gone to the kitchen or their sitting room.”

“Then,” said Miller, “we had better begin with the dining room.”

We went down the stairs, preceded by Barbara, who opened the dining room door and introduced the visitors to the two inmates in tones as quiet and matter-of-fact as if she were announcing the arrival of the gas-fitter or the upholsterer. I was sorry that the other two had not been warned, for the announcement took them both by surprise and they were in no condition for surprises of this rather alarming kind. At the word “search,” Madeline started up with a smothered exclamation and then sat down again, trembling and pale as death; while as for Wallingford, if the two officers had come to pinion him and lead him forth to the gallows, he could not have looked more appalled.

Our visitors were scrupulously polite, but they were also keenly observant and I could see that each had made a mental note of the effect of their arrival. But, of course, they made no outward sign of interest in any of us but proceeded stolidly with their business; and I noticed that, before proceeding to a detailed inspection, they opened their note-books and glanced through what was probably a rough inventory, to see that nothing had been moved in the interval since their preliminary inspection.

The examination of the dining room was, however, rather perfunctory. It contained nothing that appeared to interest them, and after going through the contents of the sideboard cupboards methodically, the superintendent turned a leaf of his note-book and said: “I think that will do, Madam. Perhaps we had better take the library next. Who keeps the keys of the bureau and the cupboard?”

“Mr Wallingford has charge of the library,” replied Barbara. “Will you give the superintendent your keys, Tony?”

“There’s no need for that,” said Miller. “If Mr Wallingford will come with us, he can unlock the drawers and cupboard and tell us anything that we want to know about the contents.”

Wallingford rose with a certain alacrity and followed us into the library, which adjoined the dining room. Here the two officers again consulted their note-books, and having satisfied themselves that the room was as they had left it, began a detailed survey, watched closely and with evident anxiety by Wallingford. They began with a cupboard, or small armoire, which formed the upper member of a large, old-fashioned bureau. Complying with Miller’s polite request that it might be unlocked, Wallingford produced a bunch of keys, and, selecting from it, after much nervous fumbling, a small key, endeavoured to insert it into the keyhole; but his hand was in such a palsied condition that he was unable to introduce it.

“Shall I have a try, Sir?” the superintendent suggested, patiently, adding with a smile, “I don’t smoke quite so many cigarettes as you seem to.”

His efforts, however, also failed, for the evident reason that it was the wrong key. Thereupon he looked quickly through the bunch, picked out another key and had the cupboard open in a twinkling, revealing a set of shelves crammed with a disorderly litter of cardboard boxes, empty ink-bottles, bundles of letters and papers and the miscellaneous rubbish that accumulates in the receptacles of a thoroughly untidy man. The superintendent went through the collection methodically, emptying the shelves, one at a time, on to the flap of the bureau, where he and the sergeant sorted the various articles and examining each, returned it to the shelf. It was a tedious proceeding and, so far as I could judge, unproductive, for, when all the shelves had been looked through and every article separately inspected, nothing was brought to light save an empty foolscap envelope which had apparently once contained a small box and was addressed to Wallingford, and two pieces of what looked like chemist’s wrapping-paper, the creases in which showed that they had been small packets. These were not returned to the shelves, but, without comment, enclosed in a large envelope on which the superintendent scribbled a few words with a pencil and which was then consigned to a large handbag that the sergeant had brought in with him from the hall.

The large drawers of the bureau were next examined. Like the shelves, they were filled with a horrible accumulation of odds and ends which had evidently been stuffed into them to get them out of the way. From this collection nothing was obtained which interested the officers, who next turned their attention to the small drawers and pigeonholes at the back of the flap. These, however, contained nothing but stationery and a number of letters, bills and other papers, which the two officers glanced through and replaced. When all the small drawers and pigeonholes had been examined, the superintendent stood up, fixing a thoughtful glance at the middle of the range of drawers; and I waited expectantly for the
next development. Like many old bureaus, this one had as a central feature a nest of four very small drawers enclosed by a door. I knew the arrangement very well, and so, apparently, did the superintendent; for, once more opening the top drawer, he pulled it right out and laid it on the writing flap. Then, producing from his pocket a folding foot-rule, he thrust it into one of the pigeonholes, showing a depth of eight and a half inches, and then into the case of the little drawer, which proved to be only a fraction over five inches deep.

“There is something more here than meets the eye,” he remarked pleasantly. “Do you know what is at the back of those drawers, Mr Wallingford?”

The unfortunate secretary, who had been watching the officer’s proceedings with a look of consternation, did not reply for a few moments, but remained staring wildly at the aperture from which the drawer had been taken out.

“At the back?” he stammered, at length. “No, I can’t say that I do. It isn’t my bureau, you know. I only had the use of it.”

“I see,” said Miller. “Well, I expect we can soon find out.”

He drew out a second drawer and, grasping the partition between the two, gave a gentle pull, when the whole nest slid easily forward and came right out of its case. Miller laid it on the writing flap, and, turning it round, displayed a sliding lid at the back, which he drew up; when there came into view a set of four little drawers similar to those in front but furnished with leather tabs instead of handles. Miller drew out the top drawer and a sudden change in the expression on his face told me that he had lighted on something that seemed to him significant.

“Now I wonder what this is?” said he, taking from the drawer a small white-paper packet. “Feels like some sort of powder. You say you don’t know anything about it, Mr Wallingford?”

Wallingford shook his head but made no further reply, whereupon the superintendent laid the packet on the flap and very carefully unfolded the ends—it had already been opened—when it was seen that the contents consisted of some two or three teaspoonfuls of a fine, white powder.

“Well,” said Miller, “we shall have to find out what it is. Will you pass me that bit of sealing-wax, Sergeant?”

He reclosed the packet with the greatest care and having sealed both the ends with his signet-ring, enclosed it in an envelope and put it into his inside breast pocket. Then he returned to the little nest of drawers. The second drawer was empty, but on pulling out the third, he uttered an exclamation.

“Well, now! Look at that! Somebody seems to have been fond of physic. And there’s no doubt as to what this is. Morphine hydrochlor, a quarter of a grain.”

As he spoke, he took out of the drawer a little bottle filled with tiny white discs or tablets and bearing on the label the inscription which the superintendent had read out. Wallingford gazed at it with a foolish expression of surprise as Miller held it up for our—and particularly Wallingford’s—inspection; and Barbara, I noticed, cast at the latter a side-long, inscrutable glance which I sought in vain to interpret.

“Morphine doesn’t seem much to the point,” Miller remarked as he wrapped the little bottle in paper and bestowed it in his inner pocket, “but, of course, we have only got the evidence of the label. It may turn out to be something else, when the chemical gentlemen come to test it.”

With this he grasped the tab of the bottom drawer and drew the latter out; and in a moment his face hardened. Very deliberately, he picked out a small, oblong envelope, which appeared once to have contained a box or hard packet, but was now empty. It had evidently come through the post and was addressed in a legible business hand to “A Wallingford Esq., 16 Hilborough Square.” Silently the superintendent held it out for us all to see, as he fixed a stern look on Wallingford. “You observe, Sir,” he said, at length, “that the post-mark is dated the 20th of August; only about a month ago. What have you to say about it?”

“Nothing,” was the sullen reply. “What comes to me by post is my affair. I am not accountable to you or anybody else.”

For a moment, the superintendent’s face took on a very ugly expression. But he seemed to be a wise man and not unkindly, for he quickly controlled his irritation and rejoined without a trace of anger, though gravely enough: “Be advised by me, Mr Wallingford, and don’t make trouble for yourself. Let me remind you what the position is. In this house a man has died from arsenic poisoning. The police will have to find out how that happened and if anyone is open to the suspicion of having poisoned him. I have come here today for that purpose with full authority to search this house. In the course of my search I have asked you for certain information, and you have made a number of false statements. Believe me, sir, that is a very dangerous thing to do. It inevitably raises the question why those false statements should have been made. Now, I am going to ask you one or two questions. You are not bound to answer them, but you will be well advised to hold nothing back, and, above all, to say nothing that is not true. To begin with that packet of powder. What do you say that packet contains?”

Wallingford, who characteristically, was now completely cowed by the superintendent’s thinly-veiled threats, hung his head for a moment and then replied, almost inaudibly, “Cocaine.”

“What were you going to do with cocaine?” Miller asked.

“I was going to take a little of it for my health.”

The superintendent smiled faintly as he demanded: “And the morphine tablets?”
"I had thought of taking one of them occasionally to—er—to steady my nerves."

Miller nodded, and casting a swift glance at the sergeant, asked:

"And the packet that was in this envelope: what did that contain?"

Wallingford hesitated and was so obviously searching for a plausible lie that Miller interposed, persuasively: "Better tell the truth and not make trouble"; whereupon Wallingford replied in a barely audible mumble that the packet had contained a very small quantity of cocaine.

"What has become of that cocaine?" the superintendent asked.

"I took part of it; the rest got spilt and lost."

Miller nodded rather dubiously at this reply and then asked:

"Where did you get this cocaine and the morphine?"

Wallingford hesitated for some time and at length, plucking up a little courage again, replied: "I would rather not answer that question. It really has nothing to do with your search. You are looking for arsenic."

Miller reflected for a few moments and then rejoined, quietly:

"That isn’t quite correct, Mr Wallingford. I am looking for anything that may throw light on the death of Mr Monkhouse. But I don’t want to press you unduly, only I would point out that you could not have come by these drugs lawfully. You are not a doctor or a chemist. Whoever supplied you with them was acting illegally and you have been a party to an illegal transaction in obtaining them. However, if you refuse to disclose the names of the persons who supplied them, we will let the matter pass, at least for the present; but I remind you that you have had these drugs in your possession and that you may be, and probably will be compelled to give an account of the way in which you obtained them."

With that he pocketed the envelope, closed the drawers and turned to make a survey of the room. There was very little in it, however, for the bureau and its surmounting cupboard were the only receptacles in which anything could be concealed, the whole of the walls being occupied by open book-shelves about seven feet high. But even these the superintendent was not prepared to take at their face value. First, he stood on a chair and ran his eye slowly along the tops of all the shelves; then he made a leisurely tour of the room, closely inspecting each row of books, now and again taking one out or pushing one in against the back of the shelves. A set of box-files was examined in detail, each one being opened to ascertain that it contained nothing but papers, and even one or two obvious portfolios were taken out and inspected. Nothing noteworthy, however, was brought to light by this rigorous search until the tour of inspection was nearly completed. The superintendent was, in fact, approaching the door when his attention was attracted by a row of books which seemed to be unduly near the front edge of the shelf. Opposite this he halted and began pushing the books back, one at a time. Suddenly I noticed that one of the books, on being pushed, slid back about half an inch and stopped as if there were something behind it. And there was. When the superintendent grasped the book and drew it out, there came into view, standing against the back of the shelf, a smallish bottle, apparently empty, and bearing a white label.

"Queer place to keep a bottle," Miller remarked, adding, with a smile, "unless it were a whiskey bottle, which it isn’t." He drew it out, and after looking at it suspiciously and holding it up to the light, took out the cork and sniffed at it. "Well," he continued, "it is an empty bottle and it is labelled ‘Benzine.’ Do you know anything about it, Mr Wallingford?"

"No, I don’t," was the reply. "I don’t use benzine, and if I did I should not keep it on a book-shelf. But I don’t see that it matters much. There isn’t any harm in benzine, is there?"

"Probably not," said Miller; "but, you see, the label doesn’t agree with the smell. What do you say, Mrs Monkhouse?"

He once more drew out the cork and held the bottle towards her. She took it from him and having smelled at it, replied promptly: "It smells to me like lavender. Possibly the bottle has had lavender water in it, though I shouldn’t, myself, have chosen a benzine bottle to keep a perfume in."

"I don’t think it was lavender water," said the superintendent. "That, I think, is nearly colourless. But the liquid that was in this bottle was red. As I hold it up to the light, you can see a little ring of red round the edge of the bottom. I daresay the chemists will be able to tell us what was in the bottle, but the question now is, who put it there? You are sure you can’t tell us anything about it, Mr Wallingford?"

"I have never seen it before, I assure you," the latter protested almost tearfully. "I know nothing about it, whatsoever. That is the truth, Superintendent; I swear to God it is."

"Very well, sir," said Miller, writing a brief note on the label and making an entry in his note-book. "Perhaps it is of no importance after all. But we shall see. I think we have finished this room. Perhaps, Sergeant, you might take a look at the drawing room while I go through Mr Monkhouse’s room. It will save time. And I needn’t trouble you anymore just at present, Mr Wallingford."

The secretary retired, somewhat reluctantly, to the dining room while Barbara led the way to the first floor. As we entered the room in which that un witnessed tragedy had been enacted in the dead of the night, I looked about me with a sort of shuddering interest. The bed had been stripped, but otherwise nothing seemed to be changed since I had seen the room but a few days ago when it was still occupied by its dread tenant. The bedside table still bore its pathetic furnishings: the water-bottle, the little decanter, the books, the candle-box, the burnt-out lamp, the watch—though that ticked no
longer, but seemed, with its motionless hands, to echo the awesome stillness that pervaded that ill-omened room.

As the superintendent carried out his methodical search, joined presently by the sergeant, Barbara came and stood by me with her eyes fixed gloomily on the table.

"Were you thinking of him, Rupert?" she whispered. "Were you thinking of that awful night when he lay here, dying, all alone, and—Oh! the thought of it will haunt me every day of my life until my time comes, too, however far off that may be."

I was about to make some reply, as consolatory as might be, when the superintendent announced that he had finished and asked that Wallingford might be sent for to be present at the examination of his room. I went down to deliver the message, and, as it would have appeared intrusive for me to accompany him, I stayed in the dining room with Madeline, who, though she had recovered from the shock of the detectives' arrival, was still pale and agitated.

"Poor Tony seemed dreadfully upset when he came back just now." she said. "What was it that happened in the library?"

"Nothing very much," I answered. "The superintendent unearthed his little stock of dope; which, of course, was unpleasant for him, but it would not have mattered if he had not been fool enough to lie about it. That was a fatal thing to do, under the circumstances."

As Wallingford seemed not to have said anything about the bottle, I made no reference to it, but endeavoured to distract her attention from what was going on in the house by talking of other matters. Nor was it at all difficult; for the truth is that we all, with one accord, avoided any reference to the horrible fact which was staring us in the face, and of which we must all have been fully conscious. So we continued a somewhat banal conversation, punctuated by pauses in which our thoughts stole secretly back to the hideous realities, until, at length, Wallingford returned, pale and scowling, and flung himself into an arm-chair. Madeline looked at him inquiringly, but as he offered no remark but sat in gloomy silence, smoking furiously, she asked him no questions, nor did I.

A minute or two later, Barbara came into the room, quietly and with an air of calm self-possession that was quite soothing in the midst of the general emotional tension.

"Do you mind coming up, Madeline?" she said. "They are examining your room and they want you to unlock the cupboard. You have your keys about you, I suppose?"

"Yes," Madeline replied, rising and taking from her pocket a little key-wallet. "That is the key. Will you take it up to them?"

"I think you had better come up yourself," Barbara replied. "It is very unpleasant but, of course, they have to go through the formalities, and we must not appear unwilling to help them."

"No, of course," said Madeline. "Then I will come with you, but I should like Rupert to come, too, if he doesn't mind. Will you?" she asked, looking at me appealingly. "Those policemen make me feel so nervous."

Of course, I assented at once; and as Wallingford, muttering "Damned impertinence! Infernal indignity!" rose to open the door for us, we passed out and took our way upstairs.

"I am sorry to trouble you, Miss Norris," said Miller, in a suave tone, as we entered, "but we must see everything if only to be able to say that we have. Would you be so kind as to unlock this cupboard?"

He indicated a narrow cupboard which occupied one of the recesses by the chimney-breast, and Madeline at once inserted the key and threw open the door. The interior was then seen to be occupied by shelves, of which the lower ones were filled, tidily enough, with an assortment of miscellaneous articles—shoes, shoe-trees, brushes, leather bags, cardboard boxes, note-books and other "oddments"—while the top shelf seemed to have been used as a repository for jars, pots and bottles, of which several appeared to be empty. It was this shelf which seemed to attract the superintendent's attention and he began operations by handing out its various contents to the sergeant, who set them down on a table in orderly rows. When they were all set out and the superintendent had inspected narrowly and swept his hand over the empty shelf, the examination of the jars and bottles began.

The procedure was very methodical and thorough. First, the sergeant picked up a bottle or jar, looked it over carefully, read the label if there was one, uncovered or uncorked it, sniffed it and passed it to the superintendent, who, when he had made a similar inspection, put it down at the opposite end of the table.

"Can you tell us what this is?" Miller asked, holding out a bottle filled with a thickish, nearly black liquid.

"That is caramel," Madeline replied. "I use it in my cookery classes and for cooking at home, too."

The superintendent regarded the bottle a little dubiously but set it down at the end of the table without comment. Presently he received from the sergeant a glass jar filled with a brownish powder.

"There is no label on this," he remarked, exhibiting it to Madeline.

"No," she replied. "It is turmeric. That also is used in my classes; and that other is powdered saffron."

"I wonder you don't label them," said Miller. "It would be easy for a mistake to occur with all these unlabelled bottles."

"Yes," she admitted, "they ought to be labelled. But I know what each of them is, and they are all pretty harmless. Most of them are materials that are used in cookery demonstrations, but that one that you have now is French chalk, and the one the sergeant has is pumice-powder."
“H’m,” grunted Miller, dipping his finger into the former and rubbing it on his thumb; “what would happen if you thickened a soup with French chalk or pumice-powder? Not very good for the digestion, I should think.”

“No, I suppose not,” Madeline agreed, with the ghost of a smile on her pale face. “I must label them in future.”

During this colloquy I had been rapidly casting my eye over the collection that still awaited examination, and my attention had been almost at once arrested by an empty bottle near the end of the row. It looked to me like the exact counterpart of the bottle which had been found in the library; a cylindrical bottle of about the capacity of half a pint, or rather less, and like the other, labelled in printed characters ‘Benzine.’

But mine was not the only eye that had observed it. Presently, I saw the sergeant pick it up—out of its turn—scrutinize it suspiciously,—hold it up to the light, take out the cork and smell both it and the bottle, and then, directing the latter, telescope-fashion, towards the window, inspect the bottom by peering in through the mouth. Finally, he clapped in the cork with some emphasis, and with a glance full of meaning handed the bottle to the superintendent.

The latter repeated the procedure in even more detail. When he had finished, he turned to Madeline with a distinctly inquisitorial air.

“This bottle, Miss Norris,” said he, “is labelled ‘Benzine.’ But it was not benzine that it contained. Will you kindly smell it and tell me what you think it did contain. Or perhaps you can say off-hand.”

“I am afraid I can’t,” she replied. “I have no recollection of having had any benzine and I don’t remember this bottle at all. As it is in my cupboard I suppose I must have put it there, but I don’t remember having ever seen it before. I can’t tell you anything about it.”

“Well, will you kindly smell it and tell me what you think it contained?” the superintendent persisted, handing her the open bottle. She took it from him apprehensively, and, holding it to her nose, took a deep sniff; and instantly her already pale face became dead white to the very lips.

“It smells of lavender,” she said in a faint voice.

“So I thought,” said Miller. “And now, Miss Norris, if you will look in at the mouth of the bottle against the light, you will see a faint red ring round the bottom. Apparently, the liquid that the bottle contained was a red liquid. Moreover, if you hold the bottle against the light and look through the label, you can see the remains of another label under it. There is only a tiny scrap of it left, but it is enough for us to see that it was a red label. So it would seem that the liquid was a poisonous liquid—poisonous enough to require a red poison label. And then you notice that this red poison label seems to have been scraped off and the benzine label stuck on over the place where it had been, although, as the lavender smell and the red stain clearly show, the bottle never had any benzine in it at all. Now, Miss Norris, bearing those facts in mind, I ask you if you can tell me what was in that bottle.”

“I have told you,” Madeline replied with unexpected firmness, “that I know nothing about this bottle. I have no recollection of ever having seen it before. I do not believe that it ever belonged to me. It may have been in the cupboard when I first began to use it. At any rate, I am not able to tell you anything about it.”

The superintendent continued to look at her keenly, still holding the bottle. After a few moments’ silence he persisted: “A red, poisonous liquid which smells of lavender. Can you not form any idea as to what it was?”

I was about to enter a protest—for the question was really not admissible—when Madeline, now thoroughly angry and quite self-possessed, replied, stiffly: “I don’t know what you mean. I have told you that I know nothing about this bottle. Are you suggesting that I should try to guess what it contained?”

“No,” he rejoined hastily; “certainly not. A guess wouldn’t help us at all. If you really do not know anything about the bottle, we must leave it at that. You always keep this cupboard locked, I suppose?”

“Usually. But I am not very particular about it. There is nothing of value in the cupboard, as you see, and the servants are quite trustworthy. I sometimes leave the key in the door, but I don’t imagine that anybody ever meddles with it.”

The superintendent took the key out of the lock and regarded it attentively. Then he examined the lock itself, and I also took the opportunity of inspecting it. Both the lock and the key were of the simplest kind, just ordinary builder’s fittings, which, so far as any real security was concerned, could not be taken seriously. In the absence of the key, a stiff wire or a bent hair-pin would probably have shot that little bolt quite easily, as I took occasion to remark to the superintendent, who frankly agreed with me.

The bottle having been carefully wrapped up and deposited in the sergeant’s hand-bag, the examination was resumed; but nothing further of an interesting or suspicious character was discovered among the bottles or jars. Nor did the sorting-out of the miscellaneous contents of the lower shelves yield anything remarkable with a single exception. When the objects on the lowest shelf had been all taken out, a small piece of white paper was seen at the back, and on this Miller pounced with some eagerness. As he brought it out I could see that it was a chemist’s powder paper, about six inches square (when Miller had carefully straightened it out), and the creases which marked the places where it had been folded showed that it had contained a mass of about the bulk of a dessert-spoonful. But what attracted my attention—and the superintendent’s—was the corner of a red label which adhered to a torn edge in company with a larger fragment of a white label on which the name or description of the contents had presumably been written or printed. Miller held it out towards Madeline, who looked at it with a puzzled frown.
“Do you remember what was in this paper, Miss Norris?” the former asked.
“I am afraid I don’t,” she replied.
“I’m,” grunted Miller; “I should have thought you would. It seems to have been a good-sized powder and it had a poison label in addition to the descriptive label. I should have thought that would have recalled it to your memory.”
“So should I,” said Madeline. “But I don’t remember having bought any powder that would be labelled ‘poison.’ It is very odd; and it is odd that the paper should be there. I don’t usually put waste paper into my cupboard.”
“Well, there it is,” said Miller, “but if you can’t remember anything about it, we must see if the analysts can find out what was in it.” With which he folded it and having put it into an envelope, bestowed it in his pocket in company with his other treasures.

This was the last of the discoveries. When they had finished their inspection of Madeline’s room the officers went on to Barbara’s, which they examined with the same minute care as they had bestowed on the others, but without bringing anything of interest to light. Then they inspected the servants’ bedrooms and finally the kitchen and the other premises appertaining to it, but still without result. It was a tedious affair and we were all relieved when, at last, it came to an end. Barbara and I escorted the two detectives to the street door, at which the superintendent paused to make a few polite acknowledgments.

“I must thank you, Madam,” said he, “for the help you have given us and for the kind and reasonable spirit in which you have accepted a disagreeable necessity. I assure you that we do not usually meet with so much consideration. A search of this kind is always an unpleasant duty to carry out and it is not made any more pleasant by a hostile attitude on the part of the persons concerned.”

“I can understand that,” replied Barbara; “but really the thanks are due from me for the very courteous and considerate way in which you have discharged what I am sure must be a most disagreeable duty. And of course, it had to be; and I am glad that it has been done so thoroughly. I never supposed that you would find what you are seeking in this house. But it was necessary that the search should be made here if only to prove that you must look for it somewhere else.”

“Quite so, Madam,” the superintendent returned, a little drily; “and now I will wish you good afternoon and hope that we shall have no further occasion to trouble you.”

As I closed the street door and turned back along the hall, the dining room door—apparently already ajar—opened and Madeline and Wallingford stepped out; and I could not help reflecting, as I noted their pale, anxious faces and shaken bearing, how little their appearance supported the confident, optimistic tone of Barbara’s last remarks. But, at any rate, they were intensely relieved that the ordeal was over, and Wallingford even showed signs of returning truculence.

Whatever he was going to say, however, was cut short by Barbara, who, passing the door and moving towards the staircase, addressed me over her shoulder.

“Do you mind coming up to my den, Rupert? I want to ask your advice about one or two things.”

The request seemed a little inopportune; but it was uttered as a command and I had no choice but to obey. Accordingly, I followed Barbara up the stairs, leaving the other two in the hall, evidently rather disconcerted by this sudden retreat. At the turn of the stairs I looked down on the two pale faces. In Madeline’s I seemed to read a new apprehensiveness, tinged with suspicion; on Wallingford’s a scowl of furious anger which I had no patience to seek to interpret.

VIII. — THORDYKE SPEAKS BLUNTLY

WHEN I had entered the little sitting room and shut the door, I turned to Barbara, awaiting with some curiosity what she had to say to me. But for a while she said nothing, standing before me silently, and looking at me with a most disquieting expression. All her calm self-possession had gone. I could read nothing in her face but alarm and dismay.

“It is dreadful, Rupert!” she exclaimed, at length, in a half-whisper. “It is like some awful dream! What can it all mean? I don’t dare to ask myself the question.”

I shook my head, for I was in precisely the same condition. I did not dare to weigh the meaning of the things that I had seen and heard.

Suddenly, the stony fixity of her face relaxed and with a little smothered cry she flung her arm around my neck and buried her face on my shoulder.

“Forgive me, Rupert, dearest, kindest friend,” she sobbed. “Suffer a poor lonely woman for a few moments. I have only you, dear, faithful one; only your strength and steadfastness to lean upon. Before the others I must needs be calm and brave, must cloak my own fears to support their flagging courage. But it is hard, Rupert; for they see what we see and dare not put it into words. And the mystery, Rupert, the horrible shadow that is over us all! In God’s name, what can it all mean?”

“That is what I ask myself, Barbara, and dare not answer my own question.”

She uttered a low moan and clung closer to me, sobbing quietly. I was deeply moved, for I realized the splendid courage that enabled her to go about this house of horror, calm and unafraid; to bear the burden of her companions’ weakness as
well as her own grief and humiliation. But I could find nothing to say to her. I could only offer her a silent sympathy, holding her head on my shoulder and softly stroking her hair while I wondered dimly what the end of it all would be.

Presently she stood up, and, taking out her handkerchief, wiped her eyes resolutely and finally.

"Thank you, dear Rupert," she said, "for being so patient with me. I felt that I had come to the end of my endurance and had to rest my burden on you. It was a great relief. But I didn't bring you up here for that. I wanted to consult you about what has to be done. I can't look to poor Tony in his present state."

"What is it that has to be done?" I asked.

"There is the funeral. That has still to take place."

"Of course it has," I exclaimed, suddenly taken aback; for amidst all the tumults and alarms, I had completely lost sight of this detail. "I suppose I had better call on the undertaker and make the necessary arrangements."

"If you would be so kind, Rupert, and if you can spare the time. You have given up the whole day to us already." "I can manage," said I. "And as to the time of the funeral, I don't know whether it could be arranged for the evening. It gets dark pretty early."

"No, Rupert," she exclaimed, firmly. "Not in the evening. Certainly not. I will not have poor Harold's body smuggled away in the dark like the dishonoured corpse of some wretched suicide. The funeral shall take place at the proper time, if I go with it alone."

"Very well, Barbara. I will arrange for us to start at the time originally fixed. I only suggested the evening because—well, you know what to expect."

"Yes, only too well! But I refuse to let a crowd of gaping sight-seers intimidate me into treating my dead husband with craven disrespect."

"Perhaps you are right," said I with secret approval of her decision, little as I relished the prospect that it opened. "Then I had better go and make the arrangements at once. It is getting late. But I am loath to leave you alone with Madeline and Wallingford."

"I think, perhaps, we shall be better alone for the present, and you have your own affairs to attend to. But you must have some food before you go. You have had nothing since the morning, and I expect a meal is ready by now."

"I don't think I will wait, Barbara," I replied. "This affair ought to be settled at once. I can get some food when I have dispatched the business."

She was reluctant to let me go. But I was suddenly conscious of a longing to escape from this house into the world of normal things and people; to be alone for a while with my own thoughts, and, above all, to take counsel with Thorndyke. On my way out I called in at the dining room to make my adieux to Madeline and Wallingford. The former looked at me, as she shook my hand, very wistfully and I thought a little reproachfully.

"I am sorry you have to go, Rupert," she said. "But you will try to come and see us tomorrow, won't you? And spend as much time here as you can."

I promised to come at some time on the morrow; and having exchanged a few words with Wallingford, took my departure, escorted to the street door by the two women.

The closing of the door, sounding softly in my ears, conveyed a sense of relief of which I felt ashamed. I drew a deep breath and stepped forward briskly with a feeling of emancipation that I condemned as selfish and disloyal even as I was sensible of its insensitivity. It was almost with a sense of exhilaration that I strode along, a normal, unnoticed wayfarer among ordinary men and women, enveloped by no cloud of mystery, overhung by no shadow of crime. There was the undertaker, indeed, who would drag me back into the gruesome environment, but I would soon have finished with him, and then, for a time, at least, I should be free.

I finished with him, in fact, sooner than I had expected, for he had already arranged the procedure of the postponed funeral and required only my assent; and when I had given this, I went my way breathing more freely but increasingly conscious of the need for food.

Yet, after all, my escape was only from physical contact. Try as I would to forget for a while the terrible events of this day of wrath, the fresh memories of them came creeping back in the midst of those other thoughts which I had generated by a deliberate effort. They haunted me as I walked swiftly through the streets, they made themselves heard above the rumble of the train, and even as I sat in a tavern in Devereux Court, devouring with ravenous appreciation a well-grilled chop, accompanied by a pint of claret, black care stood behind the old-fashioned, high-backed settle, an unseen companion of the friendly waiter.

The lighted windows of Thorndyke's chambers were to my eyes as the harbour lights to the eyes of a storm-beaten mariner. As I emerged from Fig Tree Court and came in sight of them, I had already the feeling that the burden of mystery and vague suspicion was lightened; and I strode across King's Bench Walk with the hopeful anticipation of one who looks to shift his fardel on to more capable shoulders.

The door was opened by Thorndyke, himself; and the sheaf of papers in his hand suggested that he was expecting me.
"Are those the depositions?” I asked as we shook hands.

"Yes,” he replied. “I have just been reading through them and making an abstract. Holman has left the duplicate at your chambers.”

“I suppose the medical evidence represents the 'complications' that you hinted at? You expected something of the kind?”

“Yes. An inquest in the face of a regular death certificate suggested some pretty definite information; and then your own account of the illness told one what to expect.”

“And yet,” said I, “neither of the doctors suspected anything while the man was alive.”

“No; but that is not very remarkable. I had the advantage over them of knowing that a death certificate had been challenged. It is always easier to be wise after than before the event.”

“And now that you have read the depositions, what do you think of the case? Do you think, for instance, that the verdict was justified?”

“Undoubtedly,” he replied. “What other verdict was possible on the evidence that was before the court? The medical witness swore that deceased died from the effects of arsenic poisoning. That is an inference, it is true. The facts are that the man died and that a poisonous quantity of arsenic was found in the body. But it is the only reasonable inference and we cannot doubt that it is the true one. Then again as to the question of murder as against accident or suicide, it is one of probabilities. But the probabilities are so overwhelmingly in favour of murder that no others are worth considering. No, Mayfield, on the evidence before us, we have to accept the verdict as expressing the obvious truth.”

“You think it impossible that there can be any error or fallacy in the case?”

“I don’t say that,” he replied. “I am referring exclusively to the evidence which is set forth in these depositions. That is all the evidence that we possess. Apart from the depositions we have no knowledge of the case at all; at least I have none, and I don’t suppose you have any.”

“I have not. But I understand that you think it at least conceivable that there may be, after all, some fallacy in the evidence of wilful murder?”

“A fallacy,” he replied, “is always conceivable. As you know, Mayfield, complete certainty, in the most rigorous sense, is hardly ever attainable in legal practice. But we must be reasonable. The law has to be administered; and if certainty, in the most extreme, academic sense, is unattainable, we must be guided in our action by the highest degree of probability that is within our reach.”

“Yes, I realize that. But still you admit that a fallacy is conceivable. Can you list for the sake of illustration, suggest any such possibility in the evidence that you have read?”

“Well,” he replied, “as a matter of purely academic interest, there is the point that I mentioned just now. The body of this man contained a lethal quantity of arsenic. With that quantity of poison in his body, the man died. The obvious inference is that those two facts were connected as cause and effect. But it is not absolutely certain that they were. It is conceivable that the man may have died from some natural cause overlooked by the pathologist—who was already aware of the presence of arsenic, from Detling’s information; or again it is conceivable that the man may have been murdered in some other way—even by the administration of some other, more rapidly acting poison, which was never found because it was never looked for. These are undeniable possibilities. But I doubt if any reasonable person would entertain them, seeing that they are mere conjectures unsupported by any sort of evidence. And you notice that the second possibility leaves the verdict of wilful murder unaffected.”

“Yes, but it might transfer the effects of that verdict to the wrong person.”

“True,” he rejoined with a smile. “It might transfer them from a poisoner who had committed a murder to another poisoner who had only attempted to commit one; and the irony of the position would be that the latter would actually believe himself to be the murdererer. But as I said, this is mere academic talk. The coroner’s verdict is the reality with which we have to deal.”

“I am not so sure of that, Thorndyke,” said I, inspired with a sudden hope by his ‘illustration.’ “You admit that fallacies are possible and you are able to suggest two off-hand. You insist, very properly, that our opinions at present must be based exclusively on the evidence given at the inquest. But, as I listened to that evidence, I had the feeling—and I have it still—that it did not give a credible explanation of the facts that were proved. I had—and have—the feeling that careful and competent investigation might bring to light some entirely new evidence.”

“It is quite possible,” he admitted, rather drily.

“Well, then,” I pursued, “I should wish some such investigation to be made. I can recall a number of cases in which the available evidence, as in the present case, appeared to point to a certain definite conclusion, but in which investigations undertaken by you brought out a body of new evidence pointing in a totally different direction. There was the Hornby case, the case of Blackmore, deceased, the Bellingham case and a number of others in which the result of your investigations was to upset completely a well-established case against some suspected individual.”

He nodded, but made no comment, and I concluded with the question: “Well, why should not a similar result follow in the present case?”
He reflected for a few moments and then asked: “What is it that is in your mind, Mayfield? What, exactly do you propose?”

“I am proposing that you should allow me to retain you on my own behalf and that of other interested parties to go thoroughly into this case.”

“With what object?”

“With the object of bringing to light the real facts connected with the death of Harold Monkhouse.”

“Are you authorized by any of the interested parties to make this proposal?”

“No; and perhaps I had better leave them out and make the proposal on my own account only.”

He did not reply immediately but sat looking at me steadily with a rather inscrutable expression which I found a little disturbing. At length he spoke, with unusual deliberation and emphasis.

“Are you sure, Mayfield, that you want the real facts brought to light?”

I stared at him, startled and a good deal taken aback by his question, and especially by the tone in which it was put. “But, surely,” I stammered, in reply. “Why not?”

“Don’t be hasty, Mayfield,” said he. “Reflect calmly and impartially before you commit yourself to any course of action of which you cannot foresee the consequences. Perhaps I can help you. Shall we, without prejudice and without personal bias, take a survey of the status quo and try to see exactly where we stand?”

“By all means,” I replied, a little uncomfortably.

“Well,” he said, “the position is this. A man has died in a certain house, to which he has been confined as an invalid for some considerable time. The cause of his death is stated to be poisoning by arsenic. That statement is made by a competent medical witness who has had the fullest opportunity to ascertain the facts. He makes the statement with complete confidence that it is a true statement, and his opinion is supported by those of two other competent professional witnesses. It is an established fact, which cannot be contested, that the body of deceased contained sufficient arsenic to cause his death. So far as we can see, there is not the slightest reason to doubt that the man died from arsenical poisoning.

“When we come to the question, ‘How did the arsenic find its way into the man’s body?’ there appears to be only one possible answer. Suicide and accident are clearly excluded. The evidence makes it practically certain that the poison was administered to him by some person or persons with the intent to compass his death; and the circumstances in which the poisoning occurred make it virtually certain that the arsenic was administered to this man by some person or persons customarily and intimately in contact with him.

“The evidence shows that there were eight persons who would answer this description; and we have no knowledge of the existence of any others. Those persons are: Barbara Monkhouse, Madeline Norris, Anthony Wallingford, the housemaid, Mabel Withers, the cook, the kitchenmaid, Dr Dimsdale and Rupert Mayfield. Of these eight persons the police will assume that one, or more, administered the poison; and, so far as we can see, the police are probably right.”

I was rather staggered by his bluntness. But I had asked for his opinion and I had got it. After a brief pause, I said: “We are still, of course, dealing with the deposits. On those, as you say, a presumption of guilt lies against these eight persons collectively. That doesn’t carry us very far in a legal sense. You can’t indict eight persons as having among them the guilty party. Do you take it that the presumption of guilt lies more heavily on some of these persons than on others?”

“Undoubtedly,” he replied. “I enumerated them merely as the body of persons who fulfilled the necessary conditions as to opportunity and among whom the police will—reasonably—look for the guilty person. In a sense, they are all suspect until the guilt is fixed on a particular person. They all had, technically, a motive, since they all benefited by the death of deceased. Actually, none of them has been shown to have any motive at all in an ordinary and reasonable sense. But for practical purposes, several of them can almost be put outside the area of suspicion; the kitchenmaid, for instance, and Dr Dimsdale and yourself.”

“And Mrs Monkhouse,” I interposed, “seeing that she appears to have been absent and far away on each occasion when the poison seems to have been administered.”

“Precisely,” he agreed. “In fact, her absence would seem to exclude her from the group of possible suspects. But apart from its bearing on herself, her absence from home on these occasions has a rather important bearing on some of the others.”

“Indeed!” said I, trying rapidly to judge what that bearing might be.

“Yes, it is this: the fact that the poisoning occurred—as it appears—only when Mrs Monkhouse was away from home, suggests not only that the poisoner was fully cognizant of her movements, which all the household would be, but that her presence at home would have hindered that poisoner from administering the poison. Now, the different persons in the house would be differently affected by her presence. We need not pursue the matter any further just now, but you must see that the hindrance to the poisoning caused by Mrs Monkhouse’s presence would be determined by the nature of the relations between Mrs Monkhouse and the poisoner.”

“Yes, I see that.”
“And you see that this circumstance tends to confirm the belief that the crime was committed by a member of the household?”

“I suppose it does,” I admitted, grudgingly.

“It does, certainly,” said Thorndyke; “and that being so, I ask you again: do you think it expedient that you should meddle with this case? If you do, you will be taking a heavy responsibility; for I must remind you that you are not proposing to employ me as a counsel, but as an investigator who may become a witness. Now, when I plead in court, I act like any other counsel; I plead my client’s case frankly as an advocate, knowing that the judge is there to watch over the interests of justice. But as an investigator or witness I am concerned only with the truth. I never give ex parte evidence. If I investigate a crime and discover the criminal, I denounce him, even though he is my employer; for otherwise I should become an accessory. Whoever employs me as an investigator of crime does so at his own risk.

“Bear this in mind, Mayfield, before you go any further in this matter. I don’t know what your relations are to these people, but I gather that they are your friends; and I want you to consider very seriously whether you are prepared to risk the possible consequences of employing me. It is actually possible that one or more of these persons may be indicted for the murder of Harold Monkhouse. That would, in any case, be extremely painful for you. But if it happened through the action of the police, you would be, after all, but a passive spectator of the catastrophe. Very different would be the position if it were your own hand that had let the axe fall. Are you prepared to face the risk of such a possibility?”

I must confess that I was daunted by Thorndyke’s blunt statement of the position. There was no doubt as to the view that he took of the case. He made no secret of it. And he clearly gauged my own state of mind correctly. He saw that it was not the crime that was concerning me; that I was not seeking justice against the murderer but that I was looking to secure the safety of my friends.

I turned the question over rapidly in my mind. The contingency that Thorndyke had suggested was horrible. I could not face such a risk. Rather, by far, would I have had the murderer remain unpunished than be, myself, the agent of vengeance on any of these suspects. Hideous as the crime was, I could not bring myself to accept the office of executioner if one of my own friends was to be the victim.

I had almost decided to abandon the project and leave the result to Fate or the police. But then came a sudden revulsion. From the grounds of suspicion my thoughts flew to the persons suspected; to gentle, sympathetic Madeline, so mindful of the dead man’s comfort, so solicitous about his needs, so eager to render him the little services that mean so much to a sick man. Could I conceive of her as hiding under this appearance of tender sympathy the purposes of a cruel and callous murderer? The thing was absurd. My heart rejected it utterly. Nor could I entertain for a moment such a thought of the kindly, attentive housemaid; and even Wallingford, much as I disliked him, was obviously outside the area of possible suspicion. An intolerable coxcomb he certainly was; but a murderer—never!

“I will take the risk, Thorndyke,” said I. He looked at me with slightly raised eyebrows, and I continued: “I know these people pretty intimately and I find it impossible to entertain the idea that any of them could have committed this callous, deliberate crime. At the moment, I realize circumstances seem to involve them in suspicion; but I am certain that there is some fallacy—that there are some facts which did not transpire at the inquest but which might be brought to the surface if you took the case in hand.”

“Why not let the police disinter those facts?”

“Because the police evidently suspect the members of the household and they will certainly pursue the obvious probabilities.”

“So should I, for that matter,” said he; “and in any case, we can’t prevent the police from bringing a charge if they are satisfied that they can support it. And your own experience will tell you that they will certainly not take a case into the Central Criminal Court unless they have enough evidence to make a conviction a virtual certainty. But I remind you, Mayfield, that they have got it all to do. There is grave suspicion in respect of a number of persons, but there is not, at present, a particle of positive evidence against any one person. It looks to me as if it might turn out to be a very elusive case.”

“Precisely,” said I. “That is why I am anxious that the actual perpetrator should be discovered. Until he is, all these people will be under suspicion, with the peril of a possible arrest constantly hanging over them. I might even say, ‘hanging over us’; for you, yourself, have included me in the group of possible suspects.”

He reflected for a few moments. At length he replied: “You are quite right, Mayfield. Until the perpetrator of a crime is discovered and his guilt established, it is always possible for suspicion to rest upon the innocent and even for a miscarriage of justice to occur. In all cases it is most desirable that the crime should be brought home to the actual perpetrator without delay for that reason, to say nothing of the importance, on grounds of public policy, of exposing and punishing wrong-doers. You know these people and I do not. If you are sufficiently confident of their innocence to take the risk of associating yourself with the agencies of detection, I have no more to say on that point. I am quite willing to go into the case so far as I can, though, at present, I see no prospect of success.”

“It seems to you a difficult case, then?”

“Very. It is extraordinarily obscure and confused. Whoever poisoned that unfortunate man, seems to have managed most skilfully to confuse all the issues. Whatever may have been the medium through which the poison was given, that
medium is associated equally with a number of different persons. If the medicine was the vehicle, then the responsibility is divided between Dinsdale, who prepared it, and the various persons who administered it. If the poison was mixed with the food, it may have been introduced by any of the persons who prepared it or had access to it on its passage from the kitchen to the patient’s bedroom. There is no one person of whom we can say that he or she had any special opportunity that others had not. And it is the same with the motive. No one had any really, adequate motive for killing Monkhouse; but all the possible suspects benefited by his death, though they were apparently not aware of it.”

“They all knew, in general terms, that they had been mentioned in the will though the actual provisions and amounts were not disclosed. But I should hardly describe Mrs Monkhouse as benefiting by her husband’s death. She will not be as well off now as she was when he was alive and the whole of his income was available.”

“No. But we were not including her in the group since she was not in the house when the poison was being administered. We were speaking of those who actually had the opportunity to administer the poison; and we see that the opportunity was approximately equal in all. And you see, Mayfield, the trouble is that any evidence incriminating any one person would be in events which are past and beyond recall. The depositions contain all that we know and all that we are likely to know, unless the police are able to ascertain that some one of the parties has purchased arsenic from a chemist; which is extremely unlikely considering the caution and judgment that the poisoner has shown. The truth is that, if no new evidence is forthcoming, the murder of Harold Monkhouse will take its place among the unsolved and insoluble mysteries.”

“Then, I take it that you will endeavour to find some new evidence? But I don’t see, at all, how you will go about it.”

“Nor do I,” said he. “There seems to be nothing to investigate. However, I shall study the depositions and see if a careful consideration of the evidence offers any suggestion for a new line of research. And as the whole case now lies in the past, I shall try to learn as much as possible about everything and everybody concerned. Perhaps I had better begin with you. I don’t quite understand what your position is in this household.”

“I will tell you with pleasure all about my relations with the Monkhouses, but it is a rather long story, and I don’t see that it will help you in any way.”

“Now, Mayfield,” said Thorndyke, “don’t begin by considering what knowledge may or may not be helpful. We don’t know. The most trivial or seemingly irrelevant fact may offer a most illuminating suggestion. My rule is, when I am graved for lack of evidence, to collect, indiscriminately, all the information that I can obtain that is in the remotest way connected with the problem that I am dealing with. Bear that in mind. I want to know all that you can tell me, and don’t be afraid of irrelevant details. They may not be irrelevant, after all; and if they are, I can sift them out afterwards. Now, begin at the beginning and tell me the whole of the long story.”

He provided himself with a note-book, uncapped his fountain pen and prepared himself to listen to what I felt to be a perfectly useless recital of facts that could have no possible bearing on the case.

“I will take you at your word,” said I, “and begin at the very beginning, when I was quite a small boy. At that time, my father, who was a widower, lived at Highgate and kept the chambers in the Temple which I now occupy. A few doors away from us lived a certain Mr Keene, an old friend of my father’s—his only really intimate friend, in fact—and, of course, I used to see a good deal of him. Mr Keene, who was getting on in years, had married a very charming woman, considerably younger than himself, and at this time there was one child, a little girl about two years old. Unfortunately, Mrs Keene was very delicate, and soon after the child’s birth she developed symptoms of consumption. Once started, the disease progressed rapidly in spite of the most careful treatment; and in about two years from the outset of the symptoms, she died.

“Her death was a great grief to Mr Keene, and indeed, to us all, for she was a most lovable woman; and the poor little motherless child made the strongest appeal to our sympathies. She was the loveliest little creature imaginable and as sweet and winning in nature as she was charming in appearance. On her mother’s death, I adopted her as my little sister, and devoted myself to her service. In fact, I became her slave; but a very willing slave; for she was so quick and intelligent, so affectionate and so amiable that, in spite of the difference in our ages—some eight or nine years—I found her a perfectly satisfying companion. She entered quite competently into all my boyish sports and amusements, so that our companionship really involved very little sacrifice on my part but rather was a source of constant pleasure.

“But her motherless condition caused Mr Keene a good deal of anxiety. As I have said, he was getting on in life and was by no means a strong man, and he viewed with some alarm the not very remote, possibility of her becoming an orphan with no suitable guardian, for my father was now an elderly man, and I was, as yet, too young to undertake the charge. Eventually, he decided, for the child’s sake, to marry again; and about two years after his first wife’s death he proposed to and was accepted by a lady named Ainsworth whom he had known for many years, who had been left a widow with one child, a girl some two years younger than myself.

“Naturally, I viewed the advent of the new Mrs Keene with some jealousy. But there was no occasion. She was a good, kindly woman who showed from the first that she meant to do her duty by her little stepdaughter. And her own child, Barbara, equally disarmed our jealousy. A quiet, rather reserved little girl, but very clever and quickwitted, she not only accepted me at once with the frankest friendliness but, with a curious tactfulness for such a young girl, devoted herself to my little friend, Stella Keene, without in the least attempting to oust me from my position. In effect, we three young people became a most united and harmonious little coterie in which our respective positions were duly recognized. I was the head of the firm, so to speak, Stella was my adopted sister, and Barbara was the ally of us both.
“So our relations continued as the years passed; but presently the passing years began to take toll of our seniors. My father was the first to go. Then followed Mr Keene, and after a few more years, Barbara’s mother. By the time my twenty-fifth birthday came round, we were all orphans.”

“What were your respective ages then?” Thorndyke asked.

Rather surprised at the question, I paused to make a calculation. “My own age,” I replied, “was, as I have said, twenty-five. Barbara would then be twenty-two and Stella sixteen.”

Thorndyke made a note of my answer and I proceeded: “The death of our elders made no appreciable difference in our way of living. My father had left me a modest competence and the two girls were fairly provided for. The houses that we occupied were beyond our needs, reduced as we were in numbers and we discussed the question of sharing a house. But, of course, the girls were not really my sisters and the scheme was eventually rejected as rather too unconventional; so we continued to live in our respective houses.”

“Was there any trustee for the girls?” Thorndyke asked.

“Yes, Mr Brodribb. The bulk of the property was, I believe, vested in Stella, but, for reasons which I shall come to in a moment, there was a provision that, in the event of her death, it should revert to Barbara.”

“Oh account, I presume, of the tendency to consumption?”

“Yes. To my lasting grief, I was away from home when she died. I had been recently called to the bar and was offered a brief for the Chelmsford Assizes, which I felt I ought not to refuse, especially as Stella seemed, just then, to be better than usual. What made it worse was that the telegram which was sent to recall me went astray. I had moved on to Ipswich and had only just written to give my new address, so that I did not get home until just before the funeral. It was a fearful shock, for no one had the least suspicion that the end was so near. If I had supposed that there was the slightest immediate danger, nothing on earth would have induced me to go away from home.”

Thorndyke had listened to my story not only with close attention but with an expression of sympathy which I noted gratefully and perhaps with a little surprise. But he was a strange man; as impersonal as Fate when he was occupied in actual research and yet showing at times unexpected gleams of warm human feeling and the most sympathetic understanding. He now preserved a thoughtful silence for some time after I had finished. Presently he said: “I suppose this poor girl’s death caused a considerable change in your way of living?”

“Yes, indeed! Its effects were devastating both on Barbara and me. Neither of us felt that we could go on with the old ways of life. Barbara let her house and went into rooms in London, where I used to visit her as often as I could; and I sold my house, furniture and all and took up residence in the Temple. But even that I could not endure for long. Stella’s death had broken me up completely. Right on from my boyhood, she had been the very hub of my life. All my thoughts and interests had revolved around her. She had been to me friend and sister in one. Now that she was gone, the world seemed to be a great, chilly void, haunted everywhere by memories of her. She had pervaded my whole life, and everything about me was constantly reminding me of her. At last I found that I could bear it no longer. The familiar things and places became intolerable to my eyes. I did not want to forget her; on the contrary, I loved to cherish her memory. But it was harrowing to have my loss thrust upon me at every turn. I yearned for new surroundings in which I could begin a new life; and in the end, I decided to go to Canada and settle down there to practise at the Bar.

“My decision came as a fearful blow to Barbara, and indeed, I felt not a little ashamed of my disloyalty to her; for she, too, had been like a sister to me and, next to Stella, had been my dearest friend. But it could not be helped. An intolerable unrest had possession of me. I felt that I must go; and go I did, leaving poor Barbara to console her loneliness with her political friends.

“I stayed in Canada nearly two years and meant to stay there for good. Then, one day, I got a letter from Barbara telling me that she was married. The news rather surprised me, for I had taken Barbara for an inveterate spinster with a tendency to avoid male friends other than myself. But the news had another, rather curious effect. It set my thoughts rambling amidst the old surroundings. And now I found that they repelled me no longer; that, on the contrary, they aroused a certain feeling of home-sickness, a yearning for the fuller, richer life of London and a sight of the English countryside. In not much more than a month, I had wound up my Canadian affairs and was back in my old chambers in the Temple, which I had never given up, ready to start practice afresh.”
“That,” said Thorndyke, “would be a little less than three years ago. Now we come to your relations with the Monkhouse establishment.”

“Yes; and I drifted into them almost at once. Barbara received me with open arms, and of course, Monkhouse knew all about me and accepted me as an old friend. Very soon I found myself, in a way, a member of the household. A bedroom was set apart for my use, whenever I cared to occupy it, and I came and went as if I were one of the family. I was appointed a trustee, with Brodribb, and dropped into the position of general family counsellor.”

“And what were your relations with Monkhouse?”

“We were never very intimate. I liked the man and I think he liked me. But he was not very approachable; a self-contained, aloof, undemonstrative man, and an inveterate book-worm. But he was a good man and I respected him profoundly, though I could never understand why Barbara married him, or why he married Barbara. I couldn’t imagine him in love. On the other hand I cannot conceive any motive that anyone could have had for doing him any harm. He seemed to me to be universally liked in a rather lukewarm fashion.”

“It is of no use, I suppose,” said Thorndyke, “to ask you if these reminiscences have brought anything to your mind that would throw any light on the means, the motive or the person connected with the crime?”

“No,” I answered; “nor can I imagine that they will bring anything to yours. In fact, I am astonished that you have let me go on so long dribbling out all these trivial and irrelevant details. Your patience is monumental.”

“Not at all,” he replied. “Your story has interested me deeply. It enables me to visualize very clearly at least a part of the setting of this crime, and it has introduced me to the personalities of some of the principal actors, including yourself. The details are not in the least trivial; and whether they are or are not irrelevant we cannot judge. Perhaps, when we have solved the mystery—if ever we do—we may find connections between events that had seemed to be totally unrelated.”

“It is, I suppose, conceivable as a mere, speculative possibility. But what I have been telling you is mainly concerned with my own rather remote past, which can hardly have any possible bearing on comparatively recent events.”

“That is perfectly true,” Thorndyke agreed. “Your little autobiography has made perfectly clear your own relation to these people, but it has left most of them—and those in whom I am most interested—outside the picture. I was just wondering whether it would be possible for you to amplify your sketch of the course of events after Barbara’s marriage—I am, like you, using the Christian name, for convenience. What I really want is an account of the happenings in that household during the last three years, and especially during the last year. Do you think that, if you were to turn out the garrets of your memory, you could draw up a history of the house in Hilborough Square and its inmates from the time when you first made its acquaintance? Have you any sort of notes that would help you?”

“By Jove!” I exclaimed. “Of course I have. There is my diary.”

“Oh,” said Thorndyke, with obviously awakened interest. “You keep a diary. What sort of diary is it? Just brief jottings, or a full record?”

“It is a pretty full diary. I began it more than twenty years ago as a sort of schoolboy hobby. But it turned out so useful and entertaining to refer to that I encouraged myself to persevere. Now, I am a confirmed diarist; and I write down not only facts and events, but also comments, which may be quite illuminating to study by the light of what has happened. I will read over the last three years and make an abstract of everything that has happened in that household. And I hope the reading of that abstract will entertain you; for I can’t believe that it will help you to unravel the mystery of Harold Monkhouse’s death.”

“Well,” Thorndyke replied, as I rose to take my leave, “don’t let your scepticism influence you. Keep in your mind the actual position. In that house a man was poisoned, and almost certainly feloniously poisoned. He must have been poisoned either by someone who was an inmate of that house or by someone who had some sort of access to the dead man from without. It is conceivable that the entries in your diary may bring one or other such person into view. Keep that possibility constantly before you; and fill your abstract with irrelevancies rather than risk omitting anything from which we could gather even the most shadowy hint.”
ON arriving at my chambers after my conference with Thorndyke, I found awaiting me a letter from a Maidstone solicitor offering me a brief for a case of some importance that was to be tried at the forthcoming assizes. At first, I read it almost impatiently, so preoccupied was my mind with the tragedy in which I was involved. It seemed inopportune, almost impertinent. But, in fact it was most opportune, as I presently realized, in that it recalled me to the realities of normal life. My duties to my friends I did, indeed, take very seriously. But I was not an idle man. I had my way to make in my profession and could not afford to drop out of the race, to sacrifice my ambitions entirely, even on the altar of friendship.

I sat down and glanced through the instructions. It was a case of alleged fraud, an intricate case which interested me at once and in which I thought I could do myself credit; which was also the opinion of the solicitor, who was evidently anxious for me to undertake it. Eventually, I decided to accept the brief, and having written a letter to that effect, I set myself to spend the remainder of the evening in studying the instructions and mastering the rather involved details. For time was short, since the case was down for hearing in a couple of days’ time and the morrow would be taken up by my engagements at Hilborough Square.

I pass over the incidents of the funeral. It was a dismal and unpleasant affair, lacking all the dignity and pathos that relieve the dreariness of an ordinary funeral. None of us could forget, as we sat back in the mourning coach as far out of sight as possible, that the corpse in the hearse ahead was the corpse of a murdered man, and that most of the bystanders knew it. Even in the chapel, the majestic service was marred and almost vulgarized by the self-consciousness of the mourners and at the grave-side we found one another peering furtively around for signs of recognition. To all of us it was a profound relief, when we were once more gathered together in the drawing room, to hear the street door close firmly and the mourning carriage rumble away down the square.

I took an early opportunity of mentioning the brief and I could see that to both the women the prospect of my departure came as a disagreeable surprise.

“How soon will you have to leave us?” Madeline asked, anxiously.

“I must start for Maidstone tomorrow morning,” I replied.

“Oh, dear!” she exclaimed. “How empty the place will seem and how lost we shall be without you to advise us.”

“I hope,” said I, “that the occasions for advice are past, and I shall not be so very far away, if you should want to consult me.”

“No,” said Barbara, “and I suppose you will not be away for very long. Shall you come back when your case is finished or shall you stay for the rest of the assizes?”

“I shall probably have some other briefs offered, which will detain me until the assizes are over. My solicitor hinted at some other cases, and of course there is the usual casual work that turns up on circuit.”

“Well,” she rejoined, “we can only wish you good luck and plenty of work, though we shall be glad when it is time for you to come back; and we must be thankful that you were here to help us through the worst of our troubles.”

The general tenor of this conversation, which took place at the lunch table, was not, apparently, to Wallingford’s taste; for he sat glumly consuming his food and rather ostentatiously abstaining from taking any part in the discussion. Nor was I surprised; for the obvious way in which both women leant on me was a reproach to his capacity, which ought to have made my advice and guidance unnecessary. But though I sympathized in a way with his displeasure, it nevertheless made me a little uneasy. For there was another matter that I wanted to broach; one in which he might consider himself concerned; namely, my commission to Thorndyke. I had, indeed, debated with myself whether I should not be wiser to keep my own counsel on the subject; but I had decided that they were all interested parties and that it would seem unfriendly and uncandid to keep them in the dark. But, for obvious reasons, I did not propose to acquaint them with Thorndyke’s views on the case.

The announcement, when I made it, was received without enthusiasm, and Wallingford, as I had feared, was inclined to be resentful.

“Don’t you think, Mayfield,” said he, “that you ought to have consulted the rest of us before putting this private inquiry agent, or whatever he is, on the case?”

“Perhaps I ought,” I admitted. “But it is important to us all that the mystery should be cleared up.”

“That is quite true,” said Barbara, “and for my part, I shall never rest until the wretch who made away with poor Harold is dragged out into the light of day—that is, if there is really such a person; I mean, if Harold’s death was not, after all, the result of some ghastly accident. But is it wise for us to meddle? The police have the case in hand. Surely, with all their experience and their machinery of detection, they are more likely to be successful than a private individual, no matter how clever he may be.”

“That,” I replied, “is, in fact, Dr Thorndyke’s own view. He wished to leave the inquiry to the police; and I may say that he will not come into the case unless it should turn out that the police are unable to solve the mystery.”

“In which case,” said Wallingford, “it is extremely unlikely that an outsider, without their special opportunities, will be
able to solve it. And if he should happen to find a mare's nest, we shall share the glory and the publicity of his discovery."

"I don't think," said I, "that you need have any anxiety on that score. Dr Thorndyke is not at all addicted to finding mare's nests and still less to publicity. If he makes any discovery he will probably keep it to himself until he has the whole case cut and dried. Then he will communicate the facts to the police; and the first news we shall have on the subject will be the announcement that an arrest has been made. And when the police make an arrest on Thorndyke's information, you can take it that a conviction will follow inevitably."

"I don't think I quite understand Dr Thorndyke's position," said Madeleine. "What is he? You seem to refer to him as a sort of superior private detective."

"Thorndyke," I replied, "is a unique figure in the legal world. He is a barrister and a doctor of medicine. In the one capacity he is probably the greatest criminal lawyer of our time. In the other he is, among other things, the leading authority on poisons and on crimes connected with them; and so far as I know, he has never made a mistake."

"He must be a very remarkable man," Wallingford remarked, drily.

"He is," I replied; and in justification of my statement, I gave a sketch of one or two of the cases in which Thorndyke had cleared up what had seemed to be a completely and helplessly insoluble mystery. They all listened with keen interest and were evidently so far impressed that any doubts as to Thorndyke's capacity were set at rest. But yet I was conscious, in all three, of a certain distrust and uneasiness. The truth was, as it seemed to me, that none of them had yet recovered from the ordeal of the inquest. In their secret hearts, what they all wanted—even Barbara, as I suspected—was to bury the whole dreadful episode in oblivion. And seeing this, I had not the courage to remind them of their—of our position as the actual suspected parties whose innocence it was Thorndyke's function to make clear.

"We were remarking when you came in," he said, at length, "what a curiously baffling case this is, and how very disappointing. At first it looked all plain sailing. There was the lady who used to prepare the special diet for the unfortunate man and actually take it up to him and watch him eat it. It seemed as if we had her in the hollow of our hand. And then she slipped out. The arsenic that was found in the stomach seemed to connect the death with the food; but then there was that confounded bottle of medicine that seemed to put the food outside the case. And when we came to reckon up the evidence furnished by the medicine, it proved nothing. Somebody put the poison in. All of them had the opportunity, more or less, and all about equally. Nothing pointed to one more than another. And that is how it is all through. There is any amount of suspicion; but the suspicion falls on a group of people, not on anyone in particular."

"Yes," said Thorndyke, "the issues are most strangely confused."

"Extraordinarily," said Miller. "This queer confusion runs all through the case. You are constantly thinking that you have got the solution, and just as you are perfectly sure, it slips through your fingers. There are lots of clues—fine ones; but as soon as you follow one up it breaks off in the middle and leaves you gaping. You saw what happened at the search, Mr Mayfield."

"I saw the beginning—the actual search; but I don't know what came of it."

"Then I can tell you in one word. Nothing. And yet we seemed to be right on the track every time. There was that secret
drawer of Mr Wallingford's. When I saw that packet of white powder in it, I thought it was going to be a walk-over. I didn't believe for a moment that the stuff was cocaine. But it was. I went straight to our analyst to have it tested."

As the superintendent was speaking I caught Thorndyke's eye, fixed on me with an expression of reproachful inquiry. But he made no remark and Miller continued: "Then there were those two empty bottles. The one that I found in the library yielded definite traces of arsenic. But then, whose bottle was it? The place was accessible to the entire household. It was impossible to connect it with any one person.

"On the other hand, the bottle that I found in Miss Norris' cupboard, and that was presumably hers—though she didn't admit it—contained no arsenic; at least the analyst said it didn't, though as it smelt of lavender and had a red stain at the bottom, I feel convinced that it had had Fowler's Solution in it. What do you think, Doctor? Don't you think the analyst may have been mistaken?"

"No," Thorndyke replied, decidedly. "If the red stain had been due to Fowler's Solution there would have been an appreciable quantity of arsenic present; probably a fiftieth of a grain at least. But Marsh's test would detect a much smaller quantity than that. If no arsenic was found by a competent chemist who was expressly testing for it, you can take it that no arsenic was there."

"Well," Miller rejoined, "you know best. But you must admit that it is a most remarkable thing that one bottle which smelt of lavender and had a red stain at the bottom, should contain arsenic, and that another bottle, exactly similar in appearance and smelling of lavender and having a red stain at the bottom, should contain no arsenic."

"I am entirely with you, Miller," Thorndyke agreed. "It is a most remarkable circumstance."

"And you see my point," said Miller. "Every discovery turns out a sell. I find a concealed packet of powder—with the owner lying like Ananias—but the powder turns out not to be arsenic. I find a bottle that did contain arsenic, and there is no owner. I find another, similar bottle, which has an owner, and there is no arsenic in it. Rum, isn't it? I feel like the donkey with the bunch of carrots tied to his nose. The carrots are there all right, but he can never get a bite at 'em."

Thorndyke had listened with the closest attention to the superintendent's observations and he now began a cautious cross-examination—cautious because Miller was taking it for granted that I had told him all about the search; and I could not but admire his discretion in suppressing the fact that I had not. For, while Thorndyke, himself, would not suspect me of any intentional concealment, Miller undoubtedly would, and what little confidence he had in me would have been destroyed. Accordingly, he managed the superintendent so adroitly that the latter described, piecemeal, all the incidents of the search.

"Did Wallingford say how he came to be in possession of all this cocaine and morphine?" he asked.

"No," replied Miller, "I asked him, but he refused to say where he had got it."

"But he could be made to answer," said Thorndyke. "Both of these drugs are poisons. He could be made to account for having them in his possession and could be called upon to show that he came by them lawfully. They are not ordinarily purchasable by the public."

"No, that's true," Miller admitted. "But is there any object in going into the question? You see, the cocaine isn't really any affair of ours."

"It doesn't seem to be," Thorndyke agreed, "at least, not directly; but indirectly it may be of considerable importance. I think you ought to find out where he got that cocaine and morphine, Miller."

The superintendent reflected with the air of having seen a new light.

"I see what you mean, Doctor," said he. "You mean that if he got the stuff from some Chinaman or common dope merchant, there wouldn't be much in it; whereas, if he got it from someone who had a general stock of drugs, there might be a good deal in it. Is that the point?"

"Yes. He was able to obtain poisons from somebody, and we ought to know exactly what facilities he had for obtaining poisons and what poisons he obtained."

"Yes, that is so," said Miller. "Well, I will see about it at once. Fortunately he is a pretty easy chappie to frighten. I expect, if I give him a bit of a shake-up, he will give himself away; and if he won't, we must try other means. And now, as I think we have said all that we have to say at present, I will wish you two gentlemen good night."

He rose and took up his hat, and having shaken our hands, was duly escorted to the door by Thorndyke; who, when he had seen his visitor safely on to the stairs, returned and confronted me with a look of deep significance.

"You never told me about that cocaine," said he.

"No," I admitted. "It was stupid of me, but the fact is that I was so engrossed by your rather startling observations on the case that this detail slipped my memory. And it really had not impressed me as being of any importance. I accepted Wallingford's statement that the stuff was cocaine and that, consequently, it was no concern of ours."

"I don't find myself able to agree to that 'consequently', Mayfield. How did you know that the cocaine was no concern of ours?"

"Well, I didn't see that it was, and I don't now. Do you?"
“No; I know very little about the case at present. But it seems to me that the fact that a person in this house had a considerable quantity of a highly poisonous substance in his possession is one that at least requires to be noted. The point is, Mayfield, that until we know all the facts of this case we cannot tell which of them is or is not relevant. Try to bear that in mind. Do not select particular facts as important and worthy of notice. Note everything in any way connected with our problem that comes under your observation and pass it on to me without sifting or selection.”

“I ought not to need these exhortations,” said I. “However, I will bear them in mind should I ever have anything more to communicate. Probably I never shall. But I will say that I think Miller is wasting his energies over Wallingford. The man is no favourite of mine. He is a neurotic ass. But I certainly do not think he has the makings of a murderer.”

Thorndyke smiled a little drily. “If you are able,” said he, “to diagnose at sight a potential murderer, your powers are a good deal beyond mine. I should have said that every man has the makings of a murderer, given the appropriate conditions.”

“Should you really?” I exclaimed “Can you, for instance, imagine either of us committing a murder?”

“I think I can,” he replied “Of course, the probabilities are very unequal in different cases. There are some men who may be said to be prone to murder. A man of low intelligence, of violent temper, deficient in ordinary self-control, may commit a murder in circumstances that would leave a man of a superior type unmoved. But still, the determining factors are motive and opportunity. Given a sufficient motive and a real opportunity, I can think of no kind of man who might not commit a homicide which would, in a legal sense, be murder.”

“But is there such a thing as a sufficient motive for murder?”

“That question can be answered only by the individual affected. If it seems to him sufficient, it is sufficient in practice.”

“Can you mention a motive that would seem to you sufficient?”

“Yes, I can. Blackmail. Let us take an imaginary case. Suppose a man to be convicted of a crime of which he is innocent. As he has been convicted, the evidence, though fallacious, is overwhelming. He is sentenced to a term of imprisonment—say penal servitude. He serves his sentence and is in due course discharged. He is now free; but the conviction stands against him. He is a discharged convict. His name is in the prison books, his photograph and his fingerprints are in the Habitual Criminals’ Register. He is a marked man for life.

“Now suppose that he manages to shed his identity and in some place where he is unknown begins life afresh. He acquires the excellent character and reputation to which he is, in fact, entitled. He marries and has a family; and he and his family prosper and enjoy the advantages that follow deservedly from his industry and excellent moral qualities.

“And now suppose that at this point his identity is discovered by a blackmailer who forthwith fastens on him, who determines to live on him in perpetuity, to devour the products of his industry, to impoverish his wife and children and to destroy his peace and security by holding over his head the constant menace of exposure. What is such a man to do? The law will help him so far as it can; but it cannot save him from exposure. He can obtain the protection of the law only on condition that he discloses the facts. But that disclosure is precisely the evil that he seeks to avoid. He is an innocent man, but his innocence is known only to himself. The fact, which must transpire if he prosecutes, is that he is a convicted criminal.

“I say, Mayfield, what can he do? What is his remedy? He has but one; and since the law cannot really help him, he is entitled to help himself. If I were in that man’s position and the opportunity presented itself, I would put away that blackmailer with no more qualms than I should have in killing a wasp.”

“Then I am not going to blackmail you. Thorndyke, for I have a strong conviction that an opportunity would present itself.”

“I think it very probable,” he replied with a smile. “At any rate, I know a good many methods that I should not adopt, and I think arsenic poisoning is one of them. But don’t you agree with me?”

“I suppose I do, at least in the very extreme case that you have put. But it is the only case of justifiable premeditated homicide that I can imagine; and it obviously doesn’t apply to Wallingford.”

“My dear Mayfield,” he exclaimed. “How do we know what does or does not apply to Wallingford? How do we know what he would regard as an adequate motive? We know virtually nothing about him or his affairs or about the crime itself. What we do know is that a man has apparently been murdered, and that, of the various persons who had the opportunity to commit the murder (of whom he is one) none had any intelligible motive at all. It is futile for us to argue back and forth on the insufficient knowledge that we possess. We can only docket and classify all the facts that we have and follow up each of them impartially with a perfectly open mind. But, above all, we must try to increase our stock of facts. I suppose you haven’t had time to consider that abstract of which we spoke?”

“That is really what brought me round here this evening. I haven’t had time, and I shan’t have just at present as I am starting tomorrow to take up work on the Southeastern Circuit. But I have brought the current volume of the diary, itself, if you would care to wade through it.”

“I should, certainly. The complete document is much preferable to an abstract which might leave me in the dark as to the context. But won’t you want to have your diary with you?”
"No, I shall take a short-hand note-book to use while I am away. That is, in fact, what I usually do."

"And you don’t mind putting this very confidential document into the hands of a stranger?"

"You are not a stranger, Thorndyke. I don’t mind you, though I don’t think I would hand it to anybody else. Not that it contains anything that the whole world might not see, for I am a fairly discreet diarist. But there are references to third parties with reflections and comments that I shouldn’t care to have read by Thomas, Richard and Henry. My only fear is that you will find it rather garrulous and diffuse."

"Better than than overcondensed and sketchy," said he, as he took the volume from me. He turned the leaves over, and having glanced at one or two pages exclaimed: "This is something like a diary, Mayfield! Quite in the classical manner. The common, daily jottings such as most of us make, are invaluable if they are kept up regularly, but this of yours is immeasurably superior. In a hundred years’ time it will be a priceless historical work. How many volumes of it have you got?"

"About twenty: and I must say that I find the older ones quite interesting reading. You may perhaps like to look at one or two of the more recent volumes."

"I should like to see those recording the events of the last three years."

"Well, they are all at your service. I have brought you my duplicate latchkey and you will find the volumes of the diary in the glazed book-case. It is usually kept locked, but as nobody but you will have access to the chambers while I am away, I shall leave the key in the lock."

"This is really very good of you, Mayfield," he said, as I rose to take my departure. "Let me have your address, wherever you may be for the time being, and I will keep you posted in any developments that may occur. And now, good-bye and good luck!" He shook my hand cordially and I betook myself to my chambers to complete my preparations for my start on the morrow.

---

THE incidents of my life while I was following the Southeastern Circuit are no part of this history, and I refer to this period merely by way of marking the passage of time. Indeed, it was its separateness, its detachment from the other and more personal aspects of my life that specially commended it to me. In the cheerful surroundings of the Bar Mess I could forget the terrible experiences of the last few weeks, and even in the grimmer and more suggestive atmosphere of the courts, the close attention that the proceedings demanded kept my mind in a state of wholesome preoccupation.

Quite a considerable amount of work came my way, and though most of the briefs were small—so small, often, that I felt some compunction in taking them from the more needy juniors—yet it was all experience and what was more important just now, it was occupation that kept my mind employed.

That was the great thing. To keep my mind busy with matters that were not my personal concern. And the intensity of my yearning for distraction was the measure of the extent to which my waking thoughts tended to be pervaded by the sinister surroundings of Harold Monkhouse’s death. That dreadful event and the mystery that encompassed it had shaken me more than I had at first realized. Nor need this be a matter for surprise. Harold Monkhouse had apparently been murdered; at any rate that was the accepted view. And who was the murderer? Evade the answer as I would, the fact remained that the finger of suspicion pointed at my own intimate friends—nay, even at me. It is no wonder, then, that the mystery haunted me. Murder has an ominous sound to any ears; but to a lawyer practising in criminal courts the word has connotations to which his daily experiences impart a peculiarly, hideous vividness and realism. Once, I remember that, sitting in court, listening to the evidence in a trial for murder, as my glance strayed to the dock where the prisoner stood, watched and guarded like a captured wild beast, the thought suddenly flashed on me that it was actually possible—and to the police actually probable—that thus might yet stand Wallingford or Madeline, or even Barbara or myself.

It would have been possible for me to run home from time to time at weekends but I did not. There was nothing that called for my presence in London and it was better to stick close to my work. Still, I was not quite cut off from my friends, for Barbara wrote regularly and I had an occasional letter from Madeline. As to Thorndyke, he was too busy to write unnecessary letters and his peculiar circumstances made a secretary impossible, so that I had from him no more than one or two brief notes reporting the absence of any new developments. Nor had Barbara much to tell excepting that she had decided to let or sell the house in Hilborough Square and take up her residence in a flat. The decision did not surprise me. I should certainly have done the same in her place; and I was only faintly surprised when I learned that she proposed to live alone and that Madeline had taken a small flat near the school. The two women had always been on excellent terms, but they were not specially devoted to one another; and Barbara would now probably pursue her own special interests. Of Wallingford I learned only that, on the strength of his legacy he had taken a set of rooms in the neighbourhood of Jermyn Street and that his nerves did not seem to have benefited by the change.

Such was the position of affairs when the Autumn Assizes came to an end and I returned home. I remember the occasion very vividly, as I have good reason to do—indeed, I had better reason than I knew at the time. It was a cold, dark, foggy evening, though not densely foggy, and my taxicab was compelled to crawl at an almost funereal pace (to the exasperation of the driver) through the murky streets, though the traffic was now beginning to thin out. We approached the Temple
from the east and eventually entered by the Tudor Street Gate whence we crept tentatively across Kings Bench Walk to the end of Crown Office Row. As we passed Thorndyke’s chambers I looked up and had a momentary glimpse of lighted windows glimmering through the fog; then they faded away and I looked out on the other side where the great shadowy mass of Paper Buildings loomed above us. A man was standing at the end of the narrow passage that leads to Fig Tree Court—a tallish man wearing a preposterous wide-brimmed hat and a long overcoat with its collar turned up above his ears. I glanced at him incuriously as we approached but had no opportunity to inspect him more closely, if I had wished—which I did not—for, as the cab stopped he turned abruptly and walked away up the passage. The suddenness of his retirement struck me as a little odd and, having alighted from the cab, I stood for a moment or two watching his receding figure. But he soon disappeared in the foggy darkness, and I saw him no more. By the time that I had paid my fare and carried my portmanteau to Fig Tree Court, he had probably passed out into Middle Temple Lane.

When I had let myself into my chambers, switched on the light and shut the door, I looked round my little domain with somewhat mixed feelings. It was very silent and solitary. After the jovial Bar Mess and the bright, frequented rooms of the hotels or the excellent lodgings which I had just left, these chambers struck me as just a shade desolate. But yet there were compensations. A sense of peace and quiet pervaded the place and all around were my household gods; my familiar and beloved pictures, the little friendly cabinet busts and statuettes, and, above all, the goodly fellowship of books. At this moment my glance fell on the long range of my diaries and I noticed that one of the series was absent. Not that there was anything remarkable in that since I had given Thorndyke express permission to take them away to read. What did surprise me a little was the date of the missing volume. It was that of the year before Stella’s death. As I noted this I was conscious of a faint sense of annoyance. I had, it is true, given him the free use of the diary, but only for purposes of reference. I had hardly bargained for his perusal of the whole series for his entertainment. However, it was of no consequence. The diary enshrined no secrets. If I had, in a way, emulated Pepys in respect of fullness, I had taken warning from his indiscretions; nor, in fact, was I quite so rich in the material of indiscreet records as the vivacious Samuel.

I unpacked my portmanteau—the heavier impedimenta were coming on by rail—lit the gas fire in my bedroom, boiled a kettle of water, partly for a comfortable wash and partly to fill a hot water bottle wherewith to warm the probably damp bed, and then, still feeling a little like a cat in a strange house, decided to walk along to Thorndyke’s chambers and hear the news, if there were any.

The fog had grown appreciably denser when I turned out of my entry, and, crossing the little quadrangle, strode quickly along the narrow passage that leads to the Terrace and King’s Bench Walk. I was approaching the end of the passage when there came suddenly into view a shadowy figure which I recognized at once as that of the man whom I had seen when I arrived. But again I had no opportunity for a close inspection, for he had already heard my footsteps and he now started to walk away rapidly in the direction of Mitre Court. For a moment I was disposed to follow him, and did, in fact, make a few quick steps towards him—which seemed to cause him to mend his pace; but it was not directly my business to deal with loiterers, and I could have done nothing even if I had overtaken him. Accordingly I changed my direction, and crossing King’s Bench Walk, bore down on Thorndyke’s entry.

As I approached the house I was a little disconcerted to observe that there were now no lights in his chambers, though the windows above were lighted. I ran up the stairs, and finding the oak closed, pressed the electric bell, which I could hear ringing on the floor above. Almost immediately footsteps became audible descending the stairs and were followed by the appearance of a small gentleman whom I recognized as Thorndyke’s assistant, artificer or familiar spirit, Mr Polton. He recognized me at the same moment and greeted me with a smile that seemed to break out of the corners of his eyes and spread in a network of wrinkles over every part of his face; a sort of compound smile inasmuch as every wrinkle seemed to have a smile of its own.

“I hope, Mr Polton,” said I, “that I haven’t missed the doctor.”

“No, Sir,” he replied. “He is up in the laboratory. We are just about to make a little experiment.”

“Well, I am in no hurry. Don’t disturb him. I will wait until he is at liberty.”

“Unless, sir,” he suggested, “you would like to come up. Perhaps you would like to see the experiment.”

I closed with the offer gladly. I had never seen Thorndyke’s laboratory and had often been somewhat mystified as to what he did in it. Accordingly I followed Mr Polton up the stairs, at the top of which I found Thorndyke waiting.

“I thought it was your voice, Mayfield,” said he, shaking my hand. “You are just in time to see us locate a mare’s nest. Come in and lend a hand.”

He led me into a large room around which I glanced curiously and not without surprise. One side was occupied by a huge copying camera, the other by a joiner’s bench. A powerful back-geared lathe stood against one window, a jeweller’s bench against the other, and the walls were covered with shelves and tool-racks, filled with all sorts of strange implements. From this room we passed into another which I recognized as a chemical laboratory, although most of the apparatus in it was totally unfamiliar to me.

“I had no idea,” said I, “that the practice of Medical Jurisprudence involved such an outfit as this. What do you do with it all? The place is like a factory.”

“It is a factory,” he replied with a smile; “a place where the raw material of scientific evidence is worked up into the finished product suitable for use in courts of law.”
“I don’t know that that conveys much to me,” said I. “But you are going to perform some sort of experiment; perhaps that will enlighten me.”

“Probably it will, to some extent,” he replied, “though it is only a simple affair. We have a parcel here which came by post this evening and we are going to see what is in it before we open it.”

“The devil you are!” I exclaimed. “How in the name of Fortune are you going to do that?”

“We shall examine it by means of the X-rays.”

“But why? Why not open it and find out what is in it in a reasonable way?”

Thorndyke chuckled softly. “We have had our little experiences, Mayfield, and we have grown wary. We don’t open strange parcels nowadays until we are sure that we are not dealing with a ‘Greek gift’ of some sort. That is what we are going to ascertain now in respect of this.”

He picked up from the bench a parcel about the size of an ordinary cigar-box and held it out for my inspection. “The overwhelming probabilities are,” he continued, “that this is a perfectly innocent package. But we don’t know. I am not expecting any such parcel and there are certain peculiarities about this one that attract one’s attention. You notice that the entire address is in rough Roman capitals—what are commonly called ‘block letters’. That is probably for the sake of distinctness; but it might possibly be done to avoid a recognizable handwriting or a possibly traceable typewriter. Then you notice that it is addressed to ‘Dr Thorndyke’ and conspicuously endorsed ‘personal.’ Now, that is really a little odd. One understands the object of marking a letter ‘personal’—to guard against its being opened and read by the wrong person. But what does it matter who opens a parcel?”

“I can’t imagine why it should matter,” I admitted without much conviction, “but I don’t see anything in the unnecessary addition that need excite suspicion. Do you?”

“Perhaps not; but you observe that the sender was apparently anxious that the parcel should be opened by a particular person.”

I shrugged my shoulders. The whole proceeding and the reasons given for it struck me as verging on farce. “Do you go through these formalities with every parcel that you receive?” I asked.

“No,” he replied. “Only with those that are unexpected or offer no evidence as to their origin. But we are pretty careful. As I said just now, we have had our experiences. One of them was a box which, on being opened, discharged volumes of poisonous gas.”

“The deuce!” I exclaimed, rather startled out of my scepticism and viewing the parcel with a new-born respect, not unmixed with apprehension. “Then this thing may actually be an infernal machine! Confound it all, Thorndyke! Supposing it should have a clockwork detonator, ticking away while we are talking. Hadn’t you better get on with the X-rays?”

He chuckled at my sudden change of attitude. “It is all right, Mayfield. There is no clockwork. I tried it with the microphone as soon as it arrived. We always do that. And, of course, it is a thousand to one that it is just an innocent parcel. But we will just make sure and then I shall be at liberty for a chat with you.”

He led the way to a staircase leading to the floor above where I was introduced to a large, bare room surrounded by long benches or tables occupied by various uncanny-looking apparatus. As soon as we entered, he placed the parcel on a raised stand while Polton turned a switch connected with a great coil; the immediate result of which was a peculiar, high-pitched, humming sound as if a gigantic mosquito had got into the room. At the same moment a glass globe that was supported on an arm behind the parcel became filled with green light and displayed a bright red spot in its interior.

“This is a necromantic sort of business, Thorndyke,” said I, “only you and Mr Polton aren’t dressed for the part. You ought to have tall pointed caps and gowns covered with cabalistic signs. What is that queer humming noise?”

“That is the interrupter,” he replied. “The green bulb is the Crookes’s tube and the little red-hot disc inside it is the anti-cathode. I will tell you about them presently. That framed plate that Polton has is the fluorescent screen. It intercepts the X-rays and makes them visible. You shall see, when Polton has finished his inspection.”

I watched Polton—who had taken the opportunity to get the first innings—holding the screen between his face and the parcel. After a few moments’ inspection he turned the parcel over on its side and once more raised the screen, grazing at it with an expression of the most intense interest. Suddenly he turned to Thorndyke with a smile of perfectly incredible wrinkliness and, without a word, handed him the screen; which he held up for a few seconds and then silently passed to me.

I had never used a fluorescent screen before and I must confess that I found the experience most uncanny. As I raised it before the parcel behind which was the glowing green bulb, the parcel became invisible but in its place appeared the shadow of a pistol the muzzle of which seemed to be inserted into a jar. There were some other, smaller shadows, of which I could make nothing, but which seemed to be floating in the air.

“Better not look too long, Mayfield,” said Thorndyke. “X-rays are unwholesome things. We will take a photograph and then we can study the details at our leisure; though it is all pretty obvious.”

“It isn’t to me,” said I. “There is a pistol and what looks like a jar. Do you take it that they are parts of an infernal machine?”
“I suppose,” he replied, “we must dignify it with that name. What do you say, Polton?”

“I should call it a booby-trap, Sir,” was the reply. “What you might expect from a mischievous boy of ten—rather backward for his age.”

Thorndyke laughed. “Listen to the artificer,” said he, “and observe how his mechanical soul is offended and unmechanical attempt to blow us all up. But we won’t take the inefficiency too much for granted. Let us have a photograph and then we can get to work with safety.”

It seemed that this part also of the procedure was already provided for in the form of a large black envelope which Polton produced from a drawer and began forthwith to adjust in contact with the parcel; in fact the appearance of preparedness was so striking that I remarked:

“This looks like part of a regular routine. It must take up a lot of your time.”

“As a matter of fact,” he replied, “we don’t often have to do this. I don’t receive many parcels and of those that are delivered, the immense majority come from known sources and are accompanied by letters of advice. It is only the strange and questionable packages that we examine with the X-rays. Of course, this one was suspect at a glance with that disguised handwriting and the special direction as to who should open it.”

“Yes, I see that now. But it must be rather uncomfortable to live in constant expectation of having bombs or poison-gas handed in by the postman.”

“It isn’t as bad as that,” said he. “The thing has happened only three or four times in the whole of my experience. The first gift of the kind was a poisoned cigar, which I fortunately detected and which served as a very useful warning. Since then I have kept my weather eyelid lifting, as the mariners express it.”

“But don’t you find it rather wearing to be constantly on the lookout for some murderous attack?”

“Not at all,” he answered with a laugh. “It rather adds to the zest of life. Besides, you see, Mayfield, that on the rare occasions when these trifles come my way, they are so extremely helpful.”

“Helpful!” I repeated. “In the Lord’s name, how?”

“In a number of ways. Consider my position, Mayfield. I am not like an Italian or Russian politician who may have scores of murderous enemies. I am a lawyer and an investigator of crime. Whoever wants to get rid of me has something to fear from me; but at any given time, there will not be more than one or two of such persons. Consequently, when I receive a gift such as the present one, it conveys to me certain items of information. Thus it informs me that some one is becoming alarmed by some proceedings on my part. That is a very valuable piece of information, for it tells me that some one of my inquiries is at least proceeding along the right lines. It is virtually an admission that I have made, or am in the way of making a point. A little consideration of the cases that I have in hand will probably suggest the identity of the sender. But on this question the thing itself will in most cases yield quite useful information as well as telling us a good deal about the personality of the sender. Take the present case. You heard Polton’s contemptuous observations on the crudity of the device. Evidently the person who sent this is not an engineer or mechanician of any kind. There is an obvious ignorance of mechanism; and yet there is a certain simple ingenuity. The thing is, in fact, as Polton said, on the level of a schoolboy’s booby-trap. You must see that if we had in view two or more possible senders, these facts might enable us to exclude one and select another. But here is Polton with the photograph. Now we can consider the mechanism at our leisure.”

As he spoke, Polton deposited on the bench a large porcelain dish or tray in which was a very odd-looking photograph; for the whole of it was jet-black excepting the pistol, the jar, the hinges, and a small, elongated spot, which all stood out in clear, white silhouette.

“Why,” I exclaimed as I stooped over it, “that is a muzzle-loading pistol!”

“Yes,” Thorndyke agreed, “and a pocket pistol, as you can tell by the absence of a trigger-guard. The trigger is probably hinged and folds forward into a recess. I daresay you know the kind of thing. They were usually rather pretty little weapons—and useful, too, for you could carry one easily in your waistcoat pocket. They had octagon barrels, which screwed off for loading, and the butts were often quite handsomely ornamented with silver mounts. They were usually sent out by the gunsmiths in little baize-lined mahogany cases with compartments for a little powder-flask and a supply of bullets.”

“I wonder why he used a muzzle-loader?” said I.

“Probably because he had it. It answers the purpose as well as a modern weapon, and, as it was probably made more than a hundred years ago, it would be useless to go round the trade enquiring as to recent purchases.”

“Yes, it was safer to use an old pistol than to buy a new one and leave possible tracks. But how does the thing work? I can see that the hammer is at fullcock and that there is a cap on the nipple. But what fires the pistol?”

“Apparently a piece of string, which hasn’t come out in the photograph except, faintly, just above that small mark—string is not dense enough to throw a shadow at the full exposure—but you see, about an inch behind the trigger, an elongated shadow. That is probably a screw-eye seen end-ways. The string is tied to the trigger, passed through the screw-eye and fastened to the lid of the box. I don’t see how. There is no metal fastening, and you see that the lid is not screwed or nailed down. As to how it works; you open the lid firmly; that pulls the string tight; that pulls back the trigger and fires the pistol into the jar, which is presumably full of some explosive; the jar explodes and—up goes the donkey. There is a noble
simplicity about the whole thing. How do you propose to open it, Polton?"

"I think, Sir," replied the latter, "we had better get the paper off and have a look at the box."

"Very well," said Thorndyke, "but don't take anything for granted. Make sure that the paper isn't part of the joke."

I watched Polton with intense—and far from impersonal—interest, wishing only that I could have observed him from a somewhat greater distance. But for all his contempt for the "booby-trap," he took no unnecessary risks. First, with a pair of scissors, he cut out a piece at the back and enlarged the opening so that he could peer in and inspect the top of the lid. When he had made sure that there were no pitfalls, he ran the scissors round the top and exposed the box, which he carefully lifted out of the remainder of the wrapping and laid down tenderly on the bench. It was a cigar-box of the flat type and presented nothing remarkable excepting that the lid, instead of being nailed or pinned down, was secured by a number of strips of stout adhesive paper, and bore, near the middle, a large spot of sealing-wax.

"That paper binding is quite a happy thought," remarked Thorndyke, "though it was probably put on because our friend was afraid to knock in nails. But it would be quite effective. An impatient man would cut through the front strips and then wrench the lid open. I think that blob of sealing-wax answers our question about the fastening of the string. The end of it was probably drawn through a bradawl hole in the lid and fixed with sealing wax. But it must have been an anxious business drawing it just tight enough and not too tight. I suggest, Polton, that an inch-and-a-half centre-bit hole just below and to the right of the sealing-wax would enable us to cut the string. But you had better try it with the photograph first."

Polton picked the wet photograph out of the dish and carefully laid it on the lid of the box, adjusting it so that the shadows of the hinges were opposite the actual hinges. Then with a marking-awl he pricked through the shadow of the screw-eye, and again about two inches to the right and below it.

"You are quite right, sir," said he as he removed the photograph and inspected the lid of the box. "The middle of the wax is exactly over the screw-eye. I'll just get the centre-bit."

He bustled away down the stairs and returned in less than a minute with a brace and a large centre-bit, the point of which he inserted into the second awl-hole. Then, as Thorndyke grasped the box (and I stepped back a pace or two), he turned the brace lightly and steadily, stopping now and again to clear away the chips and examine the deepening hole. A dozen turns carried the bit through the thin lid and the remaining disc of wood was driven into the interior of the box. As soon as the hole was clear, he cautiously inserted a dentist's mirror, which he had brought up in his pocket, and with its aid examined the inside of the lid.

"I can see the string, Sir," he reported; "a bit of common white twine and it looks quite slack. I could reach it easily with a small pair of scissors."

He handed the mirror to Thorndyke, who, having confirmed his observations, produced a pair of surgical scissors from his pocket. These Polton cautiously inserted into the opening, and as he closed them there was an audible snip. Then he slowly withdrew them and again inserted the mirror.

"It's all right," said he. "The string is cut clean through. I think we can open the lid now." With a sharp penknife he cut through the paper binding-strips and then, grasping the front of the lid, continued:

"Now for it. Perhaps you two gentlemen had better stand a bit farther back, in case of accidents."

I thought the suggestion an excellent one, but as Thorndyke made no move, I had not the moral courage to adopt it. Nevertheless, I watched Polton's proceedings with my heart in my mouth. Very slowly and gently did that cunning artificer raise the lid until it had opened some two inches, when he stooped and peered in. Then, with the cheerful announcement that it was "all clear," he boldly turned it right back.

Of course, the photograph had shown us, in general, what to expect, but there were certain details that had not been represented. For instance, both the pistol and the jar were securely wedged between pieces of cork—sections of wine-bottle corks, apparently—glued to the bottom of the box.

"How is it," I asked, "that those corks did not appear in the photograph?"

"I think there is a faint indication of them," Thorndyke replied; "but Polton gave a rather full exposure. If you want to show bodies of such low density as corks, you have to give a specially short exposure and cut short the development, too. But I expect Polton saw them when he was developing the picture, didn't you, Polton?"

"Yes," the latter replied; "they were quite distinct at one time, but then I developed up to get the pistol out clear."

While these explanations were being given, Polton proceeded methodically to "draw the teeth" of the infernal apparatus. First, he cut a little wedge of cork which he pushed in between the threatening hammer and the nipple and having thus fixed the former he quietly removed the percussion-cap from the latter; on which I drew a deep breath of relief. He next wrenched away one of the corks and was then able to withdraw the pistol from the jar and lift it out of the box. I took it from him and examined it curiously, not a little interested to note how completely it corresponded with Thorndyke's description. It had a blued octagon barrel, a folding trigger which fitted snugly into a recess, a richly-engraved lock-plate and an ebony butt, decorated with numbers of tiny silver studs and a little lozenge-shaped scutcheon-plate on which a monogram had been engraved in minute letters, which, however, had been so thoroughly scraped out that I was unable to make out or even to guess what the letters had been.
My investigations were cut short by Thorndyke, who, having slipped on a pair of rubber gloves, now took the pistol from me, remarking: "You haven’t touched the barrel, I think, Mayfield?"

"No," I answered; "but why do you ask?"

"Because we shall go over it and the jar for fingerprints. Not that they will be much use for tracing the sender of this present, but they will be valuable corroboration if we catch him by other means; for whoever sent this certainly had a guilty conscience."

With this he delicately lifted out the jar—a small, dark-brown stoneware vessel such as is used as a container for the choicer kinds of condiments—and inverted it over a sheet of paper, upon which its contents, some two or three tablespoonfuls of black powder, descended and formed a small heap.

"Not a very formidable charge," Thorndyke remarked, looking at it with a smile.

"Formidable!" repeated Polton. "Why, it wouldn’t have hurt a fly! Common black powder such as old women use to blow out the copper flues. He must be an innocent, this fellow—if it is a he," he added reflectively.

Polton’s proviso suddenly recalled to my mind the man whom I had seen lurking at the corner of Fig Tree Court. It was hardly possible to avoid connecting him with the mysterious parcel, as Thorndyke agreed when I had described the incident.

"Yes," exclaimed Polton, "of course. He was waiting to hear the explosion. It is a pity you didn’t mention it sooner, Sir. But he may be waiting there still. Hadn’t I better run across and see?"

"And suppose he is there still," said Thorndyke. "What would you propose to do?"

"I should just pop up to the lodge and tell the porter to bring a policeman down. Why, we should have him red-handed."

Thorndyke regarded his henchman with an indulgent smile. "Your handicraft, Polton," said he, "is better than your law. You can’t arrest a man without a warrant unless he is doing something unlawful. This man was simply standing at the corner of Fig Tree Court."

"But," protested Polton, "isn’t it unlawful to send infernal machines by parcel post?"

"Undoubtedly it is," Thorndyke admitted, "but we haven’t a particle of evidence that this man has any connection with the parcel or with us. He may have been waiting there to meet a friend."

"He may, of course," said I, "but seeing that he ran off like a lamplighter on both the occasions when I appeared on the scene, I should suspect that he was there for no good And I strongly suspect him of having some connection with this precious parcel."

"So do I," said Thorndyke. "As a matter of fact, I have once or twice, lately, met a man answering to your description, loitering about King’s Bench Walk in the evening. But I think it much better not to appear to notice him. Let him think himself unobserved and presently he will do something definite that will enable us to take action. And remember that the more thoroughly he commits himself the more valuable his conduct will be as indirect evidence on certain other matters."

I was amused at the way in which Thorndyke sank all considerations of personal safety in the single purpose of pursuing his investigations to a successful issue. He was the typical enthusiast. The possibility that this unknown person might shoot at him from some ambush, he would, I suspected, have welcomed as offering the chance to seize the aggressor and compel him to disclose his motives. Also, I had a shrewd suspicion that he knew or guessed who the man was and was anxious to avoid alarming him.

"Well," he said when he had replaced the pistol and the empty jar in the box and closed the latter, "I think we have finished for the present. The further examination of these interesting trifles can be postponed until tomorrow. Shall we go downstairs and talk over the news?"

"It is getting rather late," said I, "but there is time for a little chat, though, as to news, they will have to come from you, for I have nothing to tell."

We went down to the sitting room where, when he had locked up the box, we took each an armchair and filled our pipes.

“So you have no news of any kind?” said he.

“No; excepting that the Hilborough Square household has been broken up and the inmates scattered into various flats.”

“Then the house is now empty?” said he, with an appearance of some interest.

“Yes, and likely to remain so with this gruesome story attached to it. I suppose I shall have to make a survey of the premises with a view to having them put in repair.”

“When you do,” said he, “I should like to go with you and look over the house.”

“But it is all dismantled. Everything has been cleared out. You will find nothing there but empty rooms and a litter of discarded rubbish.”

“Never mind,” said he. “I have occasionally picked up some quite useful information from empty rooms and discarded rubbish. Do you know if the police have examined the house?”
“I believe not. At any rate, nothing has been said to me to that effect.”

“So much the better,” said he. “Can we fix a time for our visit?”

“It can’t be tomorrow,” said I, “because I must see Barbara and get the keys if she has them. Would the day after tomorrow do, after lunch?”

“Perfectly,” he replied. “Come and lunch with me; and, by the way, Mayfield, it would be best not to mention to anyone that I am coming with you, and I wouldn’t say anything about this parcel.”

I looked at him with sudden suspicion, recalling Wallingford’s observations on the subject of mare’s nests. “But, my dear Thorndyke!” I exclaimed, “you don’t surely associate that parcel with any of the inmates of that house!”

“I don’t associate it with any particular person,” he replied. “I know only what you know; that it was sent by someone to whom my existence is, for some reason, undesirable, and whose personality is to some extent indicated by the peculiarities of the thing itself.”

“What peculiarities do you mean?”

“Well,” he replied, “there is the nature and purpose of the thing. It is an appliance for killing a human being. That purpose implies either a very strong motive or a very light estimate of the value of human life. Then, as we have said, the sender is fairly ingenious but yet quite unmechanical and apparently unprovided with the common tools which ordinary men possess and are more or less able to use. You notice that the combination of ingenuity with non-possession of tools is a rather unusual one.”

“How do you infer that the sender possessed no tools?”

“From the fact that none were used, and that such materials were employed as required no tools, though these were not the most suitable materials. For instance, common twine was used to pull the trigger, though it is a bad material by reason of its tendency to stretch. But it can be cut with a knife or a pair of scissors, whereas wire, which was the really suitable material, requires cutting pliers to divide it. Again, there were the corks. They were really not very safe, for their weakness and their resiliency might have led to disaster in the event of a specially heavy jerk in transit. A man who possessed no more than a common keyhole saw, or a hand-saw and a chisel or two, would have roughly shaped up one or two blocks of wood to fit the pistol and jar, which would have made the thing perfectly secure. If he had possessed a glue-pot, he would not have used seccotine. But every one has waste corks, and they can be trimmed to shape with an ordinary dinner-knife; and seccotine can be bought at any stationer’s. But, to return to what we were saying. I had no special precautions in my mind. I suggested that we should keep our own counsel merely on the general principle that it is always best to keep one’s own counsel. One may make a confidence to an entirely suitable person; but who can say that that person may not, in his or her turn, make a confidence? If we keep our knowledge strictly to ourselves we know exactly how we stand, and that if there has been any leakage, it had been from some other source. But I need not platitudeize to an experienced and learned counsel.”

I grinned appreciatively at the neat finish; for “experienced counsel” as I certainly was not, I was at least able to realize, with secret approval, how adroitly Thorndyke had eluded my leading question.

And at that I left it, enquiring in my turn: “I suppose nothing of interest has transpired since I have been away?”

“Very little. There is one item of news, but that can hardly be said to have ‘transpired’ unless you can associate the process of transpiration with a suction-pump. Superintendent Miller took my advice and applied the suctorial method to Wallingford with results of which he possibly exaggerates the importance. He tells me—this is, of course, in the strictest confidence—that under pressure, Wallingford made a clean breast of the cocaine and morphine business. He admitted that he had obtained those drugs fraudulently by forging an order inDimsdale’s name, written onDimsdale’s headed note-paper, to the wholesale druggists to deliver to bearer the drugs mentioned. He had possessed himself of the note-paper at the time when he was working at the account books inDimsdale’s surgery.”

“But how was it that Dimsdale did not notice what had happened when the accounts were sent in?”

“No accounts were ever sent in. The druggists whom Wallingford patronized were not those with whom Dimsdale had an account. The order stated, in every case, that bearer would pay cash.”

“Quite an ingenious little plan of Wallingford’s,” I remarked. “It is more than I should have given him credit for. And you say that Miller attaches undue importance to this discovery. I am not surprised at that. But why do you think he exaggerates its importance?”

Thorndyke regarded me with a quizzical smile. “Because,” he answered, “Miller’s previous experiences have been repeated. There has been another discovery. It has transpired that Miss Norris also had dealings with a wholesale druggist. But in her case there was no fraud or irregularity. The druggist with whom she dealt was the one who used to supply her father with materia medica and to whom she was well known.”

“Then, in that case, I suppose she had an account with him?”

“No, she did not. She also paid cash. Her purchases were only occasional and on quite a small scale; too small to justify an account.”

“Has she made any statement as to what she wanted the drugs for?”
“She denies that she ever purchased drugs, in the usual sense, that is substances having medicinal properties. Her purchases were, according to her statement, confined to such pharmaceutical and chemical materials as were required for purposes of instruction in her classes. Which is perfectly plausible, for, as you know, academic cookery is a rather different thing from the cookery of the kitchen.”

“Yes, I know that she had some materials in her cupboard that I shouldn’t have associated with cookery and I should accept her statement without hesitation. In fact, the discovery seems to me to be of no significance at all.”

“Probably you are right,” said he; “but the point is that, in a legal sense, it confuses the issues hopelessly. In her case, as in Wallingford’s, materials have been purchased from a druggist, and, as no record of those purchases has been kept, it is impossible to say what those materials were. Probably they were harmless, but it cannot be proved that they were. The effect is that the evidential value of Wallingford’s admission is discounted by the fact that there was another person who is known to have purchased materials some of which may have been poisons.”

“Yes,” said I, “that is obvious enough. But doesn’t it strike you, Thorndyke, that all this is just a lot of futile logic-chopping such as you might hear at a debating club? I can’t take it seriously. You don’t imagine that either of these two persons murdered Harold Monkhouse, do you? I certainly don’t; and I can’t believe Miller does.”

“It doesn’t matter very much what he believes, or, for that matter, what any of us believe. ‘He discovers who proves.’ Up to the present, none of us has proved anything. My impression is that Miller is becoming a little discouraged. He is a genius in following up clues. But where there are no clues to follow up, the best of detectives is rather stranded.”

“By the way,” said I, “did you pick up anything from my diary that threw any light on the mystery?”

“Very little,” he replied; “in fact nothing that gets us any farther. I was able to confirm our belief that Monkhouse’s attacks of severe illness coincided with his wife’s absence from home. But that doesn’t help us much. It merely indicates, as we had already observed, that the poisoner was so placed that his or her activities could not be carried on when the wife was at home. But I must compliment you on your diary, Mayfield. It is quite a fascinating work; so much so that I have been tempted to encroach a little on your kindness. The narrative of the last three years was so interesting that it lured me on to the antecedents that led up to them. It reads like a novel.”

“How much of it have you read?” I asked, my faint resentment completely extinguished by his appreciation.

“Six volumes,” he replied, “including the one that I have just borrowed. I began by reading the last three years for the purposes of our inquiry, and then I ventured to go back another three years for the interest of tracing the more remote causation of recent events. I hope I have not presumed too much on the liberty that you were kind enough to give me.”

“Not at all,” I replied, heartily. “I am only surprised that a man as much occupied as you are should have been willing to waste your time on the reading of what is, after all, but a trivial and diffuse autobiography.”

“I have not wasted my time, Mayfield,” said he. “If it is true that ‘the proper study of mankind is man,’ how much more true is it of that variety of mankind that wears the wig and gown and pleads in Court. It seems to me that to lawyers like ourselves whose professional lives are largely occupied with the study of motives of human actions and with the actions themselves viewed in the light of their antecedents and their consequences, nothing can be more instructive than a full, consecutive diary in which, over a period of years, events may be watched growing out of those that went before and in their turn developing their consequences and elucidating the motives of the actors. Such a diary is a synopsis of human life.”

I laughed as I rose to depart. “It seems,” said I, “that I wrought better than I knew; in fact I am disposed, like Pendennis, to regard myself with respectful astonishment. But perhaps I had better not be too puffed up. It may be that I am, after all, no more than a sort of literary Strasburg goose; an unconscious provider of the food of the gods.”

Thorndyke laughed in his turn and escorted me down the stairs to the entry where we stood for a few moments looking out into the fog.

“It seems thicker than ever,” said he. “However, you can’t miss your way. But keep a look-out as you go, in case our friend is still waiting at the corner. Good night!”

I returned his farewell and plunged into the fog, steering for the left corner of the library, and was so fortunate as to strike the wall within just a few yards of it. From thence I felt my way without difficulty to the Terrace where I halted for a moment to look about and listen; and as there was no sign, visible or audible of any loiterer at the corner, I groped my way into the passage and so home to my chambers without meeting a single human creature.

XI. — THE RIVALS

THE warmth with which Barbara greeted me when I made my first appearance at her flat struck me as rather pathetic, and for the first time I seemed to understand what it was that had induced her to marry Harold Monkhouse. She was not a solitary woman by nature and she had never been used to a solitary existence. When Stella’s death had broken up her home and left her with no intimate friend in the world but me, I had been too much taken up with my own bereavement to give much consideration to her. But now, as she stood before me in her pretty sitting room, holding both my hands and smiling her welcome, it was suddenly borne in on me that her state was rather forlorn in spite of her really comfortable means.
Indeed, my heart prompted me to some demonstrations of affection and I was restrained only by the caution of a confirmed bachelor. For Barbara was now a widow; and even while my sympathy with my almost life-long friend tempted me to pet her a little, some faint echoes of Mr. Tony Weller's counsels bade me beware.

“You are quite an anchoress here, Barbara,” I said, “though you have a mighty comfortable cell. I see you have a new maid, too. I should have thought you would have brought Mabel with you.”

“She wouldn’t come—naturally. She said she preferred to go and live among strangers and forget what had happened at Hilborough Square. Poor Mabel! She was very brave and good, but it was a terrible experience for her.”

“Do you know what has become of her?”

“No. She has disappeared completely. Of course, she has never applied for a reference.”

“Why ‘of course’?”

“My dear Rupert,” she replied a little bitterly, “do you suppose that she would want to advertise her connection with Mrs Harold Monkhouse?”

“No, I suppose she would be likely to exaggerate the publicity of the affair, as I think you do. And how is Madeline? I rather expected that you and she would have shared a flat. Why didn’t you?”

Barbara was disposed to evasive. “I don’t know,” she replied, “that the plan commended itself to either of us. We have our separate interests, you know. At any rate, she never made any such suggestion and neither did I.”

“Do you ever see Wallingford now?” I asked.

“Indeed, I do,” she replied; “in fact I have had to hint to him that he mustn’t call too frequently. One must consider appearances, and, until I spoke, he was here nearly every day. But I hated doing it.”

“Still, Barbara, it was very necessary. It would be so in the case of any young woman, but in your case—er—especially so.”

I broke off awkwardly, not liking to say exactly what was in my mind. For, of course, in the atmosphere of suspicion which hung about him, his frequent visits would be a source of real danger. No motive for the murder had yet been suggested. It would be a disaster if his folly were to create the false appearance of one. But, as I have said, I shrank from pointing this out, though I think she understood what was in my mind, for she discreetly ignored the abrupt finish of my sentence and continued: “Poor Tony! He is so very self-centred and he seems so dependent on me. And really, Rupert, I am a good deal concerned about him.”

“How are you?” I asked, rather unsympathetically.

“He is getting so queer. He was always rather odd, as you know, but this trouble seems to be quite upsetting his balance. I am afraid he is getting delusions—and yet, in a way, I hope that he is.”

“What do you mean? What sort of delusions?”

“He imagines that he is being followed and watched. It is a perfect obsession, especially since that superintendent man called on him and cross-questioned him. But I don’t think I told you about that.”

“No, you did not,” said I, quite faithfully, but with an uncomfortable feeling that I was indirectly telling a lie.

“Well, it seems that this man, Miller, called at his rooms—so you see he knew where Tony was living—and, according to Tony’s account, extracted by all sorts of dreadful threats, a full confession of the means by which he obtained that cocaine.”

“And how did he obtain it?”

“Oh, he just bought it at a wholesale druggist’s. Rather casual of the druggist to have supplied him, I think, but still, he needn’t have made such a secret of it. However, since then he has been possessed by this obsession. He imagines that he is constantly under observation. He thinks that some man hangs about near his rooms and watches his comings and goings and follows him about whenever he goes abroad. I suppose there can’t be anything in it?”

“Of course not. The police have something better to do than spend their time shadowing harmless idiots. Why on earth should they shadow him? If they have any suspicions of him, those suspicions relate to the past, not to the present.”

“But I don’t think Tony connects these watchers with the police. I fancy he suspects them of being agents of Dr Thorndyke. You remember that he was suspicious and uneasy about Dr Thorndyke from the first; and I know that he suspects him of having set the superintendent on him about the cocaine.”

“The devil he does!” I exclaimed, a little startled. “Have you any idea what makes him suspect Thorndyke of that?”

“He says that the superintendent accepted his statement at the time when the cocaine was found, or at least, did not seem disposed to press him on the question as to where he obtained it, and that this inquisition occurred only after you had put the case in Dr Thorndyke’s hands.”

I reflected on this statement with some surprise. Of course, Wallingford was quite right, as I knew from first-hand knowledge. But how had he arrived at this belief? Was it a mere guess, based on his evident prejudice against Thorndyke? Or had he something to go on? And was it possible that his other suspicions might be correct? Could it be that Thorndyke was really keeping him under observation? I could imagine no object for such a proceeding. But Thorndyke’s methods were
so unlike those of the police or of anyone else that it was idle to speculate on what he might do; and his emphatic advice to Miller showed that he regarded Wallingford at least with some interest.

"Well, Barbara," I said, mentally postponing the problem for future consideration, "let us forget Wallingford and everybody else. What are we going to do this afternoon? Is there a matinee that we could go to, or shall we go and hear some music?"

"No, Rupert," she replied. "I don't want any theatres or music. I can have those when you are not here. Let us go and walk about Kensington Gardens and gossip as we used to in the old days. But we have a little business to discuss first. Let us get that finished and then we can put it away and be free. You were going to advise me about the house in Hilborough Square. My own feeling is that I should like to sell it and have done with it once for all."

"I shouldn't do that, Barbara," said I. "It is a valuable property, but just at present its value is depreciated. It would be difficult to dispose of at anything like a reasonable price until recent events have been forgotten. The better plan would be to let it at a low rent for a year or two."

"But would anybody take it?"

"Undoubtedly, if the rent were low enough. Leave it to Brodribb and me to manage. You needn't come into the matter at all beyond signing the lease. Is the house in fairly good repair?"

"Most of it is, but there are one or two rooms that will need redecorating, particularly poor Harold's. That had to be left when the other rooms were done because he refused to be disturbed. It is in a very dilapidated state. The paint is dreadfully shabby and the paper is positively dropping off the walls in places. I daresay you remember its condition."

"I do, very well, seeing that I helped Madeline to paste some of the loose pieces back in their places. But we needn't go into details now. I will go and look over the house and see what is absolutely necessary to make the place presentable. Who has the keys?"

"I have the latch-keys. The other keys are inside the house."

"And I suppose you don't wish to inspect the place yourself?"

"No. I do not. I wish never to set eyes upon that house again." She unlocked a little bureau, and taking a bunch of latch-keys from one of the drawers handed it to me. Then she went away to put on her outdoor clothes.

Left alone in the room, I sauntered round and inspected Barbara's new abode, noting how, already, it seemed to reflect in some indefinable way the personality of the tenant. It is this sympathetic quality in human dwelling-places which gives its special charm and interest to a room in which some person of character has lived and worked, and which, conversely, imparts such deadly dullness to the "best room" in which no one is suffered to distribute the friendly, humanizing litter, and which is jealously preserved, with all its lifeless ornamentation—its unenjoyed pictures and its unread books—intact and undefiled by any traces of human occupation. The furniture of this room was mostly familiar to me, for it was that of the old boudoir. There was the little piano, the two cozy armchairs, the open bookshelves with their array of well-used books, the water-colours on the walls, and above the chimney-piece, the little portrait of Stella with the thin plait of golden hair bordering the frame.

I halted before it and gazed at the beloved face which seemed to look out at me with such friendly recognition, and let my thoughts drift back into the pleasant old times and stray into those that might have been if death had mercifully passed by this sweet maid and left me the one companion that my heart yearned for. Now that time had softened my passionate grief into a tender regret, I could think other with a sort of quiet detachment that was not without its bitter-sweet pleasure. I could let myself speculate on what my life might have been if she had lived, and what part she would have played in it; questions that, strangely enough, had never arisen while she was alive.

I was so immersed in my reverie that I did not notice Barbara come into the room, and the first intimation that I had of her presence was when I felt her hand slip quietly into mine. I turned to look at her and met her eyes, brimming with tears, fixed on me with an expression of such unutterable sadness that, in a moment, my heart leaped out to her, borne on a wave of sympathy and pity which swept away all my caution and reserve. Forgetful of everything but her loneliness and the grief which we shared, I drew her to me and kissed her. It seemed the natural thing to do and I felt that she understood, though she flushed warmly and the tears started from her eyes so that she must needs wipe them away. Then she looked at me with the faintest, most pathetic little smile and without a word, we turned together and walked out of the room.

Barbara was, as I have said, a rather inscrutable and extremely self-contained woman, but she could be, on occasions, a very delightful companion. And so I found her today. At first a little pensive and silent, she presently warmed up into a quite unwonted gaiety and chatted so pleasantly and made so evident her pleasure at having me back that I yearned no more for the Bar Mess but was able to forget the horrors and anxieties of the past and give myself up to the very agreeable present.

I have seldom spent a more enjoyable afternoon. Late autumn as it was, the day was mild and sunny, the sky of that wonderful tender, misty blue that is the peculiar glory of London. And the gardens, too, though they were beginning to take on their winter garb, had not yet quite lost their autumnal charm. Still, on the noble elms, thin as their raiment was growing, the golden and russet foliage lingered, and the leaves that they had already shed remained to clothe the earth with a many-coloured carpet.
We had crossed the gardens by some of the wider paths and had turned into one of the pleasant by-paths when Barbara, spying a seat set back between a couple of elms, suggested that we should rest for a few minutes before recrossing the gardens to go forth in search of tea. Accordingly we sat down, sheltered on either side by the great boles of the elms and warmed by the rays of the late afternoon sun; but we had been seated hardly a minute when the peace and forgetfulness that had made our ramble so delightful were dissipated in a moment by an apparition on the wide path that we had just left.

I was the first to observe it. Glancing back through the interval between the elm on my left and another at a little distance, I noticed a man coming toward us. My attention was first drawn to him by his rather singular behaviour. He seemed to be dividing his attention between something that was ahead of him and something behind. But I had taken no special note of him until I saw him step, with a rather absurd air of secrecy and caution, behind a tree-trunk and peer round it along the way that he had come. After keeping a look-out in this fashion for nearly a minute, apparently without result, he backed away from the tree and came forward at a quick pace, peering eagerly ahead and on both sides and pausing now and again to cast a quick look back over his shoulder. I drew Barbara’s attention to him, remarking:

“There is a gentleman who seems to be afflicted with Wallingford’s disease. He is trying to look all round the compass at once.”

Barbara looked at the man, watching his movements for a time with a faint smile. But suddenly the smile faded and she exclaimed:

“Why, I believe it is Tony! Yes, I am sure it is.”

And Tony it was. I recognized him almost as soon as she spoke. He came on now at a quick pace and seemed in a hurry either to escape from what he supposed to be behind him or to overtake whatever was in front. He had apparently not seen us, for though we must have been visible to him—or we could not have seen him—we were rendered inconspicuous by the two trees between which we sat. Presently he disappeared as the nearer elm-trunk hid him from our view, and I waited with half-amused annoyance for him to reappear.

“What a nuisance he is!” said Barbara. “Disturbing our peaceful tete-a-tete. But he won’t freeze on to us. He would rather forego my much desired society than put up with yours.” She laughed softly and added in a thoughtful tone: “I wonder what he is doing here.”

I had been wondering that, myself. Kensington Gardens were quite near to Barbara’s flat, but they were a long way from Jermy Street. It was certainly odd that he should be here and on this day of all days. But at this point my reflections were interrupted by the appearance of their subject from behind the big elm-trunk.

He came on us suddenly and was quite close before he saw us. When he did see us, however, he stopped short within a few paces of us, regarding us with a wild stare. It was the first time that I had seen him since the funeral; and certainly his appearance had not improved in the interval. There was something neglected and dishevelled in his aspect that was distinctly suggestive of drink or drugs. But what principally struck me was the expression of furious hate with which he glaring at me. There was no mistaking it. Whatever might be the cause, there could be no doubt that he regarded me with almost murderous animosity. He remained in this posture only for a few seconds. Then, as Barbara had begun to utter a few words of greeting, he raised his hat and strode away without a word.

Barbara looked at his retreating figure with a vexed smile.

“Silly fellow!” she exclaimed. “He is angry that I have come out to spend a few hours with my oldest friend, and shows it like a bad-mannered child. I wish he would behave more like an ordinary person.”

“You can hardly expect him to behave like what he is not,” I said. “Besides, a very ordinary man may feel jealous at seeing another man admitted to terms of intimacy, which are denied to him, with the woman to whom he is specially attached. For I suppose, Barbara, we may take it that that is the position?”

“I suppose so,” she admitted. “He is certainly very devoted to me, and I am afraid he is rather jealous of you.”

As she spoke, I looked at her and could not but feel a faint sympathy with Wallingford. She was really a very handsome woman; and today she was not only looking her best; she seemed, in some mysterious way to have grown younger, more girlish. The rather sombre gravity of the last few years seemed to be quite dissipated since we had left the flat, and much of the charm of her youth had come back to her.

“He looked more than rather jealous,” said I. “Venomous hatred was what I read in his face. Do you think he has anything against me other than my position as his rival in your affections?”

“Yes, I do. He is mortally afraid of you. He believes that you suspect him of having at least had a hand in poor Harold’s death and that you have set Dr Thorndyke to track him down and bring the crime home to him. And his terror of Dr Thorndyke is positively an insane obsession.”

I was by no means so sure of this, but I said nothing, and she continued: “I suppose you don’t know whether Dr Thorndyke does really look on him with any suspicion? To me the idea is preposterous. Indeed, I find it impossible to believe that there was any crime at all. I am convinced that poor Harold was the victim of some strange accident.”

“I quite agree with you, Barbara. That is exactly my own view. But I don’t think it is Thorndyke’s. As to whom he suspects—if he suspects anybody—I have not the faintest idea. He is a most extraordinarily close and secretive man. No one ever
knows what is in his mind until the very moment when he strikes. And he never does strike until he has his case so complete that he can take it into court with the certainty of getting a conviction, or an acquittal, as the case may be.”

“But I suppose there are mysteries that elude even his skill?”

“No doubt there are; and I am not sure that our mystery is not one of them. Even Thorndyke can’t create evidence, and as he pointed out to me, the evidence in our case lies in the past and is mostly irrecoverable.”

“I hope it is not entirely irrecoverable,” said she; “for until some reasonable solution of the mystery is reached, an atmosphere of suspicion will continue to hang about all the inmates of that house. So let us wish Dr Thorndyke his usual success; and when he has proved that no one was guilty—which I am convinced is the fact—perhaps poor Tony will forgive him.”

With this, we dismissed the subject, and, getting up from the seat, made our way out of the gardens just as the sun was setting behind the trees, and went in search of a suitable tea-shop. And there we lingered gossiping until the evening was well advanced and it was time for me to see Barbara home to her flat and betake myself to Fig Tree Court and make some pretence of doing an evening’s work.

XII. — THORNDYKE CHALLENGES THE EVIDENCE

MY relations with Thorndyke were rather peculiar and a little inconsistent. I had commissioned him, somewhat against his inclination, to investigate the circumstances connected with the death of Harold Monkhouse. I was, in fact, his employer. And yet, in a certain subtle sense, I was his antagonist. For I held certain beliefs which I, half-unconsciously, looked to him to confirm. But apparently he did not share those beliefs. As his employer, it was clearly my duty to communicate to him any information which he might think helpful or significant, even if I considered it irrelevant. He had, in fact, explicitly pointed this out to me; and he had specially warned me to refrain from sifting or selecting facts which might become known to me according to my view of their possible bearing on the case.

But yet this was precisely what I felt myself constantly tempted to do; and as we sat at lunch in his chambers on the day after my visit to Barbara, I found myself consciously suppressing certain facts which had then come to my knowledge. And it was not that those facts appeared to me insignificant. On the contrary, I found them rather surprising. Only I had the feeling that they would probably convey to Thorndyke a significance that would be erroneous and misleading.

There was, for instance, the appearance of Wallingford in Kensington Gardens. Could it have been sheer chance? If so, it was a most remarkable coincidence; and one naturally tends to look askance at remarkable coincidences. In fact, I did not believe it to be a coincidence at all. I felt little doubt that Wallingford had been lurking about the neighbourhood of Barbara’s flat and had followed us, losing sight of us temporarily, when we turned into the by-path. But, knowing Wallingford as I did, I attached no importance to the incident. It was merely a freak of an unstable, emotional man impelled by jealousy to make a fool of himself. Again, there was Wallingford’s terror of Thorndyke and this ridiculous delusions on the subject of the “shadowings.” How easy it would be for a person unacquainted with Wallingford’s personality to read into them a totally misleading significance! Those were the thoughts that drifted half-consciously through my mind as I sat opposite my friend at the table. So, not without some twinges of conscience, I held my peace.

But I had not allowed for Thorndyke’s uncanny capacity for inferring what was passing in another person’s mind. Very soon it became evident to me that he was fully alive to the possibility of some reservations on my part; and when one or two discreet questions had elicited some fact which I ought to have volunteered, he proceeded to something like definite cross-examination.

“So the household has broken up and the inmates scattered?” he began, when I had told him that I had obtained possession of the keys. “And Mabel Withers seems to have vanished, unless the police have kept her in view. Did you hear anything about Miss Norris?”

“Not very much. Barbara and she have exchanged visits once or twice, but they don’t seem to see much of each other.”

“And what about Wallingford? Does he seem to have been much disturbed by Miller’s descent on him?”

I had to admit that he was in a state bordering on panic.

“And what did Mrs Monkhouse think of the forged orders on Dimsdale’s headed paper?”

“He hadn’t disclosed that. She thinks that he bought the cocaine at a druggist’s in the ordinary way, and I didn’t think it necessary to undeceive her.”

“No. The least said the soonest mended. Did you gather that she sees much of Wallingford?”

“Yes, rather too much. He was haunting her flat almost daily until she gave him a hint not to make his visits too noticeable.”

“Why do you suppose he was haunting her flat? So far as you can judge, Mayfield—that is in the strictest confidence, you understand—does there seem to be anything between them beyond ordinary friendliness?”

“Not on her side, certainly, but on his—yes, undoubtedly. His devotion to her amounts almost to infatuation, and has for a long time past. Of course, she realizes his condition, and though he is rather a nuisance to her, she takes a very kindly and
indulgent view of his vagaries."

"Naturally, as any well-disposed woman would. I suppose you didn’t see anything of him yesterday?"

Of course I had to relate the meeting in Kensington Gardens, and I could see by the way Thorndyke looked at me that he was wondering why I had not mentioned the matter before.

"It almost looks," said he, "as if he had followed you there. Was there anything in his manner of approach that seemed to support that idea?"

"I think there was, for I saw him at some distance," and here I felt bound to describe Wallingford’s peculiar tactics.

"But," said Thorndyke, "why was he looking about behind him? He must have known that you were in front."

"It seems," I explained, feebly, "that he has some ridiculous idea that he is being watched and followed."

"Ha!" said Thorndyke. "Now I wonder who he supposes is watching and following him."

"I fancy he suspects you," I replied. And so the murder was out, with the additional fact that I had not been very ready with my information.

Thorndyke, however, made no comment on my reticence beyond a steady and significant look at me.

"So," said he, "he suspects me of suspecting him. Well, he is giving us every chance. But I think, Mayfield, you would do well to put Mrs Monkhouse on her guard. If Wallingford makes a public parade of his feelings towards her, he may put dangerous ideas into the head of Mr Superintendent Miller. You must realize that Miller is looking for a motive for the assumed murder. And if it comes to his knowledge that Harold Monkhouse’s secretary was in love with Harold Monkhouse’s wife, he will think that he has found a motive that is good enough."

"Yes, that had occurred to me; and in fact, I did give her a hint to that effect, but it was hardly necessary. She had seen it for herself."

As we now seemed to have exhausted this topic, I ventured to make a few enquiries about the rather farcical infernal machine.

"Did your further examination of it," I asked, "yield any new information?"

"Very little," Thorndyke replied, "but that little was rather curious. There were no finger-prints at all. I examined both the pistol and the jar most thoroughly, but there was not a trace of a finger-mark, to say nothing of a print. It is impossible to avoid the conclusion that the person who sent the machine wore gloves while he was putting it together."

"But isn’t that a rather natural precaution in these days?" I asked.

"A perfectly natural precaution, in itself," he replied, "but not quite consistent with some other features. For instance, the wadding with which the pistol-barrel was plugged consisted of a little ball of knitting-wool of a rather characteristic green. I will show it to you, and you will see that it would be quite easy to match and therefore possible to trace. But you see that there are thus shown two contrary states of mind. The gloves suggest that the sender entertained the possibility that the machine might fail to explode, whereas the wool seems to indicate that no such possibility was considered."

He rose from the table—lunch being now finished—and brought from a locked cabinet a little ball of wool of a rather peculiar greenish blue. I took it to the window and examined it carefully, impressed by the curious inconsistency which he had pointed out.

"Yes," I agreed, "there could be no difficulty in matching this. But as to tracing it, that is a different matter. There must have been thousands of skeins of this sold to, at least, hundreds of different persons."

"Very true," said he. "But I was thinking of it rather as a corroborating item in a train of circumstantial evidence."

He put the "corroborating item" back in the cabinet and as, at this moment a taxi was heard to draw up at our entry, he picked up a large attache case and preceded me down the stairs.

During the comparatively short journey I made a few not very successful efforts to discover what was Thorndyke’s real purpose in making this visit of inspection to the dismantled house. But his reticence and mine were not quite similar. He answered all my questions freely. He gave me a wealth of instances illustrating the valuable evidence obtained by the inspection of empty houses. But none of them seemed to throw any light on his present proceedings. And when I pointed this out, he smilingly replied that I was in precisely the same position as himself.

"We are not looking for corroborative evidence," said he. "That belongs to a later stage of the inquiry. We are looking for some suggestive fact which may give us a hint where to begin. Naturally we cannot form any guess as to what kind of fact that might be."

It was not a very illuminating answer, but I had to accept it, although I had a strong suspicion that Thorndyke’s purpose was not quite so vague as he represented it to be, and determined unobtrusively to keep an eye on his proceedings.

"Can I give you any assistance?" I enquired, craftily, when I had let him into the hall and shut the outer door.

"Yes," he replied, "there is one thing that you can do for me which will be very helpful. I have brought a packet of cards with me"—here he produced from his pocket a packet of stationer’s postcards. "If you will write on each of them the
description and particulars of one room with the name of the occupant in the case of bedrooms, and lay the card on the mantelpiece of the room which it describes, I shall be able to reconstitute the house as it was when it was inhabited. Then we can each go about our respective businesses without hindering one another.”

I took the cards—and the fairly broad hint—and together we made a preliminary tour of the house, which, now that the furniture, carpets and pictures were gone, looked very desolate and forlorn; and as it had not been cleaned since the removal, it had a depressingl dirty and squalid appearance. Moreover, in each room, a collection of rubbish and discarded odds and ends had been roughly swept up on the hearth, converting each fireplace into a sort of temporary dust-bin.

After a glance around the rooms on the ground floor, I made my way up to the room in which Harold Monkhouse had died, which was my principal concern as well as Thorndyke’s.

“Well, Mayfield,” the latter remarked, running a disparaging eye round the faded, discoloured walls and the blackened ceiling, “you will have to do something here. It is a shocking spectacle. Would you mind roughly sketching out the position of the furniture? I see that the bedstead stood by this wall with the head, I presume, towards the window, and the bedside table about here, I suppose, at his right hand. By the way, what was there on that table? Did he keep a supply of food of any kind for use at night?”

“I think they usually put a little tin of sandwiches on the table when the night preparations were made.”

“You say ‘they’. Who put the box there?”

“I can’t say whose duty it was in particular. I imagine Barbara would see to it when she was at home. In her absence it would be done by Madeline or Mabel.”

“Not Wallingford?”

“No. I don’t think Wallingford ever troubled himself about any of the domestic arrangements excepting those that concerned Barbara.”

“Do you know who made the sandwiches?”

“I think Madeline did, as a rule. I know she did sometimes.”

“And as to drink? I suppose he had a water-bottle, at any rate.”

“Yes, that was always there, and a little decanter of whiskey. But he hardly ever touched that. Very often a small flagon of lemonade was put on the table with the sandwiches.”

“And who made the lemonade?”

“Madeline. I know that, because it was a very special brand which no one else could make.”

“And supposing the sandwiches and the lemonade were not consumed, do you happen to know what became of the remainder?”

“I have no idea. Possibly the servants consumed them, but more probably they were thrown away. Well-fed servants are not partial to remainders from a sick-room.”

“You never heard of any attacks of illness among any of the servants?”

“Not to my knowledge. But I shouldn’t be very likely to, you know.”

“No. You notice, Mayfield, that you have mentioned one or two rather material facts that were not disclosed at the inquest?”

“Yes. I was observing that. And it is just as well that they were not disclosed. There were enough misleading facts without them.”

Thorndyke smiled indulgently. “You seem to have made up your mind pretty definitely, on the negative side, at least,” he remarked; and then, looking round once more at the walls with their faded, loosened paper, he continued: “I take it that Mr Monkhouse was not a fresh-air enthusiast.”

“He was not,” I replied. “He didn’t much care for open windows, especially at night. But how did you arrive at that fact?”

“I was looking at the wallpaper. This is not a damp house, but yet the paper on the walls of this room is loosening and peeling off in all directions. And if you notice the distribution of this tendency you get the impression that the moisture which loosened the paper proceeded from the neighbourhood of the bed. The wall which is most affected is the one against which the bed stood; and the part of that wall that has suffered most is that which was nearest to the occupant of the bed, and especially to his head. That large piece, hanging down, is just where the main stream of his breath would have impinged.”

“Yes, I see the connection now you mention it; and yet I am surprised that his breath alone should have made the air of the room so damp. All through the winter season, when the window would be shut most closely, the gas was burning; and at night, when the gas was out, he commonly had his candle-lamp alight. I should have thought that the gas and the candle together would have kept the air fairly dry.”

“That,” said Thorndyke, “is a common delusion. As a matter of fact they would have quite the opposite effect. You have
only to hold an inverted tumbler over a burning candle to realize, from the moisture which immediately condenses on the inside of the tumbler, that the candle, as it burns, gives off quite a considerable volume of steam. But of course, the bulk of the moisture which has caused the paper to peel in this room came from the man’s own breath. However, we didn’t come here for debating purposes. Let us complete our preliminary tour, and when we have seen the whole house we can each make such more detailed inspection as seems necessary for our particular purposes."

We accordingly resumed our perambulation (but I noticed that Thorndyke deposited his attache case in Monkhouse’s room with the evident intention of returning thither), both of us looking about narrowly: Thorndyke, no doubt, in search of the mysterious “traces” of which he had spoken, and I with an inquisitive endeavour to ascertain what kind of objects or appearances he regarded as “traces.”

We had not gone very far before we encountered an object that even I was able to recognize as significant. It was in a corner of the long corridor that we came upon a little heap of rubbish that had been swept up out of the way; and at the very moment when Thorndyke stopped short with his eyes fixed on it, I saw the object—a little wisp of knitting-wool of the well-remembered green colour. Thorndyke picked it up, and, having exhibited it to me, produced from his letter-case a little envelope such as seedsmen use, in which he put the treasure trove, and as he uncapped his fountain pen, he looked up and down the corridor.

"Which is the nearest room to this spot?” he asked.

"Madeline’s,” I replied. “That is the door of her bedroom, on the right. But all the principal bedrooms are on this floor and Barbara’s boudoir as well. This heap of rubbish is probably the sweepings from all the rooms.”

“That is what it looks like,” he agreed as he wrote the particulars on the envelope and slipped the latter in his letter-case. "You notice that there are some other trifles in this heap—some broken glass, for instance. But I will go through it when we have finished our tour, though I may as well take this now.”

As he spoke, he stooped and picked up a short piece of rather irregularly shaped glass rod with a swollen, rounded end.

“What is it?” I asked.

“It is a portion of a small glass pestle and it belongs to one of those little glass mortars such as chemists use in rubbing up powders into solutions or suspensions. You had better not touch it, though it has probably been handled pretty freely. But I shall test it on the chance of discovering what it was last used for.”

He put it away carefully in another seed-envelope and then looked down thoughtfully at the miniature dust-heap; but he made no further investigations at the moment and we resumed the perambulation, I placing the identification card on the mantelpiece of each room while he looked sharply about him, opening all cupboards and receptacles and peering into their, usually empty, interiors.

When we had inspected the servants’ bedrooms and the attics—leaving the indispensable cards—we went down to the basement and visited the kitchen, the scullery, the servants’ parlour and the cellars; and this brought our tour to an end.

“Now,” said Thorndyke, “we proceed from the general to the particular. While you are drawing up your schedule of dilapidations I will just browse about and see if I can pick up any stray crumbs in which inference can find nourishment. It isn’t a very hopeful quest, but you observe that we have already lighted on two objects which may have a meaning for us.”

“Yes, we have ascertained that someone in this house used a particular kind of wool and that someone possessed a glass mortar. Those do not seem to me very weighty facts.”

“They are not,” he agreed; “indeed, they are hardly facts at all. The actual fact is that we have found the things here. But trifles light as air sometimes serve to fill up the spaces in a train of circumstantial evidence. I think I will go and have another look at that rubbish-heap.”

I was strongly tempted to follow him, but could hardly do so in face of his plainly expressed wish to make his inspection alone. Moreover, I had already seen that there was more to be done than I had supposed. The house was certainly not in bad repair, but neither did it look very fresh nor attractive. Furniture and especially pictures have a way of marking indelibly the walls of a room, and the paintwork in several places showed disfiguring traces of wear. But I was anxious to let this house, even at a nominal rent, so that, by a few years’ normal occupation its sinister reputation might be forgotten and its value restored.

As a result, I was committed to a detailed inspection of the whole house and the making of voluminous notes on the repairs and re-decorations which would be necessary to tempt even an impecunious tenant to forget that this was a house in which a murder had been committed. For that was the current view, erroneous as I believed it to be. Note-book in hand, I proceeded systematically from room to room and from floor to floor, and became so engrossed with my own business that I almost forgot Thorndyke; though I could hear him moving about the house, and once I met him—on the first floor, with a couple of empty medicine bottles and a small glass jar in his hands, apparently making his way to Harold’s room, where, as I have said, he had left his attache case.

That room I left to the last, as it was already entered in my list and I did not wish to appear to spy upon Thorndyke’s proceedings. When, at length, I entered the room I found that he, like myself, had come to the end of his task. On the floor his attache case lay open, crammed with various objects, several of which appeared to be bottles, wrapped in oddments of waste paper (including some pieces of wallpaper which he had apparently stripped off ad hoc when the other supplies
failed) and among which I observed a crumpled fly-paper. Respecting this I remarked: “I don’t see why you are burdening yourself with this. A fly-paper is in no sense an incriminating object, even though such things have, at times, been put to unlawful use.”

“Very true,” he replied as he peeled off the rubber gloves which he had been wearing during the search. “A fly-paper is a perfectly normal domestic object. But, as you say, it can on occasion be used as a source of arsenic for criminal purposes; and a paper that has been so used will be found to have had practically the whole of the arsenic soaked out of it. As I happened to find this in the servants’ parlour, it seemed worth while to take it to see whether its charge of arsenic had or had not been extracted.”

“But,” I objected, “why on earth should the poisoner—if there really is such a person—have been at the trouble of soaking out fly papers when apparently he was able to command an unlimited supply of Fowler’s Solution?”

“Quite a pertinent question, Mayfield,” he rejoined. “But may I ask my learned friend whether he found the evidence relating to the Fowler’s Solution perfectly satisfactory?”

“But surely!” I exclaimed. “You had the evidence of two expert witnesses on the point. What more would you require? What is the difficulty?”

“The difficulty is this. There were several witnesses who testified that when they saw the bottle of medicine, the Fowler’s Solution had not yet been added; but there was none who saw the bottle after the addition had been made.”

“But it must have been added before Mabel gave the patient the last dose.”

“That is the inference. But Mabel said nothing to that effect. She was not asked what colour the medicine was when she gave the patient that dose.”

“But what of the analysts and the post mortem?”

“As to the post mortem, the arsenic which was found in the stomach was not recognized as being in the form of Fowler’s Solution, and as to the analysts, they made their examination three days after the man died.”

“Still, the medicine that they analysed was the medicine that deceased had taken. You don’t deny that, do you?”

“I neither deny it nor affirm it. I merely say that no evidence was given that proved the presence of Fowler’s Solution in that bottle before the man died; and that the bottle which was handed to the analysts was one that had been exposed for three days in a room which had been visited by a number of persons, including Mrs Monkhouse, Wallingford, Miss Norris, Mabel Withers, Amos Monkhouse, Dr Dimsdale and yourself.”

“You mean to suggest that the bottle might have been tampered with or changed for another? But, my dear Thorndyke, why in the name of God should anyone want to change the bottle?”

“Not at all, I answer you. I am merely pointing out that the evidence of the analysts is material only subject to the conditions that the bottle which they examined was the bottle from which the last dose of medicine was given, and that its contents were the same as on that occasion; and that no conclusive proof exists that it was the same bottle or that the contents were unchanged.”

“But what reason could there be for supposing that it might have been changed?”

“There is no need to advance any reason. The burden of proof lies on those who affirm that it was the same bottle with the same contents. It is for them to prove that no change was possible. But obviously a change was possible.”

“But still,” I persisted, “there seems to be no point in this suggestion. Who could have had any motive for making a change? And what could the motive have been? It looks to me like mere logic-chopping and hair-splitting.”

“You wouldn’t say that if you were for the defence,” chuckled Thorndyke. “You would not let a point of first-rate importance pass on a mere assumption, no matter how probable. And as to a possible motive, surely a most obvious one is staring us in the face. Supposing some person in this household had been administering arsenic in the food. If it could be arranged that a poisonous dose could be discovered in the medicine, you must see that the issue would be at once transferred from the food to the medicine, and from those who controlled the food to those who controlled the medicine. Which is, in fact, what happened. As soon as the jury heard about the medicine, their interest in the food became extinct.”

I listened to this exposition with a slightly sceptical smile. It was all very ingenious but I found it utterly unconvincing.

“You ought to be pleading in court, Thorndyke,” I said, “instead of grubbing about in empty houses and raking over rubbish-heaps. By the way, have you found anything that seems likely to yield any suggestions?”

“It is a little difficult to say,” he replied. “I have taken possession of a number of bottles and small jars for examination as to their contents, but I have no great expectation in respect of them. I also found some fragments of the glass mortar—an eight-ounce mortar it appears to have been.”

“Where did you find those?” I asked.

“In Miss Norris’ bedroom, in a little pile of rubbish under the grate. They are only tiny fragments, but the curvature enables one to reconstruct the vessel pretty accurately.”

It seemed to me a rather futile proceeding, but I made no comment. Nor did I give utterance to a suspicion which had
just flashed into my mind, that it was the discovery of these ridiculous fragments of glass that had set my learned friend splitting straws on the subject of the medicine bottle. I had not much liked his suggestion as to the possible motive of that hypothetical substitution, and I liked it less now that he had discovered the remains of the mortar in Madeline’s room. There was no doubt that Thorndyke had a remarkable constructive imagination; and, as I followed him down the stairs and out into the square, I found myself faintly uneasy lest that lively imagination should carry him into deeper waters than I was prepared to navigate in his company.

XIII. — RUPERT MAKES SOME DISCOVERIES

BY a sort of tacit understanding Thorndyke and I parted in the vicinity of South Kensington Station, to which he had made a bee line on leaving the square. As he had made no suggestion that I should go back with him, I inferred that he had planned a busy evening examining and testing the odds and ends that he had picked up in the empty house; while I had suddenly conceived the idea that I might as well take the opportunity of calling on Madeline, who might feel neglected if I failed to put in an appearance within a reasonable time after my return to town. Our researches had taken up most of the afternoon and it was getting on for the hour at which Madeline usually left the school; and as the latter was less than half-an-hour’s walk from the station, I could reach it in good time without hurrying.

As I walked at an easy pace through the busily populated streets, I turned over the events of the afternoon with rather mixed feelings. In spite of my great confidence in Thorndyke, I was sensible of a chill of disappointment in respect alike of his words and his deeds. In this rather farcical grubbing about in the dismantled house there was a faint suggestion of charlatanism; of the vulgar, melodramatic sleuth, nosing out a trail; while, as to his hair-splitting objections to a piece of straightforward evidence, they seemed to me to be of the kind at which the usual hard-headed judge would shake his hard head while grudgingly allowing them as technically admissible.

But whither was Thorndyke drifting? Evidently he had turned a dubious eye on Wallingford; and that egregious ass seemed to be doing all that he could to attract further notice. But today I had seemed to detect a note of suspicion in regard to Madeline; and even making allowance for the fact that he had not my knowledge of her gentle, gracious personality, I could not but feel a little resentful. Once more, Wallingford’s remarks concerning a possible mare’s nest and a public scandal recurred to me, and, not for the first time, I was aware of faint misgivings as to my wisdom in having set Thorndyke to stir up these troubled waters. He had, indeed, given me fair warning, and I was half-inclined to regret that I had not allowed myself to be warned off. Of course, Thorndyke was much too old a hand to launch a half-prepared prosecution into the air. But still, I could not but ask myself uneasily whither his overacute inferences were leading him.

These reflections brought me to the gate of the school, where I learned from the porter that Madeline had not yet left and accordingly sent up my card. In less than a minute she appeared, dressed in her out-of-door clothes and wreathed in smiles, looking, I thought, very charming.

“How nice of you, Rupert!” she exclaimed, “to come and take me home. I was wondering how soon you would come to see my little spinster lair. It is only a few minutes’ walk from here. But I am sorry I didn’t know you were coming, for I have arranged to make a call—a business call—and I am due in about ten minutes. Isn’t it a nuisance?”

“How long will you have to stay?”

“Oh, a quarter of an hour, at least. Perhaps a little more.”

“Very well. I will wait outside for you and do sentry-go.”

“No, you won’t. I shall let you into my flat—I should have to pass it—and you can have a wash and brush-up, and then you can prowl about and see how you like my little mansion—I haven’t quite settled down in it yet, but you must overlook that. By the time you have inspected everything, I shall be back and then we can consider whether we will have a late tea or an early supper. This is the supper.”

She led me into a quiet by-street, one side of which was occupied by a range of tall, rather forbidding buildings whose barrack-like aspect was to some extent mitigated by signs of civilized humanity in the tastefully curtained windows. Madeline’s residence was on the second floor, and when she had let me in by the diminutive outer door and switched on the light, she turned back to the staircase with a wave of her hand.

“I will be back as soon as I can,” she said. “Meanwhile go in and make yourself at home.”

I stood at the door and watched her trip lightly down the stairs until she disappeared round the angle, when I shut the door and proceeded to follow her injunctions to the letter by taking possession of the bathroom, in which I was gratified to find a constant supply of hot water. When I had refreshed myself by a wash, I went forth and made a leisurely survey of the little flat. It was all very characteristic of Madeline, the professional exponent of Domestic Economy, in its orderly arrangement and its evidences of considered convenience. The tiny kitchen reminded one of a chemical laboratory or a doctor’s dispensary with its labelled jars of the cook’s materials set out in ordered rows on their shelves, and the two little mortars, one of Wedgewood ware and the other of glass. I grinned as my eye lighted on this latter and I thought of the fragments carefully collected by Thorndyke and solemnly transported to the Temple for examination. Here, if he could have seen it, was evidence that proved the ownership of that other mortar and at the same time demolished the significance of that discovery.
I ventured to inspect the bedroom, and a very trim, pleasant little room it was; but the feature which principally attracted my attention was an arrangement for switching the electric light off and on from the bed—an arrangement suspiciously correlated to a small set of bookshelves also within easy reach of the bed. What interested me in it was what Thorndyke would have called its "unmechanical ingenuity"; for it consisted of no more than a couple of lengths of stout string, of each of which one end was tied to the light-switch and the other end led by a pair of screw-eyes to the head of the bed. No doubt the simple device worked well enough in spite of the friction at each screw-eye, but a man of less intelligence than Madeline would probably have used levers or bell-cranks, or at least pulleys to diminish the friction in changing the direction of the pull.

There was a second bedroom, at present unoccupied and only partially furnished and serving, apparently, as a receptacle for such of Madeline's possessions as had not yet had a permanent place assigned to them. Here were one or two chairs, some piles of books, a number of pictures and several polished wood boxes and cases of various sizes; evidently the residue of the goods and chattels that Madeline had brought from her home and stored somewhere while she was living at Hilborough Square. I ran my eye along the range of boxes, which were set out on the top of a chest of drawers. One was an old-fashioned tea-caddy, another an obvious folding desk of the same period, while a third, which I opened, turned out to be a work-box of mid-Victorian age. Beside it was a little flat rosewood case which looked like a small case of mathematical instruments. Observing that the key was in the lock, I turned it and lifted the lid, not with any conscious curiosity as to what was inside it, but in the mere idleness of a man who has nothing in particular to do. But the instant that the lid was up my attention awoke with a bound and I stood with dropped jaw staring at the interior in utter consternation.

There could be no instant's doubt as to what this case was, for its green-baize-lined interior showed a shaped recess of the exact form of a pocket pistol; and, if that were not enough, there, in its own compartment was a little copper powder-flask, and in another compartment about a dozen globular bullets.

I snapped down the lid and turned the key and walked guiltily out of the room. My interest in Madeline's flat was dead. I could think of nothing but this amazing discovery. And the more I thought, the more overpowering did it become. The pistol that fitted that case was the exact counterpart of the pistol that I had seen in Thorndyke's laboratory; and the case, itself, corresponded, exactly to his description of the case from which that pistol had probably been taken. It was astounding; and it was profoundly disturbing. For it admitted of no explanation that I could bring myself to accept other than that of a coincidence. And coincidences are unsatisfactory things; and you can't do with too many of them at once.

Yet, on reflection, this was the view that I adopted. Indeed, there was no thinkable alternative. And really, when I came to turn the matter over, it was not quite so extraordinary as it had seemed at the first glance. For what, after all, was this pistol with its case? It was not a unique thing. It was not even a rare thing. Thorndyke had spoken of these pistols and cases as comparatively common things with which he expected me to be familiar. Thousands of them must have been made in their time, and since they were far from perishable, thousands of them must still exist. The singularity of the coincidence was not in the facts; it was the product of my own state of mind.

Thus I sought—none too successfully—to rid myself of the effects of the shock that I had received on raising the lid of the case; and I was still moodily gazing out of the sitting room window and arguing away my perturbation when I heard the outer door shut and a moment later Madeline looked into the room.

"I haven't been so very long, have I?" she said, cheerily. "Now I will slip off my cloak and hat and we will consider what sort of meal we will have: or perhaps you will consider the question while I am gone."

With this she flitted away; and my thoughts, passing by the problem submitted, involuntarily reverted to the little rosewood case in the spare room. But her absence was of a brevity suggesting the performance of the professional quick-change artist. In a minute or two I heard her approach and open the door; and I turned—to receive a real knock-out blow.

I was so astonished and dismayed that I suppose I must have stood staring like a fool, for she asked in a rather disconcerted tone: "What is the matter, Rupert? Why are you looking at my jumper like that? Don't you like it?"

"I don't believe you," she said, doubtfully, "you looked so surprised when I first came in. You don't think the colour too startling, do you? Women wear brighter colours than they used to, you know, and I do think this particular shade of green is rather nice. And it is rather unusual, too."

"It is," I agreed, recovering myself by an effort. "Quite distinctive." And then, noting that I had unconsciously adopted Thorndyke's own expression, I added, hastily, "And I shouldn't describe it as startling, at all. It is in perfectly good taste."

"I am glad you think that," she said, "for you certainly did look rather startled at first, and I had some slight misgivings about it myself when I had finished it. It looked more brilliant in colour as a garment than it did in the form of mere skeins."

"You made it yourself, then?"

"Yes. But I don't think I would ever knit another. It took me months to do, and I could have bought one for very little more than the cost of the wool, though, of course, I shouldn't have been able to select the exact tint that I wanted. But what about our meal? Shall we call it tea or supper?"

She could have called it breakfast for all I cared, so completely had this final shock extinguished my interest in food. But I had to make some response to her eager hospitality.
“Let us split the difference or strike an average,” I replied. “We will call it a ‘swarry’-tea and unusual trimmings.”

“Very well,” said she, “then you shall come to the kitchen and help. I will show you the raw material of the feast and you shall dictate the bill of fare.”

We accordingly adjourned to the kitchen where she fell to work on the preparations with the unhurried quickness that is characteristic of genuine efficiency, babbling pleasantly and pausing now and then to ask my advice (which was usually foolish and had to be blandly rejected) and treating the whole business with a sort of playful seriousness that was very delightful. And all the time I looked on in a state of mental chaos and bewilderment for which I can find no words. There she was, my friend, Madeline, sweet, gentle, feminine—the very type of gracious womanhood, and the more sweet and gracious by reason of these homely surroundings. For it is an appalling reflection, in these days of lady professors and women legislators, that to masculine eyes a woman never looks so dignified, so worshipful, so entirely desirable, as when she is occupied in the traditional activities that millennials of human experience have associated with her sex. To me, Madeline, flitting about the immaculate little kitchen, neat-handed, perfect in the knowledge of her homely craft; smiling, dainty, fragile, with her gracefully flowing hair and the little apron that she had slipped on as a sort of ceremonial garment, was a veritable epitome of feminine charm. And yet, but a few feet away was a rosewood case that had once held a pistol; and even now, in Thorndyke's locked cabinet—but my mind staggered under the effort of thought and refused the attempt to combine and collate a set of images so discordant.

“You are very quiet, Rupert,” she said, presently, pausing to look at me. “What is it? I hope you haven’t any special worries.”

“We all have our little worries, Madeline,” I replied, vaguely.

“Yes, indeed,” said she, still regarding me thoughtfully; and for the first time I noticed that she seemed to have aged a little since I had last seen her and that her face, in repose, showed traces of strain and anxiety. “We all have our troubles and we all try to put them on you. How did you think Barbara was looking?”

“Extraordinarily well. I was agreeably surprised.”

“Yes. She is wonderful. I am full of admiration of the way she has put away everything connected with—with that dreadful affair. I couldn’t have done it if I had been in her place. I couldn’t have let things rest. I should have wanted to know.”

“I have no doubt that she does. We all want to know. But she can do no more than the rest of us. Do you ever see Wallingford now?”

“Oh, dear, yes. He was inclined to be rather too attentive at first, but Barbara gave him a hint that spinsters who live alone don’t want too many visits from their male friends, so now he usually comes with her.”

“I must bear Barbara’s words of wisdom in mind,” said I.

“Indeed you won’t!” she exclaimed. “Don’t be ridiculous. Rupert. You know her hint doesn’t apply to you. And I shouldn’t have troubled about the proprieties in Tony’s case if I had really wanted him. But I didn’t, though I felt awfully sorry for him.”

“Yes, he seems to be in a bad way mentally, poor devil. Of course you have heard about his delusions?”

“If they really are delusions, but I am not at all sure that they are. Now help me to carry these things into the sitting room and then I will do the omelette and bring it in.”

I obediently took up the tray and followed her into the sitting room, where I completed the arrangement of the table while she returned to the kitchen to perform the crowning culinary feat. In a minute or two she came in with the product under a heated cover and we took our seats at the table.

“You were speaking of Wallingford,” said I. “Apparently you know more about him than I do. It seemed to me that he was stark mad.”

“He is queer enough, I must admit—don’t let your omelette get cold—but I think you and Barbara are mistaken about his delusions. I suspect that somebody is really keeping him under observation; and if that is so, one can easily understand why his nerves are so upset.”

“Yes, indeed. But when you say you suspect that we are mistaken, what does that mean? Is it just a pious opinion or have you something to go upon?”

“Oh, I shouldn’t offer a mere pious opinion to a learned counsel,” she replied, with a smile. “I have something to go upon, and I will tell you about it, though I expect you will think I am stark mad, too. The fact is that I have been under observation, too.”

“Nonsense, Madeline,” I exclaimed. “The thing is absurd. You have let Wallingford infect you.”

“There!” she retorted. “What did I say? You think I am qualifying for an asylum now. But I am not. Absurd as the thing seems—and I quite agree with you on that point—it is an actual fact. I haven’t the slightest doubt about it.”

“Well,” I said, “I am open to conviction. But let us have your actual facts. How long do you think it has been going on?”

“That I can’t say; and I don’t think it is going on now at all. At any rate, I have seen no signs of any watcher for more than
a week, and I keep a pretty sharp lookout. The way I first became aware of it was this: I happened one day at lunch time to be looking out of this window through the chink in the curtains when I saw a man pass along slowly on the other side of the street and glance up, as it seemed, at this window. I didn’t notice him particularly, but still I did look at him when he glanced up, and of course, his face was then directly towards me. Now it happened that, a few minutes afterwards, I looked out again; and then I saw what looked like the same man pass along again, at the same slow pace and in the same direction. And again he looked up at the window, though he couldn’t have seen me because I was hidden by the curtain. But this time I looked at him very closely and made careful mental notes of his clothing, his hat and his features, because, you see, I remembered what Tony had said and I hadn’t forgotten the way I was treated at the inquest or the way in which that detective man had turned out my cupboard when he came to search the house. So I looked this man over very carefully indeed so that I should recognize him without any doubt if I should see him again.

“Well, before I went out after lunch I had a good look out of the window, but I couldn’t see anything of him; nor did I see him on my way to the school, though I stopped once or twice and looked back. When I got to the school I stopped at the gate and looked along the street both ways, but still there was no sign of him. Then I ran up to a class-room window from which I could see up and down the street; and presently I saw him coming along slowly on the school side and I was able to check him off point by point, and though he didn’t look up this time, I could see his face and check that off, too. There was no doubt whatever that it was the same man.

“When I came out of school that afternoon I looked round but could not see him, so I walked away quickly in the direction that I usually take when going home, but suddenly turned a corner and slipped into a shop. I stayed there a few minutes buying some things, then I came out, and, seeing no one, slipped round the corner and took my usual way home but kept carefully behind a man and a woman who were going the same way. I hadn’t gone very far before I saw my man standing before a shop window but evidently looking up and down the street. I was quite close to him before he saw me and of course I did not appear to notice him; but I hurried home without looking round and ran straight up to this window to watch for him. And sure enough, in about a couple of minutes I saw him come down the street and walk slowly past.”

“And did you see him again after that?”

“Yes, I saw him twice more that same day. I went out for a walk in the evening on purpose to give him a lead. And I saw him from time to time every day for about ten days. Then I missed him, and I haven’t seen a sign of him for more than a week. I suppose he found me too monotonous and gave me up.”

“It is very extraordinary,” I said, convinced against my will by her very circumstantial description. “What possible object could anyone have in keeping a watch on you?”

“That is what I have wondered,” said she. “But I suppose the police have to do something for their pay.”

“But this doesn’t quite look like a police proceeding. There is something rather feeble and amateurish about the affair. With all due respect to your powers of observation, Madeline, I don’t think a Scotland Yard man would have let himself be spotted quite so easily.”

“But who else could it be?” she objected; and then, after a pause, she added with a mischievous smile, “unless it should be your friend, Dr Thorndyke. That would really be a quaint situation—if I should, after all, be indebted to you, Rupert, for these polite attentions.”

I brushed the suggestion aside hastily but with no conviction. And once more I recalled Wallingford’s observations on mare’s nests. Obviously this clumsy booby was not a professional detective. And if not, what could he be but some hired agent of Thorndyke’s? It was one more perplexity, and added to those with which my mind was already charged, it reduced me to moody silence which must have made me the very reverse of an exhilarating companion. Indeed, when Madeline had rallied me once or twice on my gloomy preoccupation, I felt that the position was becoming untenable. I wanted to be alone and think things out; but as it would have been hardly decent to break up our little party and take my departure, I determined, if possible, to escape from this oppressive tete-a-tete. Fortunately, I remembered that a famous pianist was giving a course of recitals at a hall within easy walking distance and ventured to suggest that we might go and hear him.

“I would rather stay here and gossip with you,” she replied, “but as you don’t seem to be in a gossiping humour, perhaps the music might be rather nice. Yes, let us go. I don’t often hear any good music nowadays.”

Accordingly we went, and on the way to the hall Madeline gave me a few further details of her experiences with her follower; and I was not a little impressed by her wariness and the ingenuity with which she had lured that guileless sleuth into exposed and well-lighted situations.

“By the way,” said I, “what was the fellow like? Give me a few particulars of his appearance in case I should happen to run across him.”

“Good Heavens, Rupert!” she exclaimed, laughing mischievously, “you don’t suppose he will take to haunting you, do you? That would really be the last straw, especially if he should happen to be employed by Dr Thorndyke.”

“It would,” I admitted with a faint grin, “though Thorndyke is extremely thorough and he plumes himself on keeping an open mind. At any rate, let us have a few details.”

“There was nothing particularly startling about him. He was a medium-sized man, rather fair, with a longish, sharp, turned-up nose and a sandy moustache, rather bigger than men usually have nowadays. He was dressed in a blue serge suit, without an overcoat and he wore a brown soft felt hat, a turn-down collar and a dark green necktie with white spots.
He had no gloves but he carried a walking-stick—a thickish yellow cane with a crooked handle."

"Not very distinctive," I remarked, disparagingly.

"Don't you think so?" said she. "I thought he was rather easy to recognize with that brown hat and the blue suit and the big moustache and pointed nose. Of course, if he had worn a scarlet hat and emerald-green trousers and carried a brass fire-shovel instead of a walking-stick he would have been still easier to recognize; but you mustn't expect too much, even from a detective."

I looked with dim surprise into her smiling face and was more bewildered than ever. If she were haunted by any gnawing anxieties, she had a wonderful way of throwing them off. Nothing could be less suggestive of a guilty conscience than this quiet gaiety and placid humour. However, there was no opportunity for moralizing, for her little retort had brought us to the door of the hall; and we had barely time to find desirable seats before the principal musician took his place at the instrument.

It was a delightful entertainment; and if the music did not "soothe my savage breast" into complete forgetfulness, it occupied my attention sufficiently to hinder consecutive thought on any other subject. Indeed, it was not until I had said "good night" to Madeline outside her flat and turned my face towards the neighbouring station that I was able to attempt a connected review of the recent startling discoveries.

What could they possibly mean? The pistol alone could have been argued away as a curious coincidence, and the same might have been possible even in the case of the wool. But the two together! The long arm of coincidence was not long enough for that. The wisp of wool that we had found in the empty house was certainly—admittedly—Madeline's. But that wisp matched identically the ball of wool from the pistol; and here was a missing pistol which was certainly the exact counterpart of that which had contained the wool plug. The facts could not be disputed. Was it possible to escape from the inferences which they yielded?

The infernal machine, feeble as it was, gave evidence of a diabolical intention—an intention that my mind utterly refused to associate with Madeline. And yet, even in the moment of rejection, my memory suddenly recalled the arrangement connected with the electric light switch in Madeline's bedroom. Its mechanism was practically identical with that of the infernal machine, and the materials used—string and screw-eyes—were actually the same. It seemed impossible to escape from this proof piled on proof.

But if the machine itself declared an abominable intention, what of that which lay behind the machine? The sending of that abomination was not an isolated or independent act. It was related to some antecedent act, as Thorndyke had implied. Whoever sent it, had a guilty conscience.

But guilty of what?

As I asked myself this question, and the horrid, inevitable answer framed itself in my mind, I turned automatically from Middle Temple Lane and passed into the deep shadow of the arch that gives entrance to Elm Court.

XIV. — RUPERT CONFIDES IN THORNDYKE

ALTHOUGH few of its buildings (excepting the Halls) are of really great antiquity, the precinct of the Temples shares with the older parts of London at least one medieval characteristic: it abounds in those queer little passages and alleys which, burrowing in all directions under the dwelling-houses, are a source of endless confusion and bewilderment to the stranger, though to the accustomed denizen they offer an equally great convenience. For by their use the seasoned Templar makes his way from any one part of the precinct to any other, if not in an actual bee-line, at least in an abbreviated zig-zag that cuts across the regular thoroughfares as though they were mere paths traversing an open meadow. Some of these alleys do, indeed, announce themselves even to unaccustomed eyes, as public passage-ways, by recognizable entrance arches; but many of them scorn even this degree of publicity, artfully concealing their existence from the uninitiated by an ordinary doorway, which they share with a pair of houses. Whereby the unsuspecting stranger, entering what, in his innocence, he supposes to be the front doorway of a house, walks along the hall and is presently astonished to find himself walking out of another front door into another startling fare.

The neighbourhood of Fig Tree Court is peculiarly rich in these deceptive burrows, indeed, excepting from the Terrace, it has no other avenue of approach. On the present occasion I had the choice of two, and was proceeding along the narrow lane of Elm Court to take the farther one, which led to the entry of my chambers, when I caught sight of a man approaching hurriedly from the direction of the Cloisters. At the first glance, I thought I recognized him—though he was a mere silhouette in the dim light—as the loiterer whom I had seen on the night of my return. And his behaviour confirmed my suspicion; for as he came in sight of me, he hesitated for a moment and then, quickening his pace forward, disappeared suddenly through what appeared to be a hole in the wall but was, in fact, the passage for which I was making.

Instantly, I turned back and swiftly crossing the square of Elm Court, dived into the burrow at its farther corner and came out into the little square of Fig Tree Court at the very moment when the mysterious stranger emerged from the burrow at the other side, so that we met face to face in the full light of the central lamp.

Naturally, I was the better prepared for the encounter and I pursued my leisurely way towards my chambers with the air of not having observed him; while he, stopping short for a moment with a wild stare at me, dashed across the square and
plunged into the passage from which I had just emerged.

I did not follow him. I had seen him and had thereby confirmed a suspicion that had been growing upon me, and that was enough. For I need hardly say that the man was Anthony Wallingford. But though I was prepared for the identification, I was none the less puzzled and worried by it. Here was yet another perplexity; and I was just stepping into my entry to reflect upon it at my leisure when I became aware of hurrying footsteps in the passage through which Wallingford had come. Quickening drawing back into the deep shadow of the vestibule, I waited to see who this new-comer might be. In a few seconds he rushed out of the passage and came to a halt in the middle of the square, nearly under the lamp, where he stood for a few moments, looking to right and left and listening intently. And now I realized the justice of what Madeline had said; for, commonplace as the man was, I recognized him in an instant. Brown hat, blue serge suit, big, sandy moustache and concave, pointed nose; they were not sensational characteristics, but they identified him beyond a moment’s doubt.

Apparently, his ear must have caught the echoes of Wallingford's footsteps, for, after a very brief pause, he started off at something approaching a trot and disappeared into the passage by which I had come and Wallingford had gone. A sudden, foolish curiosity impelled me to follow and observe the methods of this singular and artless sleuth. But I did not follow directly. Instead, I turned and ran up the other passage, which leads into the narrow part of Elm Court; and as I came flying out of the farther end of it I ran full tilt into a man who was running along the court towards the Cloisters. Of course the man was Wallingford. Who else would be running like a lunatic through the Temple at night, unless it were his pursuer?

With muttered curses but no word of recognition, he disengaged himself and pursued his way, disappearing at length round the sharp turn in the lane which leads towards the Cloisters. I did not follow him, but drew back into the dark passage and waited. Very soon another figure became visible, approaching rapidly along the dimly lighted lane. I drew farther back and presently from my hiding-place I saw the brown-hatted shadower steal past with a ridiculous air of secrecy and caution; and when he had passed, I peered out and watched his receding figure until it disappeared round the angle of the lane.

I felt half-tempted to join the absurd procession and see what eventually became of these two idiots. But I had really seen enough. I now knew that Wallingford's "delusions" were no delusions at all and that Madeline's story set forth nothing but the genuine, indisputable truth. And with these new facts to add to my unwelcome store of data, I walked slowly back to my chambers, cogitating as I went.

In truth, I had abundant material for reflection. The more I turned over my discoveries in Madeline's flat the more did the incriminating evidence seem to pile up. I recalled Polton's plainly expressed suspicion that the sender of the infernal machine was a woman; and I recalled Thorndyke's analysis of the peculiarities of the thing with the inferences which those peculiarities suggested, and read into them a more definite meaning. I now saw what the machine had conveyed to him, and what he had been trying to make it convey to me. The unmechanical outlook combined with evident ingenuity, the unfamiliarity with ordinary mechanical appliances, the ignorance concerning the different kinds of gun-powder, the lack of those common tools which nearly every man, but hardly any woman, possesses and can use: all these peculiarities of the unknown person were feminine peculiarities. And finally, there had been the plug of knitting-wool: a most unlikely material for a man to use for such a purpose, or, indeed, to possess at all.

So my thoughts went over and over the same ground, and every time finding escape from the obvious conclusion more and more impossible. The evidence of Madeline's complicity—at the very least—in the sending of the infernal machine appeared overwhelming. I could not reject it. Nor could I deny what the sending of it implied. It was virtually a confession of guilt. And yet, even as I admitted this to myself, I was strangely enough aware that my feelings towards Madeline remained unaltered. The rational, legal side of me condemned her. But somehow, in some incomprehensible way, that condemnation had a purely technical, academic quality. It left my loyalty and affection for her untouched.

But what of Thorndyke? Had his reasoning travelled along the same lines? If it had, there would be nothing sentimental in his attitude. He had warned me, and I knew well enough that whenever there should be evidence enough to put before a court, the law would be set in motion. What, then, was his present position? And even as I asked myself the question, there echoed uncomfortably in my mind the significant suggestion that he had thrown out only a few hours ago concerning the bottle of medicine. Evidently, he at least entertained the possibility that the Fowler’s Solution had been put into that bottle after Monkhouse's death, and that for the express purpose of diverting suspicion from the food. The manifest implication was that he entertained the possibility that the poison had been administered in the food. But to suspect this was to suspect the person who prepared the food of being the poisoner. And the person who prepared the food was Madeline.

The question, therefore, as to Thorndyke's state of mind was a vital one. He had expressed no suspicion of Madeline. But then he had expressed no suspicion of anybody. On the other hand, he had exonerated nobody. He was frankly observant of every member of that household. Then there was the undeniable fact that Madeline had been watched and followed. Somebody suspected her. But who? The watcher was certainly not a detective. Amateur was writ large all over him. Then it was not the police who suspected her. Apparently there remained only Thorndyke, though one would have expected him to employ a more efficient agent.

But Wallingford was also under observation, and more persistently. Then he, too, was suspected. But here there was some show of reason. For what was Wallingford doing in the Temple? Evidently he had been lurking about, apparently keeping a watch on Thorndyke, though for what purpose I could not imagine. Still, it was a suspicious proceeding and
I paced up and down my sitting room turning these questions over in my mind and all the time conscious of a curious sense of unreality in the whole affair; in all this watching and following and dodging which looked so grotesque and purposeless. I felt myself utterly bewildered. But I was also profoundly unhappy and, indeed, overshadowed by a terrible dread. For out of this chaos one fact emerged clearly: there was a formidable body of evidence implicating Madeline. If Thordryke had known what I knew, her position would have been one of the gravest peril. My conscience told me that it was my duty to tell him; and I knew that I had no intention of doing anything of the kind. But still the alarming question haunted me: how much did he really know? How much did he suspect?

In the course of my perambulations I passed and repassed a smallish deed box which stood on a lower book-shelf and which was to me what the Ark of the Covenant was to the ancient Israelites: the repository of my most sacred possessions. Its lid bore the name “Stella,” painted on it by me, and its contents were a miscellany of trifles, worthless intrinsically, but to me precious beyond all price as relics of the dear friend who had been all in all to me during her short life and who, though she had been lying in her grave for four long years, was all in all to me still. Often, in the long, solitary evenings, had I taken the relics out of their abiding-place and let the sight of them carry my thoughts back to the golden days of our happy companionship, filling in the pleasant pictures with the aid of my diary—but that was unnecessary now, since I knew the entries by heart—and painting other, more shadowy, pictures of a future that might have been. It was a melancholy pleasure, perhaps, but yet, as the years rolled on, the bitterness of those memories grew less bitter and still the sweet remained.

Presently, as for the hundredth time the beloved name met my eye, there came upon me a yearning to creep back with her into the sunny past; to forget, if only for a short hour, the hideous anxieties of the present and in memory to walk with her once more “along the meads of asphodel.”

Halting before the box, I stood and lifted it tenderly to the table and having unlocked it, raised the lid and looked thoughtfully into the interior. Then, one by one, I lifted out my treasures, set them out in order on the table, and sat down to look at them and let them speak to me their message of peace and consolation.

To a stranger’s eye they were a mere collection of odds and ends. Some would have been recognizable as relics of the more conventional type. There were several photographs of the dead girl, some taken by myself, and a tress of red-gold hair—such hair as I had been told often glorifies the victims whom consumption had marked for its own. It had been cut off for me by Barbara when she took her own tress, and tied up with a blue ribbon. But it was not these orthodox relics that spoke to me most intimately. I had no need of their aid to call up the vision of her person. The things that set my memory working were the records of actions and experiences; the sketch-books, the loose sketches and the little plaster plaques and medallions that she had made with my help and could go no more abroad to sketch. Every one of these had its story to tell, its vision to call up.

I turned over the sketches—simple but careful pencil drawings for the most part, for Stella, like me, had more feeling for form than for colour—and recalled the making of them; the delightful rambles across the sunny meadows or through the cool woodlands, the solemn planting of sketching-stools and earnest consultation on the selection and composition of the subjects. These were the happiest days, before the chilly hand of the destroyer had been laid on its chosen victim and there was still a long and sunny future to be vaguely envisaged.

And then I turned to the little plaques and medallions which she had modelled under my supervision and of which I had made the plaster moulds and casts. These called up sadder memories, but yet they spoke of an even closer and more loving companionship; for each work was, in a way, a joint achievement over which we had triumphed and rejoiced together. So it happened that, although the shadow of sickness, and at last of death, brooded over them, it was on these relics that I tended to linger most lovingly.

Here was the slate that I had got for her to stick the clay on and which she used to hold propped up against her knees as she worked with never-failing enthusiasm through the long, monotonous days, and even, when she was well enough, far into the night by the light of the shaded candle. Here were the simple modelling-tools and the little sponge and the camelhair brush with which she loved to put the final finish on the damp clay reliefs. Here was Lanterri’s priceless textbook over which we used to pore together and laud that incomparable teacher. Here were the plaques, medals and medallions that we had prised out, with haled breath, from their too-adherent moulds. And here—the last and saddest relic—was the wax mould from which no cast had ever been made, the final, crowning work of those deft, sensitive fingers.

For the thousandth time, I picked it up and let the light fall obliquely across its hollows. The work was a medal some three inches across, a portrait of Stella, herself, modelled from a profile photograph that I had taken for the purpose. It was an excellent likeness and unquestionably the best piece of modelling that she had ever done.

Often, I had intended to take the cast from it, but always had been restrained by a vague reluctance to disturb the mould. Now, as I looked at the delicate, sunken impression, I had again the feeling that this, her last work, ought to be finished; and I was still debating the matter with the mould in my hand when I heard a quick step upon the stair, followed by a characteristic knock on my door.

My first impulse was to hustle my treasures back into their box before answering the summons. But this was almost instantly followed by a revulsion. I recognized the knock as Thordryke’s; and somehow there came upon me a desire to share my memories with him. He had shown a strangely sympathetic insight into my feelings towards Stella. He had read
my diary. He now knew the whole story; and he was the kindest, the most loyal and most discreet of friends. Gently laying down the mould I went to the door and threw it open.

“I saw your light burning as I passed just now,” said Thorndyke as he entered and shook my hand warmly, “so I thought I would take the opportunity to drop in and return your diary. I hope I am not disturbing you. If I am, you must treat me as a friend and eject me.”

“Not at all, Thorndyke,” I replied. “On the contrary, you would be doing me a charity if you would stay and smoke a companionable pipe.”

“Good,” he said, “then I will give myself the pleasure of a quiet gossip. But what is amiss, Mayfield?” he continued, laying a friendly hand on my shoulder and looking me over critically. “You look worn, and worried and depressed. You are not letting your mind dwell too much, I hope, on the tragedy that has come unhbidden into your life?”

“I am afraid I am,” I replied. “The horrible affair haunts me. Suspicion and mystery are in the very air I breathe. A constant menace seems to hang over all my friends, so that I am in continual dread of some new catastrophe. I have just ascertained that Wallingford is really being watched and shadowed; and not only Wallingford but even Miss Norris.”

He did not appear surprised or seek for further information. He merely nodded and looked into my face with grave sympathy.

“Put it away, Mayfield,” said he. “That is my counsel to you. Try to forget it. You have put the investigation into my hands. Leave it there and wash your own of it. You did not kill Harold Monkhouse. Whoever did must pay the penalty if ever the crime should be brought home to the perpetrator. And if it never can be, it were better that you and all of us should let it sink into oblivion rather than allow it to remain to poison the lives of innocent persons. Let us forget it now. I see you were trying to.”

I had noticed that when he first entered the room, he cast a single, swift glance at the table which, I was sure, had comprehended every object on it. Then he had looked away and never again let his eyes stray in that direction. But now, as he finished speaking, he glanced once more at the table, and this time with undisguised interest.

“Yes,” I admitted. “I was trying to find in the memories of the past an antidote for the present. These are the relics of that past. I daresay you have read of them in the diary and probably have written me down a mawkish sentimentalist.”

“I pray you, my friend, not to do me that injustice!” he exclaimed. “Faithful friendship, that even survives the grave, is not a thing that any man can afford to despise. But for the disaster of untimely death, your faithfulness and hers would have created for two persons the perfect life. I assure you, Mayfield, that I have been deeply moved by the story of your delightful friendship and your irreparable loss. But don’t let us dwell too much on the sad aspects of the story. Show me your relics. I see some very charming little plaques among them.”

He picked up one with reassuring daintiness of touch and examined it through a reading-glass that I handed to him.

“It really is a most admirable little work,” said he. “Not in the least amateur. She had the makings of a first-class medallist; the appreciation of the essential qualities of a miniature relief. And she had a fine feeling for composition and spacing.”

Deeply gratified by his appreciation and a little surprised by his evident knowledge of the medallist’s art, I presented the little works, one after another, and we discussed their merits with the keenest interest. Presently he asked: “Has it never occurred to you, Mayfield, that these charming little works ought to be finished?”

“Finished?” I repeated. “But, aren’t they finished?”

“Certainly not. They are only on the plaster. But a plaster cast is an intermediate form. Just a mere working model. It is due to the merits of these plaques and medals that they should be put into permanent material—silver or copper or bronze. I’ll tell you what, Mayfield,” he continued, enthusiastically. “You shall let Polton make replicas of some of them—he could do it with perfect safety to the originals. Then we could hand the casts to an electrotyper or a founder—I should favour the electrotype process for such small works—and have them executed in whichever metal you preferred. Then you would be able to see, for the first time, the real quality of the modelling.”

I caught eagerly at the idea, but yet I was a little nervous.

“You think it would be perfectly safe?” I asked.

“Absolutely safe. Polton would make gelatine moulds which couldn’t possibly injure the originals.”

That decided me. I fell in with the suggestion enthusiastically, and forthwith we began an anxious consultation as to the most suitable pieces with which to make a beginning. We had selected half a dozen casts when my glance fell on the wax mould. That was Stella’s masterpiece and it certainly ought to be finished; but I was loath to part with the mould for fear of an accident. Very dubiously, I handed it to Thorndyke and asked: “What do you think of this? Could it be cast without any risk of breaking it?”

He laid the mould on the table before him so that the light fell obliquely across it and looked down on it reflectively.

“So,” said he, “this is the wax mould. I was reading about it only yesterday and admiring your resourcefulness and ingenuity. I must read the entry again with the actual object before me.”
He opened the diary, which he had laid on the table, and when he had found the entry, read it to himself in an undertone.

“Dropped in to have tea with Stella and found her bubbling with excitement and triumph. She had just finished the portrait medal and though her eyes were red and painful from the strain of the close work, in spite of her new spectacles, she was quite happy and as proud as a little peacock. And well she might be. I should like Lanterri to see his unknown pupil’s work. We decided to make the mould of it at once, but when I got out the plaster tin, I found it empty. Most unfortunate, for the clay was beginning to dry and I didn’t dare to damp it. But something had to be done to protect it. Suddenly I had a brilliant idea. There was nearly a whole candle in Stella’s candlestick, quite enough for a mould, and good, hard wax that wouldn’t warp. I took off the reflector and lighted the candle, which I took out of the candlestick and held almost upside down over the clay medal and let the wax drip on to it. Soon the medal was covered by a film of wax which grew thicker and thicker, until, by the time I had used up practically the whole of the candle, there was a good, solid crust of wax, quite strong enough to cast from. When I went home, I took the slate with me with the wax mould sticking to it, intending to cover it with a plaster shell for extra safety. But my plaster tin was empty, too, so I put the slate away in a safe place until I should get some fresh plaster to make the cast; which will not happen until I get back from Chelmsford.

“Busy evening getting ready for tomorrow; hope I shall feel less cheap than I do now.”

As Thorndyke finished reading he looked up and remarked: “That was an excellent plan of yours. I have seen Polton use the same method. But how was it that you never made the cast?”

“I was afraid of damaging the mould. As you know, when I came back from Ipswich, Stella was dead, and as the medal was her last work and her best, I hardly dared to risk the chance of destroying it.”

“Still,” Thorndyke urged, “it was the medal that was her work. The mould was your own; and the medal exists only potentially in the mould. It will come into actual existence only when the cast is made.”

I saw the force of this, but I was still a little uneasy, and said so,

“There is no occasion,” said he. “The mould is amply strong enough to cast from. It might possibly break in separating the cast, but that would be of no consequence, as you would then have the cast, which would be the medal, itself. And it could then be put into bronze or silver.”

“Very well,” I said, “if you guarantee the safety of the operation, I am satisfied. I should love to see it in silver; or perhaps it might look even better in gold.”

Having disposed of the works, themselves, we fell to discussing the question of suitable settings or frames; and this led us to the subject of the portraits. Thorndyke glanced over the collection, and picking up one, which happened to be my own favourite, looked at it thoughtfully.

“It is a beautiful face,” said he, “and this seems to have been a singularly happy portrait. In red chalk autotype, it would make a charming little picture. Did you take it?”

“Yes; and as I have the negative I am inclined to adopt your suggestion. I am surprised that I never thought of it myself, for red chalk is exactly the right medium.”

“Then let Polton have the negative. He is quite an expert in autotype work.”

I accepted the offer gladly and we then came back to the question of framing. Thorndyke’s suggestion was that the portrait should be treated as a medallion and enclosed in a frame to match that of the medal. The idea appealed to me rather strongly, and presently a further one occurred to me, though it was suggested indirectly by Thorndyke, who had taken up the tress of Stella’s hair and was looking at it admiringly as he drew it softly between his fingers.

“Human hair,” he remarked, “and particularly a woman’s hair, is always a beautiful material, no matter what its colour may be; but this red-gold variety is one of the most gorgeous of Nature’s productions.”

“Yes,” I agreed, “it is extremely decorative. Barbara had her tress made up into a thin plait and worked into the frame of a miniature of Stella. I liked the idea, but somehow the effect is not so very pleasing. But it is an oblong frame.”

“I don’t think,” said Thorndyke, “that a plait was quite the best form. A little cable would look better, especially for a medallion portrait; indeed I think that if you had a plain square black frame with a circular opening, a little golden cable, carried round concentrically with the opening would have a rather fine effect.”

“So it would,” I exclaimed. “I think it would look charming. I had no idea, Thorndyke, that you were a designer. Do you think Polton could make the cable?”

“Polton,” he replied, impressively, “can do anything that can be done with a single pair of human hands. Let him have the hair, and he will make the cable and the frame, too; and he will see that the glass cover is an airtight fit—for, of course, the cable would have to be under the glass.”

To this also I agreed with a readiness that surprised myself. And yet it was not surprising. Hitherto I had been accustomed secretly and in solitude to pore over these pathetic little relics of happier days and lock up my sorrows and my sense of bereavement in my own breast. Now, for the first time, I had a confidant who shared the knowledge of my shattered hopes and vanished happiness; and so wholeheartedly, with such delicate sympathy and perfect understanding had Thorndyke entered into the story of my troubled life that I found in his companionship not only a relief from my old
self-repression but a sort of subdued happiness. Almost cheerfully I fetched an empty cigar-box and a supply of cotton wool and tissue paper and helped him tenderly and delicately to pack my treasures for their first exodus from under my roof. And it was with only a faint twinge of regret that I saw him, at length, depart with the box under his arm.

“You needn’t be uneasy, Mayfield,” he said, pausing on the stairs to look back. “Nothing will be injured; and as soon as the casting is successfully carried through, I shall drop a note in your letter-box to set your mind at rest. Good night.”

I watched him as he descended the stairs, and listened to his quick foot-falls, fading away up the court. Then I went back to my room with a faint sense of desolation to repack the depleted deed-box and thereafter to betake myself to bed.
XV. — A PURSUIT AND A DISCOVERY

MORE than a week had passed since that eventful evening—how eventful I did not then realize—when I had delivered my simple treasures into Thorndyke’s hands. But I was not uneasy; for, within twenty-four hours, I had found in my letter-box the promised note, assuring me that the preliminary operations had been safely carried through and that nothing had been damaged. Nor was I impatient. I realized that Polton had other work than mine on hand and that there was a good deal to do. Moreover, a little rush of business had kept me employed and helped me to follow Thorndyke’s counsel and forget, as well as I could, the shadow of mystery and peril that hung over my friends, and, by implication, over me.

But on the evening of which I am now speaking I was free. I had cleared off the last of the day’s work, and, after dining reposefully at my club, found myself with an hour or two to spare before bed-time; and it occurred to me to look in on Thorndyke to smoke a friendly pipe and perchance get a glimpse of the works in progress.

I entered the Temple from the west, and, threading my way through the familiar labyrinth, crossed Tanfield Court, and passing down the narrow alley at its eastern side, came out into King’s Bench Walk. I crossed the Walk at once and was sauntering down the pavement towards Thorndyke’s house when I noticed a large, closed car drawn up at its entry, and, standing on the pavement by the car, a tall man whom I recognized by the lamplight as Mr Superintendent Miller.

Now I did not much want to meet the superintendent, and in any case it was pretty clear to me that my visit to Thorndyke was not very opportune. The presence of Miller suggested business, and the size of the car suggested other visitors. Accordingly I slowed down and was about to turn back when my eye caught another phenomenon. In the entry next to Thorndyke’s a man was standing, well back in the shadow, but not so far that he could not get a view of the car; on which he was quite obviously keeping a watchful eye. Indeed, he was so preoccupied with his observation of it that he had not noticed my approach, his back being turned towards me.

Naturally, the watchful attitude and the object of his watchfulness aroused my suspicions as to his identity. But a movement backward on his part which brought him within range of the entry lamp, settled matter. He was Anthony Wallingford.

I turned and walked quietly back a few paces. What was this idiot doing here within a few yards of Thorndyke’s threshold? Was he merely spying fatuously and without purpose? Or was it possible that he might be up to some kind of mischief? As I framed the question my steps brought me opposite another entry. The walk was in darkness save for the few lamps and the place was practically deserted. After a moment’s reflection, I stepped into the entry and decided thence to keep a watch upon the watcher.

I had not long to wait. Hardly had I taken up my rather undignified position when three men emerged from the house and walked slowly to the car. By the light of the lamp above Thorndyke’s entry, I could see them quite plainly and I recognized them all. One was Thorndyke, himself, another was Dr Jervis, Thorndyke’s colleague, now in the employ of the Home Office, and the third was Dr Barnwell, well-known to me as the analyst and toxicologist to the Home Office. All three carried substantial bags and Dr Barnwell was encumbered with a large case, like an out-size suit-case, suggestive of chemical apparatus. While they were depositing themselves and their impedimenta in the car, Superintendent Miller gave directions to the driver. He spoke in clear, audible tones, but though (I have to confess) I listened intently, I caught only the question: “Do you know the way?” The words which preceded and followed it were just audible but not intelligible to me. It appeared, however, that they were intelligible to Wallingford, for, as soon as they were spoken and while the superintendent still held the open door of the car, he stepped forth from his lurking-place and walked boldly and rapidly across to the narrow passage by which I had come.

Realizing instantly what his intention was, I came out of the entry and started in pursuit. As I reached the entrance to the passage, my ear caught the already faint sound of his receding footsteps; by which I learned that he was running swiftly and as silently as he could. Since I did not intend to lose him, I had no choice but to follow his example, and I raced across Tanfield Court, past the Cloisters and round by the church as if the Devil were after me instead of before. Half-way up Inner Temple Lane he slowed down to a walk—very wisely, for otherwise the night porter would certainly have stopped him—and was duly let out into Fleet Street, whither I followed him at a short interval.

When I stepped out of the gate I saw him some little distance away to the west, giving directions to the driver of a taxi. I looked round desperately, and, to my intense relief, perceived an apparently empty taxi approaching from the east. I walked quickly towards it, signalling as I went, and the driver at once drew in to the kerb and stopped. I approached him, and, leaning forward, said in a low voice—though there was no one within earshot: “There is a taxi just in front. It will probably follow a big car which is coming up Middle Temple Lane. I want you to keep that taxi in sight, wherever it may go. Do you understand?”

The man broke into a cynical grin—the nearest approach to geniality of which a taxi-driver is capable—and replied that he understood; and as, at this moment, the nose of the car appeared coming through the arched entrance gate of Middle Temple Lane, I sprang into the taxi and shut the door. From the off-side window, but keeping well back out of sight, I saw the car creep across Fleet Street, turn eastward and then sweep round into Chancery Lane. Almost immediately, Wallingford’s taxi moved off and followed; and then, after a short interval, my own vehicle started, and, crossing directly to Chancery Lane, went ahead in the wake of the others.

It was an absurd affair. Now that the pursuit was started and its conduct delegated for the time to the driver, I leaned
back in the shadow and was disposed to grin a little sheepishly at my own proceedings. I had embarked on them in obedience to a sudden impulse without reflection—for which, indeed, there had been no time. But was there anything to justify me in keeping this watch on Wallingford? I debated the question at some length and finally decided that, although he was probably only playing the fool, still it was proper that I should see what he was really up to. Thorndyke was my friend and it was only right that I should stand between him and any possible danger. Well as he was able to take care of himself, he could not be always on his guard. And I could not forget the infernal machine. Someone at least had the will to do him an injury.

But what about the brown-hatted man? Why had he not joined in this novel sport? Or had he? I put my head out of the window and looked along the street in our rear, but there was no sign of any pursuing taxi. The ridiculous procession was limited to three vehicles; which was just as well, since we did not want a police cyclist bringing up the rear.

From my own proceedings my thoughts turned to those of Thorndyke and his companions, though they were no affair of mine, or of Wallingford’s either, for that matter. Apparently the three men were going somewhere to make a post mortem examination. The presence of Dr Barnwell suggested an analysis in addition; and the presence of Miller hinted at a criminal case of some kind. But it was not my case or Wallingford’s. For both of us the analyst had already done his worst.

While I reflected, I kept an eye on the passing landmarks, checking our route and idly trying to forecast our destination. From Chancery Lane we crossed Holborn and entered Gray’s Inn Road, at the bottom of which we swept round by King’s Cross into Pancras Road. At the end of this we turned up Great College Street, crossed Camden Road and presently passed along the Kentish Town Road. So far I had noted our progress with no more than a languid interest. It did not matter to me whether we were going. But when, at the Bull and Gate, we swept round into Highgate Road, my attention awoke; and when the taxi turned sharply at the Duke of St Albans and entered Swain’s Lane, I sat up with a start. In a moment of sudden enlightenment, I realized what our destination must be; and the realization came upon me with the effect of a palpable blow. This lane, with its precipitous ascent at the upper end, was no ordinary thoroughfare. It was little more than an approach to the great cemetery whose crowded areas extended on either side of it; its traffic was almost completely limited to the mournful processions that crept up to the wide gates by the mortuary chapel. Indeed, on the very last occasion when I had ridden up this lane, my conveyance had been the mourning carriage which followed poor little Stella to her last home.

Before I had recovered from the shock of this discovery sufficiently to consider what it might mean, the taxi came to a sudden halt. I stepped out, and, looking up the lane, made out the shadowy form of Wallingford’s vehicle, already backing and manoeuvring to turn round.

“Bloke in front has got out,” my driver announced in a hoarse whisper, and as he spoke, I caught sight of Wallingford—or at least of a human figure—lurking in the shadow of the trees by the railings on the right-hand side of the road. I paid off my driver (who, thereupon, backed on to the footway, turned and retired down the hill) and having waited for the other taxi to pass down, began slowly to ascend the lane, keeping in the shadow of the trees. Now that the two taxis were gone, Wallingford and I had the lane to ourselves, excepting where, in the distance ahead, the reflected light from the headlamps of the car made a dim halo and the shape of the gothic chapel loomed indistinctly against the murky sky. I could see him quite plainly, and no doubt he was aware of my presence; at any rate, I did not propose to attempt any concealment, so far as he was concerned. His movements had ceased to be of any interest to me. My entire concern was with the party ahead and with the question as to what Thorndyke was doing at this time of night in Highgate Cemetery.

The burial ground is divided, as I have said, into two parts, which lie on either side of the lane; the old cemetery with its great gates and the large mortuary chapel, on the left or west side and the newer part on the right. To which of these two parts was Thorndyke bound? That was the question that I had to settle.

I continued to advance up the lane, keeping in the shadow, though it was a dark night and the precaution was hardly necessary. Presently I overtook Wallingford and passed him without either concealment or recognition on either side. I could now clearly make out the gable and pinnacles of the chapel and saw the car turn in the wide sweep and then extinguish its headlights. Presently, from the gate-house there emerged a party of men of whom some carried lanterns, by the light of which I could recognize Thorndyke and his three companions; and I noted that they appeared to have left their cases either in the car or elsewhere for they now carried nothing. They lingered for a minute or two at the wicket by the great gates; then, accompanied by a man whom I took to be the gate-keeper, they crossed the road to the gate of the eastern cemetery and were at once followed by another party of men, who trundled two wheel-barrows, loaded with some bulky objects the nature of which I could not make out. I watched them with growing anxiety and suspicion as they passed in at the gate; and when they had all entered and moved away along the main path, I came forth from the shadow and began to walk quickly up the lane.

The eastern cemetery adjoins Waterlow Park, from which it is separated by a low wall surmounted by tall railings, and this was my objective. The park was now, of course, closed for the night, locked up and deserted. So much the better. Locks and bars were no hindrance to me. I knew the neighbourhood of old. Every foot of the lane was familiar to me, though the houses that had grown up at the lower end had changed its aspect from that which I remembered when as a boy I had rambled through its leafy shades. On I strode, past the great gates on the left and the waiting car, within which I could see the driver dozing, past the white gatehouse on the right, up the steep hill until I came to the place where a tall oak fence encloses the park from the lane. Here I halted and took off my overcoat, for the six-foot fence is guarded at the top by a row of vicious hooks. Laying the folded overcoat across the top of the fence, I sprang up, sat for a moment astride and then
dropped down into the enclosure.

I now stood in a sort of dry ditch between the fence and a steep bank, covered with bushes which rose to the level of the park. I had just taken down my overcoat and was putting it on before climbing the bank when its place was taken by another overcoat cast over from without. Then a pair of hands appeared, followed by the clatter of feet against the fence and the next moment I saw Wallingford astride of the top and looking down at me.

I still affected to be unaware of him, and, turning away, began to scramble up the bank, at the summit of which I pushed my way through the bushes, and, stepping over a three-foot fence, came out upon a by-path overshadowed by trees. Pausing for a moment to get my bearings and to mark out a route by which I could cross the park without coming into the open, where I might be seen by some watchful keeper, I started off towards a belt of trees just as Wallingford stepped over the dwarf fence and came out upon the path behind me.

The position was becoming absurd, though I was too agitated to appreciate its humour. I could not protest against his following me seeing that I had come in the first place to spy upon him, and was now, like himself, engaged in spying upon Thorndyke. However, he soon solved the difficulty by quickening his pace and overtaking me, when he asked in a quite matter-of-fact tone: “What is Thorndyke up to, Mayfield?”

“That is what I want to find out,” I replied.

“He is not acting on your instructions, then?”

“No; and the probability is that what he is doing is no concern of mine or of yours either. But I don’t know; and I have come here to make sure. Keep in the shadow. We don’t want the keeper to see us prowling about here.”

He stepped back into the shade and we pursued our way in silence; and even then, troubled and agitated as I was, I noted that he asked me no question as to what was in my mind. He was leaving the initiative entirely to me.

When we had crossed the park in the shelter of the trees and descended into the hollow by the little lake where we were out of sight of the gate-house, I led the way towards the boundary between the park and the cemetery. The two enclosures were separated, as I have said, by a low wall surmounted by a range of high, massive railings; and the wall and the cemetery beyond were partially concealed by an irregular hedge of large bushes. Pushing through the bushes, I moved along the wall until I came to the place which I intended to watch; and here I halted in the shade of a tall mass of bushes, and resting my arms on the broad coping of the wall, took up my post of observation with Wallingford, silently attentive at my side.

The great burial ground was enveloped in darkness so profound that the crowded headstones and monuments conveyed to the eye no more than a confused glimmer of ghostly pallor that was barely distinguishable from the general obscurity. One monument only could be separately identified: a solitary stone cross that rose above a half-seen grave some sixty yards from the wall. But already the mysterious procession could be seen threading its way in and out by the intricate, winding paths, the gleam of the lanterns lighting up now a marble figure and now a staring head-stone or urn or broken column; and as it drew ever nearer, the glare of the lanterns, the rumble of the barrow-wheels on the hard paths and the spectral figures of the men grew more and more distinct. And still Wallingford watched and spoke never a word.

At length, a turn of the path brought the procession into full view, and as it approached I could make out a man—evidently by his uniform, the cemetery keeper—leading, lantern in hand and showing the way. Nearer and nearer the procession drew until at last, close by the stone cross, the leader halted. Then, as Thorndyke and his companions—now clearly visible—came up, he lifted his lantern and let its light fall full on the cross. And even at this distance I could read with ease—though it was unnecessary—the single name STELLA.

As that name—to me so sacred—flashed out of the darkness, Wallingford gripped my arm. “Great God!” he exclaimed. “It is Stella Keene’s grave! I came here once with Barbara to plant flowers on it.”

He paused, breathing hard and still clutching my arm. Then, in a hoarse whisper, lie demanded: “What can that devil be going to do?”

There was little need to ask. Even as he spoke, the labourers began to unload from the first barrow its lading of picks, shovels and coils of rope. And when these were laid on the ground, the second barrow yielded up its cargo; a set of rough canvas screens which the men began to set up around the grave. And even as the screens were being erected, another lantern slowly approaching along the path, revealed two men carrying a long, bedstead-like object—a bier—which they at length set down upon its stunted legs just outside the screens.

With set teeth I stared incredulously between the railings at these awful preparations while Wallingford, breathing noisily, held fast to my arm with a hand that I could feel shaking violently. The lanterns inside the screens threw a weird, uncertain light on the canvas, and monstrous, distorted shadows moved to and fro. Presently, amidst these flitting, spectral shapes, appeared one like an enormous gnome, huge, hideous and deformed, holding an up-raised pick. The shadowy implement fell with an audible impact, followed by the ring of a shovel.

At the sight and the sound—so dreadfully conclusive—Wallingford sprang up with a stifled cry.

“God Almighty! That devil is going to dig her up!”

He stood motionless and rigid for a few moments. Then, turning suddenly, without another word, he burst through the bushes, and I heard him racing madly across the park.
I had half a mind to follow him. I had seen enough. I now knew the shocking truth. Why stay and let my soul be harrowed by the sight of these ghouls? Every stroke of pick or shovel seemed to knock at my heart. Why not go and leave them to their work of desecration? But I could not go. I could not tear myself away. There was the empty bier. Presently she would be lying on it. I could not go until I had seen her borne away.

So I stayed there gazing between the railings, watching the elfin shapes that flitted to and fro on the screen, listening to the thud of pick and the ring and scrape of shovel and letting my confused thoughts wander obscurely through a maze of half-realized pain and anger. I try in vain to recall clearly what was my state of mind. Out of the confusion and bewilderment little emerges but a dull indigestion and especially a feeling of surprised resentment against Thorndyke.

The horrible business went on methodically. By degrees a shadowy mound grew up at the bottom of the screen. And then of her movements and other sounds; a hollow, woody sound that seemed to bring my heart into my mouth. At last, the screens were opened at the end and then the coffin was borne out and laid on the bier. By the light of the lanterns I could see it distinctly. I was even able to recognize it, shabby and earth-stained as it now was. I saw Thorndyke help the keeper to spread over it some kind of pall, and then two men stepped between the handles of the bier, stooped and picked it up; and then the grim procession re-formed and began slowly to move away.

I watched it until it had passed round a turn of the path and was hidden from my view. Then I stood up, pushed my way through the bushes and stole away across the park by the way I had come. In the ditch inside the fence I stood for a few moments listening, but the silence was as profound as the darkness. As quietly as I could I climbed over the fence and dropped down into the lane. There seemed to be not a soul moving anywhere near; nevertheless, when I had slipped on my overcoat, instead of retracing my steps down the lane past the entrance-gates of the cemetery, I turned to the right and toiled up the steep hill to its termination in South Grove, where I bore away westward and, descending the long slope of West Hill, passed the Duke of St Albans and re-entered the Highgate Road.

It did not occur to me to look out for any conveyance. My mind was in a whirl that seemed to communicate itself to my body and I walked on and on like one in a dream.

The dreary miles of deserted streets were consumed unreckoned—though still, without conscious purpose, I followed the direct road home as a well-constructed automaton might have done. But I saw nothing. Nor, for a time, could I be said to think coherently. My thoughts seethed and eddied in such confusion that no product emerged. I was conscious only of an indignant sense of shocked decency and a loathing of Thorndyke and all his works.

Presently, however, I grew somewhat more reasonable and my thoughts began to take more coherent shape. As a lawyer, I could not but perceive that Thorndyke must have something definite in his mind. He could not have done what I had seen him do without a formal authority from the Home Secretary; and before any such authority would have been given he would have been called upon to show cause why the exhumation should be carried out. And such licences are not lightly granted. Nor, I had to admit, was Thorndyke likely to have made the application without due consideration. He must have had reasons for this outrageous proceeding which not only appeared sufficient to him but which must have appeared sufficient to the Home Secretary.

All this became by degrees clear enough to me. But yet I had not a moment’s doubt that he had made some monstrous mistake. Probably he had been misled by something in my diary. That seemed to be the only possible explanation. Presently he would discover his error—by means which I shudderingly put aside. But when the error was discovered, the scandal would remain. It is impossible to maintain secrecy in a case like this. In twenty-four hours or less, all the world would know that the body of Mrs Monkhouse’s step-sister had been exhumed; and no subsequent explanation would serve to destroy the effect of that announcement. Wallingford’s dismal prophecy was about to be fulfilled.

Moreover, Thorndyke’s action amounted in effect to an open accusation—not of Madeline or Wallingford but of Barbara, herself. And this indignity she would suffer at my hands—at the hands of her oldest friend! The thought was maddening. But for the outrageous lateness of the hour, I would have gone to her at once to put her on her guard and crave her pardon. It was the least that I could do. But it could not be done tonight, for she would have been in bed hours ago and her flat locked up for the night. However, I would go in the morning at the earliest possible hour. I knew that Barbara was an early riser and it would not be amiss if I arrived at the flat before the maid. She must be warned at the earliest possible moment and by me, who was the author of the mischief.

Thus, by the time that I reached my chambers I had decided clearly what was to be done. At first, I was disposed to reject altogether the idea of sleep. But presently, more reasonable thoughts prevailing, I decided at least to lie down and sleep a little if I could. But first I made a few indispensable preparations for the morning; filled the kettle and placed it on the gas-rings, set out the materials for a hasty breakfast, and cleaned my shoes. Then, when I had wound the alarm clock and set it for five, I partially undressed and crept into bed.

XVI. — BARBARA’S MESSAGE

THE routine of modern life creates the habit of dividing the day into a series of definite phases which we feel impelled to recognize even in circumstances to which they have no real application. Normally, the day is brought formally to an end by retirement to bed, a process that—also normally—leads to a lapse into unconsciousness the emergence from which marks the beginning of another day. So, in mere obedience to the call of habit, I had gone to bed, though, in spite of bodily
fatigue, there had been no hint of any tendency to sleep. But I might have saved myself the trouble. True, my tired limbs stretched themselves out restfully and mere muscular fatigue slowly wore off; but my brain continued, uselessly and chaotically, to pursue its activities only the more feverishly when the darkness and the silence closed the avenues of impressions from without.

Hour after hour crept by with incredible slowness, marked at each quarter by the gentle undertone of the Treasury clock, voicing its announcement, as it seemed, in polite protest (surely there was never a clock that hinted so delicately and unobtrusively at the passage of the irrevocable minutes “that perish for us and are reckoned”). Other sound there was none to break the weary silence of the night; but by the soft, mellow chime I was kept informed of the birth of another day and the progress of its infancy, which crawled so tardily in the wake of my impatience.

At last, when half-past four had struck, I threw back the bedclothes, and, stepping out, switched on the light and put a match to the gas under the kettle. I had no occasion to hurry, but rather sought to make my preparations with studied deliberation; in spite of which I had shaved, washed and dressed and was sitting down to my frugal breakfast when the alarm clock startled me by blunting out with preposterous urgency its unnecessary reminder.

It had just turned a quarter-past five when I set forth to take my way on foot towards Kensington. No conveyance was necessary, nor would it have been acceptable; for though throughout the wearisome hours that I had spent in bed my thoughts had never ceased to revolve around the problem that Thorndyke had set, I still seemed to have the whole matter to debate afresh.

What should I say to Barbara? How should I break to her the news that my own appointed agent had made an undissembled accusation and was holding over her an unconcealed menace? I knew well enough what her attitude would be. She would hold me blameless and she would confront the threat against her reputation—even against her liberty—calmly and unafraid. I had no fear for her either of panic or recrimination. But how could I excuse myself? What could I say in extenuation of Thorndyke’s secret, hostile manoeuvre?

The hands of the church clock were approaching half-past six when I turned the corner and came in sight of the entrance to her flat. And at the same moment I was made to realize the imminence and the actuality of the danger which threatened her. In a narrow street nearly opposite to the flat, a closed car was drawn up in such a position that it could move out into the main road either to the right or left without turning round; and a glance at the alert driver and a watchful figure inside—both of whom looked at me attentively as I passed—at once aroused my suspicions. And when, as I crossed to the flat, I observed a tall man perambulating the pavement, those suspicions were confirmed. For this was no brown-hatted neophyte. The hard, athletic figure and the calm, observant face were unmistakable. I had seen too many plain-clothes policemen to miss the professional characteristics. And this man also took unobtrusive note of me as my destination became apparent.

The church clock was chiming half-past six as I pressed the button of the electric bell by Barbara’s front door. In the silence that still wrapped the building, I could hear the bell ring noisily, though far away, and I listened intently for some sounds of movement within. The maid would not arrive for another half hour, but I knew that Barbara was usually up at this hour. But I could hear no sign of any one stirring in the flat. Then I rang again, and yet again; and as there was still no sound from within, a vague uneasiness began to creep over me. Could Barbara be away from home? That might be as well in some respects. It might give time for the discovery of the error and save some unpleasantness. On the other hand—but at this moment I made a singular discovery myself. The latch-key was in the door! That was a most remarkable circumstance. It was so very unlike the methodical, self-possessed Barbara. But probably it had been left there by the maid. At any rate, there it was; and as I had now rung four times without result, I turned the key, pushed open the door and entered.

When I had closed the door behind me, I stood for some seconds in the dark hall, listening. There was not a sound. I was astonished that the noise of the bell had not aroused Barbara; indeed, I was surprised that she was not already up and about. Still vaguely uneasy, I felt for the light-switch, and when I had turned it on, stole along the hall and peered into the sitting room. Of course there was no one in it; nor was there any one in the kitchen, or in the spare bedroom. Finally, I went to Barbara’s bedroom and knocked loudly, at the same time calling her by name. But still there was no response or sound of movement.

At last, after one or two more trials, I turned the handle and opening the door a few inches, looked in. The room was nearly dark, but the cold, wan light of the early morning was beginning to show on the blind; and in that dim twilight I could just make out a figure lying on the bed. With a sudden thrill of alarm, I stepped into the room and switched on the light. And then I stood, rooted to the spot, as if I had been turned into stone.

She was there, lying half-dressed upon the bed and as still as a bronze effigy upon a tomb. From where I stood I could see that her right hand, resting on the bed, lightly held a hypodermic syringe, and that her left sleeve was rolled up nearly to the shoulder. And when, approaching stealthily on tip-toe, I drew near, I saw upon the bare arm a plainly visible puncture and close by it a little blister-like swelling.

The first glance had made plain the dreadful truth. I had realized instantly that she was dead. Yet still, instinctively, I put my fingers to her wrist in the forlorn hope of detecting some lingering trace of life; and then any possible doubt was instantly dispelled; for the surface was stone-cold and the arm as rigid as that of a marble statue. Not only was she dead; she had been lying here dead while I, in my bed in the Temple, had lain listening to the chimes and waiting for the hour when I could come to her.
For quite a long time I stood by the bed looking down on her in utter stupefaction. So overwhelming was the catastrophe that for the moment my faculties seemed to be paralysed, my power of thought suspended. In a trance of amazement I gazed at her, and, with the idle irrelevancy of a dreamer, noted how young, how beautiful she looked; how lissom and graceful was the pose of the figure, how into the waxy face with its drowsy eyes and parted lips, there had come a something soft and youthful, almost girlish, that had not been there during life. Dimly and dreamily I wondered what the difference could be.

Suddenly my glance fell on the syringe that still rested in her hand. And with that my faculties awoke. She had killed herself! But why? Even as I asked myself the question, the terrible, the incredible answer stole into my mind only to be indignantly cast out. But yet—I lifted my eyes from the calm, pallid face, so familiar and yet so strange, and cast a scared glance round the room; and then I observed for the first time a small table near the bed on which beside a flat candle-stick containing the remains of a burnt-out candle, lay two unstamped letters. Stepping over to the table, I read their superscriptions. One was addressed to me, the other to Superintendent Miller, CID, and both were in Barbara’s handwriting.

With a shaking hand I snatched up the one addressed to me, tore open the envelope and drew out the letter; and this is what I read:—

“Thursday, 1 a.m.

“My dearest Rupert,

“This letter is to bid you farewell. When you receive it you will curse and revile me, but I shall not hear those curses. Now, as I write, you are my darling Rupert and I am your dear friend, Barbara. With what will be when I am gone, I have no concern. It would be futile to hope that any empty words of mine could win your forgiveness. I have no such thought and do not even ask for pardon. When you think of me in the future it will be with hatred and loathing. It cannot be otherwise. But I have no part in the future. In the present—which runs out with every word that I write—I love you, and you, at least, are fond of me. And so it will be to the end, which is now drawing near.

“But though this which I write to you in love will be read by you in hatred, yet I have a mind to let you know the whole truth. And that truth can be summed up in three words. I love you. I have always loved you, even when I was a little girl and you were a boy. My desire for you has been the constant, consuming passion of my life, and to possess you for my own has been the settled purpose from which I have never deviated but once—when I married Harold.

“As I grew up from girlhood to womanhood, my love grew from a girl’s to a woman’s passion and my resolution became more fixed. I meant to have you for my own. But there was Stella. I could see that you worshipped her, and I knew that I should never have you while she lived. I was fond of poor Stella. But she stood as an insuperable obstacle between you and me. And—I suppose I am not quite as other women. I am a woman of a single purpose. Stella stood in the way of that purpose. It was a terrible necessity. But it had to be.

“And after all, I seemed to have failed. When Stella was gone, you went away and I thought I had lost you for ever. For I could not follow you. I knew that you had understood me, at least partly, and that you had fled from me.

“Then I was in despair. It seemed that I had dismissed poor Stella to no purpose. For once, I lost courage, and, in my loneliness, committed myself to a marriage with poor Harold. It was a foolish lapse. I ought to have kept my courage and lived in hope, as I realized almost as soon as I had married him.

“But when you came back, I could have killed myself. For I could see that you were still the same old Rupert and my love flamed up more intensely than ever. And once more I resolved that you should be my own; and so you would have been in the end but for Dr Thorndyke. That was the fatal error that I fell into; the error of under-valuing him. If I had only realized the subtlety of that man, I would have made a serious effort to deal with him. He should have had something very different from the frivolous make-believe that I sent him.

“Well, Rupert, my darling, I have played my hand and I have lost. But I have lost only by the merest mischance. As I sit here with the ready-filled syringe on the table at my side, I am as confident as ever that it was worth while. I regret nothing but the bad luck that defeated skilful play, and the fact that you, my dear one, have had to pay so large a proportion of my losings.

“I will say no more. You know everything now; and it has been a melancholy pleasure to me to have this little talk with you before making my exit.

“Your loving friend,

“BARBARA.”

“I have just slipped the key into the latch on the chance that you may come to me early. From what Tony said and what I know of you, I think it just possible. I hope you may. I like to think that we may meet, for the last time, alone.”

To say that this astounding letter left me numb and stupefied with amazement would be to express but feebly its effect on me. The whole episode presented itself to me as a frightful dream from which I should presently awaken and come back to understandable and believable realities. For I know not how long I stood, dazed by the shock, with my eyes riveted on that calm, comely figure on the bed, trying to grasp the incredible truth that this dead woman was Barbara, that she had killed herself and that she had murdered Stella—murdered her callously, deliberately and with considered intent.
Suddenly, the deathly silence of the flat was broken by the sound of an opening, and then of a closing door. Then a strong masculine voice was borne to my ear, saying, in a not unkindly tone. “Now, my girl, you had better run off to the kitchen and shut yourself in.”

On this I roused, and, walking across to the door, which was still ajar, went out into the hall, where I confronted Superintendent Miller and Barbara’s maid. Both stared at me in astonishment and the maid uttered a little cry of alarm as she turned and hurried into the kitchen. The superintendent looked at me steadily and with obvious suspicion, and, after a moment or two, asked, gruffly, nodding at the bedroom door, “Is Mrs Monkhouse in there?”

“Mrs Monkhouse is dead,” I answered.

“Dead!” he repeated, incredulously. Then, pushing past me, he strode into the room, and as I followed, I could hear him cursing furiously in a not very low undertone. For a few moments he stood looking down on the corpse, gently touching the bare arm and apparently becoming aware of its rigidity. Suddenly he turned, and, glaring fiercely at me, demanded: “What is the meaning of this, Mr Mayfield?”

“I found her dead when I arrived here,” I explained. “And when did you arrive here?”

“About half an hour ago.”

He shook his head and rejoined in an ominously quiet tone: “That won’t do, Sir. The maid has only just come and the dead woman couldn’t have let you in.”

I explained that I had found the key in the outer door but he made no pretence of accepting the explanation.

“That is well enough,” said he, “if you can prove that the key was in the door. Otherwise it is a mere statement which may or may not be true. The actual position is that I have found you alone in this flat with the body of a woman who has died a violent death. You will have to account satisfactorily for your presence here at this time in the morning, and for your movements up to the time of your arrival here.”

The very equivocal, not to say perilous, position in which I suddenly found myself served to steady my wits. I realized instantly how profoundly suspicious the appearances really were and that if I could not produce evidence of my recent arrival I should quite probably have to meet the charge of being an accessory to the suicide. And an accessory to suicide is an accessory to murder. It was a very serious position.

“Have you seen your man yet?” I asked. “The men, I mean, who were on observation duty outside.”

“I have seen them, but I haven’t spoken to them. They are waiting out on the landing now. Why do you ask?”

“Because I think they saw me come in here.”

“Ah, well, we can see about that presently. Is that letter that you have in your hand from Mrs Monkhouse? Because, if it is, I shall want to see it.”

“I don’t want to show it unless it is necessary; and I don’t think it will be. There is a letter addressed to you which will probably tell you all that you need know.”

He snatched up the letter, and, tearing it open, glanced through it rapidly. Then, without comment, he handed it to me. It was quite short and ran as follows:

“Thursday, 1.35 a.m.

“Mr Superintendent Miller, CID

“This is to inform you that I alone am responsible for the death of my late husband, Harold Monkhouse, and also for that of the late Miss Stella Keene. I had no confidants or accomplices and no one was aware of what I had done.

“As my own death will occur in about ten minutes (from an injection of morphine which I shall administer to myself) this statement may be taken as my dying declaration.

“I may add that no one is aware of my intention to take my life.

“Yours very truly

“BARBARA MONKHOUSE.”

“Well,” said Miller, as I returned the letter to him, “that supports your statement, and if my men saw you enter the flat, that will dispose of the matter so far as the suicide is concerned. But there is another question. It is evident that she knew that a discovery had been made. Now, who told her? Was it you, Mr Mayfield?”

“No,” I replied, “it was not. I found her dead when I arrived, as I have told you.”

“Do you know who did tell her?”

“I do not; and I am not disposed to make any guesses.”
“No, it’s no use guessing. Still, you know, Mr Mayfield, you knew, and you came here to tell her; and you know who knew besides yourself. But there,” he added, as we moved out into the hall, “it is no use going into that now. I’ve acted like a fool—too punctilious by half. I oughtn’t to have let her slip through my fingers. I should have acted at once on Dr Thorndyke’s hint without waiting for confirmation.”

He was still speaking in an angry, reproachful tone; but suddenly his manner changed. Looking at me critically but with something of kindly sympathy, he said: “It has been a trying business for you, Mr Mayfield—the whole scandalous affair; and this must have given you a frightful shock, though I expect you would rather have it as it is than as it ought to have been. But you don’t look any the better for it.”

He escorted me politely but definitely to the outer door, and when he opened it I saw his two subordinates waiting on the landing; to both of whom collectively Miller addressed the inquiry: “Did you see Mr Mayfield enter this flat?”

“Yes, Sir,” was the reply of one, confirmed by the other. “He went up the stairs at exactly half-past six.”

Miller nodded, and wishing me “good morning,” beckoned to the two officers; and as I turned to descend the stairs, I saw the three enter and heard the door shut.

Once more in the outer world, walking the grey, half-lighted streets, to which the yet unextinguished lamps seemed only to impart an added chill, my confused thoughts took up the tangled threads at the point at which the superintendent’s appearance had broken them off. But I could not get my ideas arranged into any intelligible form. Each aspect of the complex tragedy conflicted with all the others. The pitiful figure that I had left lying on the bed made its appeal in spite of the protest of reason; for the friendship of a lifetime cannot easily be extinguished in a moment. I knew now that she was a wretch, a monster; and when I reminded myself of what she had done, I grudged the easy, painless death by which she had slipped away so quietly from the wreckage that her incredible wickedness had created. When I contrasted that death—a more gentle lapsing into oblivion—with the long, cheerfully endured sufferings of brave, innocent little Stella, I could have cursed the faithful friendship of Wallingford which had let her escape from the payment to the uttermost farthing other hideous debt. And yet the face that haunted me—the calm, peaceful, waxen face—was the face of Barbara, my friend, almost my sister, who had been so much to me, who had loved me with that strange, tenacious, terrible passion.

It was very confusing. And the same inconsistency pervaded my thoughts of Thorndyke. Unreasonably, I found myself thinking of him with a certain repulsion, almost of dislike, as the cause of this catastrophe. Yet my reason told me that he had acted with the highest motives of justice; that he had but sought retribution for Stella’s sufferings and death and those of poor, harmless Harold Monkhouse; that as a barrister, even as a citizen, he could do no less than denounce the wrong-doer. But my feelings were too lacerated, my emotions too excited to allow my reason to deal with the conflicting elements of this tragedy.

In this confused state of mind, I walked on, hardly conscious of direction, until I found myself at the entry of my chambers. I went in and made a futile attempt to do some work. Then I paced the room for an hour or more, alternately raging against Barbara and recalling the lonely figure that I had seen in the twilight of that darkened room, until my unrest drove me forth again to wander through the streets, away into the squalid east, among the docks and the rookeries from Whitechapel to Limehouse.

It was evening when, once more, I dragged myself up my stairs, and, spent with fatigue and exhausted by lack of food—for during the whole day I had taken but a few cups of tea, hastily snatched in the course of my wanderings—re-entered my chamber. As I closed the door, I noticed a letter in the box, and taking it out, listlessly opened the envelope. It was from Thorndyke; a short note, but very cordially worded, begging me “like a good fellow” to go round to have a talk with him.

I flung the note down impatiently on the table, with an immediate resurgence of my unreasonable sense of resentment. But in a few minutes I experienced a sudden revulsion of feeling. A sense of profound loneliness came upon me; a yearning for human companionship, and especially for the companionship of Thorndyke, from whom I had no secrets, and who knew the whole dreadful story even to its final culmination.

Once more, foot-sore as I was, I descended my stairs and a couple of minutes later was ascending the “pair” that led up to Thorndyke’s chambers.

XVII. — THORNDYKE RETRACES THE TRAIL

APARENTLY Thorndyke had seen me from the window as I crossed the Walk, for, when I reached the landing, I found him standing in the open doorway of his chambers; and at the sight of him, whatever traces of unreasonable resentment may have lingered in my mind, melted away instantly. He grasped my hand with almost affectionate warmth, and looking at me earnestly and with the most kindly solicitude, said: “I am glad you have come, Mayfield. I couldn’t bear to think of you alone in your chambers, haunted by this horrible tragedy.”

“You have heard, then—about Barbara, I mean?”

“Yes. Miller called and told me. Of course, he is righteously angry that she has escaped, and I sympathize with him. But for us—for you and me—it is a great deliverance. I was profoundly relieved when I heard that she was gone; that the axe had fallen once for all.”

“Yes,” I admitted, “it was better than the frightful alternative of a trial and what would have followed. But still, it was
terrible to see her, lying dead, and to know that it was my hand—the hand of her oldest and dearest friend—that had struck the blow.

"It was my hand, Mayfield, not yours, that actually struck the blow. But even if it had been yours instead of your agent's, what could have been more just and proper than that retribution should have come through the hand of the friend and guardian of that poor murdered girl?"

I assented with a shudder to the truth of what he had said, but still my mind was too confused to allow me to see things in their true perspective. Barbara, my friend, was still more real to me than Barbara the murderess. He nodded sympathetically enough when I explained this, but rejoined, firmly: "You must try, my dear fellow, to see things as they really are. Shocking as this tragedy is, it would have been immeasurably worse if that terrible woman had not received timely warning. As it is, the horrible affair has run its course swiftly and is at an end. And do not forget that if the axe has fallen on the guilty its menace has been lifted from the innocent. Madeline Norris and Anthony Wallingford will sleep in peace tonight, free from the spectre of suspicion that has haunted them ever since Harold Monkhouse died. As to the woman whose body you found this morning, she was a monster. She could not have been permitted to live. Her very existence was a menace to the lives of all who came into contact with her."

Again, I could not but assent to his stern indictment and his impartial statement of the facts.

"Very well, Mayfield," said he. "Then try to put it to yourself that, for you, the worst has happened and is done with. Try to put it away as a thing that now belongs to the past and is, in so far as it is possible, to be forgotten."

"As far as is possible," I repeated. "Yes, of course, you are quite right, Thorndyke. But forgetfulness is not a thing which we can command at will."

"Very true," he replied. "But yet we can control to a large extent the direction of our thoughts. We can find interests and occupations. And, speaking of occupations, let me show you some of Polton’s productions."

He rose, and putting a small table by the side of my chair, placed on it one or two small copper plaques and a silver medallion which he had taken from a drawer. The medallion was the self-portrait of Stella which had lain dormant in the wax mould through all the years which had passed since her death, and as I took it in my hand and gazed at the beloved face, I found it beautiful beyond my expectations.

"It is a most charming little work," I said, holding it so that the lamp light fell most favourably on the relic, "I am infinitely obliged to you, Thorndyke."

"Don't thank me," said he. "The whole credit is due to Polton. Not that he wants any thanks, for the work has yielded him hours of perfect happiness. But here he is with the products of another kind of work."

As he spoke, Polton entered with a tray and began in his neat, noiseless way, to lay the table. I don't know how much he knew, but when I caught his eye and his smile of greeting, it seemed to me that friendliness and kindly sympathy exuded from every line of his quaint, crinkly face. I thanked him for his skilful treatment of my treasures and then, observing that he was apparently laying the table for supper, would have excused myself. But Thorndyke would hear of no excuses.

"My dear fellow," said he, "you are the very picture of physical exhaustion. I suspect that you have had practically no food today. A meal will help you to begin to get back to the normal. And, in any case, you mustn't disappoint Polton, who has been expecting you to supper and has probably made a special effort to do credit to the establishment."

I could only repeat my acknowledgments of Polton’s goodness (noting that he certainly must have made a special effort, to judge by the results which began to make themselves evident) and, conquering my repugnance to the idea of eating, take my place at the table.

It is perhaps somewhat humiliating to reflect that our emotional states, which we are apt to consider on a lofty spiritual plane, are controlled by matters so grossly material as the mere contents of our stomachs. But such is the degrading truth, as I now realized. For no sooner had I commenced a reluctant attack on the products of Polton’s efforts and drunk a glass of Burgundy—delicately warmed by that versatile artist to the exact optimum temperature—than my mental and physical unrest began to subside and allow a reasonable, normal outlook to develop, with a corresponding bodily state. In effect, I made quite a good meal and found myself listening with lively interest to Thorndyke’s account of the technical processes involved in converting my little plaster plaques and the wax mould into their final states in copper and silver.

Nevertheless, in the intervals of conversation the unforgettable events of the morning and the preceding night tended to creep back into my consciousness; and now a question which I had hitherto hardly considered began to clamour for an answer. Towards the end of the meal, I put it into words. Apropos of nothing in our previous conversation, I asked: "How did you know, Thorndyke?" and as he looked up inquiringly, I added: "I mean, how were you able to make so confident a guess, for, of course, you couldn’t actually know?"

"When do you mean?" he asked.

"I mean that when you applied for a Home Office authority you must have had something to go on beyond a mere guess."

"Certainly I had," he replied. "It was not a guess at all. It was a certainty. When I made the application I was able to say that I had positive knowledge that Stella Keene had been poisoned with arsenic. The examination of the poor child’s body was not for my information. I would have avoided it if that had been possible. But it was not. As soon as my declaration was made, the exhumation became inevitable. The Crown could not have prosecuted on a charge of poisoning without an
examination of the victim's body."

“But, Thorndyke,” I expostulated, “how could you have been certain—I mean certain in a legal sense? Surely it could have been no more than a matter of inference.”

“It was not,” he replied. “It was a matter of demonstrated fact. I could have taken the case into court and proved the fact of arsenical poisoning. But, of course, the jury would have demanded evidence from an examination of the body, and quite properly, too. Every possible corroboration should be obtained in a criminal trial.”

“Certainly,” I agreed. “But still I find your statement incomprehensible. You speak of demonstrated fact. But what means of demonstration had you? There was my diary. I take it that that was the principal source of your information; in fact I can’t think of any other. But the diary could only have yielded documentary evidence, which is quite a different thing from demonstrated fact.”

“Quite,” he agreed. “The diary contributed handsomely to the train of circumstantial evidence that I had constructed. But the demonstration—the final, positive proof—came from another source. A very curious and unexpected source.”

“I suppose,” said I, “as the case is finished and dealt with, there would be no harm in my asking how you arrived at your conclusion?”

“Not at all,” he replied. “The whole investigation is a rather long story, but I will give you a summary of it if you like.”

“Why a summary?” I objected. “I would rather have it in extenso if it will not weary you to relate it.”

“It will be more likely to weary you,” he replied. “But if you are equal to a lengthy exposition, let us take to our easy chairs and combine bodily comfort with forensic discourse.”

We drew up the two arm-chairs before the hearth, and when Polton had made up the fire and placed between us a small table furnished with a decanter and glasses, Thorndyke began his exposition.

“This case is in some respects one of the most curious and interesting that I have met with in the whole of my experience of medico-legal practice. At the first glance, as I told you at the time, the problem that it presented seemed hopelessly beyond solution. All the evidence appeared to be in the past and utterly irrecoverable. The vital questions were concerned with events that had passed unrecorded and of which there seemed to be no possibility that they could ever be disinterred from the oblivion in which they were buried. Looking back now on the body of evidence that has gradually accumulated, I am astonished at the way in which the apparently forgotten past has given up its secrets, one after another, until it has carried its revelation from surmise to probability and from probability at last to incontestable proof.

“The inquiry divides itself into certain definite stages, each of which added new matter to that which had gone before. We begin, naturally, with the inquest on Harold Monkhouse, and we may consider this in three aspects: the ascertained condition of the body; the evidence of the witnesses; and the state of affairs disclosed by the proceedings viewed as a whole.

“First, as to the body: there appeared to be no doubt that Monkhouse died from arsenical poisoning, but there was no clear evidence as to how the poison had been administered. It was assumed that it had been taken in food or in medicine—that it had been swallowed—and no alternative method of administration was suggested or considered. But on studying the medical witnesses’ evidence, and comparing it with the descriptions of the patient’s symptoms, I was disposed to doubt whether the poison had actually been taken by the mouth at all.”

“Why,” I exclaimed, “how else could it have been taken?”

“There are quite a number of different ways in which poisonous doses of arsenic can be taken. Finely powdered arsenic is readily absorbed by the skin. There have been several deaths from the use of ‘violet powder’ contaminated with arsenic, and clothing containing powdered arsenic would produce poisonous effects. Then there are certain arsenical gases—notably arsenic, or arseniureted hydrogen—which are intensely poisonous and which possibly account for a part of the symptoms in poisoning from arsenical wallpapers. There seemed to me to be some suggestion of arsenical gas in Monkhouse’s case, but it was obviously not pure gas poisoning. The impression conveyed to me was that of a mixed poisoning; that the arsenic had been partly inhaled and partly applied to the skin, but very little, if any, taken by the mouth.”

“You are not forgetting that arsenic was actually found in the stomach?”

“No. But the quantity was very minute; and a minute quantity is of no significance. One of the many odd and misleading facts about arsenic poisoning is that, in whatever way the drug is taken, a small quantity is always found in the stomach and there are always some signs of gastric irritation. The explanation seems to be that arsenic which has got into the blood in any way—through the skin, the lungs or otherwise—tends to be eliminated in part through the stomach. At any rate, the fact is that the presence of minute quantities of arsenic in the stomach affords no evidence that the poison was swallowed.”

“But,” I objected, “what of the Fowler’s Solution which was found in the medicine?”

“Exactly,” said he. “That was the discrepancy that attracted my attention. The assumption was that deceased had taken in his medicine a quantity of Fowler’s Solution representing about a grain and a half of arsenious acid. If that had been so we should have expected to find a very appreciable quantity in the stomach: much more than was actually found. The condition of the body did not agree with the dose that was assumed to have been taken; and when one came to examine the
evidence of the various witnesses there was further room for doubt. Two of them had noticed the medicine at the time when the Fowler’s Solution had not been added; but no witness had noticed it after the alleged change and before the death of deceased. The presence of the Fowler’s Solution was not observed until several days after his death. Taking all the facts together, there was a distinct suggestion that the solution had been added to the medicine at some time after Monkhouse’s death. But this suggestion tended to confirm my suspicion that the poison had not been swallowed. For the discovery of the Fowler’s Solution in the medicine would tend to divert inquiry—and did, in fact, divert it—from any other method of administering the poison.

“To finish with the depositions: not only was there a complete lack of evidence even suggesting any one person as the probable delinquent; there was not the faintest suggestion of any motive that one could consider seriously. The paltry pecuniary motive applied to all the parties and could not be entertained in respect of any of them. The only person who could have had a motive was Barbara. She was a young, attractive woman, married to an elderly, unattractive husband. If she had been attached to another man, she would have had the strongest and commonest of all motives. But there was nothing in the depositions to hint at any other man; and since she was absent from home when the poisoning occurred, she appeared to be outside the area of possible suspicion.

“And now to look at the evidence as a whole; you remember Miller’s comment. There was something queer about the case; something very oddly elusive. At first glance it seemed to bristle with suspicious facts. But when those facts were scrutinized they meant nothing. There were plenty of clues but they led nowhere. There was Madeline Norris who prepared the victim’s food—an obvious suspect. But then it appeared that the poison was in the medicine, not in the food. There was Wallingford who actually had poison in his possession. But it was the wrong poison. There was the bottle that had undoubtedly contained arsenic. But it was nobody’s bottle. There was the bottle that smelled of lavender and had red stains in it and was found in Miss Norris’ possession; but it contained no arsenic. And so on.

“Now all this was very strange. The strongest suspicion was thrown on a number of people collectively. But it failed every time to connect itself with any one individually. I don’t know precisely what Miller thought of it, but to me it conveyed the strong impression of a scheme—of something arranged, and arranged with extraordinary skill and ingenuity. I had the feeling that, behind all these confusing and inconsistent appearances, was a something quite different, with which they had no real connection; that all these apparent clues were a sort of smoke-screen thrown up to conceal the actual mechanism of the murder.

“What could the mechanism of the murder have been? That was what I asked myself. And by whom could the arrangements have been made and carried out? Here the question of motive became paramount. What motive could be imagined? And who could have been affected by it? That seemed to be the essential part of the problem, and the only one that offered the possibility of investigation.

“Now, as I have said, the most obvious motive in cases of this kind is that of getting rid of a husband or wife to make room for another. And ignoring moral considerations, it is a perfectly rational motive; for the murder of the unwanted spouse is the only possible means of obtaining the desired release. The question was, could such a motive have existed in the present case; and the answer was that, on inspection, it appeared to be a possible motive, although there was no evidence that it actually existed. But, assuming its possibility for the sake of argument, who could have been affected by it? At once, one saw that Madeline Norris was excluded. The death of Harold Monkhouse did not affect her, in this respect, at all. There remained only Barbara and Wallingford. To take the latter first: he was a young man, and the wife was a young, attractive woman; he had lived in the same house with her, appeared to be her social equal and was apparently on terms of pleasant intimacy with her. If he had any warmer feelings towards her, her husband’s existence formed an insuperable obstacle to the realization of his wishes. There was no evidence that he had any such feelings, but the possibility had to be borne in mind. And there were the further facts that he evidently had some means of obtaining poisons and that he had ample opportunities for administering them to the deceased. All things considered, Wallingford appeared, prima facie, to be the most likely person to have committed the murder.

“Now to take the case of Barbara. In the first place, there was the possibility that she might have had some feeling towards Wallingford, in which case she would probably have been acting in collusion with him and her absence from home on each occasion when the poisoning took place would have been part of the arrangement. But, excluding Wallingford, and supposing her to be concerned with some other man, did her absence from home absolutely exclude the possibility of her being the poisoner? There were suggestions of skillful and ingenious arrangements to create false appearances. Was it possible that those arrangements included some method by which the poison could be administered during her absence without the connivance or knowledge of any other person?

“I pondered this question carefully by the light of all the details disclosed at the inquest; and the conclusion that I reached was that, given a certain amount of knowledge, skill and executive ability, the thing was possible. But as soon as I had admitted the possibility, I was impressed by the way in which the suggestion fitted in with the known facts and served to explain them. For all the arranged appearances pointed to the use of Fowler’s Solution, administered by the mouth. But this could not possibly have been the method if the poisoner were a hundred miles away. And as I have said, I was strongly inclined to infer, from the patient’s symptoms and the condition of the body, that the poison had not been administered by the mouth.

“But all this, as you will realize, was purely hypothetical. None of the assumptions was supported by a particle of positive evidence. They merely represented possibilities which I proposed to bear in mind in the interpretation of any new evidence
that might come into view.

“This brings us to the end of the first stage; the conclusions arrived at by a careful study of the depositions. But following hard on the inquest was your visit to me when you gave me the particulars of your past life and your relations with Barbara and Monkhouse. Now your little autobiographical sketch was extremely enlightening, and, as it has turned out, of vital importance. In the first place, it made clear to me that your relations with Barbara were much more intimate than I had supposed. You were not merely friends of long standing; you were virtually in the relation of brother and sister. But with this very important difference: that you were not brother and sister. An adopted brother is a possible husband; an adopted sister is a possible wife. And when I considered your departure to Canada with the intention of remaining there for life, and your unexpected return. I found that the bare possibility that Barbara might wish to be released from her marriage had acquired a certain measure of probability.

“But further; your narrative brought into view another person who had died. And the death of that person presented a certain analogy with the death of Monkhouse. For if Barbara had wished to be your wife, both these persons stood immovably in the way of her wishes. Of course there was no evidence that she had any such wish and the death of Stella was alleged to have been due to natural causes. Nevertheless, the faint, hypothetical suggestions offered by these new facts were strikingly similar to those offered by the previous facts.

“The next stage opened when I read your diary, especially the volume written during the last year of Stella’s life. But now one came out of the region of mere speculative hypothesis into that of very definite suspicion. I had not read very far when, from your chance references to the symptoms of Stella’s illness, I came to the decided conclusion that, possibly mingled with the symptoms of real disease, were those of more or less chronic arsenical poisoning. And what was even more impressive, those symptoms seemed to be closely comparable with Monkhouse’s symptoms, particularly in the suggestion of a mixed poisoning partly due to minute doses of arsine. I need not go into details, but you will remember that you make occasional references to slight attacks of jaundice (which is very characteristic of arsenic poisoning) and to ‘eye-strain’ which the spectacles failed to relieve. But, redness, smarting and watering of the eyes is an almost constant symptom of chronic arsenic poisoning. And there were various other symptoms of a decidedly suspicious character to which you refer and which I need not go into now.

“Then a careful study of the diary brought into view another very impressive fact. There were considerable fluctuations in Stella’s condition. Sometimes she appeared to be so far improving as to lead you to some hopes of her actual recovery. Then there would be a rather sudden change for the worse and she would lose more than she had gained. Now, at this time Barbara had already become connected with the political movement which periodically called her away from home for periods varying from one to four weeks; and when I drew up a table of the dates other departures and returns, I found that the periods included between them—that is the periods during which she was absent from home—coincided most singularly with Stella’s relapses. The coincidence was so complete that, when I had set the data out in a pair of diagrams in the form of graphs, the resemblance of the two diagrams was most striking. I will show you the diagrams presently.

“But there was something else that I was on the look-out for in the diary, but it was only quite near the end that I found it. Quite early, I learned that Stella was accustomed to read and work at night by the light of a candle. But I could not discover what sort of candle she used; whether it was an ordinary household candle or one of some special kind. At last I came on the entry in which you describe the making of the wax mould; and then I had the information that I had been looking for. In that entry you mention that you began by lifting the reflector off the candle, by which I learned that the receptacle used was not an ordinary candlestick. Then you remark that the candle was of ‘good hard wax’; by which I learned that it was not an ordinary household candle—these being usually composed of a rather soft paraffin wax. Apparently, it was a stearine candle such as is made for use in candle-lamps.”

“But,” I expostulated, “how could it possibly matter what sort of candle she used? The point seems to be quite irrelevant.”

“The point,” he replied, “was not only relevant; it was of crucial importance. But I had better explain. When I was considering the circumstances surrounding the poisoning of Monkhouse, I decided that the probabilities pointed to Barbara as the poisoner. But she was a hundred miles away when the poisoning occurred; hence the question that I asked myself was this: Was there any method that was possible and practicable in the existing circumstances by which Barbara could have arranged that the poisoning could be effected during her absence? And the answer was that there was such a method, but only one. The food and the medicine were prepared and administered by those who were on the spot. But the candles were supplied by Barbara and by her put into the bedside candle-box before she went away. And they would operate during her absence.”

“But,” I exclaimed, “do I understand you to suggest that it is possible to administer poison by means of a candle?”

“Certainly,” he replied. “It is quite possible and quite practicable. If a candle is charged with finely powdered arsenious acid—‘white arsenic’—when that candle is burnt, the arsenious acid will be partly vaporized and partly converted into arsine, or arseniureted hydrogen. Most of the arsine will be burnt in the flame and reconverted into arsenic acid, which will float in the air, as it condenses, in the form of an almost invisible white cloud. The actual result will be that the air in the neighbourhood of the candle will contain small traces of arsine—which is an intensely poisonous gas—and considerable quantities of arsenic acid, floating about in the form of infinitely minute crystals. This impalpable dust will be breathed into the lungs of any person near the candle and will settle on the skin, from which it will be readily absorbed into the blood and produce all the poisonous effects of arsenic."
“Now, in the case of Harold Monkhouse, not only was there a special kind of candle, supplied by the suspected person, but, as I have told you, the symptoms during life and the appearances of the dead body, all seemed to me to point to some method of poisoning through the lungs and skin rather than by way of the stomach, and also suggested a mixed poisoning in which arsenical played some part. So that the candle was not only a possible medium of the poisoning; it was by far the most probable.

“Hence, when I came to consider Stella’s illness and noted the strong suggestion of arsenic poisoning; and when I noted the parallelism of her illness with that of Monkhouse; I naturally kept a watchful eye for a possible parallelism in the method of administering the poison. And not only did I find that parallelism; but in that very entry, I found strong confirmation of my suspicion that the candle was poisoned. You will remember that you mention the circumstance that on the night following the making of the wax mould you were quite seriously unwell. Apparently you were suffering from a slight attack of acute arsenical poisoning, due to your having inhaled some of the fumes from the burning candle.”

“Yes, I remember that,” said I. “But what is puzzling me is how the candles could have been obtained. Surely it is not possible to buy arsenical candles?”

“No,” he replied, “it is not. But it is possible to buy a candle-mould, with which it is quite easy to make them. Remember that, not so very long ago, most country people used to make their own candles, and the hinged moulds that they used are still by no means rare. You will find specimens in most local museums and in curio shops in country towns and you can often pick them up in farmhouse sales. And if you have a candle-mould, the making of arsenical candles is quite a simple affair. Barbara, as we know, used to buy a particular German brand of stearine candles. All that she had to do was to melt the candles, put the separated wicks into the mould, stir some finely-powdered white arsenic into the melted wax and pour it into the mould. When the wax was cool, the mould would be opened and the candles taken out these hinged moulds usually made about six candles at a time. Then it would be necessary to scrape off the seam left by the mould and smooth the candles to make them look like those sold in the shops.”

“It was a most diabolically ingenious scheme,” said I.
